I THE DETERMINANTS OF NONFAMILY CHILD CARE UTILIZATION

Although there are many means of providing care for children during the day, for analytical purposes these were classified into two general types: care by family members and care by persons outside the immediate family. It should be noted that this distinction is not the same as between methods that involve a direct cost and those that do not, since arrangements made with family members often involve direct monetary outlays.[3] The dependent variable in this section assumes the value of 1 if the preschool-aged child is cared for by a person other than a relative; otherwise its value is 0.[4]

The analysis proceeds as follows. First, a model is proposed and estimated separately using 1967 and 1971 cross-sections of employed women with at least one child three to five years of age. For ease of presentation, the explanatory variables are grouped into five general categories: family composition, mother's labor market behavior and attitudes, ability to pay for child care, personal tastes and preferences, and residential and environmental characteristics. Second, in order to determine if the characteristics affecting choice of a nonfamily child care arrangement were stable over time, the 1967 and 1971 parameters are tested for equality.

---

[3] See the discussion under "Ability to Pay" for the proportions paying and average amount paid for child care in 1971 by women with a child three to five years of age.

[4] Nonfamily forms of care include: nonrelative in the child's home or in someone else's home; a nonrelative-relative combination; public day care center; private day care center; public or private day care combined with some other form of care; and enrollment in a school sponsored prekindergarten or kindergarten program. The data understate enrollment in school sponsored prekindergarten or kindergarten programs, since the respondent would not have mentioned them unless she thought of such school programs as "child care arrangements." In addition, it was possible to identify children enrolled in preschool programs if the mother responded that she worked only while the child was in school.

Explanatory Variables

Family composition The decision to leave a preschool child in a setting other than his or her home, or to bring someone outside the immediate family in to look after the child while the mother works is contingent on (1) the availability of other family members to care for the child and (2) whether the arrangement must also cover an infant son or daughter. Several variables are included to measure these effects. First, it is hypothesized that the probability of relying upon an arrangement other than the immediate family is negatively related to the presence of a teenaged son or daughter in the household.[5] Second, it is hypothesized that selection of a nonfamily arrangement is inversely related to having an adult relative, other than husband, living in the household.[6] Third, it is hypothesized that women who were not married were more likely to seek child care arrangements outside the family, because of the absence of the child's father as a potential child care source.[7] Fourth, if the family has an infant child in addition to the preschooler, the special needs of the infant and the complexity or difficulty of finding an arrangement that might include both children is expected to favor choice of family forms of child care.[8]

---

[5] The effect of a teenaged child is measured by a dichotomous variable which takes the value of 1 if there is a son or daughter of the respondent who is 14 to 17 years of age living at home and 0 otherwise.

[6] The presence of an adult relative is measured by a 1-0 variable which assumes the value of 1 if there is a son, a daughter or some other relative excluding the husband who is 18 or older residing in the household. A study by Duncan and Hill (1975) used a measure of whether the woman's family moved in the previous year as a proxy for the availability of relatives living in the community. Although a similar variable could have been used here, it was rejected because the relation between migration and the presence of relative in the community is, at best, ambiguous.

[7] In 1971, fathers accounted for 16 and 13 percent of the child care arrangements made by white and black two-parent families, respectively. The absence of the husband is measured by a dichotomous variable which assumes the value of 1 if the woman's marital status is other than married and living in the same household as her husband and 0 otherwise.

Mother's labor market behavior and attitudes   Previous studies have indicated that family arrangements are often made for fewer hours during the day than arrangements involving the use of outsiders.[9] Therefore, it is hypothesized that mothers employed part time will be less likely to rely upon nonfamily arrangements.[10] Attitudes toward market work may also influence selection of an arrangement for a preschool child. It is hypothesized that women with more favorable attitudes toward the propriety of mothers working outside the home will be more likely to arrange a nonfamily means for the care of their preschool children.[11]

Family's ability to pay   Child care arrangements made with individuals outside the immediate family are likely to involve a higher direct cost than arrangements made within the family. In 1971, 89 percent of working mothers in the sample who made nonfamily arrangements, but only 36 percent of those relying on family members, were required to pay for the services. Moreover, the average payment in the former case was $.50 per hour that the mother worked, as compared to the average payment of $.33 per hour to relatives. Thus, if nonfamily arrangements are a normal good, a family's use of them, all else being equal, will be a direct function of its income. It is therefore hypothesized that both per capita family earnings, excluding the mother's wage and salary income, and the mother's average hourly earnings will be directly related to selection of a nonfamily child care arrangement.[12]

---

[8] The effect of an infant child in addition to the preschooler is measured by a 0-1 variable which is assigned the value of 1 if the respondent also has a child under three living in the household and 0 otherwise.

[9] Low and Spindler (1968); Westinghouse and Westat (1971).

[10] A woman is defined as being employed part time if she usually worked less than 35 hours a week in her 1967 and 1971 survey week job.

[11] For the method of measuring attitude toward market work, see Glossary, Appendix B. This variable in the 1971 cross-section is based upon the respondent's answers in the 1972 survey. The questions were administered only in 1967 and 1972.

[12] Per capita earnings are used to control for the effect of family size on a family's ability to purchase nonfamily child care. Earnings are used rather than income because of the high nonresponse rate on the questions dealing with income from personal or family assets.

Tastes and preferences   Two variables are included as measures of a woman's taste for child care arrangements outside the family--education and race. Recent time budget studies have suggested that a mother's education is positively related to the number of hours she spends in the care of both infants and preschoolers.[13] Furthermore, economic analyses of fertility suggest that the commonly found negative relationship between the number of children ever borne by women and education reflects the positive relationship between "child quality" and education.[14] That is, families substitute "child quality" for "child quantity" as the educational attainment of the mother rises. If parental education and emphasis on the quality of the environment in which children are reared are positively related, it seems reasonable to hypothesize that among women who work outside the home the "qualitative" aspects of a child care arrangement will be valued more the higher the educational level of the mother. The finding of a positive relationship between education and choice of a nonfamily arrangement would suggest that "quality" child care is more likely to be found outside the immediate family, all else being equal. National opinion polls and other studies of child care have shown that blacks are more likely than whites to rely upon day care centers.[15] Since day care centers are included among the set of nonfamily arrangements, it is hypothesized that blacks will be more apt than whites to utilize nonfamily arrangements.

Residential and environmental factors   Both population density and region of residence are likely to affect the choice of a child care arrangement. Community size has been found to be positively related to the reliance upon nonfamily child day care arrangements.[16] The availability and proximity of nonrelatives, nursery schools, and day care centers are likely to be greater in areas of concentrated population. To measure the effect of population density, two dummy variables are employed which distinguish those who live in an SMSA or its central city from those who do not. Since utilization of nonfamily child care has been found to vary according to the Census region in which the family lives, two dummy variables for region of residence are included. Other studies, using bivariate analysis, have indicated a greater reliance on care outside the immediate family in both the South and the West as opposed to the Northeast and North Central.[17] Therefore, a positive relationship with the use of nonfamily care is expected for residing either in the South or the West.

Regression Results: 1967[18]

The single most important variable in the decision to utilize child care other than the immediate family in 1967 was the woman's average hourly earnings.[19] The probability of arranging for a child to be cared for by a nonfamily source rose directly with the hourly earnings of the mother. Although of less relative importance, the same direct effect was observed for per capita family earnings. Thus, it would appear that in 1967 it was the earnings of the mother which played a major role in the selection of a child care arrangement.

Of the variables reflecting the availability of family child care substitutes for the mother, only two were found to be significant. The presence of a teenaged son or daughter decreased, and being nonmarried increased, the probability of selecting an arrangement beyond the family. Since other variables such as earnings, education, hours worked, and race are also simultaneously being controlled, it seems reasonable to interpret the coefficient on marital status as measuring the impact of not having the father as a possible child care resource.

Both measures of labor market behavior and attitudes were significant as expected. Mothers who worked part time were less apt than those who worked full time to use nonfamily forms of child care. The direction of causation is, of course, not clear. That is, the decision to work part time may be motivated by the desire to use family care or, having been made on some other basis, may make it easier to make various family arrangements for the care of the children. The more favorable a woman's attitude toward the propriety of mothers working outside the home, the greater the probability of relying on nonfamily modes of child care.

The behavior of the education variable indicates that, even after controlling for the ability to afford various forms of child care, there is a net positive relationship between education and selection of a nonfamily arrangement. Although not statistically significant, the regression coefficients for race and for region of residence suggest the possibility that blacks have a lower (net) probability than whites of using nonfamily child care arrangements and that residents of the South have a greater tendency to do so than those living elsewhere.

---

[18] Means and standard deviations are presented in Table 5.1 and the regression results are contained in Table 5.2.

[19] The standardized regression coefficient for average hourly earnings was .19.

Comparison of the 1967 and 1971 Results[20]

Since even a casual comparison of the 1967 and 1971 results indicates major differences between the two years, it is not surprising that a formal statistical test indicates that there are significant differences.[21] It is also noteworthy that in a pooled equation using the data for both years, the dummy variable denoting the survey year was not statistically significant. Thus, while the average probability of relying on care outside the family remained stable at 40 percent between 1967 and 1971 (Table 5.1) there is evidence that the factors associated with the variation in this probability did change. The facts that (1) both the mother's average hourly earnings and the family's per capita earnings were significant in 1967 but nonsignificant in 1971 and (2) that Southern residence was significant in 1971 but not 1967 may mean that national child day care policy has substantially increased the availability of nonfamily child care alternatives to low income families. Whether this has in fact occurred is an important issue which will require further research using a more definitive and comprehensive data source designed specifically to study child care.

It is interesting that the negative relationship between being black and reliance on nonfamily child care that was observed in 1967 had become significant by 1971. Thus, one can assert more confidently that by 1971 black families were less likely than white families to utilize nonfamily forms of child care. Whether this results from differences in tastes between whites and blacks or from inequities in the administration and allocation of government child care resources is not clear and needs to be analyzed in greater depth.[22]

---

[20] The results for 1971 are included in Table 5.2, along with those for 1967. Means and standard deviations are included in Table 5.1.

[21] The calculated F-ratio of 2.73 with 15 and 655 degrees of freedom was significant at an ∂ of .005. This F-ratio was computed without removing cases in the sample both years. Whether these cases were removed or included, there was a significant difference between the 1967 and 1971 results.

[22] The major sources of national funding for child day care services between 1967 and 1971 were Title IV of the Social Security Act and Title II-A of the Economic Opportunity Act of 1964 authorizing Head Start. By fiscal year 1972, federal expenditures alone for child day care services were close to one billion dollars, approximately 140 times the level of expenditures in fiscal 1965. These estimates are derived from an unpublished Department of Health, Education, and Welfare document. It is important to keep in mind that these federal monies were allocated to state agencies for expenditure. Although these expenditures are controlled by federal law and guidelines, it is clear from a recent HEW audit that these guidelines have not been rigidly enforced or adhered to. The various federally funded child care programs are mentioned in Rosenberg and Spindler (1972).

II THE EXTENT TO WHICH FREE DAY CARE CENTERS WOULD ENCOURAGE SEARCH FOR WORK

The negative relationship between female labor force participation and the presence of young children is well documented.[23] This relationship is often used as prima facie evidence of the need for day care centers.[24] However, the extent to which women with young children would respond to such a program by entering the labor force is an empirical question. It was with this thought in mind that women with children who were out of the labor force in the 1971 survey week were asked about their willingness to seek employment if a free day care center were available to them.[25] By examining in some detail the determinants of an affirmative response to this question, one gains an estimate, albeit a crude one, of the possible labor supply impact of a national program of free day care centers.

A Model of the Labor Supply Response to Free Day Care Centers

The five sets of independent variables are similar but not identical to those used in Section I to analyze the determinants of the use of nonfamily child care arrangements. These are designed to reflect (1) the family's ability to provide for child care by using other family members; (2) the labor market behavior and attitudes of the mother; (3) the effect of income on labor supply; (4) the mother's tastes and preferences; and (5) regional and residential differences in employment opportunities. The variables included in each of these categories, along with their expected relationships, are described below. The dependent variable is a dichotomy which assumes the value of 1 if the mother stated unconditionally

[24] Hagen (1973); Keyserling (1972); and National Association for the Education of Young Children (1973).

[25] A related question is the circumstances under which employed mothers who are not currently using center care would prefer to do so, or would be willing to do so if such care were available at a cost no greater than what the woman was currently paying. This question was examined by a multiple regression analysis, using the same independent variables as in Section I. The only variables significantly related to the desire for day care centers were the per capita earnings of the family and the mother's average hourly earnings. In the light of these findings, it is noteworthy that Title XX, which recently replaced Title IV of the Social Security Act, liberalized the eligibility requirements for social services such as child day care. It appears that this amendment represents a step in the direction of meeting the expressed desire for center care among low income families who were not eligible for these services under Title IV.

149

that she would look for employment if provided with a free day care center and a value of 0 otherwise. The data are restricted to mothers with at least one child three to five years of age who were not in the labor force at the 1971 survey date but who had worked at some time during their lives.

Family composition Women with potential child care resources within the family such as a teenaged son or daughter, husband, or other adult relative are expected to be less inclined to search for work with the provision of free day care centers. In other words, women with these resources already have potential child care sources, and are thus more likely to be out of the labor force by choice. Since existing day care centers cater primarily to children of preschool age, it is hypothesized that a mother who has both an infant child and a preschooler will be more likely than one with only a preschooler to wish to enter the labor force if day care facilities were made available to her.

Mother's labor market behavior and attitudes A woman's attitude toward market work, her own recent exposure to the labor market, and her expressed interest in taking a job in her local area are factors which are hypothesized to be positively associated with the probability that she will look for work if provided with a free day care center.[26] The more favorable a mother's attitude toward market work, the more likely she was to use nonfamily care in both 1967 and 1971. Therefore, it seems reasonable to expect an analogous relationship to the probability of engaging in market search with the availability of free center care. Similarly, recent work experience is expected to increase the probability that she would enter the labor force with the provision of free center care. Finally, women out of the labor force include both women who wish to work and those who do not. Therefore, the provision of free day care centers would be expected to attract into the labor force a disproportionately greater number of women who have expressed an interest in working outside the home than of those who have not.[27]

---

[26] Recent work experience is measured by a 0-1 variable which has the value of 1 if the women worked at any time since the 1969 survey (or the 1968 survey for women not interviewed in 1969). Her expressed interest in working is measured by her response to the question, "If you were offered a job by some employer in this area, do you think you would take it?" She was assigned a value of 1 if she responded affirmatively to this question and 0 otherwise.

[27] This is not to say that mothers who were not interested in taking a job would not enter the labor force if free day-care services were provided, but only that in relative terms they would be less likely to do so. The availability of such centers might well have a demonstration effect and draw women into the labor force. However, the opposite effect is also possible if women were not satisfied with the form that such centers ultimately took.

143

The "income" effect The labor supply of women, particularly married women, varies inversely with family income (exclusive of the woman's contribution). Therefore, it is hypothesized that the propensity to search for employment will be negatively related to per capita family earnings.

Tastes and preferences The measures of tastes and preferences are educational attainment and race. There are two competing hypotheses for the educational variable. Education may be a proxy for the woman's earning potential, which would lead one to expect a positive relationship between propensity to seek work and education. On the other hand, recent empirical evidence suggests that the negative effect of small children on the labor supply of women varies directly with education.[28] That is, the higher the educational attainment of the mother, the less likely she is to be in the labor force if she has small children. Hence, this should be reflected in a negative coefficient for the educational attainment variable. Since national opinion polls indicate that proportionally more blacks than whites report that they would search for work with the provision of day care centers, it is hypothesized that the coefficient of the race variable will be positive.[29]

Employment opportunities The effect of employment opportunities is measured by two variables. The first is an index which measures the demand for female labor in the local labor market. This variable is expected to be positively related to the likelihood of entering the labor force. The second is a proxy for regional differences in female earnings. Among the Census regions, the Western region appears to offer women a significant earnings advantage.[30] Therefore, it is hypothesized that residing in the West will be positively related to the probability of engaging in market search.

The results[31] Among women who were out of the labor force in the 1971 survey week and who had at least one child three to five years of age, 18 percent, or slightly more than one in six, expressed an interest in

[b] Two-tail significance test used for this variable.

searching for work with the provision of a free day care center.[32] Of the variables reflecting the availability of family child care sources, only the presence of an adult relative in the household was statistically significant, being negatively related to the likelihood of the mother's entrance into the labor force. This finding is consistent with the negative relationship between utilization of nonfamily care and the presence of a teenaged child in 1971 found in Section I of the chapter. Neither recent previous work experience nor attitude toward market work appeared to affect the probability of job search. However, having an expressed interest in engaging in market work was positively associated with the probability of looking for work in the event a free day care center were available.

Both educational attainment and race were significant. The significant negative relationship for educational attainment provides further evidence of a possible negative substitution effect between market and nonmarket work associated with the presence of preschool-aged children. That is, better educated women appear to attach a higher value than less educated women to time spent in the rearing of small children, since earnings foregone vary directly with education. As expected, black women expressed a significantly greater interest than white women in looking for work with the provision of day care centers. Furthermore, women living in the West as opposed to other regions of the country expressed a significantly higher interest in engaging in job search. It thus appears that free day care centers are more likely to pull women into the labor force if favorable employment terms such as higher earnings exist.

III SUMMARY, CONCLUSIONS, AND POLICY IMPLICATIONS

An important finding of this research--which resulted in the decision to restrict the analysis to mothers of children between the ages of three and five--is the apparent interaction between variables affecting child care choice and the age of the child for whom the arrangement is being made. In light of that interaction, restriction of the universe was essential because there were simply too few mothers of infants to allow confident estimates of regression coefficients for that group.[33]

---

[32] These findings are supported by the results of recent experimental programs using various child care subsidy schemes combined with some form of a negative income tax. See Ditmore and Prosser (1973). Further evidence from Feldmans' study (1972) in central New York state indicates that the absence of child care is not a major constraint on the labor force participation of low income mothers.

[33] This statement obviously casts some doubt on the validity of the conclusion regarding the existence of an interaction effect. However, it is the author's opinion that the issue is of sufficient policy importance to warrant additional statistical analysis using a sample of mothers large enough to examine both the effect of the child's age and race on choice of child care. Until this is done, the finding of age interaction remains tentative.

The availability of other family members within the household reduced both the probability that a working mother arranged for care outside the immediate family while she worked and the probability that a nonworking mother would be induced to enter the labor force by the existence of a free day care center. Although a favorable attitude toward the propriety of mothers working outside the home was positively associated with selection of nonfamily modes of child care in both 1967 and 1971, it was not related to the probability of searching for work with the provision of free center care.

In 1967, per capita family earnings excluding the wage and salary income of the respondent, the respondent's average hourly earnings, and her educational attainment were positively associated with reliance on nonfamily child care. However, by 1971 these variables were nonsignificant. These results coupled with the growth in regional disparities in the use of nonfamily child care between the South and West and other regions of the U.S. suggest a fundamental change in the factors explaining variability in the use of different forms of child care. The 1967 to 1971 period was characterized by a rapid expansion in the number of programs and federal expenditures for child care services. These expenditures were largely directed at low income families, and could be spent on care either in the home or outside the home.[34] Thus, the dramatic expansion in child care services to the poor may well account for the absence of significant variability in the earnings variables by 1971.

The analysis of the probable labor supply impact of free center care indicated that approximately one out of every six mothers who were out of the labor force and had at least one preschool child, would search for employment if free center care were available. Among the factors related to the probability of looking for employment with free center care, the most important was having a predisposition to seek employment. In other words, a policy such as free day care centers would have its greatest impact on women who were only "marginally" out of the labor force. In addition, the effect would be more pronounced among blacks than among whites and in areas with favorable employment opportunities for women.

---

[34] However, the federal rules governing the allocation of these monies did specify that certain "qualitative" requirements as outlined by the Federal Interagency Day Care Requirements be met if care were provided by a member other than the immediate family. These requirements were generally ignored by state welfare agencies. Little effort was made by regional federal officials to check compliance with the federal legislation. The emphasis was primarily on the quantity of services made available to low income families rather than its quality. These remarks are based upon an unpublished HEW audit of federal child care expenditures.

The child care issues discussed and analyzed in this chapter have dealt with patterns of child care utilization among employed mothers and the potential impact of free center care on the labor supply of mothers with preschool children. Although a number of child care issues has been presented, it must be kept in mind that they represent only a portion of the total set of policy questions relating to child care. The analysis has addressed issues which reflect the needs of women who either worked outside the home or wanted to work outside the home, but has ignored the important issues related to the educational and developmental needs of young children. To treat them as separate issues is convenient from the standpoint of data analysis, but artificial both from the standpoint of national policy and the family decision making process. That is, a mother's decision to work is influenced by the child care alternatives available to her. She and her family take into account not only the costs of the various arrangements among which she might choose but also the likely impact of a potential mode of child care on the child's own happiness and well-being.

CHAPTER VI

THE ECONOMICS OF FAMILY MIGRATION

Steven H. Sandell*

In this chapter an economic model is developed to explain the decision of families to migrate and the effect of migration on the labor market earnings of men and women. The basic tenet of the model is that family utility, (defined operationally as the labor market earnings of the husband and wife, the wife's leisure, and the husband's leisure) is maximized. The model suggests that the labor market involvement of the wife is a significant consideration in a (husband-wife) family's decision to migrate.

The data from the National Longitudinal Surveys are well suited for empirical testing of the model. The Surveys provide the opportunity to examine the change in labor market earnings of families and individuals over a five-year period. The availability of data on migratory status as well as on other personal characteristics of women and their families permits the direct testing of the model.

The finding that although family labor market earnings of migrants increase faster than nonmigrant families' earnings, the earnings of migrant wives increase slower than the earnings of nonmigrant wives is consistent with the model. There is evidence that the improvement in the husband's earnings associated with geographic mobility is greater than the earnings loss suffered by the wife, making the decision to migrate rational from the point of view of the family unit. The negative relationship between the wife's employment prior to the move and the likelihood of family migration supports the main implication of the model.

The chapter is organized in the following manner. Section I reviews previous research on geographic mobility that considers female migration either explicitly or indirectly while examining male migration. In Section II a family utility maximization model is used to derive implications with regard to the probability of migration by the family and the effect of migration on individual and family earnings. In Section III these implications are tested using multiple regression analysis of data for women who were 35 to 49 years of age in 1972. The implications of the empirical estimates for the economic welfare of women and for interpreting the observed earnings distribution are discussed in Section IV.

153

I SURVEY OF THE LITERATURE

> Woman is a greater migrant than man. This may surprise those who associate women with domestic life, but the figures of the census clearly prove it.[1]

In spite of this early statement by Ravenstein, the separate study of geographic mobility among women has been virtually ignored by students of migration. The reason is straightforward: married women are assumed to migrate because their husbands migrate.[2]

Lansing and Mueller, for example, virtually ignored women in their large-scale study of geographic mobility. The omission is based on "the general finding that migration rates are in general similar for the sexes. Ordinarily husband and wife migrate together. It is that fact which has made it possible to focus attention on the mobility of heads of families in the present study."[3] Gallaway, in comparing the earnings of migrant men and women to the earnings of their nonmobile counterparts using Social Security data from 1957-1960, found that "while female mobility flows are uniquely different from those for men and the most obvious hypothesis for explaining this would be that of 'tied' movement among women."[4]

Some researchers, however, have analyzed migration rates of men according to their marital status and, where applicable, the employment status of their wives. A search of the existing literature reveals only relatively simple tabular analyses and no explicit modeling.[5] This literature has been written mainly by demographers and sociologists.

Ann Miller found that women interstate migrants had lower subsequent labor force participation than male interstate migrants and, after differences in marital status composition for each age group are removed,

---

[1] Ravenstein (1885), p. 196.

[2] For nonmarried women who move, application of male migration models is presumably appropriate.

[3] Lansing and Mueller (1967), p. 40. (In their appendix the authors report a regression equation [dependent variable: family moved in the year before the survey] where the coefficient for the variable "wife is working" has the expected negative sign and a t-value of 1.34).

[4] Gallaway (1969), p. 57.

[5] Becker (1974, p. 1007), however, writing about social interaction, illustrates a more general argument about decision making of the head of household with the following statement: "For example he would not move to another city if his spouse's or children's income would be decreased by more than his own income would be increased."

"white females who were interstate migrants were less likely to be in the labor force than the average."[6] Unfortunately, Miller could not obtain migration data cross-classified by marital and labor force status simultaneously, so her evidence is only indirect. Also, as Masnick (1968) pointed out, she used labor force status after the migration period rather than at the outset, so inferences about the cause of the migration could be misleading.

Using data from the 1970 Census, Larry Long (1974) found that men whose wives worked in 1965 were less likely to have made long distance (interstate) moves between 1965 and 1970 than men whose wives were not employed in 1965. He also found that the likelihood of a wife dropping out of the labor force was increased by a long-distance move. Since certain factors (e.g., husband's education) that may influence the probability of migration may also be related to labor force participation of the wife, Long's simple tabular analysis is only suggestive and not conclusive.

While it is undoubtedly true that most migration involves family units and that the migration of husband and wife occurs jointly, the possibility that the wife's welfare is considered in the family's decision to migrate should not be ruled out. It is at least desirable to study the effect of migration on women's earnings and to test the hypothesis that the wife's employment is considered in the decision to migrate. These are the objectives of this chapter.

II A THEORY OF FAMILY MIGRATION

The Model

In our development of a two-location, work-leisure choice model nonpecuniary benefits from working or living in either location are ignored. The family is assumed to attempt to maximize its utility, which is posited to depend on total family income, the wife's leisure and the husband's leisure. Total family income is a function of the wage rates of husband and wife and the amount of labor each offers.[7] The present model differs from the standard labor supply model in that the family is allowed to migrate, thereby changing husband's and wife's wage rates. If the family does migrate, moving costs are subtracted from total family income.

---

[6] Miller (1966), p. 61.

[7] We make the simplifying assumption that family income consists of only the labor market earnings of the husband and wife. Inclusion of nonlabor income or labor market earnings of other family members would not change the conclusions.

The choice of residence depends not only on the wage rates obtainable by the husband and wife but also on their tastes for market work. A high potential wage for the wife in a new location would not provide an incentive for the family to migrate if the wife would not choose to work at that wage. Hence, for families where the wife would not work at any conceivable wage, the decision to migrate becomes a function of the husband's labor market opportunities only. If the wife is willing to work at certain wage rates (the husband's wage is also a determinant of the number of hours the wife offers to the labor market), then her labor market opportunities become a consideration in the family's location choice.

The greater utility achieved in the new location for the migrant family can be associated with a change in its labor supply. Thus the new set of wage rates available to the migrant family can lead to increased income and the same amount of leisure, increased leisure at the same level of income, increased leisure which more than compensates for reduced family income, or increased family income which more than compensates for reduced leisure. It is also possible for the total family labor supply to remain unchanged while the wife and husband change their individual hours of work in response to the new market wages.[8]

---

[8] In more formal terms, the model may be represented by the four equations shown below. Equation 1 sets forth the determinants of family utility. The time and budget constraints depicted by equations 2a, 2b, and 3 are similar to those generally employed in the conventional theory of labor supply. Equation 4 indicates the possibility of the family's changing its budget constraint through migration.

$$U = U(L_w, L_h, Y_f) \tag{1}$$

$$D_w + L_w = \bar{T}_w \tag{2a}$$

$$D_h + L_h = \bar{T}_h \tag{2b}$$

$$Y_f = Y_w + Y_h = W_w D_w + W_h D_h \tag{3}$$

$$Y'_f = Y'_w + Y'_h - M = W'_w D'_w + W'_h D'_h - M \tag{4}$$

where: U = family utility

L_w = the wife's leisure (including non-market work)

L_h = the husband's leisure

Y_f = total family (labor market) earnings

D_w = the wife's labor supply

As a consequence of migration, the family faces a new set of temporary and permanent market prices on which it bases its behavior. Since there are costs to job switching, and since job search often requires flexible hours, newly migrant women might refuse low-paying jobs that would be immediately available in order first to search the new labor market extensively. In addition, the increased value the family places on the wife's time in setting up the new household might initially keep her out of the labor force. Hence, we would expect to observe higher unemployment rates and lower labor force participation among new migrants than among other married women.

Fertility plans, by differentiating the costs associated with moving among families, can affect migratory behavior. If the wife were planning to drop out of the labor force irrespective of the decision to move, the cost to the family of setting up a household in a new location is reduced and there is a greater likelihood of migration. On the other hand, if as a result of migration the wife's wage rate is decreased or the husband's wage rate is increased, then she may decide to work fewer hours (or not at all) and revise her fertility plans.

The model can be extended to consider explicitly the welfare of children and other family members. Family migration may impose a cost on children through interruption of schooling. In order to minimize this cost, inter-city migration is likely to be timed to occur during the summer months when schools are not in session. Families with school-aged children are less likely to move than otherwise similar families.

D_h = the husband's labor supply

$\bar{T}_w$ = the wife's total available time (a constant)

$\bar{T}_h$ = the husband's total available time (a constant)

Y_w = the wife's (labor market) earnings

Y_h = the husband's (labor market) earnings

W_w = the wife's wage rate

W_h = the husband's wage rate

M = moving costs

Y'_f, Y'_w, Y'_h, D'_w, D'_h, W'_w, W'_h, L'_w, L'_h are the respective variables after migration has taken place.

Search Behavior, the Wife's Employment, and Geographic Mobility

In terms of the foregoing model, the employment position of the wife will influence the family's migration behavior only if it affects the likelihood that the family's utility will increase by changing residence. This influence can be indirect, affecting job search behavior that precedes or coincides with migration.

The model presented describes the family migration decision when the labor market options in a distant labor market are known. It is useful to extend the model to incorporate rational search behavior for the family. Following McCall (1970) and Gronau (1971), geographic job search will occur if the expected return to that search exceeds its cost.

In a family context, the reduction in the earnings of a spouse is a cost of migration. Since this reduction is potentially quite large for the husband, it often does not pay for the wife to search for a job in a distant area until the husband has obtained satisfactory employment there. Hence, given the low market wage opportunities for many married women, their husbands' employment will preclude their initiation of job search outside of the area of current residence.[9] Likewise, potential reduction in the wife's earnings is considered by the husband to be a cost of a geographical job change on his part and will constrain both his search behavior and actual family migration.

The wife's working makes one type of job search extremely costly for the husband: moving first then searching for a job on arrival at the destination. Husbands whose wives are working are likely to devote relatively more resources to local than distant labor market search compared to husbands who are the sole family breadwinners. The latter, *ceteris paribus*, are then more likely to obtain acceptable job offers in distant regions.

If rational job search procedures are followed, the probability of an improvement in total earned income as the result of migration is lower for a two-wage-earner family than for a family with only one person in the labor market. Consider, for instance, a geographic change that would increase the present value of husband's earnings by $1,000, where the moving costs are $500. Suppose there are two otherwise similar families, one where the loss (or change) of the wife's job will result in a decrease in the present value of her earnings of $600 and one where the wife does not work (hence, no dollar net loss). It is obvious that the move would be worthwhile for the family with the wife out of the labor force but not for the family with the working wife. Hence, consideration of the wife's labor market earnings in this example makes one family's migration unlikely, and the other family's migration probable.[10]

---

[9] The smaller the amount of distant job search a spouse engages in, the lower is the likelihood that person will exert a positive influence on the decision to move. Stigler (1962) has shown that the optimal amount of job search is positively related to the amount of time expected to be spent on the job in the future. Since the average expected labor force participation for married women is less than that of married men, husbands will, on average, conduct more search than their wives. Our explanation of search behavior of two-labor-market-participant families is based on the existing male-female earnings distribution and on the labor force participation pattern of married women. If their expected period of labor force participation increases, married women will more likely initiate geographical job search.

Since it is reasonable to assume that the wife will search for a job in a different geographic area only after the husband first receives a job offer in that area, the likelihood that the wife's labor market opportunities will have a positive influence on the decision to migrate is minimal.[11] Hence, we would expect to observe, ceteris paribus, less geographic movement among families where both husband and wife are working and expect to remain in the labor market than among other families.[12]

---

[10] Net migration has taken place from low wage areas to high wage areas. However, if an individual often can find a job in a low wage area that pays more than the one he presently has, some migration will be in the opposite direction. If the wage offers to males and females are positively correlated, we would expect families with both husband and wife working to be more likely than other migrant families to move from low to high wage areas.

[11] It is possible for the wife, faced with a different budget constraint, to reduce her labor supply in the new location. That is, given the wage rate she could earn and the increased earnings of her husband, the family places a higher value on her time than the market does so she increases her leisure or nonmarket work and reduces her hours of work. While this action lowers a cost of moving, it cannot be considered an incentive to migrate. It is clear from the text that a reduction in the wage offered the wife (ceteris paribus) can only be a deterrent to migration. Hence, the only remaining influence on both migration and the wife's labor supply is the change in the husband's earnings. The increased utility from the wife's changed labor supply behavior is an effect of the husband's increased earnings and not by itself sufficient incentive for family migration.

[12] Studies of male migration (see Bowles [1970], Schwartz [1968], and Sjaastad [1962]) have shown that age and education affect the likelihood of migration. These factors are ignored in the model presented in order to concentrate on the effect of the wife's employment.

159

Family Income and the Migration Decision

In this section a model of the migration decision is presented based on the assumption that the family's objective is to maximize total family income. Let the present value of the family's earnings stream be equal to the sum of the present value of the labor market earnings of the husband plus the present value of the labor market earnings of the wife.[13]

If a family acts rationally and decides to move, it must expect the present value of the returns to migration to exceed the cost of migration. That is, the expected earnings stream after migration must be greater than the expected earnings without migration. For the household with two persons willing to work it is not possible to say anything about the income stream of either spouse separately without additional information. Maximization of family earnings implies that the sum of the two persons' income streams must increase. This can happen if both increase or if the increase in the income stream of one spouse is greater than the reduction of the income stream of the other (plus the cost of moving).

---

[13] Formally, this can be represented as:

$$(5a) \quad \sum_{t=1}^{t=R} Y_{ft} (1+i)^{-t} = \sum_{t=1}^{t=R} Y_{wt} (1+i)^{-t} + \sum_{t=1}^{t=R} Y_{ht} (1+i)^{-t}$$

or

$$(5b) \quad F = W + H$$

where: Y_{ft} = family's earnings in year t (without migration)

$Y_{wt}(Y_{ht})$ = the wife's (husband's) earnings in year t

i = rate of discount

R = year of retirement; R_w, (R_h) is the year of retirement for the wife (husband)

F, W, H = the present value of family, the wife's and the husband's lifetime earnings (without migration)

M = the present value of the moving cost

Y'_{ft}, Y'_{wt}, Y'_{ht} = earnings after migration

Y', W', and H' = the present value of earnings after migration.

160

The motivation for a family's migration could be due solely to improvement of the husband's earnings if the negative effect on the earnings of the wife is offset by the husband's improvement.[14]

The model immediately yields a testable hypothesis: Migrant families expect their total labor market earnings stream after migration to be greater than their expected earnings would have been without migration. Assuming that expectations are fulfilled (in the aggregate), and using earnings in a single year as a proxy for the earnings stream, the hypothesis can be tested with the NIS data. When relevant personal and labor market characteristics are controlled, it is hypothesized that the increase in labor market earnings of migrant families (between a year before and after migration) should be greater than the increase for nonmigrant families.[15] For married women the relevant earnings figure is the sum of their own plus their husband's labor market earnings while for single women only their own earnings are relevant.

---

[14] Excluding nonpecuniary cost and returns, all of this can be stated in the following terms:

$$F' - M > F. \quad (6)$$

If moving costs are positive and the family moves, (6) implies:

$$H' + W' > H + W \quad (7a)$$

if both husband and wife are willing to work

$$H' > H \quad (7b)$$

if only the husband is in the labor market

$$W' > W \quad (7c)$$

for the household with only the wife in the labor market.

While this model is developed for husband-wife families, it can be used to analyze the migration of single women or single men since their behavior would be identical to that of husband-wife families where only one person worked.

[15] Factors other than migration (e.g., level of education and age) affect the change in a person's earnings. Theoretical explanations of the effects of these variables can be found in Becker (1964).

II EMPIRICAL RESULTS

In this section, hypotheses developed from the model of family migration are subjected to empirical tests. These involve two aspects of migration: the determinants of migration and the effect of the geographic movement on family and individual earnings.

The Likelihood of Migration

The dependent variable used in the regression analyses is a dummy variable with the value "1" if the family is migratory and the value "0" otherwise.[16] A family is considered to have migrated if the respondent reports that her county or SMSA of residence is different in at least one survey year (1968, 1969, 1971, and 1972) than it was in 1967.[17]

The probability of a family's moving depends on labor-market-related personal characteristics of each labor force participant. If migration is looked at as an investment, it is clear that the incentive to move should decrease with age, since the length of time for the person to reap benefits from moving decreases and the psychic costs of moving probably increase with age. Since the geographic scope of the labor market is likely to be larger for the highly educated than for the less educated, migration is expected to be positively related to education.[18] The presence of school-aged children is expected to inhibit family migration.

---

[16] Because of econometric problems associated with estimation when the dependent variable can only take the values "0 or 1," (Theil [1971], pp. 632-633) logit analysis has also been used. The dependent variable was converted to the natural logarithm of the relative probability of migrating (i.e., $\ln \frac{P}{1-P}$. These results, which yield the same conclusions as the ordinary least squares regressions, are shown in Appendix Tables 6A-1 and 6A-2.

[17] Approximately 11 percent (248) of the families of white married women (same spouse present all survey years) are defined as migrants under this definition. Between 1968 and 1971, (the only period to which data on distance moved is available), 68 percent of the migrants moved more than 100 miles and 81 percent moved more than 50 miles. Seventy-eight percent of the 1967-1971 migrants were living in the same Census division in 1971 as in 1967. Since attrition from the sample during the later years of the survey has occurred when respondents moved without leaving a forwarding address, our estimates probably understate the magnitude of family migration.

[18] Bowles (1970) and Schwartz (1968) explain the positive correlation between migration rates and educational level by hypothesizing that those with more education have better access to labor market information for distant regions.

For our purposes, however, the variables alluded to above may be considered to be control variables; our chief interest lies in examining the effect of the wife's labor force commitment on the migration decision. Since it has been shown that a family is probably less likely to improve its economic position by migration if two persons rather than one are working, the likelihood that a family will move is expected to be inversely related to the labor force commitment of the wife. Thus, the crucial coefficients are those for (1) the dummy variable for employment status, 1967 and (2) tenure with 1967 employer.

The regression results for white women are presented in Table 6.1.[19] The regression coefficients exhibit the expected signs. The significant (at the 1 percent level, one-tail test) negative signs of the regression coefficients for these variables when used separately in the equations confirm our hypothesis. That is, the families of women who work are less likely to move than are families of other married women, and the likelihood of migration decreases the longer they have worked for their 1967 employer.

When the only independent variable in the regression equation is employment status, its regression coefficient can be interpreted as the gross effect of working on the probability of family migration. The respective net effects of employment status and tenure on family migration are the coefficients of these variables in those equations where the husband's age and education are also included as independent variables. The positive differential between the gross and net effect of the wife's labor force participation on migration is an indication of the correlation of some of the other independent variables with both the dependent variable (migration) and the employment status of the wife. In particular, greater educational attainment of the husband is associated both with lower labor force participation of the wife and with a higher probability of mobility for the family.

Table 6.2 is constructed by using the information from equation (4) for a (white) family with the sample's husbands' mean education (12.0 years) and husbands' mean age (40.4 years). We find that the likelihood of family migration between 1967 and 1972 is 14.0 percent if there were no children in the household and the wife did not work in 1967; the likelihood is only 4.5 percent if there were school-aged children present and the wife's 1967 job tenure was 10 years. Not only does family migration vary inversely with the wife's employment status, but this inverse relationship is stronger the longer she has worked at her job (bottoming out at 14 years).

The Effect of Migration on Earnings of Husband-Wife Families

[a] The universe consists of married white respondents whose spouses were present in all survey years. The dependent variable is a dummy variable with the value of "1" if the respondent reports that her SMSA or county of residence in 1967 was different than her residence in 1968, 1969, 1971, 1972 and "0" otherwise.

(husband plus wife) or husband's labor market earnings represents the change in earnings associated with migration. By controlling for personal characteristics (i.e., age and education) and base year earnings it is possible to isolate the net effect of migration on earnings.[20] By comparing the estimates of migration coefficients for change in family's earnings with those for change in husband's earnings, it is possible to estimate the effect of migration on the wife's earnings. Table 6.3 shows the regression results when change in husband's earnings and change in family earnings between 1966 and 1971 are the dependent variables.[21]

Table 6.2 Probability of Family Migration, 1967 to 1972, by Wife's Job Tenure and Presence of School-Aged Children

(Percent)

Presence of children, aged 16-18 in family Wife's tenure at 1967 job	No children aged 6-18	Any children aged 6-18
0 Years	14.0	11.4
5 Years	9.6	7.0
10 Years	7.1	4.5

---

[20] To the extent that earnings of migrants prior to their move are larger than those of nonmigrants, the observed earnings gain to migrants measured in absolute terms might only reflect equivalent increases in relative terms. Controlling for base year earnings eliminates this ambiguity in the interpretation of the earnings change. The estimates of the effect of migration on earnings, however, are not affected by the inclusion of base year earnings as an independent variable.

[21] There were only six migrants in the sample of 219 black women who reported the information necessary for the earnings analysis. The results for these women are not reported here because of the small sample size.

[a] Universe consists of married white respondents whose spouses were present in all survey years and who had lived in 1967 SMSA or county of residence for at least two years. For means and standard deviations of the variables, see Appendix Table 6A-3.

The control variables in the regression equation are worthy of some discussion. The negative coefficient for husband's age (experience) and the positive coefficient for the variable reflecting the number of years of education are consistent with the theory of human capital. Since the dependent variable is change in earnings we are, in effect, examining an experience/earnings profile. Since theory suggests that investment in on-the-job training is positively associated with education and negatively associated with age, it is expected that younger individuals and more educated individuals will exhibit, *ceteris paribus*, faster earnings growth than their older or less educated counterparts. Thus our finding using the panel data is consistent with the cross-sectional results of other researchers.[22]

Table 6.4 shows the net effect of migration between 1966 and 1971 on the labor market earnings of the husband and on the combined labor market earnings of the husband and wife. The earnings of migrant husbands increased more than those of nonmigrant husbands, and family earnings of migrants increased more than those of nonmigrant families. The difference between these two figures, obtained from regressions using the same sample, implies that the earnings of nonmigrant wives went up faster than those of migrant wives. For example, the coefficient 952 indicates that the total labor market earnings per year of a migrant family grew $952 more than an average nonmigrant family between 1966 and 1971. While on average the migrant husband's earnings grew by $1,174 more than the earnings of a nonmigrant husband, a migrant wife's yearly earnings grew $222 *less* than those of a nonmigrant wife. That is, although migration seems to lead to an improvement in the earnings of the family unit, implying that the move is economically rational, the earnings position of the wife deteriorates as a result of the move.

The results (see Table 6.4) show that for families that moved *more than once* between 1967 and 1971 (multiple migrants) and for those families that moved because the husband received an *intrafirm transfer* between 1968 and 1971, labor market earnings grew substantially faster than the earnings of other migrant families. The reason for the above-average gain can be traced to the improvement in the earnings of the husbands, since the wives in these groups fared worse than the wives of all other migrants.

To provide some insight into the source of the earnings loss to migrant wives, we regressed the change in the number of weeks worked by the wife on the migration dummy variables and the number of weeks she worked in 1966 (Table 6.5). The statistically significant negative coefficients for the migration dummies in these equations indicate that the slower growth

---

[22] Since, as we have seen in the likelihood-of-migration equations, the probability of migration is positively associated with education and negatively associated with age, the omission of age and education from the change-in-earnings equation would lead to overstatement of the returns to migration.

Table 6.4 Difference in Growth of Migrants' and Nonmigrants' Annual Earnings between 1966 and 1971

Year, frequency, or reason for migration \ Group	Family's earnings (dollars per year)	Husband's earnings (dollars per year)	Wife's earnings (dollars per year)
1967-1971 Migrants	952	1,174	- 222
Multiple migrants	3,992	5,120	-1,128
Intrafirm transfers (1968-1971)	2,149	2,490	- 341

in the earnings of migrant as compared to nonmigrant wives is in part due to reduced market work. An examination of the change in weeks worked for 1969-1971 migrants shows that the difference in weeks worked between migrants and nonmigrants narrows with the passage of time. This implies that the initial reduced work effort represents a cost of migration for the wife rather than a change in taste for work. It seems to be advantageous for the family if the migrant wife temporarily foregoes market work in order to set up the new household as well as to search for a more desirable job.[23]

Marital Status and the Effect of Migration on Women's Earnings and Labor Supply

A clear implication of the model is that migration will occur for single women (all one-person families) only if the move is expected to lead to an increase in utility. Since this condition does not necessarily hold for married women (or any individual members of multi-person households), we would expect to observe, on average, a greater increase in the personal welfare due to migration for single than for married women. While own earnings may not be a good proxy for welfare for all married women, change in earnings may be regarded as a first approximation to change in welfare for those women who desire to work full-time. Hence, changes in earnings and in weeks worked of migratory women who worked more than 1,400 hours in 1966 have been analyzed, using a sample containing both married (spouse present) and never married women. Although we found that single migrants fared much better than married migrants in terms of changes in earnings, in part due to their greater number of weeks worked after migration, there were only ten single women in the sample who migrated between 1967 and 1971. Hence, the empirical support for the model was not statistically significant and is not reproduced here.

III CONCLUSIONS

The empirical results are consistent with the theory. On the one hand, the labor market orientation of the wife seems to be taken into consideration in the decision of a family to migrate. On the other hand, the migration of the family increases the earnings of the husband and decreases (relative to what it would have been) the labor market earnings of the wife. In contrast, the earnings of never-married women increase after moving. Since family earnings have been shown to increase as a result of migration, the decision to migrate is rational from the viewpoint of the family.

---

[23] An examination of the weeks unemployed for migrant wives for the survey periods close to the time migration took place seems to indicate that most of the reduced work effort is due to withdrawal from the labor force rather than job search.

The data are consistent with the hypothesis that the contribution of the wife to family income is considered, but that the positive effect of migration on husband's earnings outweighs the negative effect of migration on the wife's earnings. If the participation of women in the labor force continues to increase, this may have a limiting effect on the geographic mobility of the male labor force. Moreover, to the extent that female employment becomes less casual and women develop greater attachment to their jobs (i.e., there is more firm-specific training and concomitant earnings premiums), this effect could be intensified.

This study documents the often harmful effects of migration on the earnings of married women. This is not to say that migration is involuntary for them in the usual sense, but to emphasize that what is beneficial to the welfare of the family (and the wife as a family member and consumer of family income) is nevertheless consistent with lower labor market earnings of the wife. The interruption of women's careers is often an effect of migration and the maximization of the utility of the family unit. We have uncovered no evidence that the labor market earnings of the husband are a more important consideration than those of the wife. Our data only tell us that, given the jobs held by men and those held by women, the earnings improvement for men resulting from geographic movement is large enough to offset their wives' loss in market earnings. Furthermore, there is some evidence that the wives' loss in market earnings is only a temporary phenomenon due in part to reduced market work in the period immediately following the move.

Finally, it seems that we have shown an additional reason for differences in the earnings of men and women. Family decision making often restricts the wife's choice of job and reduces her continuity of employment. An employer's awareness of the possibility of her leaving her current residence and, hence, her current job in spite of pay premiums which would make this job the best available to her, will be likely to lower his investment in her human capital. Even if on average the tenure of males in particular firms is no greater than that of females, the lack of influence of differential salary payments on the behavior of some married women employees might rationally lead employers to treat female and male employees differently. On the other hand, if the woman's geographic mobility is restricted by the permanence of her husband's job, the employer is able to discriminate and pay her lower wages than she could be receiving at an alternative job (in a different geographic area).

CHAPTER VII

VOLUNTARY JOB CHANGING

Herbert S. Parnes and Gilbert Nestel*

Labor mobility--the movement of workers among jobs--is a process that imparts flexibility to the utilization of human resources at the same time that it contributes to the pursuit of individual self interest. Conventional economic theory assumes that workers make voluntary job changes in response to differentials in "net economic advantage," especially wage differentials. To the extent that wage differentials signify the relative social importance of different jobs as measured by the market, when workers move in the direction of higher paying jobs they are at the same time increasing their contribution to the social product.

Interest in labor mobility, then, stems both from a desire to examine the allocative efficiency of the labor market and from a concern for the degree to which the labor market actually serves the interests of the individual. In this paper our focus is on several aspects of the voluntary interfirm mobility of women in their thirties and forties. The paper is divided into four major sections. In Section I a conceptual framework for the empirical work is presented. Section II contains an analysis of the propensity of women to make job changes. A question contained in the 1972 interview schedule was designed to permit this kind of analysis: "Suppose someone in this area offered you a job in the same line of work you are in now. How much would the new job have to pay for you to be willing to take it?" Each respondent's answer was related to her current average hourly earnings, yielding a measure of the degree of attachment of the woman to her current employer or, what amounts to the same thing, her propensity to respond to more attractive alternatives elsewhere. The analysis will be directed at identifying the factors associated with variation in propensity to change jobs.

The third section of the paper analyzes the factors related to the likelihood of an actual voluntary job change between 1969 and 1971 among women who were employed in both years.[1] The fourth section is devoted to

---

*We are grateful for the competent research assistance of Randall H. King, Malcolm C. Rich, and Shu-O Yang.

[1] It is not possible to examine voluntary job changes over the entire five-year period covered by the surveys, since it was not until the 1969 interview schedule that voluntary and involuntary job separations were differentiated. Thus, the alternatives were to examine job changes between 1969 and 1971, between 1969 and 1972, or between 1971 and 1972. The

173

an examination of the consequences of voluntary interfirm job changes over the same two-year period in respect to earnings and job satisfaction. The purpose, in other words, is to ascertain whether voluntary movement appears to produce higher earnings and/or greater job satisfaction. In each case the voluntary movers will be compared with those who remained in the same jobs and those who were involuntarily separated from their 1969 jobs. In the final section of the chapter, the findings are summarized.

I CONCEPTUAL FRAMEWORK AND METHOD OF ANALYSIS

There is some ambiguity in the use of the term "labor mobility." In much of the economic literature on the theory of labor allocation and wage determination, mobility refers to the propensity of workers to respond to perceived differentials in economic advantage. On the other hand, since measures of propensity are very uncommon, the term "mobility" is also frequently used to refer to the actual movement of workers among jobs. In order to avoid this confusion, we shall use the term mobility consistently to refer to actual job changing. The term "mobility propensity" will be used to refer to the receptivity of an individual to alternative job opportunities. The likelihood that a woman will make a voluntary interfirm job change may be viewed as a resultant of her *propensity* to make such a move and her *opportunities* for doing so.[2] In the remainder of this section we discuss in turn each of these determinants of mobility.

Propensity to Move

The readiness of an employed woman to exchange her current job for a higher paying job in the same line of work may be thought of as being influenced by the relation between a set of her own personal characteristics on the one hand and the characteristics of her job on the other. To begin with, the interaction between the terms and conditions of her employment and her value hierarchy produces a level of *satisfaction* with her job that is hypothesized to be inversely related to her propensity to leave it. That is, the more positive the woman's attitude toward her job, the greater the psychic costs of a separation. However, although job satisfaction is related to propensity to move, the latter is not exclusively a funtion of the former. Characteristics of the worker and of the work situation can

---

1969-1971 option was chosen in order to maximize the comparability of the data with a similar set of data for middle-aged men (Parnes and Nestel, 1974). It also has the advantage of permitting a measure of unemployment experience in the period following the job change.

[2] A number of comparable formulations have been suggested both by labor economists and by organizational theorists. See, for example, Stoikov and Raimon (1968); Parker and Burton (1967); March and Simon (1958), Chapter 4.

combine to produce different propensities to move for workers with the same degree of satisfaction. For instance, a woman who places a high premium on security may be unwilling to sacrifice her seniority despite dissatisfaction with her job on other grounds, while an equally dissatified worker who is less concerned with security may have fewer reservations about leaving.

Propensity to move is expected to be inversely related to tenure in current job for both economic and psychological reasons. Long service provides a degree of protection against layoffs as well as advantages relating to such fringe benefits as vacation allowances and pension rights. In addition, it is reasonable to believe that the social and psychological bonds to a particular work place become stronger with the passage of time. Age is expected to inhibit the propensity to move because of the shorter payoff period for the new job as age increases, and also because the risks associated with a change probably increase with age as the result of typical employer hiring preferences.[3] Marital and family status may also influence the propensity of women to change jobs. It seems likely, for example, that the constraints imposed by marital and familial obligations have an inhibiting effect on the propensity to move in response to wage differentials. In other words, factors like location and work schedule may loom larger than wage considerations in the labor market decisions of married women, especially those with young children. Finally, we introduce into the analysis the race of the respondent not because we are prepared to offer an hypothesis relating to this variable, but simply to ascertain whether there are racial variations in propensity to change jobs.

Opportunities for Movement

The propensity factors outlined above are relevant to the analysis presented in the following section of the paper. However, the likelihood of an actual voluntary job change depends, in addition, on factors affecting the opportunities for movement. These, in turn, are related to labor market conditions and to the characteristics of the worker that measure the extent of her knowledge of alternative opportunities, her initiative and vigor in seeking them out, and her attractiveness to other employers.[4] Our data permit us to develop only a few measures of opportunity for movement. Two of these--age and race--are variables that have already been discussed in the context of propensity to move. In the context of opportunities, age and being black are expected to bear an inverse relationship to the opportunity for movement because of the typical hiring preferences of employers.[5]

---

[3] It might appear at first thought that this factor would not be relevant in the present situation, since the respondent is reacting to a job which she presumably can have. However, since there is no assurance that she will be able to keep the new job, especially in view of the low seniority she will have, it is logical for the woman to take into account the availability of alternatives--and this is influenced by her age.

[4] Cf. March and Simon (1958), pp. 100-106. In the March and Simon formulation, it is the perceived ease of movement rather than the objective opportunities for movement that are referred to.

In addition to these two variables that are conceptually linked to both propensity and opportunity, there are two variables reflecting opportunities alone that we expect to be related to the likelihood of voluntary movement. One of these is a measure of the relative attractiveness of the respondent to other employers; specifically, women whose educational attainment is below average for their occupational category are expected to be relatively less attractive to other employers and therefore less likely to make voluntary job shifts, other things being equal. Second, the likelihood of a voluntary job change is hypothesized to be negatively related to a woman's position in the wage structure, since workers whose hourly earnings are below average for their occupational category are, other things equal, more likely to encounter jobs with positive wage differentials than those whose current wage rates are average or above.[6]

Method of Analysis

The hypotheses outlined above are tested in the following sections by means of Multiple Classification Analysis (MCA).[7] As has been indicated, our measure of propensity to change jobs is based upon responses to an hypothetical job offer. The dependent variable is the likelihood that a respondent reports a willingness to change jobs for some specified wage rate.[8] The MCA technique allows one to calculate for each category of a particular explanatory variable what the proportion of women with a propensity to change jobs would have been had the members of the category been "average" in terms of all the other variables in the analysis. Differences in these "adjusted" proportions among the various categories of a given variable may be interpreted as indicating the "pure" (net) effect of that variable on the propensity to change jobs, controlling for all the other variables in the analysis.

---

[5] It is possible, on the other hand, that affirmative action programs have actually increased the relative job opportunities of black women.

[6] There are clearly additional factors that are related to opportunities in the labor market, but our data base does not permit the development of adequate measures of them. The most obvious of these is the local area unemployment rate. There is abundant evidence that voluntary labor turnover is related to the level of economic activity, and one would therefore expect the likelihood of a voluntary interfirm shift to be inversely related to the level of unemployment in the local area in which the respondent lives. However, when the local area unemployment rate was included as a variable in the analysis, there was no systematic relationship between the level of unemployment and the mobility rate. The same was true, incidentally, in our earlier study based on the NLS data for middle-aged men. We suspect that these results are attributable to the high sampling error in our measure of unemployment. See Parnes and Nestel (1975), p. 103.

[7] Multiple classification analysis is identical to the more commonly used multiple regression analysis with all of the explanatory variables expressed in categorical form, which avoids the assumption of linearity. The constant term in the multiple classification equation is the mean of the dependent variable. The coefficient of each category of every explanatory variable represents a deviation from this mean.

For the analysis of the determinants of an actual job change, the dependent variable is the likelihood of a woman's having made a voluntary change of employer between the interview dates in 1969 and 1971. Since the criterion of a job change is serving with different employers at those two times, it should be noted that a woman who left her 1969 employer but returned prior to the 1971 interview would be treated as not having made a change. By the same token, it is possible for an individual to have made more than one change of employer during the period, in which case the criterion for classifying the move as voluntary or involuntary is the reason for separating from the earliest employer.

In all the analyses, attention is confined to women employed as wage and salary workers. Moreover, because of the tenuous nature of the employer-employee relationship in many of the jobs in agriculture and domestic service, women in those employment categories have been excluded. Finally, we have run separate MCA's for women employed full time and those employed part time. Because there is generally little difference between these two groups in the way in which the explanatory variables are related to the dependent variables, we have pooled them and have introduced an

---

[8] In other words, responses to the hypothetical job offer question are dichotomized and coded in dummy variable form (1 = willingness to change jobs for some specified wage rate, 0 = unwillingness to change for any specified wage rate). We also have experimented with this variable expressed in continuous form, but the results have been less satisfactory. It should be observed that an unwillingness to move except at a very high wage rate, or indeed even a reported unwillingness to move at any wage rate, does not necessarily signify "uneconomic" or "irrational" behavior. Even if one accepts the hedonistic calculus that underlies conventional economic theory, a wage differential should produce a willingness to move only if its expected present value is large enough to exceed the (discounted) costs of moving, the latter including psychic as well as economic costs. While this admittedly seems to suggest that there will always be some wage that would justify a move, a categorically negative response to the question may be interpreted to mean simply that the respondent believes that no wage rate likely to be encountered would be sufficient to compensate the costs of movement.

177

hours-of-work variable in the pooled MCA's. Only the pooled results are shown in the text tables, but the separate MCA results for the full-time and part-time workers are presented in the statistical appendix to the volume.

II PROPENSITY TO CHANGE JOBS

Overall, slightly more than three-fifths of the women who were employed as wage and salary earners in 1972 indicated a willingness to accept an alternative job in the same line of work at a higher wage than they were currently receiving (Table 7.1).[9] Black women manifest a greater propensity to be mobile than white women.[10] Even after adjusting for the other factors included in the analysis, the difference in the proportions of blacks and whites with a propensity to change jobs is 9 percentage points. Contrary to expectations, the propensity of women to change jobs does not vary significantly by age, at least within the 15-year range represented by the present sample. Those in their late 40's are every bit as likely as those 10 years younger to be willing to move to higher paying jobs in the same line of work.

As anticipated, women who are not currently married and who have no children living with them have a higher propensity to change jobs than women who are living with husbands and/or children under age 18. It has been commonly recognized that the domestic obligations of married women inhibit their geographic mobility and thus limit their ability to maximize their positions in the labor market. The present finding suggests that a comparable effect operates even within the confines of a single local labor market. That is, women living with their husbands and/or children appear to be more likely than women without such family responsibilities to have constraints on the kinds and locations of jobs they are willing to take and are thus less likely to be responsive to wage differentials. The significant difference in mobility propensity between part-time and full-time workers is perhaps another manifestation of the same point. Almost two-thirds of the full-time workers in contrast to slightly over half of those working part-time express a willingness to change jobs. Part-time jobs are more likely than full-time jobs to be those which, by virtue of their location and/or scheduled hours, meet the particular requirements of married women.

---

[9] Appendix Tables 7A-1a and 7A-1b contain comparable data for women who were employed full-time and those who were employed part-time, respectively.

[10] We originally stratified the MCA by race. When the application of a Chow test revealed no statistically significant difference between blacks and whites in the slopes of the explanatory variables, we simply introduced race as a variable in analyzing the pooled data.

[a] Adjusted for the effects of all the variables shown in the stub of the table. For method of adjustment, see text.

[b] Analysis confined to respondents employed as nonagricultural and nondomestic wage and salary earners in 1972.

There is clear evidence of the hypothesized relationship between the degree of satisfaction a woman finds in her job and her willingness to consider an alternative. Among those who profess to like their current job very much, slightly over half manifest a willingness to make a job change for higher wages; among the small minority expressing some degree of dislike for their jobs, the proportion is over three-fourths. There is also a significant relationship between length of service in current job and willingness to trade it for another with higher wages. To illustrate, over seven-tenths of those with less than one year of service manifest a propensity to change jobs, in contrast with less than half of those with 15 or more years of service. Between these two extremes, the decrease in propensity with increasing tenure is perfectly regular.

Comparison with Middle-Aged Men

Employed women in their thirties and forties are apparently more responsive to alternative job opportunities than employed men in their fifties and early sixties. As compared with the approximately three-fifths of the respondents in the present sample, somewhat less than half of the NLS sample of middle-aged men interviewed in 1971 expressed a willingness to change jobs.[11] This, of course, is hardly surprising, for there are good theoretical reasons for expecting an inverse relationship between age and mobility propensity, and there is substantial evidence that actual voluntary mobility rates decline with increasing age.[12]

There are also a few differences between the women and the men in the factors associated with a willingness to chahge jobs. For example, among the women there is no evidence of the inverse relationship between mobility propensity and age that prevails in the case of middle-aged men. Also, the racial differential in mobility propensity in favor of black women has no counterpart in the case of the males. Nevertheless, the basic factors conditioning the mobility propensities of men and women appear to be the same. In both cases the influence of degree of satisfaction with and tenure in current job is strong.[13]

III THE CORRELATES OF VOLUNTARY JOB CHANGING, 1969 TO 1971

We direct our attention now to the actual job changes made by those women who were employed as wage and salary workers at the times of interview in 1969 and 1971.[14] Our purpose is to ascertain the factors that are related to the likelihood of a voluntary job change, i.e., one initiated by the woman, rather than her employer (Table 7.2).[15] Overall, about one woman in eight who was employed as a wage and salary earner in both 1969 and 1971 had voluntarily changed employers between the two survey dates.[16] This percentage, it may be noted, was two and one-half times as high as the corresponding proportion for men between the ages of 50 and 64.[17]

---

[11] Unpublished data for an identically defined universe of the middle-aged men. The calculated percentage is 47.5.

[12] Parnes (1970), pp. 44-45. The women also have shorter tenure than the men, and tenure is inversely related to mobility propensity.

[13] For the comparable data for the men, see Parnes and Nestel (1975), pp. 85-92.

As hypothesized, there is a highly significant inverse relationship between age and mobility, even within the relatively narrow age range of the present sample. Women in their late thirties had a mobility rate of 18 percent as compared with rates of 12 and 10 percent for those in their early and late forties, respectively. This substantial relationship

---

[14] To be more precise, the universe under investigation consists of women employed at both dates as wage and salary workers in nonagricultural industries and in occupations other than domestic service, for whom information on mobility status is available.

[15] Tables 7A2a and 7A-2b in Appendix A show the same results separately for women employed full time in both their 1969 and 1971 jobs and for those employed part time in one or both of the jobs.

[16] Analysis of the voluntary mobility of women is complicated by the fact that women, far more frequently than men, make job changes that are incidental to periods of withdrawal from the labor force. Since the criterion of an interfirm move in this study is serving with a different employer in 1971 than in 1969, some of the women categorized as job changers may not have changed jobs directly in order to improve their labor market position but may rather have withdrawn from the labor force for varying periods of time and have been unable to regain their old job upon reentry. In order to examine the effect of such cases on our data, we re-estimated the equation for women who had not absented themselves from the labor force in the period between the two survey dates in 1969 and 1971 for longer than 12 weeks (24 weeks in the case of school teachers since teachers frequently report the summer months as periods out of the labor force). The results of this MCA are shown in Appendix Table 7A-2c. The effect of this restriction of the universe is to reduce the mobility rate from 12.9 to 10.8 percent. Otherwise, the pattern of results is substantially the same as that shown in Table 7.2 except that the difference between women employed full time in both 1969 and 1971 jobs and those employed part time in one or another year becomes less pronounced and loses its statistical significance.

[17] See Parnes and Nestel (1974), p. 100.

between age and actual rates of job changing is of particular interest in view of our earlier finding that the propensity to change jobs shows no such inverse relationship with age. We are led to the conclusion that the declining mobility rates with increasing age among this age category of women is largely attributable to declining opportunities rather than to decreasing propensities as age advances.

Although the difference narrowly misses being statistically significant, the adjusted mobility rate among blacks is lower than that among whites--9.6 percent versus 13.4 percent. The fact that a differential in favor of white women obtains both among full-time and part-time workers (Tables 7A-2a and 2b) suggests that it is probably real rather than being attributable to sampling variation.[18] If so, it has no counterpart among middle-aged men. In the comparable analysis of the mobility of that age group of men, no racial differences were found in mobility rates between 1966 and 1971, between 1969 and 1971, or between 1967 and 1969.[19] The fact that the mobility propensities of black women are significantly higher than those of white women while actual mobility rates vary in the opposite direction suggests that alternative labor market opportunities are more limited for black women than for white women.

It is surprising that there are virtually no differences in mobility rates among women with varying domestic obligations, particularly in view of the fact that the propensity to move has been found to be higher among nonmarried women without children in their households. There is no reason to believe that nonmarried women--other things equal--are less attractive employees than married women; indeed, any difference in this respect between the two groups probably operates in favor of the former. Thus, in view of both their greater propensity and greater opportunity for movement, it is difficult to explain the fact that nonmarried women have no higher rates of actual mobility than married women. The only plausible explanation that has occurred to us--and one that we are unable to check because of the inadequate numbers of movers--is that nonmarried women do indeed make more voluntary job changes that are motivated by career considerations, but that married women make more job changes that are related to their roles as wives and mothers.

Women who were employed part time in one or both of the survey weeks were twice as likely as those employed full time to have made a job change between the survey dates in 1969 and 1971. Even when other factors are controlled, there is a 6-point difference in the adjusted percentages, which is highly significant. In part, this difference is a statistical artifact, since women who change from a full-time to a part-time job or from a part-time to a full-time job are included among the part-time workers, and these kinds of shifts are more likely to occur among women who change employers than among those who do not. In addition, however, since women holding part-time jobs frequently wish to keep them only temporarily, the greater mobility that occurs among part-time workers is hardly surprising. In this context, it is worth noting that when the universe is confined to women with steady labor force participation over the two-year period, the difference between the full-time and part-time workers is no longer statistically significant.[20]

---

[18] As in the case of mobility propensity (see footnote 10), a Chow test indicated no statistically significant interaction between race and the other explanatory variables in the analysis of actual mobility. Hence, we present only the pooled results.

[19] Parnes and Nestel (1975), pp. 96-102.

A very pronounced relationship exists between the degree of satisfaction that a woman expressed toward her job in 1969 and the likelihood that she had voluntarily left it by 1971. Respondents who had expressed some dislike for their jobs in 1969 were three times as likely to have left their jobs by 1971 as those who had indicated a high degree of satisfaction. Those who had expressed only moderate satisfaction in 1969 were almost twice as likely to have left as the highly satisfied group. These findings are consistent with those of previous studies, but many of the latter have suffered from the fact that measures of satisfaction were obtained retrospectively after the worker had left the job. The present findings allow us to say with considerable confidence that job satisfaction predicts the likelihood of a voluntary separation.[21]

Consistent with other studies of voluntary mobility, the data in Table 7.2 show a very strong relationship between the length of service that the woman had accumulated in her 1969 job and the likelihood that she would have voluntarily left it by 1971. Among those with less than a year's service in 1969 the mobility rate is five times as high as among those with 15 years or more of service, and between these two extremes the decline in mobility with increasing tenure is monotonic.

The measure of the relative attractiveness of workers to potential employers--the educational attainment of the woman relative to others in her occupational category--turns out not to be significantly related to the likelihood of movement. Indeed, the relationship is not at all systematic, but the lowest mobility rate occurs among those with the highest relative education. We have no adequate explanation for these results. It may be noted that in our earlier study of the factors affecting the mobility of middle-aged men, while the analogous variable narrowly missed being statistically significant, its relationship with the dependent variable was nevertheless regular and in the hypothesized direction.[22]

185

The gross relationship between the average hourly earnings a woman enjoyed in her 1969 job and the likelihood of her having left that job by 1971 is substantially in the expected direction. Women with hourly earnings 50 cents or more below average for their occupational categories had gross mobility rates about four times as high as those whose earnings were $1.00 or more above average. The adjusted data, on the other hand, are not quite so regular and narrowly miss the test of statistical significance. Nonetheless, they seem to provide some support for the generalization that, holding other things constant, women with above average earnings for their occupational category are less likely than those with below-average earnings to make voluntary job changes.

IV THE CONSEQUENCES OF JOB CHANGING

We turn our attention now from the determinants of voluntary job movement to its consequences for the welfare of the job changers. More specifically, the question at which the analysis in this section is directed is whether voluntary job changes during the two-year period under consideration were advantageous to the job changers in terms of average hourly earnings and degree of job satisfaction. To the extent that women move among jobs in order to improve their welfare, one would expect voluntary changes to be reflected in gains in one or both of these aspects of work. Although not central to the major concern of this chapter, we also inquire into the effects of *involuntary* separations for those women who were successful in finding other jobs.

It is not immediately clear, however, how these questions ought to be explored. For example, during a period in which average money wages are rising it is obviously not sufficient merely to ascertain whether job changers have experienced wage gains, for this would be too "easy" a test. On the other hand, a simple comparison of the current earnings of women who have changed employers with those of women who have not would be plagued by the opposite bias, since we have seen that women with below-average earnings within an occupational category are more likely than others to change jobs. Conceptually, the relevant question is whether the job changers are *better off than they would have been* had they not changed, and this is a very difficult question to answer with the data at hand.

With respect to earnings, we have chosen to address the question by comparing the percentage increase in hourly earnings of job changers and nonchangers over the period in question, controlling by means of multiple classification analysis for other factors that may influence changes in earnings--viz., race, occupational and geographic mobility, receipt of training, and base-year average hourly earnings. This is tantamount to assuming that the voluntary changers, on average, would have done relatively as well as the nonchangers had they remained where they were. While this is perhaps the most reasonable assumption that one can make, it must be borne in mind that it is not particularly realistic for those who quit because of dissatisfaction with the rate at which their earnings were rising or because they foresaw a layoff. To investigate the effects of mobility on job satisfaction we employ essentially the same model, except that extent of job satisfaction in the base year, rather than base-year earnings is used as a control. The question here is how job changers compare with nonchangers in the proportion who are highly satisfied with their 1971 jobs.

Overall, women who made voluntary job changes between 1969 and 1971 appear to have enjoyed a payoff in terms of average hourly earnings (Table 7.3), although the advantage is confined exclusively to women who were employed part-time in one or both years (Tables 7A-3a and 3b). For the total sample, the (adjusted) increase over the two-year period was 20 percent for those employed in the same job both years, as compared with 26 percent for those who voluntarily changed employers and 14 percent among those whose job changes were involuntary. Among the women employed full time at both survey dates, however, relative increases in hourly earnings were virtually identical among all three categories (Table 7A-3a); in the case of women who worked fewer than 35 hours per week in one or both years, the relative wage increase experienced by the voluntary job changers was almost twice as high as that of women who did not change employers.

On the criterion of job satisfaction (Table 7.4), voluntary job changers did no better than those who remained with the same employer. Almost identical (adjusted) proportions of both these categories were highly satisfied in 1971, controlling for degree of satisfaction in 1969 and other relevant factors. On the other hand, the involuntary job changers were significantly worse off. Only a little more than two-fifths of them expressed a high degree of satisfaction with their 1971 job, in contrast with almost three-fifths of those who had stayed with the same employer.

V SUMMARY AND CONCLUSIONS

Six out of ten employed women in their thirties and forties manifest a willingness to change employers for a higher wage rate. As many as an eighth of employed women in that age group actually made a voluntary change of employers over the two-year period 1969-1971. This chapter has explored the factors associated with variations in the propensity to change jobs and in actual movement. It has also addressed the question whether voluntary movement has tended to improve the hourly earnings and the job satisfaction of mobile women.

Propensity to Change Jobs

Although most women in our sample show a disposition to be mobile, there is nevertheless considerable variation in their mobility propensity according to their personal characteristics and circumstances, the degree of satisfaction they express with their current jobs, and how long they have held them. To begin with, there is a difference between black and white women in this respect. Other things equal, blacks are more likely than whites to indicate a willingness to change employers for higher pay.

[c] The small number of cases for which information on the variable was not ascertained were included in the analysis but are not reported.

Tenure in current job bears a substantial inverse relationship to mobility propensity, as does degree of job satisfaction. Family status is also an important determinant of the propensity to change jobs. Women who are not currently married and who have no children under 18 living in the household have higher mobility propensities than those living with husbands and/or children. Finally, part-time workers have substantially lower propensities to change jobs in response to wage differentials than full-time workers, presumably because the former are more likely than the latter to have special requirements concerning hours and/or location of work.

Voluntary Mobility, 1969 to 1971

By and large, the pattern of actual voluntary movement that occurred between 1969 and 1971 was consistent with the propensity factors that have been described, although there is also evidence of the effect of variations in opportunity for movement. The factors most strongly associated with the likelihood of a voluntary job change over the two-year period are the tenure the woman had in her 1969 job and the degree of job satisfaction she had expressed in the earlier year. Other things equal, women with less than a year of service in 1969 were five times as likely as those with 15 years of service to have changed employers by 1971. Also, again controlling for other factors, the minority of women expressing some dissatisfaction with their 1969 jobs had mobility rates three times as high as those who had reported the highest degree of satisfaction with their jobs. Family status is not related to actual mobility as it is to mobility propensity, which has led us to speculate that the greater likelihood among nonmarried women of job changes related to career considerations may be counterbalanced by the greater likelihood among married women of job changes related to their roles as wives and mothers.

The significant inverse relationship between actual mobility rates and age, juxtaposed with the finding that older women in our sample have mobility propensities at least as high as younger women, suggests that opportunities for movement may be more limited for older than for younger women even within the rather narrow age range of the sample. Also, the fact that black women have significantly higher mobility propensities than whites, while the (nonsignificant) differences in mobility rates are in the opposite direction, suggests more limited labor market opportunities for black than for white women. Neither of the other two measures of opportunity for movement that have been available to us shows a statistically significant relation to mobility. The educational attainment of women relative to others in their occupational category is not related to their mobility rates. On the other hand, the likelihood of a voluntary job change does appear to be inversely related to the average hourly earnings of a woman relative to others in her occupational category, although the relationship narrowly fails the formal test of statistical significance.

The "Payoff" to Voluntary Movement

The voluntary job changes made by members of the sample between 1969 and 1971 appear to have paid off in higher earnings than the women would likely have received had they remained with their 1969 employers, although this pattern is discernible only for women employed part time in one or both years. Overall, voluntary movers enjoyed an average relative increase in hourly earnings about 6 percentage points higher than that accruing to women who did not change jobs. On the other hand, women who were separated involuntarily from their 1969 employers and who were reemployed by 1972 experienced an increase in earnings 6 percentage points lower than that gained by workers who remained with the same employer. There is no evidence that the voluntary movers gained in terms of overall satisfaction with their jobs; however, the involuntary changers were substantially worse off.

Conclusion

The evidence presented in this chapter leaves little doubt that employed women in their late thirties and forties tend to be responsive to labor market forces in the manner postulated by economic theory. While the six-tenths of the employed members of the sample who manifest a propensity to change jobs for higher wages may at first blush appear to be an inexplicably low proportion, it can be put into perspective by noting that the corresponding fraction of men in their fifties and early sixties is less than half, while among young men in their early twenties in 1966 it was five-sixths.[23] Thus, while our data do not permit precise sex comparisons, the differences between the women under consideration here and older and younger groups of men appear to be entirely consistent with what would be expected on the basis of differences in age alone.

There is, to be sure, some evidence that the responsiveness of women to wage differentials may to some extent be constrained by the requirements of their non-labor-market roles as wives and mothers, since mobility propensity appears to be somewhat lower among women who are currently filling those roles than among women who are not. Nonetheless, this should not obscure the fact that both the mobility propensity and actual mobility of the total group of women are influenced by substantially the same kinds of factors that are significant for men.

Thus, from a policy perspective, aside from combating whatever sex discrimination may exist, there is no reason to believe that labor market policies relating to mobility should be any different--or any less important--for women than for men. Specifically, evidence that only a fraction of the potentially mobile women actually make a voluntary job change argues for the importance of improving labor market information.

---

[23] Parnes, Miljus, and Spitz (1969), p. 151.

The strong inverse relationship between age and mobility, in the face of the absence of age differences in the propensity to move, suggests the need for improving employment opportunities for women in their forties and older. Finally, the lower-than-average mobility rates of black women despite their higher-than-average propensity to move suggests that equality of opportunity in the labor market has not yet been achieved for black women.

CHAPTER VIII

CONCLUSIONS*

Although all of the studies in this volume address issues relating to the labor market behavior and experience of women in their thirties and forties, they do not fit neatly into a single topical or analytical framework, and are therefore difficult to summarize and synthesize. Fortunately, a systematic summary is not necessary, for the concluding section of each study highlights its findings and discusses their implications. Nevertheless, there is some merit in taking a panoramic view of the analyses contained in the preceding chapters to see what broad generalizations they appear to support. That is the purpose of this brief concluding chapter.

It needs to be emphasized at the outset that the findings of these studies relate to a particular cohort of women over a particular period of time. While for ease of exposition authors have occasionally used such generic terms as "women" or "married women," their evidence relates only to those women who were between the ages of 35 and 49 at the end of the five-year period covered by the detailed work histories. As the introductory chapter has made clear,[1] not only are these women at particular stages of the life cycle, but they are also to some extent products of the social milieus in which they developed and reached maturity. Hence, their behavior is not necessarily representative of the behavior of older or younger women at the same period of time; neither is it necessarily predictive of the behavior of women who will attain the same age a decade hence, for they will have been influenced by a different social environment.

For this particular cohort of women, the five years from 1967 to 1972 was a period of increasing labor force activity and of general improvement in labor market position for those who participated.[2] Labor force participation increased as many of the women became free of the responsibility of caring for young children and as their attitudes became more favorable toward market work by married women with children. Among those at work, full-time employment became more prevalent. Most of the women who were in the labor force at both dates perceived that they had progressed during the period, probably reflecting the substantial increases in real earnings that occurred, especially among those who were continuously employed.

[1] pp. 6-7.

[2] pp. 16, 20.

There has been considerable stability in the labor force status of the women both during the five-year period from 1967 to 1972 and over their entire working lives. For instance, of those employed in 1967, four-fifths were also employed in 1972, and of those out of the labor force in the earlier year two-thirds were also out at the end of the period.[3] Similarly, within marital and child-status categories there is a strong relationship between the degree of labor force activity at one period of the woman's life (e.g., between marriage and birth of first child) and another (e.g., between birth of first child and 1967).[4] These relationships reflect the fact that many of the factors that condition labor force participation (e.g., educational attainment and "tastes") are more or less invariable over time. They probably also reflect the fact that women with extensive experience in an early period command higher wage rates and thus have greater incentive to (continue to) work in a later period.

A minority of the women have established "careers" in the sense of having worked in the same or in related occupations for as much as three-fourths of the time since leaving school.[5] This proportion is as high as one-half among the never-married (without children), about one-third among the ever-married without children, but only 7 percent among the ever-married with children. However, irrespective of whether they have careers in this sense, married women who are employed make substantial contributions to family income. On average, the earnings of white women account for one-fourth of total annual family income. In black families the corresponding proportion is one-third.[6]

The importance of marital status in accounting for variation in labor force participation of women is well understood. Without making a systematic effort to do so, the studies reported in this volume have produced evidence indicating that other aspects of labor market experience and behavior also reflect differences in marital and/or child status. For instance, women who ultimately married--irrespective of whether they had children--ended their schooling earlier than those who remained single. Moreover, controlling for education, married women were not as likely as the never-married to have moved up the occupational ladder since their first job.[7] It is important to note that the full extent of the disadvantage suffered by married women in this respect is probably not captured by the data, since the analysis was confined to women who were employed in both 1967 and 1971, as well as after leaving school.

Married women have also been shown not to fare as well as single women in improving their earnings as the result of migration.[8] While total family earnings of migrants tend to increase more than for nonmigrants, this occurs simply because the relative earnings gain of the migrant husband generally more than compensates for the relative loss experienced by his wife. Finally, the propensity to change jobs in response to perceived wage differentials is weaker among married women and among those with children than among non-married women without children, presumably reflecting the constraining influence of the presence of husbands and/or children.[9] Needless to say, these findings do not imply labor market discrimination against married as compared with single women; nor do they necessarily mean that marriage impedes upward mobility for women with given degrees of attachment to the labor force. The evidence is equally consistent with the hypothesis that women with strong labor market and career orientations are less likely to have married than those who wished to emphasize other roles.

The studies in this volume also demonstrate that, irrespective of marital status, the degree of success that women enjoy in the labor market is substantially related to the extent of their previous investments in human capital. To take the most obvious example, the number of years of school a woman has completed bears a substantial positive relationship with her earnings in 1972,[10] with the socioeconomic status of her first job after leaving school,[11] with the extent of her upward occupational mobility between her first and 1967 jobs and over the five-year period between 1967 and 1972,[12] and with the likelihood of her having pursued a career.[13] Like education, training also contributes to labor market success. Women who have participated in training programs outside of regular school are more likely than comparable women without such training to have pursued careers,[14] to have experienced upward occupational mobility,[15] and to enjoy high current earnings.[16]

Extent of work experience also bears a positive relationship to level of earnings. In this case, however, the findings of Chapter IV indicate that facile generalizations about the effect of "on-the-job training" (work experience) on earnings are likely to be misleading. Among women in occupations requiring high or moderate levels of skills, current earnings are indeed related to the extent of life-time work experience; for women in jobs requiring little or no skill, however, only very recent experience appears to be influential.[17]

Analysis of women's earnings within skill categories of occupations, incidentally, also provides some interesting insights into the character of typically female occupations. It is well known that "female" occupations tend, on average, to be both less skilled and lower-paid than "male" occupations. It is important to know, however, whether the earnings differentials simply reflect the skill differentials or whether they persist even when skill level is controlled. The answer to this question apparently differs depending upon the broad skill category of jobs one examines. Within the highest skill category of occupations, serving in a typically female occupation carries no earnings penalty when skill requirements of jobs are similar. However, in occupation categories requiring only moderate or low skill levels, being in a typically female occupation has a negative effect on earnings net of skill requirement.[18]

Along with the factors that measure their relative productivities, women's "tastes" and attitudes also bear strong relationships to their labor market behavior. Specifically, if a woman has "liberated" views on the propriety of labor market participation by the mothers of young children, she is more likely to have pursued a career,[19] and, if employed, is more likely to make child care arrangements involving care by persons other than family members.[20] The perception of a favorable attitude toward her working on the part of her husband also bears a positive relationship to the likelihood that the woman will have pursued a career.

In virtually every respect that has been examined by the studies in this volume, black women fare less well than white women. One expects to find gross racial differentials, of course, as a result of the relative disadvantage of blacks in the characteristics (e.g., education) that affect labor market position. But the inferior labor market position of black women persists even when these factors are controlled as fully as possible with the data at hand. Thus, there was a net racial difference in the socioeconomic status of the jobs women took after leaving school; moreover, black women were less likely than white to move up the occupational ladder between then and 1967, other things equal.[21] Finally, even during the five-year period 1967-1972, black women were less likely to experience upward mobility than white women, other things being equal.[22]

[18] P. 113.

[19] P. 65.

[20] P. 124.

In the context of interfirm mobility, black women are no more likely to make interfirm shifts than white women, despite the fact that they have a significantly higher propensity to do so, which may reflect their more limited opportunities. The only encouraging finding with respect to racial differences is that black women enjoyed greater relative increases in hourly and annual earnings than white women enjoyed during the five-year period covered by the surveys, so that the black-white differential shrank from 1.27 to 1.10 in the case of hourly earnings and from 1.26 to 1.16 in the case of annual earnings.[23]

The evidence presented in most of the chapters suggests that the labor market behavior of women in their thirties and forties is consistent, by and large, with what would be expected on the basis of economic theory. The relative occupational position and the relative earnings of a woman are related to the same kinds of factors that operate for men. (It should be understood that the reference here is to the occupational position or earnings relative to other women in the same age category. Nothing in the volume permits us to say anything about the issue of sex discrimination in employment.) Moreover, both the propensities to make job changes and the actual changes made by women are influenced by substantially the same set of factors that are significant for men.[24]

Thus, from a policy perspective--beyond combatting whatever sex discrimination may exist and enhancing labor market options by continuing to expand the availability of child care service--there is no reason to believe that labor market policies relating to women should be any different from--or any less important than--for men. For example, the fact that only a fraction of potentially mobile women actually make voluntary job changes argues for the improvement of labor market information. The strong inverse relationship between age and mobility, despite the absence of age differences in the propensity to move, suggests the need for improving employment opportunities for women in their forties and older. Finally, the numerous indications of unequal labor market opportunities for black women point to the importance of continued efforts to combat racial discrimination.

APPENDIX A

SUPPLEMENTARY TABLES

Tables in this Appendix have been cited at relevant points in the text. The initial number of each table indicates the chapter to which it relates.

In these and all other tables in this volume, counts of individuals are shown in terms of number of sample cases rather than weighted population estimates. However, all calculations (percentages, means, regressions) are based on weighted observations.

In all percentage distributions, cases for which no information was obtained are excluded from the totals. Percentage distributions may not add up to 100 percent because of rounding. However, where numbers of sample cases do not add to their indicated totals, the difference is attributable (unless otherwise noted) to cases for which no information was obtained and/or to rounding.

[a] In all tables relating to Chapter I that show data for two or more survey years, the universe is restricted to respondents who provided the relevant information in both (all) years. In other words, the data in each table relate to precisely the same set of individuals at both (all) time periods. The only exception is Table 1A-16, in which each year's data relate to individuals who were employed as wage or salary earners in that year and who reported a rate of pay.

[b] Percentage not shown where base is fewer than 25 sample cases.

14+	79	29	100	9	6	25	26	17	17	20,361	7,801	38

[a] Includes only respondents who were married and living with their husbands at the time of the 1972 survey and who reported wage and salary income for 1971.

Table 3A-1 Career Status of Respondents, by Marital Status and Race[a]

(Percentage distributions)

Marital and child status and race	Number of respondents	Total percent	Career	Noncareer		
				Total	Strong attachment[d]	Weak attachment[e]
All marital status categories[b]						
Total	4,402[c]	100	11	89	6	84
Whites	3,195	100	10	90	5	85
Blacks	1,207	100	14	86	12	74
Ever-married with children						
Total	3,915	100	7	93	4	89
Whites	2,875	100	7	93	3	90
Blacks	1,040	100	11	89	11	78
Ever-married without children						
Total	245	100	32	68	14	54
Whites	174	100	31	69	14	55
Blacks	71	100	41	59	16	43
Never-married without children						
Total	183	100	49	51	29	23
Whites	140	100	49	51	29	22
Blacks	43	100	50	50	20	29

[a] Universe consists of respondents who were interviewed in 1972.

[b] Never-married respondents with children are included in the total but are not shown separately.

[c] Includes a total of 1,099 respondents for whom career status could not be ascertained. These are excluded from the base for purpose of calculating the percentage distributions.

[d] Women who meet the 75-percent-of-time criterion for career status, but not the occupational criterion. See text, p. 59 .

[e] Women who do not meet the 75-percent-of-time criterion for career status. See text, p. 59 .

Table 3A-2 Percent Distributions of All Employed Women and of Career Women, by Occupation and by Race, 1972[a]

Occupation	TOTAL		WHITES		BLACKS	
	All employed women	Career women	All employed women	Career women	All employed women	Career women
Number of respondents[b]	2,435	352	1,721	241	714	111
Total percent	100	100	100	100	100	100
Professional, technical	15.6	26.5	16.2	26.3	11.2	27.6
Managerial	6.3	5.3	6.9	6.0	2.3	0.7
Clerical	35.6	43.9	38.0	47.9	16.5	17.7
Sales	5.3	0.4	5.6	0.4	2.5	0.0
Blue collar[c]	16.4	13.8	15.8	13.5	20.6	15.5
Domestic services	3.0	1.4	1.4	0.4	15.2	8.3
Other services	15.5	6.4	13.6	2.8	29.9	30.3

[a] Universe consists of those respondents who were employed in 1972.

[b] Agricultural workers are included in the total but are not shown separately.

[c] Includes craftsmen, operatives, and nonfarm laborers.

Table 4A-1 Regressions Relating Average Hourly Earnings to Human Capital Variables, Sex-Type of Occupation, and Control Variables for Women in the MEDIUM SKILL Category: Whites and Blacks

*** Significant at $\alpha \leq .01$, 1-tail test.

[a] The dependent variable used in the analyses is constructed from a dummy variable with the value of "1" if the respondent reports a different SMSA or county of residence in 1967 than in 1972 and "0" otherwise.

[b] PSEUDO $R^2 = [1 - \exp\{Z (L_w - L_r/T)\}]/[1 - \exp\{Z (L_w - L_{max})/T\}]$ where L_w is the maximum of the log of the likelihood function using a constant, L_r is the maximum using all variables and L_{max} is the maximum possible.

Table 6A-2 Probability of Family Migration, 1967 to 1972, by Wife's Job Tenure and Presence of School-Aged Children

Presence of children, aged 16-18 in family / Wife's tenure at 1967 job	No children aged 6-18	Any children aged 6-18
0 Years	13.2%	10.7%
5 Years	7.9%	6.3%
10 Years	5.5%	4.4%

Source: Calculated on the basis of regression coefficients in Equation (4), Table 6A-1.

Table 6A-3 Summary Statistics for Variables Used in Tables 6.3 and 6.5

Variable	Mean	Standard deviation
Change in husband's labor market earnings 1966-1967 (in dollars per year)	3,217	3,551
Husband's labor market earnings 1966 (in dollars)	8,526	3,333
Change in family's earnings 1966-1971 (in dollars per year)	4,371	3,932
Family's labor market earnings 1966 (in dollars)	9,742	3,501
Change in wife's weeks worked 1966-1971	6.04	22.81
Wife's weeks worked 1966	18.58	22.83
Migrants 1967-1971 (dummy)	.077	.267
Migrants 1969-1971 (dummy)	.028	.164
Multiple migrants (dummy)	.006	.077
Intrafirm transfers (1968-1971)	.018	.134
Husband's education	11.9	3.0
Husband's age, 1967	39.9	5.5

APPENDIX B

GLOSSARY

This glossary defines all of the variables that have been used in the analysis in this volume. So far as possible, all variations in acronyms for individual variables are included. "Item numbers" refer to the interview schedules in Appendix D. References without a date are to the 1972 schedule.

APPENDIX B

GLOSSARY

ADULT RELATIVE

A binary variable indicating that there was at least one individual 18 years of age or older living in the respondent's household who was related to the respondent.

AGE

Age of the respondent as of her last birthday prior to April 1, 1972, unless otherwise indicated.

AGE DISTRIBUTION OF CHILDREN: See AGE OF YOUNGEST CHILD

AGE OF YOUNGEST CHILD

Respondents were divided into four categories according to the age of the youngest of the respondent's own children living in the household at the time of a survey, irrespective of the possible presence of older children living at home or the existence of children not residing with the respondent at a survey date.

Child Under 6

Includes all women whose youngest child was under six years of age.

Child 6 to 13

Includes all women whose youngest child was between 6 and 13 years of age.

Child 14 to 17

Includes all women whose youngest child was between 14 and 17 years of age.

No Children or Children 18 or Older

Includes all women with no children or children 18 or older living at home.

ANNUAL EARNINGS: See WAGE AND SALARY INCOME

ANNUAL FAMILY EARNINGS

The wage, salary, and net self employment income received by the respondent, her husband, or other family members in the calendar year preceding the survey week. It is measured in actual dollar amounts.

ATTITUDE TOWARD JOB

The respondent's report of her feelings toward her job at the time of interview when confronted with the following four alternatives: "like it very much, like it fairly well, dislike it somewhat, dislike it very much." [See item 34, 1972 schedule.]

ATTITUDE TOWARD MARKET WORK

An index summarizing the respondent's attitude toward the propriety of a married woman with young school-aged children working outside the home. In 1967 and 1972, respondents were asked about their attitudes toward a married woman with children between the ages 6 and 12 working outside the home under three circumstances: first, if economically necessary; second, if she wanted to and her husband agreed; and third, if she wanted to and her husband disagreed. There were five possible answers to each question ranged on a Likert scale from "definitely not all right" to "definitely all right." The composite index was obtained by summing the responses to the three questions. The resulting index ranged from a value of 3 (most unfavorable) to a value of 15 (most favorable). A favorable attitude is defined as codes 12 through 15; an unfavorable attitude is defined as codes 3 through 9; an ambivalent attitude consists of codes 10 through 11. See items 66a, 66b, and 66c in the 1967 schedule and items 42a, 42b, and 42c in the 1972 schedule.

AVERAGE HOURLY EARNINGS

Usual gross rate of compensation per hour on job held by a wage and salary worker during the survey week. If a time unit other than an hour was reported, hourly rates were computed by first converting the reported figure into a weekly rate and then dividing by the number of hours usually worked per week on the job.

AVERAGE WORK EXPERIENCE

This is a veriable indicating the average number of years a particular category of women worked at least six months between completion of formal schooling and 1967, 1969, or 1971. [See YEARS WORKED.]

BAD HEALTH

A binary variable indicating that a respondent's health limited the amount or kind of work outside the home in which she could engage. [See HEALTH CONDITION.]

BLACK

A binary variable indicating that the respondent is Negro. [See RACE.]

BOSE INDEX OF SOCIOECONOMIC STATUS

An ordinal measure of the prestige of an occupation, developed from the responses of a sample of 197 white households in the Baltimore Metropolitan Area to questions about the prestige of 110 selected occupations. These rankings within each occupation were averaged and the mean values transformed to a metric with values 0 to 100. The latter scores were regressed on the 1959 median earnings and 1960 median years of school completed of the civilian experienced female labor force employed in these occupations. The resultant equation was then used to estimate the mean prestige scores for occupations in which women in the NLS sample were represented. [See Christine E. Bose. *Jobs and Gender: Sex and Occupational Prestige*. Baltimore: The Johns Hopkins Press, 1973, Appendix E.]

BOTH INFANT AND PRESCHOOLER

A binary variable indicating that the respondent had both a child under 3 years of age and one 3 to 5 years of age living in the household.

CAREER: See text, Chapter III, pp. 58-60.

CENTER CARE: See DAY CARE CENTER

CHANGE IN FAMILY'S EARNINGS, 1966-1971

Actual dollar amount difference in the respondent's and her husband's income from wages, salary, commission, tips, and net self employment income in calendar year 1966 and calendar year 1971. Respondents' husbands reporting incomes of less than $1,000 in either 1966 or in 1971 were excluded from the regression analysis.

CHANGE IN WIFE'S WEEKS WORKED, 1966-1971

Actual difference between the total number of weeks worked by the respondent in the 12-month period prior to the 1967 and 1972 survey dates. [See WEEKS EMPLOYED.]

CHILD 0-5

A binary variable indicating that the respondent has at least one child less than six years of age living in her household.

CHILD CARE

Refers to an arrangement made by a mother who works outside the home for the care of her child(ren) during the time she is away from the home. The arrangements include care within the woman's home by a relative or a nonrelative, care outside the woman's home by a relative, a nonrelative, or a day care center. See items 21a, 21b, 21c, and 21d in the 1967 schedule. [See DAY CARE CENTER, NONFAMILY CARE and CENTER CARE.]

CHILDREN: See NUMBER OF CHILDREN

CHILDREN AGED 6-18

A binary variable indicating that the respondent had at least one son or daughter between 6 and 18 years of age living in the household.

CLASS OF WORKER

Wage and Salary Worker

A person working for a rate of pay per unit-time, commission, tips, payment in kind, or piece rate for a private employer or government unit.

Self-employed Worker

A person working in her own unincorporated business, profession, or trade, or operating a farm for profit or fees.

Unpaid Family Worker

A person working without pay on a farm or in a business operated by a member of the household to whom she is related by blood or marriage.

COLBAR

A binary variable indicating that a respondent's wages in her survey week job were set by collective bargaining.

COMPARATIVE JOB STATUS

Comparative job status is based on a comparison of the employer for whom the respondent worked at two specified survey dates. Respondents are classified into two major categories: "same employer" and "different employer." The latter category is further divided according to whether the job change was voluntary or involuntary. Where a worker has several jobs between the two survey dates in question, the reason for the separation from the job held in the earlier survey week is used to classify the change as voluntary or involuntary.

COMPARATIVE LABOR MARKET STATUS: See STAYER, ENTRANT, EXITER

COMPARATIVE OCCUPATION CATEGORY

A comparison of the respondent's 3-digit occupational codes in the two reference periods.

COMPARISON OF EMPLOYER: See COMPARATIVE JOB STATUS

239

DAY CARE CENTER

This refers to private or public sponsored centers or homes which are organized to care for groups of children. These include prekindergartens organized by the school system, nursery schools, day care centers, settlement houses, church sponsored facilities, group care facilities available at the respondent's place of employment, or residential homes which care for children on a regular paid basis; kindergartens are excluded. The terms "private" and "public" refer to the sponsorship or ownership of the day care facility and not its sources of funding. For example, "private" centers may receive state and federal revenue assistance and "public" centers revenue from parent fee payments.

DEMAND FOR FEMALE LABOR

An indicator of the extent to which the industrial structure of a community provides jobs normally held by women. The index was calculated for each PSU by multiplying the number employed (in 1960) in each of the industries within the PSU by the national fraction of that industry's employment represented by women, summing the individual products, and then dividing the resultant sum by the total civilian employment in the PSU (excluding the category "industry not reported.") [See PSU.]

EDUCATION: See HIGHEST YEAR OF SCHOOL COMPLETED

EDUCATIONAL ATTAINMENT: See HIGHEST YEAR OF SCHOOL COMPLETED

EMNC

A binary variable indicating that a respondent has ever been married and has never had (acquired) children. [See MARITAL STATUS.]

EMPLOYED: See LABOR FORCE AND EMPLOYMENT STATUS

EMPLOYED WIFE, 1967

A binary variable indicating the respondent was both married and employed at the 1967 survey date. [See LABOR FORCE AND EMPLOYMENT STATUS and MARITAL STATUS.]

EMPLOYER CHANGE: See COMPARATIVE JOB STATUS

EMWC

A binary variable indicating that a respondent has ever been married and has ever borne (acquired) children. [See MARITAL STATUS.]

240

ENTRANT

A binary variable indicating that a respondent who was out of the labor force in time t-1 had entered the labor force by time t.

ENTRY RATE

The ratio of women who had entered the labor force by a specific survey date to all those out of the labor force at some previous survey date (expressed in percentage terms).

EVER TRAIN

A binary variable indicating that the respondent had completed a training program aside from regular schooling either prior to 1967 or between 1967 and 1972. [See OCCUPATIONAL TRAINING.]

EXIT RATE

The ratio of women who had left the labor force by a specific survey date to all those in the labor force at some previous survey date (expressed in percentage terms).

EXITER

A binary variable indicating that a respondent who was in the labor force in time t-1 had left the labor force by time t. [See LABOR FORCE AND EMPLOYMENT STATUS.]

EXPERIENCE

A series of variables representing a respondent's work history. [See TENURE, WEEKS WORKED, and YEARS WORKED.]

FAMILY EARNINGS, 1966

The actual dollar amount of the respondent's and her husband's income from wages, salary, tips, commissions, and net self-employment income during calendar year 1966. Respondents whose husbands earned less than $1,000 were excluded from the regression analysis.

FAMILY INCOME

Income from all sources (including wages and salaries, net income from business or farm, pensions, dividends, interest, rent, royalties, social insurance, and public assistance) received by any family member living in the household of the respondent in the calendar year preceding the survey week. Income of nonrelatives living in the household is not included.

FEM OCC

A binary variable indicating that a respondent is in a typically female occupation. [See FEMALE OCCUPATION, OCCUPATION'S SEX LABEL, TYPICALLY MALE, or TYPICALLY FEMALE.]

FEMALE OCCUPATION

A continuous variable derived from the 1970 Census of Population data which compares the degree of representation of women in a 3-digit occupation and their representation in the experienced civilian labor force. A negative difference indicates a smaller-than-average proportion of women in the occupation; a positive difference implies a greater-than-average proportion.

FULL TIME EMPLOYMENT

A minimum of 35 hours usually worked per week on current job.

HEALTH CONDITION

On the basis of respondents' assessment of whether their health or physical condition prevents them from working or limits the kind and/or amount of work they can do, they are classified into two groups: those whose health affects work and those with no health limitations affecting work.

HIGH JOB SATISFACTION

A binary variable indicating that the respondent reported that she liked her survey week job very much. [See ATTITUDE TOWARD JOB and JOB.]

HIGH SKILL

A binary variable representing codes 6-8 in the "Specific Vocational Preparation" index. [See OCCUPATION'S SKILL REQUIREMENT.]

HIGHEST YEAR OF SCHOOL COMPLETED

The highest year of "regular" school completed by the respondent--from 0 to 18--as of the survey week in 1967. "Regular" schools include graded public, private, and parochial elementary and secondary schools; colleges; universities; and professional schools.

HOURLY EARNINGS: See AVERAGE HOURLY EARNINGS

HOURS USUALLY WORK PER WEEK

The number of hours per week the respondent usually works in her survey week job. [See JOB.]

HUSBAND'S AGE

The actual age of the respondent's husband as of April 1, 1972, unless otherwise indicated.

HUSBAND'S ATTITUDE

A binary variable indicating that the respondent reported that her husband has a favorable attitude toward her working. See item 67 in the 1967 schedule and item 42d in the 1972 schedule.

HUSBAND'S EARNINGS, 1966

The actual dollar amount of income from wages, salary, commission, tips, and net self employment income received by the respondent's husband in calendar year 1966. Husbands reporting less than $1,000 in earnings for calendar year 1966 were excluded from the regression analysis.

HUSBAND'S EDUCATION, 1967

The highest year of "regular" school--from 0 to 18--completed by respondent's husband as of the survey week, 1967.

INCIDENCE OF TRAINING: See OCCUPATIONAL TRAINING

INFANT

A binary variable indicating that the respondent's youngest child living in the household was 0 to 2 years of age.

INTEREST IN WORKING

A binary variable indicating that a respondent who was out of the labor force at the 1971 survey date would take a job in her area of residence if offered to her. See item 30a in the 1967 schedule and item 30b in the 1972 schedule.

INTRA-FIRM TRANSFERS, 1968-1971

A binary variable indicating that the reason for the respondent's change in county or SMSA of residence between any two survey dates was related to the geographical transfer of the husband's job with his base year employer. See item 91b in the 1972 schedule.

INVOLUNTARY JOB CHANGE

A job separation initiated by the employer, as in a layoff, the ending of a temporary job, or a discharge. [See COMPARATIVE JOB STATUS.]

JOB

A continuous period of service with a given employer.

Current or Last Job

For respondents who were employed during the survey week, the job held during the survey week. For respondents who were either unemployed or not in the labor force during the survey week, the most recent job.

JOB ATTITUDE: See ATTITUDE TOWARD JOB

JOB SATISFACTION: See ATTITUDE TOWARD JOB

LABOR FORCE AND EMPLOYMENT STATUS

In the Labor Force

All respondents who were either employed or unemployed during the survey week:

Employed

All respondents who during the survey week were either (1) "at work"--those who did any work for pay or profit or worked without pay for 15 hours or more on a family farm or business; or (2) "with a job but not at work"--those who did not work and were not looking for work, but had a job or business from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or because they were taking time off for various other reasons.

Unemployed

All respondents who did not work at all during the survey week and (1) either were looking or had looked for a job in the four-week period prior to the survey; (2) were waiting to be recalled to a job from which they had been laid off; or (3) were waiting to report to a new job within 30 days.

Out of Labor Force

All respondents who were neither employed nor unemployed during the survey week.

LABOR FORCE PARTICIPATION RATE

The proportion of the total civilian noninstitutional population or of a subgroup of that population classified as "in the labor force." [See LABOR FORCE AND EMPLOYMENT STATUS.]

LFPR: See LABOR FORCE PARTICIPATION RATE

LIKELIHOOD OF MIGRATION

A binary variable indicating that the respondent's place of residence (county or SMSA) on at least one post-1967 survey date was different from the place of residence as of the 1967 survey date.

LIKELIHOOD OF SEARCHING

A binary variable indicating that the respondent said in the 1971 survey that she would unconditionally look for work if provided with a free day care center or home. Refers only to respondents out of the labor force with at least one child under 18 years of age.

LOW SKILL

A binary variable representing codes 2-3 in the "Specific Vocational Preparation" index. [See OCCUPATION'S SKILL REQUIREMENT.]

MARITAL STATUS

Respondents were classified into the following categories: married, spouse present; married, spouse absent; divorced; separated; widowed; and never married. When the term "married" is used in this report, it refers only to the first of these categories.

MC

A binary variable indicating that a respondent [whose first (or only) marriage occurred after completion of formal schooling and whose first (or only) child was born (or acquired) after the year of her marriage] worked at least six months during one or more of the years between her marriage and the birth (acquisition) of her first child.

MEDIUM SKILL

A binary variable representing codes 4-5 in the "Specific Vocational Preparation" index. [See OCCUPATION'S SKILL REQUIREMENT.]

MIGRANT, 1967-1971: See MIGRATION DUMMY and MIGRANT STATUS

MIGRANT, 1969-1971

A binary variable indicating that the respondent's place of residence (county or SMSA) at the 1971 survey date was different from her place of residence at the 1969 survey date. [See MIGRANT STATUS.]

MIGRANT STATUS

A comparison of the respondent's place of residence at two different survey dates. Individuals who remain in the same SMSA or county are classified as "nonmigrants or stayers"; those who cross county or SMSA boundaries are classified as "migrants or movers." [See SMSA.]

MIGRATION DUMMY

A binary variable indicating that the respondent's county or SMSA in 1968, 1969, or 1971 was different from her county or SMSA as of the 1967 survey date. [See MIGRANT STATUS.]

MSP

A binary variable indicating that the respondent was married with her spouse present in the household. [See MARITAL STATUS.]

MULTIPLE MIGRANT

A binary variable indicating that the respondent had changed counties or SMSA's more than once between 1967 and 1971. [See MIGRANT STATUS.]

NMC

A binary variable indicating that a respondent [whose first (or only) marriage occurred after completion of formal schooling and whose first (or only) child was born (or acquired) after the year of her marriage] did not work at least six months during one or more of the years between her marriage and the birth (acquisition) of her first child.

NO CHILDREN AGED 6-18

A binary variable indicating that the respondent did not have a son or a daughter 6 to 18 years of age living in the household.

NONFAMILY CARE

A binary variable indicating that the respondent utilized one of the following modes of child care during the time she worked outside the home: a nonrelative in the child's home; in the home of a nonrelative; a nonrelative-relative combination; public or private day care center; any arrangement combined with a public or private day care center; enrollment in a school-sponsored pre-kindergarten or kindergarten program; or a school-sponsored program combined with any other mode of care. [See CHILD CARE.]

NONMARRIED

A binary variable indicating that the respondent was married, spouse absent; divorced; separated; widowed; or never married. [See MARITAL STATUS.]

NSM

A binary variable indicating that a respondent, who has ever been married, did not work at least six months during one or more years between completion of formal schooling and her first (or only) marriage.

NUMBER OF CHILDREN

The actual number of the respondent's sons and daughters under the age of 18 living in her household.

NUMBER OF DEPENDENTS

The number of persons who receive at least one-half of their support from the respondent (or her husband), including children, parents, and other relatives, whether or not they reside in the household.

NUMBER OF FAMILY MEMBERS

The actual number of individuals (including the respondent) living in the household who were related by blood or marriage to the respondent.

OCCUPATIONAL TRAINING

In the 1967 survey, respondents were asked about training or educational programs they had ever taken "aside from regular school." For each type (e.g., business college or technical school, company training school lasting two weeks or more, other formal vocational training, and general education) respondents were asked the kind and duration of the training and whether it was used on their current (or last) job. See items 79-81 in the 1967 schedule.

In subsequent surveys, respondents were asked whether they had taken any training courses or educational programs of any kind since the previous survey. If so, information was collected on kind, source, and duration of program and whether it was used on current job. See item 62 in the 1972 schedule.

OCCUPATION'S SEX LABEL

An occupation was categorized as typically male or typically female by comparing the percentage of the experienced civilian labor force as of the 1970 Census of Population which was female (38.1 percent) with the percentage of an occupation's incumbents who were female.

Any occupation in 1970 in which at least 43.1 percent (38.1 + 5 percent) of the incumbents were women is defined as a "typically female" occupation; any occupation in 1970 in which 33.1 percent (38.1 - 5 percent) or less of the incumbents were women is defined as a "typically male" occupation. Also see Chapter IV, Appendix A for a further discussion of this variable. [See FEMALE OCCUPATION.]

OCCUPATION'S SEX TYPE: See FEMALE OCCUPATION and OCCUPATION'S SEX LABEL

OCCUPATION'S SKILL REQUIREMENT

An index representing the varying amounts of time normally required for a person to become proficient in an occupation. The variable is based upon the index of "Specific Vocational Preparation" (SVP), which ranges from 1 to 9, found in the Supplement to the Dictionary of Occupational Titles (3rd edition), 1966.

OTHER

A binary variable indicating that a respondent, who has ever been married, was married either prior to or during the year in which she completed formal schooling.

OUT

A binary variable indicating that a respondent was out of the labor force in time t-1 and in time t. [See LABOR FORCE AND EMPLOYMENT STATUS.]

OUT OF LABOR FORCE: See LABOR FORCE AND EMPLOYMENT STATUS

PART TIME
A binary variable indicating that a respondent usually worked a maximum of 34 hours per week on her survey week job.

PER CAPITA FAMILY EARNINGS [EXCLUDING RESPONDENT'S EARNINGS]
Annual family earnings in actual dollar amounts excluding the respondent's wage and salary income divided by the number of dependents (inclusive of the respondent and husband). [See ANNUAL FAMILY EARNINGS and NUMBER OF DEPENDENTS.]

PERCEPTION OF PROGRESS
Responses to the 1972 question "All in all, so far as your work is concerned, would you say that you've progressed during the past five years, moved backward, or just about held your own?" See Item 53a.

POST-CHILD WORK EXPERIENCE
A variable indicating the proportion of years that a respondent has worked at least six months between the year of birth (acquisition) of her first (or only) child and 1967.

POST-MARRIAGE WORK EXPERIENCE
A variable indicating the proportion of years that a respondent has worked at least six months between her first (or only) marriage and 1967.

POST-SCHOOL WORK EXPERIENCE: See YEARS WORKED

PRESCHOOLER
A binary variable indicating that the respondent's youngest child living in the household was 3 to 5 years of age.

PRIVATE
A binary variable indicating that a respondent was working for a private employer as a wage and salary worker. [See CLASS OF WORKER.]

PROPENSITY TO CHANGE JOBS
This construct is measured by means of a hypothetical question asked of all employed respondents in 1972: "Suppose someone in this area offered you a job in the same line of work you are in now. How much would the new job have to pay for you to be willing to take it?" Each response has been expressed as a percentage of actual earnings in the current job, and the resulting figure is taken as a measure of the relative attachment of an individual to her current employer or, what amounts to the same thing, of her readiness to move, given the perception of a similar job offering higher pay. See item 37.

PSU (PRIMARY SAMPLING UNIT)

One of the 235 areas of the country from which the sample for this study was drawn; usually an SMSA (Standard Metropolitan Statistical Area) or a county.

RACE

"Blacks" refer to Negroes, "Whites" to Caucasians. Other racial groups are excluded from all analysis in this report.

REAL AVERAGE HOURLY EARNINGS

Average hourly earnings in survey week job expressed in May 1971 dollars using the Consumer Price Indices for the month of May of each survey year. [See AVERAGE HOURLY EARNINGS.]

REAL WAGE AND SALARY INCOME

Wage and salary earnings of the respondent in calendar years 1966, 1968, 1970, and 1971 expressed in 1971 dollars using the average of the twelve monthly Consumer Price Indices in each of these years. [see WAGE AND SALARY INCOME.]

RELATIVE EDUCATIONAL ATTAINMENT

This variable compares the respondent's educational attainment and the mean educational attainment of all respondents in the same 3-digit occupation code and race category. A negative difference indicates a below-average attainment by the respondent while a positive difference denotes an above-average attainment. [See YEARS OF SCHOOL COMPLETED.]

RELATIVE HOURLY EARNINGS

This variable compares the respondent's average hourly earnings and the mean average hourly earnings of all respondents in the same 3-digit occupation code and race category. A negative difference indicates below-average hourly earnings while a positive difference denotes above-average compensation. [See AVERAGE HOURLY EARNINGS.]

SEX LABEL: See FEMALE OCCUPATION and OCCUPATION'S SEX LABEL

SIZE

A variable indicating the size (in 1960) of the civilian labor force in the local area in which a respondent resided in 1972. Measured in thousands of persons.

SKILL: See OCCUPATION'S SKILL REQUIREMENT

SKILL REQUIREMENT: See OCCUPATION'S SKILL REQUIREMENT

SM

A binary variable indicating that a respondent who has been married worked at least six months during one or more years between completion of formal schooling and her first (or only) marriage.

SMSA

Standard Metropolitan Statistical Area.

SMSA CENTRAL CITY

A binary variable indicating that the respondent resided in the central or major city within a SMSA. [See SMSA.]

SMSA NONCENTRAL CITY

A binary variable indicating that the respondent resided in a SMSA but not in its central or major city. [See SMSA.]

SOUTH

A binary variable indicating the respondent resided in one of the following Census Divisions: South Atlantic, East South Central, or West South Central.

SPACING OF CHILDREN

The mean number of years between birth (acquisition) of the respondent's children. It is generally computed by dividing the total number of children of the respondent into the number of years that have elapsed between her (first) marriage and the birth of the youngest child currently living in her household. In the case of respondents with only one child it is the number of years between (first) marriage and the birth of this child.

STAYER

A binary variable indicating that a respondent was in the labor force both in time t-1 and time t. [See LABOR FORCE and EMPLOYMENT STATUS.]

SURVEY WEEK

The term "survey week" denotes the calendar week preceding the date of interview. In the conventional parlance of the Bureau of the Census, it means the "reference week."

TEENAGED CHILD

A binary variable indicating that the respondent had at least one son or daughter who was 14 to 17 years of age residing in her household.

TENURE

The number of years of service with the respondent's survey week employer.

TRAINING

A binary variable indicating that the respondent had participated in a training program aside from regular schooling prior to 1967 or between 1967 and 1972. [See OCCUPATIONAL TRAINING.]

TYPICALLY FEMALE

A binary variable indicating that in 1970 at least 43.1 percent of the incumbents of the occupation were female. [See FEMALE OCCUPATION and OCCUPATION'S SEX LABEL.]

TYPICALLY MALE

A binary variable indicating that in 1970 33.1 percent or fewer of the incumbents of the occupation were female. [See FEMALE OCCUPATION and OCCUPATION'S SEX LABEL.]

UNEMPLOYED: See LABOR FORCE AND EMPLOYMENT STATUS

UNEMPLOYMENT RATE

Rate of unemployment in the local area in which the respondent resides. The rate is based on the 12-month average for the specified year obtained from the CPS for that area.

VOLUNTARY JOB CHANGE (SEPARATION)

A binary variable indicating that the respondent had left her 1969 survey week employer for voluntary reasons during the period 1969 to 1971. [See COMPARATIVE JOB STATUS.]

WAGE AND SALARY INCOME

The wage and salary income received by the respondent in the calendar year preceding the survey week. It is measured in actual dollar amounts.

WAGE AND SALARY WORKER: See CLASS OF WORKER

WDS

A binary variable indicating that the respondent was widowed, divorced, or separated.

WEEKS EMPLOYED

The number of weeks in a 12-month period in which the respondent reported that she was employed.

WEEKS IN THE LABOR FORCE

The number of weeks in a 12-month period that the respondent reported that she either worked, looked for work, or was on layoff from a job. [See WEEKS EMPLOYED and WEEKS UNEMPLOYED.]

WEEKS UNEMPLOYED

The number of weeks in a 12-month period that the respondent reported she was not working but looking for work or on layoff from a job.

WEEKS WORKED

A variable indicating the number of weeks a respondent was employed between the 1968 and 1972 surveys.

WEST

A binary variable indicating that the respondent resided in either the Mountain Census Division or the Pacific Census Division.

WIFE'S EARNINGS, 1966

The actual dollar amount of income from wages, salary, commissions, and tips received by the respondent in calendar year 1966.

WIFE'S JOB TENURE, 1967

The actual number of years of service with the respondent's 1967 survey week employer.

WIFE'S TENURE SQUARED

The square of the actual number of years of service with the respondent's 1967 survey week employer.

WILLING TO USE CENTER CARE

A binary variable indicating that the respondent either expressed a preference for center care over her current child care arrangement or stated that she would be willing to leave her child(ren) in a day care center if one were available to her at a cost no greater than her current arrangement. [See DAY CARE CENTER and CHILD CARE.]

WORKED SOME SINCE 1969

A binary variable indicating that the respondent worked at least one week between the date of the 1969 interview (1968 interview date if not interviewed in 1969) and the date of the 1971 interview.

YEARS WORKED

In Chapter IV, a variable indicating the number of years a respondent worked at least six months between completion of formal schooling and 1967.

In Chapter V, a continuous variable summarizing the percent of years between completion of formal schooling and 1967 (or between 1967 and 1972) in which the respondent worked six months or more.

APPENDIX C

SAMPLING, INTERVIEWING AND ESTIMATING PROCEDURES

APPENDIX C

SAMPLING, INTERVIEWING AND ESTIMATING PROCEDURES

The Survey of Work Experience of Mature Women is one of four longitudinal surveys sponsored by the Employment and Training Administration of the U.S. Department of Labor. Taken together these surveys constitute the National Longitudinal Surveys. Each of the four NLS samples was designed by the United States Bureau of the Census to represent the civilian noninstitutional population of the United States at approximately the time of the initial survey. Because of attrition from the samples over the years of the surveys, they cannot be construed to be precisely representative of the civilian population in any year after the first.

The 1972 survey was the fourth personal interview conducted for the Survey of Work Experience of Mature Women.[1] The respondents were between the ages of 30 and 44 at the time of the first interview in 1967; thus, the age range in 1972 was 35 to 49.

Sample Design

The cohort is represented by a multi-stage probability sample located in 235 sample areas comprising 485 counties and independent cities representing every state and the District of Columbia. The 235 sample areas were selected by grouping all of the nation's counties and independent cities into about 1,900 primary sampling units (PSU's) and further forming 235 strata of one or more PSU's that are relatively homogeneous according to socioeconomic characteristics. Within each of the strata a single PSU was selected to represent the stratum. Within each PSU a probability sample of housing units was selected to represent the civilian noninstitutional population.

Since one of the survey requirements was to provide separate reliable statistics for blacks, households in predominantly black enumeration districts (ED's) were selected at a rate approximately three times that for households in predominantly white ED's. The sample was designed to provide approximately 5,000 respondents--about 1,500 blacks and 3,500 whites.

An initial sample of about 42,000 housing units was selected and a screening interview took place in March and April 1966. Of this number, about 7,500 units were found to be vacant, occupied by persons whose usual residence was elsewhere, changed from residential use, or demolished. On the other hand, about 900 additional units were found which had been created within existing living space or had been changed from what was previously nonresidential space. Thus, 35,360 housing units were available for interview, of which usable information was collected for 34,622 households, a completion rate of 98.0 percent.

---

[1] Interviews were also conducted in 1969 and 1971. A brief mailed questionnaire was used in 1968.

Following the initial interview and screening operation, the sample was rescreened in the fall of 1966, immediately prior to the first survey of Work Experience of Males 14 to 24. For the rescreening operation, the sample was stratified by the presence or absence of a 14- to 24-year old male in the household. The rescreened sample was used to designate 5,392 women age 30 to 44 to be interviewed for the Survey of Work Experience. These were sampled differentially within four strata: whites in white ED's (i.e., ED's which contained predominantly white households), blacks in white ED's, whites in black ED's, and blacks in black ED's.

The Field Work

Over three hundred interviewers were assigned to each of the surveys. Since many of the procedures and the labor force concepts used in the NIS were similar to those employed in the Current Population Survey (CPS), the Census Bureau used only interviewers with CPS experience.

For the 1967 survey, a two-stage training program was used to provide specific instruction to the interviewers. First, two supervisors from each of the Bureau's 12 regional offices were trained in Washington; they in turn trained the interviewers and office clerks assigned to the survey in their regions. Each trainee was provided with a "verbatim" training guide prepared by the Bureau staff and reviewed by the Employment and Training Administration and the Center for Human Resource Research of The Ohio State University. The guide included not only lecture material, but a number of structured practice interviews to familiarize the interviewers with the questionnaire. For the 1972 survey, interviewing began on April 24 and continued until the end of June.

In addition to training, a field edit was instituted to insure adequate quality. In the 1967 survey, this consisted of a "full edit" of the first several schedules returned by each interviewer and a partial edit of the remaining questionnaires from each interviewer's assignment. The full edit consisted of reviewing the questionnaires from beginning to end, to determine if the entries were complete and consistent and whether the "skip" instructions were being followed. The interviewer was contacted by phone concerning minor problems and, depending on the nature of the problem, was either merely told of the error or asked to contact the respondent for additional information or for clarification. For more serious problems the interviewer was retrained either totally or in part, and the questionnaire was returned for completion.

If problems arose, the complete edit was continued until the supervisor was satisfied that the interviewer was doing a complete and consistent job. The partial edit simply checked to determine that the interviewer had not inadvertently skipped any part of the questionnaire which should have been filled. Any questionnaire which failed the partial edit was returned to the interviewer for completion. In the 1969, 1971, and 1972 surveys, a "full edit" was used on all the schedules.

Estimating Methods

The estimating procedure used in the NLS involved multi-stage ratio estimates.

Basic weight The first step was the assignment to each sample case of a basic weight consisting of the reciprocal of the final probability of selection. The probability reflects the differential sampling which was employed by color within each stratum.

Noninterview adjustment In the initial survey the weights for all those interviewed were adjusted to the extent needed to account for persons for whom no information was obtained because of absence, refusal, or unavailability for other reasons. This adjustment was made separately for each of 16 groupings: Census region of residence (Northeast, North Central, South, West) by residence (urban, rural), by color (white, black).

Ratio estimates The distribution of the population selected for the sample may differ somewhat, by chance, from that of the nation as a whole with respect to residence, age, color, and sex. Since these population characteristics are closely correlated with the principal measurements made from the sample, the measurements can be substantially improved when weighted appropriately to conform to the known distribution of these population characteristics. This was accomplished in the initial survey through two stages of ratio estimation.

The first stage of ratio estimation takes into account differences at the time of the 1960 Census between the distribution by color and residence of the population as estimated from the sample PSU's and that of the total population in each of the four major regions of the country. Using 1960 Census data, estimated population totals by color and residence for each region were computed by appropriately weighting the Census counts for PSU's in the sample. Ratios were then computed between these estimates (based on sample PSU's) and the actual population totals for the region as shown by the 1969 Census.

In the second stage, the sample proportions were adjusted to independent current estimates of the civilian noninstitutionalized population by age and color. These estimates were prepared by carrying forward the most recent Census data (1960) to take account of subsequent aging of the population, mortality, and migration between the United States and other countries. The adjustment was made by color within three age groupings.

256

Weights for subsequent years As a result of the above steps, each sample person has a weight which remains unchanged throughout the life of the study. The universe of study was thus fixed at the time of interview for the first survey. Since no reweighting of the sample was made after subsequent surveys, the group of interviewed persons is an unbiased sample of the population group in existence at the time of the first survey only. The number of women with whom initial interviews were conducted was 5,083.

Coding and Editing

Most of the data on the interview schedules required no coding, since a majority of the answers were numerical entries or in the form of precoded categories. However, clerical coding was necessary for the occupational and industrial classification of the several jobs referred to in the interview. The Census Bureau's standard occupation and industry codes used for the CPS were employed for this purpose. Codes for other open-ended questions were assigned by the Census Bureau, in some cases on the basis of guidelines developed by the Center for Human Resource Research from tallies of subsamples of the returns.

The consistency edits for the interview schedules were completed on the computer by the Census Bureau. For the parts of the questionnaire which were similar to the CPS, a modified CPS edit was used. For all other sections, separate consistency checks were performed. None of the edits included an allocation routine which was dependent on averages or random information from outside sources, since such allocated data could not be expected to be consistent with data from previous or subsequent surveys. However, where the answer to a question was obvious from others in the questionnaire, the missing answer was entered on the tape. To take an example from the initial (1967) survey, if item 21a ("Is it necessary for you to make any regular arrangements for the care of your children while you are working?") was blank, but legitimate entries appeared in 21b and c ("What arrangements have you made?" and "What is the cost of these arrangements?") a "Yes" was inserted in 21a. In this case, only if 21a was marked "Yes," could 21b and c be filled; therefore, the assumption was made that either the key punch operator failed to punch the item or the interviewer failed to mark it.

APPENDIX D

INTERVIEW SCHEDULES

The interview schedules for the 1967 and 1972 surveys are displayed in the following pages. Data used in the volume that are based on the 1969 or 1971 surveys were derived from questions identical or analogous to those included in these schedules.

I. CURRENT LABOR FORCE STATUS

1. What were you doing most of LAST WEEK –
{Working
{Keeping house
or something else

1 ☐ WK – Working – *SKIP to 2a*
2 ☐ J – With a job but not at work
3 ☐ LK – Looking for work
4 ☐ S – Going to school
5 ☐ KH – Keeping house
6 ☐ U – Unable to work – *SKIP to 5a*
7 ☐ OT – Other – *Specify*

____

2. Did you do any work at all LAST WEEK, not counting work around the house?

(Note: If farm or business operator in household, ask about unpaid work.)

1 ☐ Yes x ☐ No – *SKIP to 3*

2a. How many hours did you work LAST WEEK at all jobs? ________

2b. INTERVIEWER CHECK ITEM

1 ☐ 49 or more – *SKIP to 6*
2 ☐ 1 – 34 – *ASK 2c*
3 ☐ 35 – 48 – *ASK 2d*

2c. Do you USUALLY work 35 hours or more a week at this job?

1 ☐ Yes – What is the reason you worked less than 35 hours LAST WEEK?
2 ☐ No – What is the reason you USUALLY work less than 35 hours a week?

(Mark the appropriate reason)

01 ☐ Slack work
02 ☐ Material shortage
03 ☐ Plant or machine repair
04 ☐ New job started during week
05 ☐ Job terminated during week
06 ☐ Could find only part-time work
07 ☐ Holiday (legal or religious)
08 ☐ Labor dispute
09 ☐ Bad weather
10 ☐ Own illness
11 ☐ Illness of family member
12 ☐ On vacation
13 ☐ Too busy with housework
14 ☐ Too busy with school, personal business, etc.
15 ☐ Did not want full-time work
16 ☐ Full-time work week under 35 hours
17 ☐ Other reason – *Specify*

____

(If entry in 2c, SKIP to 6 and enter job worked at last week.)

2d. Did you lose any time or take any time off LAST WEEK for any reason such as illness, holiday, or slack work?

1 ☐ Yes – How many hours did you take off? ______

2 ☐ No

(Correct 2a if lost time not already deducted; if 2a reduced below 35, fill 2c, otherwise SKIP to 6.)

2e. Did you work any overtime or at more than one job LAST WEEK?

1 ☐ Yes – How many extra hours did you work? ________

2 ☐ No

(Correct 2a if extra hours not already included and SKIP to 6.)

(If "J" in 1, SKIP to 3a.)

3. Did you have a job (or business) from which you were temporarily absent or on layoff LAST WEEK?

1 ☐ Yes x ☐ No – *SKIP to 4*

3a. Why were you absent from work LAST WEEK?

1 ☐ Own illness
2 ☐ Illness of family member
3 ☐ On vacation
4 ☐ Too busy with housework, school, personal business
5 ☐ Bad weather
6 ☐ Labor dispute
7 ☐ New job to begin within 30 days – *ASK 4c2*
8 ☐ Temporary layoff (Under 30 days) } *ASK 4c3*
9 ☐ Indefinite layoff (30 days or more or no definite recall date) } *ASK 4c3*
0 ☐ Other – *Specify*

____

3b. Are you getting wages or salary for any of the time off LAST WEEK?

1 ☐ Yes
2 ☐ No
3 ☐ Self-employed

3c. Do you usually work 35 hours or more a week at this job?

1 ☐ Yes 2 ☐ No

(SKIP to 6 and enter job held last week.)

Notes

I. CURRENT LABOR FORCE STATUS – Continued

(If "LK" in 1, SKIP to 4a.)

4. Have you been looking for work during the past 4 weeks?

1 ☐ Yes   x ☐ No – *SKIP to 5a*

4a. What have you been doing in the last 4 weeks to find work?

(Mark all methods used; do not read list.)

Checked with –

1 ☐ State employment agency
2 ☐ Private employment agency
3 ☐ Employer directly
4 ☐ Friends or relatives
5 ☐ Placed or answered ads
6 ☐ Nothing – *SKIP to 5a*
7 ☐ Other – *Specify – e.g., MDTA, union or professional register, etc.*

____

4b. Why did you start looking for work? Was it because you lost or quit a job at that time or was there some other reason?

1 ☐ Lost job
2 ☐ Quit job
3 ☐ Wanted temporary work
4 ☐ Other – *Specify* ______________

4c. 1) How many weeks have you been looking for work?

2) How many weeks ago did you start looking for work?

3) How many weeks ago were you laid off?

Number of weeks __________

4d. Have you been looking for full-time or part-time work?

1 ☐ Full-time work   2 ☐ Part-time work

4e. Is there any reason why you could not take a job LAST WEEK?

1 ☐ Yes →
6 ☐ No

2 ☐ Already has a job
3 ☐ Temporary illness
4 ☐ Going to school
5 ☐ Other – *Specify*

____

4f. In what year did you last work at a regular full- or part-time job lasting two consecutive weeks or more? *Record year last job ended on Reference Information sheet (Labor Force Group B)*

1 ☐ January 1966 or later
2 ☐ 1962 – 65 – *Specify month and year*
Month __________ year ______
3 ☐ Before 1962 – Specify year ______
} *SKIP to 5b*

4 ☐ Never worked 2 weeks or more
5 ☐ Never worked at all
} *SKIP to Check Item C, Page 5*

5a. In what year did you last work at a regular full- or part-time job or business? *Record year last job ended on Reference Information Sheet (Labor Force Group C)*

1 ☐ January 1966 or later
2 ☐ 1962 – 65 – *Specify month and year*
Month __________ Year ______
3 ☐ Before 1962 – *Specify year* ______
} *ASK 5b*

4 ☐ Never worked – *SKIP to Check Item C, page 5*

5b. On that job did you usually work 35 hours or more a week?

1 ☐ 35 hours or more   2 ☐ Less than 35 hours

5c. Why did you leave your last job?

01 ☐ To get married
02 ☐ Husband wanted her to quit
03 ☐ Husband transferred, moved
04 ☐ Own health
05 ☐ Pregnancy
06 ☐ Health of family members
07 ☐ Devote more time to family
08 ☐ Seasonal job completed
09 ☐ Slack work or business conditions
10 ☐ Temporary nonseasonal work completed
11 ☐ Unsatisfactory work arrangements (hour, pay, etc.)
12 ☐ Other – *Specify* __________

GO to 6 and describe that job

6. DESCRIPTION OF JOB OR BUSINESS

6a. For whom did you work? *(Name of company, business, organization or other employer)*

____

6b. In what city and State is . . . located?

City ____________________
State ____________________

6c. What kind of business or industry is this? *(For example, TV and radio manufacturer, retail shoe store, restaurant, State Labor Department, farm)*

____

Census use only

6d. Were you –

1 ☐ P – An employee of PRIVATE company, business, or individual for wages, salary, or commission?
2 ☐ G – A GOVERNMENT employee (Federal, State, county, or local)?
3 ☐ O – Self-employed in OWN business, professional practice, or farm?

(If not a farm) – Is this business incorporated?

☐ Yes   ☐ No

4 ☐ WP – Working WITHOUT PAY in family business or farm?

6e. What kind of work were you doing? *(For example, typist, elementary teacher, waitress, stock clerk)*

____

Census use only

I. CURRENT LABOR FORCE STATUS – Continued

6f. When did you start working at this job or business? *If 1966 or later, enter both month and year.*	**6f.** Year ____ Month ____
7. How did you find out about that job? *If "Other," specify here* ____ ____	**7.** 1 ☐ State employment agency 2 ☐ Private employment agency 3 ☐ Checked directly with employer 4 ☐ Newspaper ads 5 ☐ Friends or relatives 6 ☐ Other

III. WORK EXPERIENCE IN 1966

34a. Now I have some questions on your work experience during 1966. In how many different weeks did you work either full or part time in 1966 (not counting work around the house)? (Include paid vacations and paid sick leave.)	**34a.** Number of weeks ______ × ☐ None – *SKIP to 36a*
b. During the weeks that you worked in 1966, how many hours per week did you usually work?	**b.** Hours ______
CHECK ITEM D	1 ☐ 52 weeks in 34a – *ASK 35a* 2 ☐ 1 – 51 weeks in 34a – *SKIP to 35b*
35a. Did you lose any full weeks of work in 1966 because you were on layoff from a job or lost a job?	**35a.** 1 ☐ Yes – How many weeks? ______ *Adjust item 34a and SKIP to 35c* × ☐ No – *SKIP to Check Item E, page 10*
b. You say you worked *(entry in 34a)* weeks in 1966. In any of the remaining *(52 weeks minus entry in 34a)* ______ weeks were you looking for work or on layoff from a job?	**b.** 1 ☐ Yes – How many weeks? ______ – *ASK 35c* × ☐ No – *SKIP to Check Item E, page 10*
c. Were all of these weeks in one stretch?	**c.** 1 ☐ Yes, 1 2 ☐ No, 2 3 ☐ No, 3 or more (1–3) *SKIP to Check Item E, page 10*

III. WORK EXPERIENCE IN 1966 – Continued

For those who did not work in 1966 **36a.** Even though you did not work in 1966, did you spend any time trying to find work or on layoff from a job?	**36a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to c and ask about 52 weeks*
b. How many different weeks were you looking for work or on layoff from a job?	**b.** Weeks ______
c. Now let me see. During 1966 there were about *(52 weeks minus entries in items 34a and 36b)* ______ weeks that you were not working or looking for work. What would you say was the main reason that you were not looking for work?	**c.** 1 ☐ Ill or disabled and unable to work 2 ☐ Birth of child 3 ☐ Other family responsibility 4 ☐ Couldn't find work 5 ☐ Vacation 6 ☐ Did not want to work 7 ☐ Other – *Specify* ______ *SKIP to Check Item G*
CHECK ITEM E	*Refer to items 34a and 35b* 1 ☐ All weeks accounted for – *SKIP to Check Item F* 2 ☐ Some weeks not accounted for – *ASK 37*
37. Now let me see. During 1966 there were about *(52 weeks minus entries in items 34a and 35b)* ______ weeks that you were not working or looking for work. What would you say was the main reason that you were not looking for work?	**37.** 1 ☐ Ill or disabled and unable to work 2 ☐ Birth of child 3 ☐ Other family responsibility 4 ☐ Couldn't find work 5 ☐ Vacation 6 ☐ Did not want to work 7 ☐ Other – *Specify* ______
CHECK ITEM F	1 ☐ "O" in 6d – *ASK 38a* 2 ☐ "P," "G" or "WP" in 6d – *SKIP to 38b*
38a. I see that you are self-employed. Did you work for anyone else for wages or salary in 1966?	**38a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to Check Item G*
b. In 1966, for how many employers did you work?	**b.** Number of employers ______

IV. MARITAL AND FAMILY HISTORY

CHECK ITEM G	*Refer to Household Record Card* 1 ☐ Respondent is "never married" and has children of her own in the household – *SKIP to 44* × ☐ Respondent is "never married" and has no children of her own in the household – *SKIP to Check Item H, page 12* 2 ☐ All others – *ASK 39* *Record on Reference Information Sheet*
39. Have you been married more than once?	**39.** 1 ☐ Once – *ASK 40* 2 ☐ More than once – *Specify number* ______ – *SKIP to 41*
40a. When were you married?	**40a.** Month ______ 19 ______
2 ☐ Respondent currently married – *SKIP to 42* 3 ☐ All others – *ASK 40 b*	*Record marital status and year of marriage on Reference Information Sheet*
b. When were you (widowed, divorced, separated)?	**b.** Month ______ 19 ______ – *SKIP to 42*

IV. MARITAL AND FAMILY HISTORY – Continued

41a. What was the date of your first marriage?	**41a.** Month ______________ 19 ________
b. How was it terminated?	**b.** 1 ☐ Widowed 2 ☐ Divorced
c. When was it terminated?	**c.** Month ______________ 19 ________

2 ☐ Respondent currently married – *ASK 41d*
3 ☐ All others – *SKIP to 41e*
Record marital status and year of respondent's first marriage on Reference Information Sheet

d. When were you married most recently?	**d.** Month ______________ 19 ________ *SKIP to 42*
e. What are the dates of your most recent marriage?	**e.** From: Month ______________ 19 ________ To: Month ______________ 19 ________
42a. Have you ever adopted any children or did your husband have children who came to live with you when you married him?	**42a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to 44*
b. How many children?	**b.** ________
43a. In what year did the first of these children come to live with you?	**43a.** 19 ________
b. How old was the child at that time?	**b.** ________
c. Of all these children, how many still live with you?	**c.** ________
44a. Have you ever given birth to any children who are not living with you now?	**44a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to 46*
b. How many children?	**b.** ________
45. In what month and year was the first child born?	**45.** Month ______________ 19 ________

0 ☐ Respondent has no children – *SKIP to Check Item H, page 12*

46. If I am correct, your first child was born (you first assumed responsibility for a child) in 19______. Is that right? *Enter earliest year of birth or "acquisition" of a child from Record Card and items 43 and 45. Record year of first child's birth on Reference Information Sheet.*	**46.** 1 ☐ Yes 2 ☐ No – *Find out correct year and adjust accordingly*

Was another person present while completing Section IV?
1 ☐ Yes 2 ☐ No – *Go to Check Item H, page 12*

Would you say this person influenced the respondent's answers?
1 ☐ Yes 2 ☐ No

Notes

V. WORK EXPERIENCE BEFORE 1966

CHECK ITEM H

Refer to Reference Information Sheet

1 ☐ Respondent has never worked – *SKIP to 66*

Respondent has worked and:

2 ☐ (Is, has been) married – *ASK 47*
3 ☐ Has never been married and has no children of her own in the household – *SKIP to 57*
4 ☐ Has never been married and has children of her own in the household – *SKIP to 60*

EVER MARRIED RESPONDENT

47a. I'd like to ask you about the longest job you had between the time you stopped going to school full time and your (first) marriage. For whom did you work?	**47a.** x ☐ Did not work in that period 0 ☐ Married while still in school } *SKIP to 48a and then Check Item I, page 13* 1 ☐ Same as current (last) job – *ASK b and SKIP to k* 2 ☐ Other – *ASK b – l*
b. What kind of work were you doing on that job? (longest assignment)	
c. What kind of business or industry was that?

VI. ATTITUDE TOWARD WOMEN'S ROLE

66. Now I'd like your opinion about women working. People have different ideas about whether married women should work. Here are three statements about a married woman with children between the ages of 6 and 12. *(HAND CARD TO RESPONDENT)* In each case, how do you feel about such a woman taking a full-time job outside the home: Is it definitely all right, probably all right, probably not all right, or definitely not all right?

Statements	Definitely all right	Probably all right	Probably not all right	Definitely not all right	No opinion, undecided
a. If it is absolutely necessary to make ends meet	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
b. If she wants to work and her husband agrees	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
c. If she wants to work, even if her husband does not particularly like the idea	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐

CHECK ITEM M

Refer to Reference Information Sheet

× ☐ Respondent is not currently married – *SKIP to Check Item N, page 21*

Respondent is currently married and

1 ☐ Is in Labor Force Group A or B – *ASK 67*

2 ☐ Is in Labor Force Group C – *SKIP to 68*

67. How does your husband feel about your working – does he like it very much, like it somewhat, not care either way, dislike it somewhat or dislike it very much?	**67.** 1 ☐ Like it very much 2 ☐ Like it somewhat 3 ☐ Not care either way 4 ☐ Dislike it somewhat 5 ☐ Dislike it very much } *SKIP to 69*
68. How do you think your husband would feel about your working now – would he like it very much, like it somewhat, not care either way, dislike it somewhat or dislike it very much?	**68.** 1 ☐ Like it very much 2 ☐ Like it somewhat 3 ☐ Not care either way 4 ☐ Dislike it somewhat 5 ☐ Dislike it very much
69a. Now I'd like your opinion about some homemaking activities. How do you feel about keeping house in your own home? Respondent's comments ______________	**69a.** Do you – 1 ☐ Like it very much? 2 ☐ Like it somewhat? 3 ☐ Dislike it somewhat? 4 ☐ Dislike it very much? 5 ☐ Undecided
b. How do you feel about taking care of children?	**b.** Do you – 1 ☐ Like it very much? 2 ☐ Like it somewhat? 3 ☐ Dislike it somewhat? 4 ☐ Dislike it very much? 5 ☐ Undecided
70. How do you spend most of the time when you are not doing housework or working for pay? – *After the respondent gives an answer, ask* "Anything else?" (1) ______________ (2) ______________ (3) ______________	**70.** 1 ☐ Family or housekeeping related activities 2 ☐ Other activities at home 3 ☐ Entertainment, sports, social activities away from home 4 ☐ Clubs, education, church, etc.

Was another person present while completing Section VI?

1 ☐ Yes   2 ☐ No – *Go to Check Item N*

Would you say this person influenced the respondent's answers?

1 ☐ Yes   2 ☐ No

VII. HEALTH

CHECK ITEM N	1 ☐ Respondent is in Labor Force Group A or B – *SKIP to 71b* 2 ☐ Respondent is in Labor Force Group C – *ASK 71a*

71. Does your health or physical condition –	**71.**	
a. Keep you from working at a job for pay?	**a.** 1 ☐ Yes – *SKIP to 72*	2 ☐ No – *ASK b*
b. Limit the kind of work you can do?	**b.** 1 ☐ Yes – *SKIP to 72*	2 ☐ No – *ASK c*
c. Limit the amount of work you can do?	**c.** 1 ☐ Yes – *SKIP to 72*	2 ☐ No – *ASK d*
d. Limit the amount of housework you can do?	**d.** 1 ☐ Yes – *ASK 72*	2 ☐ No – *SKIP to 73*

72a. *If "Yes" in any of 71a – d* – What physical or health problems do you have?

____

b. In what way are your activities limited?

____

c. How long have you been limited in this way?	**c.** Months ________	Years ________
73. Would you rate your health, compared with other women of about your age, as excellent, good, fair, or poor?	**73.** 1 ☐ Excellent 2 ☐ Good	3 ☐ Fair 4 ☐ Poor

x ☐ Respondent not married – *SKIP to 76*

74. Does your husband's health or physical condition –	**74.**	
a. Keep him from working?	**a.** 1 ☐ Yes – *SKIP to 75*	2 ☐ No – *ASK b*
b. Limit the kind of work he can do?	**b.** 1 ☐ Yes – *SKIP to 75*	2 ☐ No – *ASK c*
c. Limit the amount of work he can do?	**c.** 1 ☐ Yes – *ASK 75*	2 ☐ No – *SKIP to 76*

75a. *If "Yes" in any of 74a – c* – What physical or health problems does he have?

____

b. In what way are his activities limited?

____

c. How long has he been limited this way?	**c.** Months ________	Years ________

x ☐ No other family members living here – *SKIP to 77*

76a. Does any other member of your family living here have a physical condition or health problem which limits his work or other activities in any way?	**76a.** 1 ☐ Yes – *ASK b – e* 2 ☐ No – *SKIP to 77*

b. Which family member is this? – *List line number as shown on Record Card.*

____

c. What physical or health problems does he have?

____

d. In what way are his activities limited?

____

____

e. Have his health problems influenced in any way, your decision to work or not work outside the home?	**e.** 1 ☐ Yes – In what way? ________________ ________________ 2 ☐ No – *Go to 77*

VIII. EDUCATION AND TRAINING

77a. Now, I'd like to ask some questions about your education and specialized training. What is the highest grade (or year) of regular school you have ever attended?	**77a.** 1 Elementary 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☐ 6 ☐ 7 ☐ 8 ☐ 2 High 1 ☐ 2 ☐ 3 ☐ 4 ☐ 3 College 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5 ☐ 6+ ☐
b. Did you finish this grade (year)?	**b.** 1 ☐ Yes 2 ☐ No
☐ Three or more years of college – *ASK 77c* ☐ Less than three years of college – *SKIP to 78*	
c. What was your field of study in college?	**c.** ______________

x ☐ Never attended high school – *SKIP to 79*
1 ☐ Attended three or four years of high school – *ASK 78a*
2 ☐ All other – *SKIP to 78c*

78a. Did you take a vocational or commercial curriculum in high school?	**78a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to c*
b. What did you specialize in?	**b.** ______________
c. In high school, did you take any courses in typing or shorthand?	**c.** 1 ☐ Yes – *ASK d – e* 2 ☐ No – *SKIP to 79*
d. What courses did you take?	**d.** 1 ☐ Typing 3 ☐ Both 2 ☐ Shorthand
e. How many years did you take (typing, shorthand)?	**e.** Typing ________ Shorthand ________
79a. Aside from regular school, did you ever take a full-time program lasting two weeks or more at a company training school?	**79a.** 1 ☐ Yes – *ASK b* x ☐ No – *SKIP to 80*
b. What type of training did you take? ______________	
c. How long did this training last?	**c.** Months ________
d. How many hours per week did you spend on this program?	**d.** 1 ☐ 1 – 4 4 ☐ 15 – 19 2 ☐ 5 – 9 5 ☐ 20 or more 3 ☐ 10 – 14
e. Did you finish or complete this program?	**e.** 1 ☐ Yes – *SKIP to g* 2 ☐ No – *ASK f* 3 ☐ Still going on – *SKIP to 80*
f. Why didn't you finish or complete this program? ______________	
g. Do you use this training on your present (last) job?	**g.** 1 ☐ Yes – *SKIP to 80* 2 ☐ No – *ASK h*
h. Have you ever used this training on a job?	**h.** 1 ☐ Yes 2 ☐ No

VIII. EDUCATION AND TRAINING – Continued

80a. Aside from regular school, did you ever take any technical, commercial, vocational, or skill training (not counting on-the-job training given informally)?	**80a.** 1 ☐ Yes – *ASK b* x ☐ No – *SKIP to 81*
b. What type of training did you take?	
c. How long did this training last?	**c.** Months ________
d. How many hours per week did you spend on this training?	**d.** 1 ☐ 1 – 4 2 ☐ 5 – 9 3 ☐ 10 – 14 4 ☐ 15 – 19 5 ☐ 20 or more
e. Did you finish or complete this program?	**e.** 1 ☐ Yes – *SKIP to g* 2 ☐ No – *ASK f* 3 ☐ Still going on – *SKIP to 81*
f. Why didn't you complete this program?	
g. Do you use this training on your present (last) job?	**g.** 1 ☐ Yes – *SKIP to 81* 2 ☐ No – *ASK h* 3 ☐ Never worked – *SKIP to 81*
h. Have you ever used this training on a job?	**h.** 1 ☐ Yes 2 ☐ No
81a. Since you stopped going to school full time, have you taken any additional courses, such as English, math, science, or art?	**81a.** 1 ☐ Yes – *ASK b* x ☐ No – *SKIP to 82*
b. Did you take this course(s) in order to obtain a certificate, diploma or degree?	**b.** 1 ☐ Yes – *ASK c–d* 2 ☐ No – *ASK e–j*
c. What kind of certificate, diploma or degree is this?	
d. Did you finish or complete this course?	**d.** 1 ☐ Yes 2 ☐ No 3 ☐ Still going on } *SKIP to 82*
e. What kind of course(s) did you take? – *If more than one course, obtain information for most important course.*	
f. How long did this course last?	**f.** Months ________
g. How many hours per week did you spend on this course?	**g.** 1 ☐ 1 – 4 2 ☐ 5 – 9 3 ☐ 10 – 14 4 ☐ 15 – 19 5 ☐ 20 or more
h. Did you finish or complete this course?	**h.** 1 ☐ Yes – *SKIP to j* 2 ☐ No – *ASK i* 3 ☐ Still going on – *SKIP to 82*
i. Why didn't you complete this course?	
j. Do you use this education on your present (last) job?	**j.** 1 ☐ Yes 2 ☐ No 3 ☐ Never worked

281

VIII. EDUCATION AND TRAINING – Continued

82a. Are you planning to enroll in any type of educational or training courses in the future?	**82a.** 1 ☐ Yes – *ASK b – c* x ☐ No – *SKIP to 83*
b. What kind of course(s) are you interested in? *Specify particular type of course below.*	**b.** 1 ☐ General high school courses 2 ☐ Business or commercial school courses 3 ☐ General college courses 4 ☐ Teacher certification program 5 ☐ Graduate education 6 ☐ Refresher or brush-up courses 7 ☐ Other
c. What is your major reason for wanting to take more courses?	
83a. Have you ever obtained a certificate required for practicing any profession or trade such as teacher, registered nurse, practical nurse, or beautician?	**83a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to 84*
b. What type of certificate was it?	
c. Is this certificate currently in effect?	**c.** 1 ☐ Yes 2 ☐ No

Notes

IX. ASSETS AND INCOME

84. Is this house (apartment) owned or being bought by you (or your husband) or is it rented? *If "Other," specify here* ____________	**84.** 1 ☐ Owned or being bought 2 ☐ Rented 3 ☐ No cash rent } *SKIP to 87* 4 ☐ Other
85. In what year did you (or your husband) buy this property?	**85.** Year ________
86a. About how much do you think this property would sell for on today's market?	**86a.** $ ________ 0 ☐ None
b. How much do you (or your husband) owe on this property for mortgages, back taxes, loans, etc.? (Mortgages include deeds of trust, land contracts for deed, etc.)	**b.** $ ________ 0 ☐ None
87a. Do you (or your husband) rent, own, or have an investment in a farm?	**87a.** 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to 88*
b. What is the total market value of your farm operation? (Include value of land, building, house, if you own them, and the equipment, live stock, stored crops, and other assets. Do not include crops held under Commodity Credit Loans.)	**b.** $ ________
c. Does that include the value of this house?	**c.** 1 ☐ Yes 2 ☐ No

Notes

II. WORK EXPERIENCE AND ATTITUDES – Continued

37. Suppose someone IN THIS AREA offered you a job in the same line of work you're in now. How much would the new job have to pay for you to be willing to take it?
(If amount given per hour, record dollars and cents. Otherwise, round to the nearest dollar.)

37.
(287) $ ________ (Dollars) . ______ (Cents) per:
(288) 1 ☐ Hour
OR
(289) $ ________ (Dollars only) . 00 per:
(290) 2 ☐ Day
3 ☐ Week
4 ☐ Biweekly
5 ☐ Month
6 ☐ Year
7 ☐ Other – *Specify* ________________

(291) 8 ☐ I wouldn't take it at any conceivable pay
9 ☐ I would take a steady job at same or less pay
10 ☐ Would accept job; don't know specific amount
11 ☐ Don't know
12 ☐ Other

CHECK ITEM N
☐ Respondent currently married – *SKIP to Check Item O*
☐ Respondent not married – *ASK 38*

38. What if this job were IN SOME OTHER PART OF THE COUNTRY – how much would it have to pay in order for you to be willing to take it?
(If amount given per hour, record dollars and cents. Otherwise, round to the nearest dollar.)

38.
(292) $ ________ (Dollars) . ______ (Cents) per:
(293) 1 ☐ Hour
OR
(294) $ ________ (Dollars only) . 00 per:
(295) 2 ☐ Day
3 ☐ Week
4 ☐ Biweekly
5 ☐ Month
6 ☐ Year
7 ☐ Other – *Specify* ________________

(296) 8 ☐ I wouldn't take it at any conceivable pay
9 ☐ I would take a steady job at same or less pay
10 ☐ Would accept job; don't know specific amount
11 ☐ Depends on location, cost of living
12 ☐ Don't know
13 ☐ Other

CHECK ITEM O
Refer to item 102R on the Information Sheet.
☐ Respondent in Labor Force Group A in 1971 – *ASK 39*
☐ All other – *SKIP to 41*

39. Would you say you like your present job more, less, or about the same as (the job you held) last year?

39.
(297) 1 ☐ More } ASK 40
2 ☐ Less } ASK 40
3 ☐ Same – *SKIP to 41*

40. What would you say is the main reason that you like your present job (more, less)?

40.
(298) ☐☐

Notes

(299)
(300)
(301)

II. WORK EXPERIENCE AND ATTITUDES – Continued

41. We are interested in your opinion about the employment of wives. *(HAND CARD Ⓐ TO RESPONDENT).* I will read you a series of statements and after each one I would like to know whether you: strongly agree, agree, disagree, or strongly disagree?

Statements		Strongly agree	Agree	Disagree	Strongly disagree	Undecided
a. Modern conveniences permit a wife to work without neglecting her family	(302)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
b. A woman's place is in the home, not in the office or shop	(303)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
c. A job provides a wife with interesting outside contacts	(304)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
d. A wife who carries out her full family responsibilities doesn't have time for outside employment	(305)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
e. A working wife feels more useful than one who doesn't hold a job	(306)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
f. The employment of wives leads to more juvenile deliquency	(307)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
g. Working wives help to raise the general standard of living	(308)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
h. Working wives lose interest in their homes and families	(309)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
i. Employment of both parents is necessary to keep up with the high cost of living	(310)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐

42. Now I'd like your opinion about women working. People have different ideas about whether married women should work. Here are three statements about a married woman with children between the ages of 6 and 12. *(HAND CARD Ⓑ TO RESPONDENT).* In each case, how do you feel about such a woman taking a full-time job outside the home: it is definitely all right, probably all right, probably not all right, or definitely not all right?

Statements		Definitely all right	Probably all right	Probably not all right	Definitely not all right	No opinion, undecided
a. If it is absolutely necessary to make ends meet	(311)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
b. If she wants to work and her husband agrees	(312)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐
c. If she wants to work, even if her husband does not particularly like the idea	(313)	1 ☐	2 ☐	3 ☐	4 ☐	5 ☐

CHECK ITEM P

Respondent is married and –
- ☐ In Labor Force Group A or B – *ASK d*
- ☐ In Labor Force Group C – *SKIP to e*

☐ Respondent is not married – *SKIP to 43*

42d. How does your husband feel about your working – does he like it very much, like it somewhat, not care either way, dislike it somewhat, or dislike it very much?

d. (314)
- 1 ☐ Like it very much
- 2 ☐ Like it somewhat
- 3 ☐ Not care either way
- 4 ☐ Dislike it somewhat
- 5 ☐ Dislike it very much

SKIP to 43

e. How do you think your husband would feel about your working now – would he like it very much, like it somewhat, not care either way, dislike it somewhat, or dislike it very much?

e. (315)
- 1 ☐ Like it very much
- 2 ☐ Like it somewhat
- 3 ☐ Not care either way
- 4 ☐ Dislike it somewhat
- 5 ☐ Dislike it very much

Notes

II. WORK EXPERIENCE AND ATTITUDES – Continued

43. **We would like to find out whether people's outlook on life has any effect on the kind of jobs they have, the way they look for work, how much they work, and matters of that kind. On each of these cards is a pair of statements numbered 1 and 2. For each pair, please select the ONE statement which is closer to your opinion. In addition, tell us whether the statement you select is MUCH CLOSER to your opinion or SLIGHTLY CLOSER.**

In some cases you may find that you believe both statements, in other cases you may believe neither one. Even when you feel this way about a pair of statements, select the one statement which is more nearly true in your opinion.

Try to consider each pair of statements separately when making your choices; do not be influenced by your previous choices.

a. (316) *

1 ☐ Many of the unhappy things in people's lives are partly due to bad luck.

2 ☐ People's misfortunes result from the mistakes they make.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

b. (317) *

1 ☐ In the long run, people get the respect they deserve in this world.

2 ☐ Unfortunately, an individual's worth often passes unrecognized no matter how hard he tries.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

c. (318) *

1 ☐ Without the right breaks, one cannot be an effective leader.

2 ☐ Capable people who fail to become leaders have not taken advantage of their opportunities.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

d. (319) *

1 ☐ Becoming a success is a matter of hard work; luck has little or nothing to do with it.

2 ☐ Getting a good job depends mainly on being in the right place at the right time.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

e. (320) *

1 ☐ What happens to me is my own doing.

2 ☐ Sometimes I feel that I don't have enough control over the direction my life is taking.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

f. (321) *

1 ☐ When I make plans, I am almost certain that I can make them work.

2 ☐ It is not always wise to plan too far ahead, because many things turn out to be a matter of good or bad fortune anyhow.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

g. (322) *

1 ☐ In my case, getting what I want has little or nothing to do with luck.

2 ☐ Many times we might just as well decide what to do by flipping a coin.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

II. WORK EXPERIENCE AND ATTITUDES – Continued

43h. (323) 1 ☐ Who gets to be boss often depends on who was lucky enough to be in the right place first.

2 ☐ Getting people to do the right thing depends upon ability; luck has little or nothing to do with it.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

i. (324) 1 ☐ Most people don't realize the extent to which their lives are controlled by accidental happenings.

2 ☐ There is really no such thing as "luck."

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

j. (325) 1 ☐ In the long run, the bad things that happen to us are balanced by the good ones.

2 ☐ Most misfortunes are the result of lack of ability, ignorance, laziness, or all three.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

k. (326) 1 ☐ Many times I feel that I have little influence over the things that happen to me.

2 ☐ It is impossible for me to believe that chance or luck plays an important role in my life.

Is this statement much closer or slightly closer to your opinion?

8 ☐ Much 9 ☐ Slightly

Notes

III. HEALTH

44a. Do you have any health problem or condition that limits in any way the amount or kind of work you can do?	44a.	(327) 1 ☐ Yes – *SKIP to Check Item Q* 2 ☐ No – *ASK b*
b. Do you have any health problem or condition that limits in any way the amount or kind of housework you can do?	b.	(328) 1 ☐ Yes – *SKIP to Check Item Q* 2 ☐ No – *ASK c*
c. Do you have any health problems that in any way limit your other activities?	c.	(329) 1 ☐ Yes 2 ☐ No
CHECK ITEM Q		☐ Respondent is currently in Labor Force Group A or B – *ASK 45a* ☐ Respondent is currently in Labor Force Group C – *SKIP to 45e*
45a. If, by some chance, you (and your husband) were to get enough money to live comfortably without working, do you think you would work anyway?	45a.	(330) 1 ☐ Yes – *ASK b* 2 ☐ No – *SKIP to c* 3 ☐ Undecided – *SKIP to d*
b. Why do you think you would work?	b.	(331) ☐ ____________________ *SKIP to e*
c. Why do you feel that you would not work?	c.	(332) ☐ ____________________ *SKIP to e*
d. On what would it depend?	d.	(333) ☐ ____________________
e. What would you say is the most important thing about any job – good wages or liking the kind of work you are doing?	e.	(334) 1 ☐ Good wages 2 ☐ Liking the work

Notes

IV. CHILD CARE

CHECK ITEM R

☐ Labor Force Group A or B with at least one child under 18 – ASK 46a
☐ Labor Force Group C with at least one child under 18 – SKIP to 47a
☐ All others – SKIP to Check Item T

46a. Who usually takes (will take) care of your child(ren) while you are working?

46a.	Youngest child in each column		
	0–2 years old	3–5 years old	6+ years old
1. In own home by relative			
a. Father	(335) * 1☐	(337) * 1☐	(339) * 1☐

100C. **When we last interviewed you, you mentioned** *(read names from item 107R on Information Sheet)* **as persons who will always know where you can be reached even if you moved away. Is this still true?** *(If so, verify the addresses and telephone numbers and mark box 1 or 2 below. If not, mark box 2 and enter information about other persons who will know the respondent's whereabouts.)*

1 ☐ All names, addresses and phone numbers are verified as being the same as those entered in item 107R – END INTERVIEW

2 ☐ All others, enter the names, etc. of two persons who will know the respondent's whereabouts.

	Name	Relationship to respondent	Address	Telephone number
(1)				
(2)				

NONINTERVIEWS IN 1971

Ask the following questions of all respondents who were noninterviews in 1971. Transcribe the answers to the appropriate item on the Information Sheet, then proceed with the regular interview.

A. What were you doing at this time in 1971 – working, keeping house, or something else?

1 ☐ Working } ASK B
2 ☐ With a job, not at work } ASK B
3 ☐ Looking for work } END of questions
4 ☐ Keeping house } END of questions
5 ☐ Unable to work } END of questions
6 ☐ Other – *Specify* } END of questions

____

____

Transcribe entries as follows:

1. If box 1 or 2 is checked, mark "Labor Force Group A" in 102R.
2. If box 3 is checked, mark "Labor Force Group B" in 102R.
3. If box 4 or 6 is checked, mark "Labor Force Group C" in 102R.
4. If box 5 is checked, mark "Unable to work" in 102R.

B. For whom did you work?

____

____

Transfer name of employer to 103R(1)

C. What kind of work were you doing?

____

____

Transfer kind of work to 103R(2)

WHEN THE TRANSCRIPTION HAS BEEN COMPLETED, BEGIN THE REGULAR INTERVIEW WITH ITEM 1.

OFFICE USE ONLY

108R. (1) Name of employer in 1969

____

____

☐ Not employed in 1969

109R. ☐ Noninterview in 1968

(1) Name of employer in 1968

____

____

☐ Not employed in 1968

110R. (1) Name of employer in 1967

____

____

☐ Not employed in 1967

111R. Residence in 1967

City ______________________

State ______________________

112R. Social Security Number

IX. INFORMATION SHEET
DATA FROM LAST INTERVIEW

101R. Date of last interview

(627)

Month	Day	Year

102R. Labor Force Group in 1971

(628) 1 ☐ A

3 ☐ B

5 ☐ C

6 ☐ Unable to work

103R. (1) Name of employer in 1971

____

____

(2) Kind of work done in 1971

____

☐ Not employed in 1971

104R. Status of respondent's parents in 1971

(629) 1 ☐ Both parents of respondent are dead

2 ☐ All other

105R. Status of husband's parents in 1971

(630) 1 ☐ Respondent not married

2 ☐ Both parents of the respondent's husband are dead

3 ☐ All other

106R. Marital status at last interview

(631) 1 ☐ Married

2 ☐ Separated

3 ☐ Widowed

4 ☐ Divorced

5 ☐ Never married

107R. Names and addresses of persons who will always know where respondent can be reached:

INDEX

INDEX

NOTE: All entries refer to women respondents 35-49 years of age in 1972 unless otherwise noted. T refers to a table or chart; n refers to footnote.

Age, in relation to:
  career status, 61-62, 63T
  earnings (average hourly), 207T, 208T
  educational attainment (respondent's), 70, 71T, 72
  job change, voluntary, 169, 170T-71T, 172
  labor force participation, 45, 200T
  propensity to change jobs, 163, 166, 167T
Age (husband's), in relation to:
  earnings (family), 154T, 155
  earnings (husband's), 154T, 155
  migration (family), 150, 151, 152T, 155
Attitude toward market work (respondent's), in relation to:
  career status, 65, 66T
  child care, 122, 124, 127T-28T, 130, 132T, 133T, 134
  race, 13, 14T, 198T
Attitude toward respondent's working (husband's), in relation to:
  career status, 65-66, 67T
  race, 13-14, 15T, 199T
Average hourly earnings, see Earnings (average hourly)
Career status, in relation to:
  age, 61-62, 63T
  attitude toward market work (respondent's), 65, 66T
  attitude toward respondent's working (husband's), 65-66, 67T
  certification for trade or profession, 64T, 65
  educational attainment (husband's), 65, 67T
  educational attainment (respondent's), 62, 64T
  employment experience (extent), 58, 59-60
  family structure (at age 15), 62, 63T
  health, 65, 66T
  marital and/or child status, 59-60, 65, 67T, 210T
  nature of residence (at age 15), 62, 63T
  occupation (general), 59-60, 211T
  occupational assignment (pattern), 58, 58n, 59-60
  race, 59-60, 61n, 63T, 210T, 211T
  training, 62, 64T, 65
  work status of mother, 62, 63T
  years between school and marriage, 65, 67T
Certification for trade or profession, in relation to career status, 64T, 65

- Child care arrangement, in relation to:
  - attitude toward market work (respondent's), 122, 124, 127T-28T, 130, 132T, 133T, 134
  - demand for female labor (local labor market), 131, 132T, 133T
  - earnings (average hourly), 124, 125
  - earnings (family), 122, 124, 125, 126T, 127T-28T, 131, 132T, 133T
  - educational attainment (respondent's), 123, 124, 126T, 127T-28T, 131, 132T, 133T, 134
  - employment status, 130, 132T, 133T
  - family composition, 121-22, 124, 126T, 127T-28T, 130, 131, 132T, 133T, 134
  - hours worked, 122, 124, 126T, 127T-28T
  - population density, 123, 126T, 127T-28T
  - propensity for job search, 131, 132T, 133T, 134
  - race, 123, 124, 125, 126T, 127T-28T, 131, 132T, 133T, 134
  - region of residence, 123, 124, 125, 126T, 131, 132T, 133T, 134
- Children, *see* Marital and/or child status
- Demand for female labor (local labor market), in relation to child care, 131, 132T, 133T
- Earnings (average hourly), in relation to:
  - age, 207T, 208T
  - child care, 124, 125
  - educational attainment (respondent's), 110T, 111
  - job change, involuntary, 175, 176T
  - job change, voluntary, 170T-71T, 174-75, 176T, 222T, 223T
  - occupational segregation, 102-04, 108, 109, 110T, 111, 113
  - race, 20, 21T, 207T, 208T
  - skill requirement, 108-09, 110T, 111, 113
  - tenure, 109, 110T
  - training, 110T, 111
  - weeks worked, 109, 110T, 111, 113
  - years worked, 109, 110T, 111, 113
- Earnings (family)
  - defined, 143, 148, 148n
  - in relation to:
    - age (husband's), 154T, 155
    - child care, 122, 124, 125, 126T, 127T-28T, 131, 132T, 133T
    - educational attainment (husband's), 154T, 155
    - intrafirm transfer, 154T, 155, 156T, 157
    - leisure time, 144
    - migration (family), 146-47, 148-49, 151, 153, 154T, 155, 156T
    - migration, multiple (family), 154T, 155, 156T, 157
    - race, 20-21, 209T
- Earnings (husband's), in relation to:
  - age (husband's), 154T, 155
  - educational attainment (husband's), 154T, 155
  - intrafirm transfer, 154T, 155, 156T, 157
  - migration (family), 151, 153, 154T, 155, 156T
  - migration, multiple (family), 154T, 155, 156T, 157

Earnings (respondent's), in relation to:
  income (family), 20-21, 209T
  intrafirm transfer, 154T, 155, 156T, 157
  migration (family), 147, 147n, 155, 156T
  migration, multiple (family), 154T, 155, 156T, 157
  race, 20-21, 209T
Educational attainment (father's), in relation to:
  educational attainment (respondent's), 70, 71T
  occupational status (first job), 72, 73T-74T
Educational attainment (husband's), in relation to:
  career status, 65, 67T
  earnings (family), 154T, 155
  earnings (husband's), 154T, 155
  migration (family), 150, 151, 152T, 154T, 155
Educational attainment (mother's), in relation to:
  educational attainment (respondent's), 70, 71T
  occupational status (first job), 72, 73T-74T
Educational attainment (respondent's), in relation to:
  age, 70, 71T, 72
  career status, 62, 63T
  child care, 123, 124, 126T, 127T-28T, 131, 132T, 133T, 134
  earnings (average hourly), 110T, 111
  educational attainment (father's), 70, 71T
  educational attainment (mother's), 70, 71T
  family structure (at age 15), 71T, 72
  job change, voluntary, 170T-71T, 173
  marital and/or child status, 71T, 72
  nature of residence (at age 15), 71T, 72
  occupational status (first job), 72, 73T-74T
  occupational status (1967 job), 76T-77T, 78
  occupational status (1972 job), 79, 80T-81T
  occupation of head of household (at age 15), 70, 71T
  race, 70, 71T
  skill requirement, 99-100, 101n, 110T, 111, 112T, 113T
Employment experience (extent), in relation to career status, 58, 59-60
Employment status, in relation to:
  child care, 130, 132T, 133T
  migration (family), 146, 151, 152T, 153T
  race, 16-17, 30T, 31-32, 32T, 33T, 34T, 201T
Experience, see Work experience
Family composition, in relation to child care, 121-22, 124, 126T, 127T-28T, 130, 131, 132T, 133T, 134
Family structure (at age 15), in relation to:
  career status, 62, 63T
  educational attainment (respondent's), 71T, 72
  occupational status (first job), 73T-74T, 75
Female-intensive occupations, see Occupational segregation
Fertility, in relation to migration (family), 145
Geographic mobility, see Migration

Health, in relation to:
  career status, 65, 66T
  occupational status (1967 job), 76T-77T, 78
  occupational status (1972 job), 80T-81T
  race, 12, 13T, 197T
Hours worked, in relation to:
  child care, 122, 126T, 127T-28T
  job change, voluntary, 169n, 170T-71T, 172-73, 175, 218T, 219T
  propensity to change jobs, 166, 167T
  race, 18, 19T, 204T
Human capital
  defined, 98
  in relation to:
    occupation (general), 98-101
    skill requirement, 99-100, 101-02
Husband's attitude toward wife's working, see Attitude toward wife's working (husband's)
Income (total family), in relation to respondents earnings, 20-21 209T; see also Earnings
Intrafirm transfer, in relation to:
  earnings (family), 154T, 155, 156T, 157
  earnings (husband's) 154T, 155, 156T, 157
  earnings (respondent's), 154T, 155, 156T, 157
  weeks worked, 155, 156T, 157
Involuntary job change, see Job change, involuntary
Job change, involuntary, effects on:
  earnings (average hourly), 175T-76T
  job satisfaction, 175, 177T
Job change, voluntary
  comparison with middle-aged men, see Men, middle-aged
  correlates:
    age, 169, 170T-71T, 172
    earnings (average hourly), 170T-71T
    educational attainment (respondent's), 170T-71T, 173
    hours worked, 169n, 170T-71T, 172-73, 175, 218T, 219T
    job satisfaction, 170T-71T, 173
    marital and/or child status, 170T-71T, 172
    propensity to change jobs, 169, 172
    tenure, 170T-71T, 173
  effects on:
    earnings (average hourly), 174-75, 176T, 222T, 223T
    job satisfaction, 175, 177T
    unemployment rate (local area), 164n
    wage structure (position in), 164
  extent:
    overall, 169, 169n, 170T-71T
    by race, 170T-71T, 172

326

Job satisfaction, in relation to:
  job change, involuntary, 175, 177T
  job change, voluntary, 170T-71T, 173, 175, 177T

  race, 12, 30T, 32, 32T, 33T, 34T, 41T, 44T, 46T, 48T-49T, 50T, 52T, 195T, 196T
Men, middle-aged
  comparison with women, 35 to 59 years of age in 1972, by:
    job change, voluntary, 169, 172
    propensity to change jobs, 168
Migrant status, in relation to occupational status (1972 job), 80T-81T
Migration (family); see also Migration, multiple (family)
  correlates:
    age (husband's), 150, 151, 152T, 155
    earnings (family), 146-47, 148-49, 151, 153, 154T, 155, 156T
    earnings (husband's), 151, 153, 154T, 155, 156T
    earnings (respondent's), 147, 147n, 155, 156T
    educational attainment (husband's), 150, 151, 152T, 154T, 155
    employment status, 146, 151, 152T, 153T
    fertility, 145
    marital and/or child status, 145, 150, 151, 152T, 153T
    search (job), 145, 146, 146n
    tenure, 151, 152T, 153T
    weeks worked, 155, 156T, 157
  extent (overall), 150, 150n

Migration, multiple (family), in relation to:
  earnings (family), 154T, 155, 156T, 157
  earnings (husband's), 154T, 155, 156T, 157
  earnings (respondent's), 154T, 155, 156T, 157
  weeks worked, 155, 156T, 157
Mobility, see Labor mobility
Multiple classification analysis (MCA), defined, 60n, 60-61, 164n
Nature of residence (at age 15), in relation to:
  career status, 62, 63T
  educational attainment (respondent's), 71T, 72
  occupational status (first job), 73T-74T, 75
Occupational assignment (pattern), in relation to career status, 58, 58n, 59-60
Occupational commitment, see Occupational assignment (pattern)
Occupational mobility, see Occupational status
Occupational segregation, in relation to:
  earnings (average hourly), 102-04, 108, 109, 110T, 111, 113
  skill requirement, 103-04, 105T, 110T, 113, 113T
Occupational status
  of first job, in relation to:
    educational attainment (father's), 72, 73T-74T
    educational attainment (mother's), 70, 71T
    educational attainment (respondent's), 72, 73T-74T
    family structure (at age 15), 73T-74T, 75
    marital and/or child status, 73T-74T, 75
    nature of residence (at age 15), 73T-74T, 75
    occupation of head of household (at age 15), 73T-74T, 75
    occupational status (1967 job), 76T-77T, 78
    race, 73T-74T, 75
  of 1967 job, in relation to:
    educational attainment (respondent's), 76T-77T, 78
    health, 76T-77T, 78
    occupational status (first job), 76T-77T, 78
    occupational status (1972 job), 79, 80T-81T
    race, 76T-77T, 79
    tenure, 76T-77T, 78
    training, 76T-77T, 78
    years worked, 76T-77T, 78-79
  of 1972 job, in relation to:
    educational attainment (respondent's), 79, 80T-81T
    health, 80T-81T
    migrant status, 80T-81T
    occupational status (1967 job), 79, 80T-81T
    race, 80T-81T, 82
    tenure, 80T-81T
    training, 79, 80T-81T
    weeks worked, 79, 80T-81T
    years worked, 79, 80T-81T

Occupation, female (typical), see Occupational segregation
Occupation (general), in relation to:
  career status, 59-60, 211T
  human capital, 98-101
  skill requirement, 98-102
Occupation of head of household (at age 15), in relation to:
  educational attainment (respondent's), 70, 71T
  occupational status (first job), 73T-74T, 75
Opportunity to change jobs, concept defined, 163-64
Population density, in relation to child care, 123, 126T, 127T-28T
Propensity for job search, in relation to child care, 131, 132T, 133T, 134
Propensity to change jobs
  comparison with middle-aged men, see Men, middle-aged
  defined, 162
  in relation to:
    age, 163, 166, 167T
    hours worked, 166, 167T

TITLE: REPORT ON THE ILO/DANIDA TRAINING COURSE FOR VOCATIONAL REHABILITATION CENTRE AND SHELTERED WORKSHOP MANAGERS, ADDIS ABABA, ETHIOPIA, 15-31 OCTOBER 1975.

DESCRIPTOR: *INSERVICE PROGRAMS; *MANAGEMENT DEVELOPMENT; *VOCATIONAL REHABILITATION; *SHELTERED WORKSHOPS; COURSE ORGANIZATION; LECTURE; REHABILITATION PROGRAMS; *HANDICAPPED; FIELD TRIPS; VOCATIONAL TRAINING CENTERS; DEVELOPING NATIONS

IDENTIFIER: *AFRICA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 214P.

ABSTRACT: DEVELOPMENT OF NEEDED VOCATIONAL REHABILITATION CENTERS FOR AFRICA'S LARGE DISABLED AND HANDICAPPED POPULATION HAS BEEN GREATLY LIMITED BY THE SHORTAGE OF SKILLED MANAGERIAL STAFF. THE TRAINING COURSE DESCRIBED IN THIS REPORT WAS ORGANIZED TO ASSIST ADMINISTRATIVE PERSONNEL IN OPERATING VOCATIONAL REHABILITATION, SHELTERED, AND PRODUCTION WORKSHOPS FOR THE DISABLED. THE TRAINING COURSE PROGRAM COVERED A SERIES OF LECTURES AND DISCUSSIONS ON ASPECTS OF MANAGING SUCH WORKSHOPS, ON THE VOCATIONAL REHABILITATION PROBLEMS ASSOCIATED WITH SPECIFIC DISABILITY GROUPS, VISITS TO WORKSHOPS FOR THE DISABLED ALREADY SUCCESSFULLY ESTABLISHED IN ETHIOPIA TO SEE PRACTICAL APPLICATION OF THE LECTURE TOPICS, STUDY IN WORKING GROUPS, AND DISCUSSION IN PLENARY SESSION IN WHICH GROUP REPORTS WERE READ. PARTICIPANTS FROM 15 AFRICAN COUNTRIES RECEIVED TRAINING COURSE CERTIFICATES AT THE END OF THE PROGRAM. AT THE FINAL REVIEW SESSION PARTICIPANTS ADOPTED CONCLUSIONS CONCERNING THE PROBLEM OF DISABILITY IN AFRICAN COUNTRIES, COORDINATION OF SERVICES, PRODUCTION AND SHELTERED WORKSHOPS, REHABILITATION AND EMPLOYMENT OF VARIOUS CATEGORIES OF THE HANDICAPPED, AND INTERNATIONAL ASSISTANCE. MORE THAN HALF OF THE REPORT CONSISTS OF A SELECTION OF THE LECTURES PRESENTED IN THE COURSE TO PROVIDE INFORMATION ON THE SUBJECT AREAS. APPENDED ARE PAPERS PREPARED BY EACH COURSE PARTICIPANT DESCRIBING HIS COUNTRY'S VOCATIONAL REHABILITATION ACTIVITIES. (MF)

11. Vocational Rehabilitation Services in Somalia - Mr. M.H. Balayah 196

12. Sudan's Programme in Vocational Rehabilitation of the Disabled - Mr. M.S. Abdel Rahman 199

13. Tanzania's Programme in the Field of Vocational Rehabilitation of the Disabled - Mr. E.M. Mshana 202

14. Vocational Rehabilitation of the Disabled in Uganda - Mr. R.M. Karozi 205

15. Zambia's Programme for the Handicapped - Mr. T.K. Nkonde 208

INTRODUCTION

It is estimated that in Africa, handicapping conditions such as leprosy, blindness, deafness, poliomyelitis, tuberculosis, mental illness, mental retardation, etc. may affect 10 per cent of the population. Industrial and traffic accidents are on the increase and malnutrition, as a result of drought and other natural disasters on the African continent, has left large numbers of disabled in its wake. The serious impact of these handicaps cannot be measured in medical and humanitarian terms alone - it is also an economic problem of the first magnitude as millions of inactive disabled persons are a charge on the community and their families.

In many African countries which are experiencing heavy unemployment and underemployment, prospects of placement for the disabled in the normal labour market are very poor indeed. Consequently, some governments are turning their attention to the development of "employment-creation" projects for the disabled such as sheltered/production workshops, co-operatives and homeworking schemes. One such country is Ethiopia, where successful and viable production workshops for the disabled have been firmly established over the past few years.

One of the greatest drawbacks to the successful development of sheltered/production workshops for the disabled is the shortage of skilled managerial staff and it was with this and the above factors in view that the ILO/DANIDA Training Course for Vocational Rehabilitation and Sheltered Workshop Managers was conceived. The course itself which was held in Addis Ababa, Ethiopia from 15 to 31 October 1975, was organised jointly by the International Labour Office and the Governments of Denmark and Ethiopia as part of the joint technical co-operation programme of the ILO and the Danish International Development Agency (DANIDA).

The main objectives of the training course were:

to give managing staff of rehabilitation and sheltered workshops in African countries the opportunity of studying at first hand the management, organisation, administration and operation of vocational rehabilitation, sheltered and production workshops for the disabled.

In particular the course was designed to enable participants to:

(1) study in a realistic setting, the development and organisation of the sheltered/production workshops in Ethiopia which employ large numbers of disabled persons in various occupations including carpet making, cloth weaving, umbrella making and dry cell battery manufacture;

(2) obtain new ideas and fresh views, methods and techniques on the management of workshops and small-scale industry enterprises for the disabled and to consider how best they can be applied to their own countries;

(3) exchange information on vocational rehabilitation programmes and related services for the disabled and discuss the problems encountered or envisaged in developing such programmes in the countries represented.

The Director-General of the International Labour Office gratefully acknowledges the co-operation and generosity of the Governments of Denmark and Ethiopia which contributed so much to the planning, development and successful outcome of the project; in particular, he wishes to place on record the notable contribution made by Ato Kassa Kebede, the Ethiopian Co-Director of the training course and his staff and Mr. Otto Wandall-Holm, the Danish Co-Director. Thanks are also due to the Ethiopian secretarial and administrative staff, the Ethiopian and international lecturers and the management and staff of the rehabilitation centres and workshops visited as part of the training course programme.

The support and assistance provided by Rehabilitation International and the International League of Societies for the Mentally Handicapped are also gratefully acknowledged.

It is hoped that the report of the training course which follows will be of value and help, not only to the governments of Africa represented at the course, but also to all other countries and organisations which are interested in developing employment-creation projects for their disabled people.

The report itself comprises four chapters:

Chapter I - Organisation and administration of the course.

Chapter II - Programme and activities.

Chapter III - Final conclusions of the training course.

Chapter IV - A selection of papers presented at the course.

CHAPTER I

ORGANISATION AND ADMINISTRATION OF THE COURSE

Participants

Twenty African countries were invited to participate in the training course but three countries were unable to nominate candidates; candidates nominated by two other countries failed to attend. The following 21 participants (including three observers) were eventually selected and took part in the programme:

Country	Name and address of participant
Cameroon	Mr. Mathias E. Eta, Director, Bulu Blind Centre, P.M.B. 27, BUEA.
Ethiopia	Ato Endale Samuel, Deputy General Manager, United Abilities Co., P.O. Box 2484, ADDIS ABABA.
	Captain Tadesse Tekle, Manager, Ethio-Craft Centre, P.O. Box 30722, ADDIS ABABA.
Ghana	Mr. J.L. Adjei, Society of Friends of Mentally Retarded Children, P.O. Box 640, ACCRA.
Kenya	Mr. Frederick K. Boit, Instructor, Kisii Rehabilitation Centre, P.O. Box 237, KISII.
	Mr. William O. Olaka, Manager, Embu Rural Vocational Rehabilitation Centre, P.O. Box 200, EMBU.
Liberia	Mr. B. Nuwo Jensen, Superintendent, Klay Basic Crafts Training Centre, Ministry of Labour, Youth and Sports, KLAY, Bomi Territory.
Libya	Mr. Mahmoud A. Tayeb, Chief of Department, Ministry of Education, TRIPOLI. and Deputy Chief, Arab Federation for the Deaf.
Malawi	Mr. George P. Mchiela, Secretary/Registrar, Malawi Council for the Handicapped, P.O. Box 5971, LIMBE.

Nigeria	Mr. Daniel Aduak, Social Welfare Officer, Rehabilitation Unit, Ministry of Social Development, North Central State, KADUNA.
Rwanda	Mr. Jean Hategekimana, Rehabilitation Centre, Catagara, B.P. 24, NYABISINDU.
Sierra Leone	Mr. Egerton Williams, Manager, Employment Exchange, Ministry of Labour, FREETOWN.
Somalia	Mr. M. Husein Balayah, Vocational Training Officer, Ministry of Labour and Sports, MOGADISCIO.
	Mr. Ahmed A. Hasan, Vocational Rehabilitation Officer, Somali Social Security Fund, MOGADISCIO.
Sudan	Mr. Musa Shallal Abd-Elrahman, Director of Social Welfare Centres, Department of Social Welfare, KHARTOUM.
Tanzania	Mr. Elieza M. Mshana, Director of Welfare Services and Manager of Production Workshop, P.O. Box 577, TANGA.
Uganda	Mr. Richard M. Karozi, Manager, Mbale Sheltered Workshop, MBALE.
Zambia	Mr. Kangwa T. Nkonde, Workshop Management, Zambia Council for the Handicapped, Kanganga Employment Centre, P.O. Box 517, NDOLA.

Observers

Ato Aberra Batcha,
Rehabilitation Agency for the Disabled,
P.O. Box 21372,
ADDIS ABABA, ETHIOPIA.

Sister Senkenseh Gebre-Mariam,
Head of Social Work Department,
Bisidimo Rehabilitation Centre,
HARAR, ETHIOPIA.

Mr. Lars Lind,[**]
Vocational Rehabilitation Associate Expert,
ILO Area Office,
P.O. Box 9212,
DAR ES SALAAM, TANZANIA.

[**] Full cost of his participation was kindly met by the Swedish Government.

Lecturers

The following lecturers presented papers at the training course:

Mr. J. Bochet	ILO African Regional Adviser in Co-operatives, ILO Regional Office for Africa, P.O. Box 2788, ADDIS ABABA, ETHIOPIA.
Mr. D. Carter	Director and Advisory Officer, Rural Training Unit of the National Society for Mentally Handicapped Children, Lufton Manor, LUFTON, Somerset, ENGLAND. (also representing the International League of Societies for the Mentally Handicapped)
Mr. Norman E. Cooper	Head of Vocational Rehabilitation Section, ILO Headquarters, CH 1211 GENEVA 22, SWITZERLAND.
Ato Yesuneh Hailu	Ethiopian National Association for the Deaf, P.O. Box 21359, ADDIS ABABA, ETHIOPIA.
Ato Kassa Kebede	General Manager, Rehabilitation Agency for the Disabled, P.O. Box 21372, ADDIS ABABA, ETHIOPIA.
Professor D. Lockwood	Chief of Programme Co-ordination, ILO International Centre for Advanced Technical and Vocational Training, Via Ventemiglia, 201 TORINO, ITALY.
Mr. Edgar Marland	ILO Asian Regional Adviser in Vocational Rehabilitation of the Disabled, ILO Regional Office for Asia, P.O. Box 1759, BANGKOK, THAILAND.
Mr. Sam Niwa	ILO African Regional Adviser in Vocational Rehabilitation of the Disabled, ILO Regional Office for Africa, P.O. Box 2788, ADDIS ABABA, ETHIOPIA.
Dr. D. Owosina	Adeoyo Orthopaedic Rehabilitation Division, P.O. Box 3427, IBADAN, Western State, NIGERIA. (also representing Rehabilitation International)
Mr. J. Percy	ILO Project Manager, Vocational Training Project, c/o ILO Regional Office for Africa, P.O. Box 2788, ADDIS ABABA, ETHIOPIA.

Dr. Felton Ross	Director of Training, ALERT, P.O. Box 165, ADDIS ABABA, ETHIOPIA.
Ato Zewde Shaarega	United Abilities Company, P.O. Box 1021, ADDIS ABABA, ETHIOPIA.
Mr. Otto Wandall-Holm	ILO Vocational Rehabilitation Expert, c/o United Nations Office, P.O. Box 30218, NAIROBI, KENYA.
Mr. Tom Wijenje	Manager, Workshop for the Blind, MACHAKOS, KENYA.
Ato Wondimagegnehu Assefa	Ethiopia Amalgamated Co., P.O. Box 1335, ADDIS ABABA, ETHIOPIA.

Technical preparations

The Ethiopian Government, in close co-operation with the ILO Regional Office for Africa, Addis Ababa, approved the draft programme for the training course early in 1975. Ato Kassa Kebede was nominated as Ethiopian Co-Director of the course and was responsible for the recruitment of local lecturers and secretarial staff, provision of accommodation for participants and the training course facilities as well as arrangements for visits to rehabilitation centres, workshops, etc. Throughout the planning and implementation period, he worked closely with the Danish and ILO Co-Directors of the course who were responsible for the basic planning of the project, recruitment and travel of participants and international lecturers, editing of lecture papers and provision of background materials and other technical documentation.

The directing staff consisted of:

Ethiopian Co-Director	Ato Kassa Kebede, General Manager, Rehabilitation Agency for the Disabled, ADDIS ABABA.
Danish Co-Director	Mr. Otto Wandall-Holm, ILO Vocational Rehabilitation Expert, KENYA.
ILO Co-Director	Mr. Norman E. Cooper, Head of Vocational Rehabilitation Section, ILO Headquarters, GENEVA, Switzerland.
ILO Regional Vocational Rehabilitation Adviser for Africa	Mr. Isamu Niwa, ILO Regional Office for Africa, ADDIS ABABA, Ethiopia.
ILO Regional Vocational Rehabilitation Adviser for Asia	Mr. Edgar Marland. ILO Regional Office for Asia, BANGKOK, Thailand.

Material arrangements

The training course was based at the Ghion Hotel, Addis Ababa, which had good conference facilities and which offered board and accommodation for staff, participants and lecturers. The Ethiopian Government generously provided all office equipment and supplies as well as transport for the many visits to rehabilitation facilities and for leisure time.

CHAPTER II

PROGRAMME AND ACTIVITIES

Opening ceremony

The training course was formally opened on 15 October, 1975 by His Excellency Ato Tadesse Terefe, Minister of Labour and Social Affairs. Other addresses of welcome were given by Mr. A. Adossama, Director of the ILO Regional Office for Africa, and the Ethiopian and Danish Co-Directors. There was full television and press coverage for the occasion.

Programme

The detailed programme of the training course was as follows:

Date	1975		Activities
Tuesday,	14 October		Arrival and registration of participants
Wednesday,	15 October	a.m.	Formal opening of the training course Technical session (Explanation of working arrangement for the training course)
		p.m.	Lecture: Ethiopia's rehabilitation programme for disabled persons (Ato Kassa Kebede) Visit to rehabilitation agency for the disabled and craft workshops
Thursday,	16 October	a.m.	Lecture: The extent, incidence and special problems of disablement in African countries (Dr. D. Owosina, Nigeria) Discussion: The role of an ILO regional vocational rehabilitation adviser (Mr. E. Marland, Mr. S. Niwa, ILO)
		p.m.	Lecture: The planning and development of the umbrella workshop (Mr. Marland) Lecture: The training of personnel for the workshop (Ato Wondimagegnehu Assefa)
Friday,	17 October	a.m.	Visit to the United Abilities Co., and showing of film "The Umbrella Man"
		p.m.	Lecture: The organisation of production work and sales outlets (Mr. Marland) Lecture: Expansion of the workshop and introduction of new products (Ato Wondimagegnehu Assefa) Group and plenary discussions
Saturday,	18 October	a.m.	Round table discussion: Production workshops for the disabled in African countries (Ato Kassa Kebede, Ato Wondimagegnehu Assefa, Mr. Marland, Mr. Niwa, Mr. Wandall-Holm) Group and plenary discussions Free time

Date	1975		Activities
Sunday,	19 October	a.m.	Free time.
Monday,	20 October	a.m.	Lecture: Selecting and developing products for workshops (Prof. D. Lockwood, ILO, Turin)
			Group and plenary discussions
		p.m.	Lecture: Production scheduling and control (Prof. D. Lockwood)
			Group and plenary discussions
Tuesday,	21 October	a.m.	Lecture: Industrial engineering (techniques of setting up a workshop, maintenance, layout, etc.) (Prof. D. Lockwood)
			Group and plenary discussions
		p.m.	Lecture: Employment schemes for leprosy patients (Dr. Felton-Ross)
			Visit to ALERT workshops
Wednesday,	22 October	a.m.	Lecture: Training of personnel for rehabilitation workshops (Dr. Felton-Ross)
			Lecture: Employment of the deaf (Ato Hailu Yesuneh)
			Group discussions
		p.m.	Visit to school for the blind
Thursday,	23 October	a.m.	Lecture: The problem of blindness in Africa (Mr. T. Wijenje)
			Lecture: Employment of the blind (Ato Shoarega Zewde)
			Lecture: Employment through co-operative schemes (Mr. J. Bochet, ILO)
			Group and plenary discussions
		p.m.	Practice studies at Ethio-Craft Workshop, United Abilities Co., and Volunteer Rehabilitation Project for Leprosy Patients
Friday,	24 October	a.m.) p.m.)	Practical studies at Ethio-Craft Workshop, United Abilities Co., and Volunteer Rehabilitation Project for Leprosy Patients
Saturday,	25 October	a.m.	Presentation of group reports
		p.m.	Free time
Sunday,	26 October		Free time
Monday,	27 October	a.m.	Lecture: Organisation of vocational training workshops (Mr. J. Percy, ILO)
			Group and plenary discussions
		p.m.	Lectures: Rehabilitation and employment of the mentally handicapped
			(a) The mentally ill (Mr. N.E. Cooper, ILO)
			(b) The mentally retarded (Mr. D. Carter)
			Group and plenary discussions

Date	1975		Activities
Tuesday,	28 October	a.m.	Lecture: Resettlement of the disabled in rural areas of Africa (Mr. S. Niwa)
			Group and plenary discussions
		p.m.	Free time
Wednesday,	29 October	a.m.) p.m.)	Presentation of country papers by participants
Thursday,	30 October	a.m.	Presentation of country papers, (contd.)
		p.m.	Preparation of final conclusions
Friday,	31 October	a.m.	Adoption of final conclusions and review of the training course
		p.m.	Formal closure

Pattern of the training course

Following a general introduction to the Ethiopian rehabilitation programme, the training course programme covered:

(a) a series of lectures, discussions and study subjects on general and specific aspects of managing sheltered and production workshops for the disabled;

(b) the special vocational rehabilitation problems and techniques associated with some specific disability groups (e.g. leprosy patients, blind, deaf, mentally ill, mentally retarded, etc.);

(c) visits to workshops for the disabled in Ethiopia to see and study the practical application of the lectures and discussion subjects;

(d) discussions and study in working groups (each subject was examined and discussed by participants in small working groups and views formulated);

(e) discussion in plenary session in which the group reports were read and discussed.

Copies of the full English texts of most papers were distributed in advance to the participants and in some instances it was only necessary for lecturers to present a summary of their papers - thus leaving more time for individual questioning and group discussion.

With a view to stimulating an exchange of ideas and experiences and to allow for a thorough examination of each subject, participants were divided into three working groups. The directing staff prepared special points for consideration although participants were free to discuss any aspect of the subject which was being examined. The conclusions of each group were presented orally by group rapporteurs and discussed in plenary session. The conclusions, which were summarised each evening by the directing staff and distributed to participants the following morning, provided a basis for the formulation of the final conclusions which were adopted unanimously on the last day of the training course (see Chapter III). The composition of the working groups was as follows:

Group A

Mr. Endale Samuel	(Ethiopia)
Mr. D. Aduak	(Nigeria)
Mr. J.L. Adjei	(Ghana)
Mr. F.K. Boit	(Kenya)
Mr. M.E. Eta	(Cameroon)

Country papers

Prior to the training course, each participant was invited to prepare a paper describing his country's vocational rehabilitation activities under the following headings:

(a) extent of the problem of disability;

(b) existing vocational rehabilitation services for the physically and mentally disabled in general (i.e. vocational assessment, guidance, training, employment, sheltered workshops);

(c) services for special groups (e.g. blind, deaf, mentally retarded, lepers, etc.);

(d) co-ordination of these services with health, social and community services;

(e) staff training;

(f) unresolved problems, particularly those related to management of rehabilitation centres and sheltered workshops;

(g) plans for the future.

Three sessions of the training course were devoted to the presentation and discussion of these papers. This proved to be a valuable exercise with many new ideas and suggestions being put forward for improving and developing vocational rehabilitation and workshop programmes for the disabled in African countries. (Copies of the country papers are reproduced as an annex to the report.)

Special studies at the Ethio-Craft Workshop, United Abilities Company and the Volunteer Rehabilitation Project for Leprosy Patients

With a view to providing participants with an opportunity to study the organisation, management and successful development of Ethiopian workshops for the disabled, special group studies were arranged on 23 and 24 October 1975. The composition of the three groups "A", "B" and "C" (indicated above) was maintained with the exception that three Ethiopian participants were nominated as group leaders at the three workshops visited, i.e.:

The Ethio-Craft Workshop - Ato Tedesse Tekle
United Abilities Company - Ato Endale Samuel
ALERT Volunteer Rehabilitation Project for Leprosy Patients - Sister Senkenseh Gebre-Mariam

Each group visited the three workshops in turn, one half-day being spent at each workshop. In order to facilitate the studies and to obtain relevant information through questioning of and discussions with the group leaders and workshop management and staff, the following outline was provided:

When visiting each workshop, each group should endeavour, through questioning of and discussions with the group leader and staff, to cover the following points:

(1) Trace the origin and development of the project (how it was planned and conceived);

(2) What market survey investigations were undertaken?

(3) What capital, staff and premises were required to launch it?

(4) How were staff recruited and trained?

(5) What type of production work was undertaken originally and why?

(6) Has the production work changed or expanded? If so, indicate how this was possible.

(7) What is the admission procedure for disabled persons entering the workshop? How many are currently employed (male and female, by type of disability)?

(8) How is the production work organised?

(9) Where are the raw materials and equipment obtained from?

(10) What tariff protection or tax concessions are granted to the workshop?

(11) What are the management procedures, including production scheduling and control?

(12) What profits is the workshop making and how are these utilised for further development?

(13) Describe the wage scheme operating.

(14) How are products disposed of?

(15) Are there plans for future expansion? If so, what are they?

(16) What supporting sources are provided by the workshop to the workers (e.g. housing, medical, canteen, social welfare, etc.)?

(17) To what extent do you feel that this project is applicable to other African countries?

The reports of the individual groups were as follows:

Report of group "A"

I. Special studies at the Ethio-Craft Workshop (23 October 1975)

Under the leadership of Captain Tadesse Tekle, the group was able to make a thorough on-the-spot investigation of the entire workshop.

The Ethio-Craft Workshop was established by an Ethiopian lady in 1966 from funds donated by government and voluntary agencies. (The government contribution was Eth.$678,000.) The intention was to provide vocational training to disabled persons and place them in the open labour market.

No formal or informal market survey was undertaken and sale of products largely depended on the goodwill and interest of those who knew of the project's aims and objectives.

Staff were recruited who showed interest and enthusiasm for the project and disabled trainees were admitted provided they were not under active medical care; had lived in Addis Ababa for at least five years and needed a job. The site for the workshop was selected in view of its popularity as a dwelling place for large numbers of disabled beggars. By 1969, the number of trained workers had grown to 200 and demand for the products had considerably increased. It had not been possible, however, to transfer many workers to the open labour market. It was, therefore, decided to develop the project as a craft production workshop, concentrating on those products (shamma cloth and rugs) which had a ready sale and which were made from locally produced materials.

Expansion of the workshop itself in recent years had been limited with the management concentrating on improving quality and quantity of the goods produced.

The present criteria for admission are the same as those stated above when the workshop was first opened.

Currently, there are 450 persons employed, including 221 disabled males, 108 disabled females and 121 able-bodied, many of whom were originally socially disadvantaged (destitute, beggars, orphans, etc.). The types of disabilities of the workers have not been enumerated, but many blind, crippled and deaf people were observed and identified.

The organisation of production work is carried out by:

(a) the manager;

(b) four supervisors; and

(c) a general foreman for each division.

Workers are assigned in groups, with each worker, in many instances, able to perform one or more operations - thus avoiding production bottlenecks when workers are absent through sickness, accidents, etc.

Raw materials (mainly wool and cotton) are purchased locally and most of the looms and other equipment are locally made. No tariff protection or tax concessions have been granted to Ethio-Craft.

Management procedures including production scheduling and control are channelled through:

(a) a general manager;

(b) a purchasing manager;

(c) supervisory staff;

(d) division foremen;

(e) a sales manager; and

(f) a general storekeeper.

Annual profits are minimal and needs are subsidised by government grants.

With regard to wages, all disabled persons, on entry, receive a monthly salary of Eth.$30. With training and experience, this could reach to Eth.$130, particularly for production-line workers.

All products are disposed of through the Ethio-Craft shop on the premises or through three other sales points. There are good export possibilities, also, which are being explored.

Expansion is being considered only in terms of building or workshop enlargement and improved quality and quantity of the products. The workshop manager is willing to introduce new products, provided there is an assured market, based on feasibility studies.

Ethio-Craft provides medical services on a first-aid basis at the workshop and also at a local hospital. A social welfare service is also provided.

All members of the group felt that similar workshops should be developed in other African countries, utilising local expertise and raw materials.

Observations

(a) The general layout of the workshop could be improved.

(b) Canteen facilities are required for the workers.

(c) Courses in business management need to be organised for staff as well as workers with management potential.

(d) The group wishes to commend the management and staff of the workshop for the remarkable work they are doing on behalf of disabled workers.

II. Special studies at the Volunteer Rehabilitation Project for Leprosy Patients (24 October 1975)

The project was started in 1970 by a volunteer lady as a means of providing employment for ex-leprosy patients and members of patients' families and the patients themselves. The project was conceived because the patients and ex-patients were not received back into society; nor was it possible for them to gain admittance to the various rehabilitation projects for other categories of disabled persons.

Before the project was started, no market survey investigations were undertaken. It was started on a trial-and-error basis. Later, volunteers came forward to help and also gave orders for some of the goods produced by the workers.

The project was started with no working capital. Donations and gifts were received from public-spirited people. It was administered by women, all non-Ethiopian, who worked in a volunteer capacity. These volunteers offered services and trained the staff on the job. Presently guiding the project are six ladies who work part or full time as unpaid managers, teachers and consultants. They co-ordinate the skills and work habits of the craftsmen to help them earn a living wage. Six volunteers work in the sales shop.

At present there are six staff members, four of whom are salaried. Plans are in hand to engage a full-time manager/accountant. Consideration is also being given to employing other staff.

Originally, weaving and sewing of Ethiopian dresses were started, as there was a ready market for them, and training required was minimal. Production has not changed much. Local skills and materials are fully utilised to produce a wide range of saleable items which appeal to a variety of tastes.

Expansion has been possible because of donations and the time and talents of volunteers, gifts the centre receives from the public and also through the sale of products at the cotton house and the Ethio-Craft shop. Visitors and tourists also buy their goods from the centre shop. The centre also participates in bazaars at Christmas time.

Admission is arranged on the basis of a medical report. Of the 90 employed, about 45 work in their homes. They collect supplies from the centre and return the completed work there. Further workers cannot be admitted until the centre is extended. Disability of those employed varies in degree and type.

In order to ensure continuous production, purchasing of raw materials is done in bulk. It is also cheaper to make bulk purchases at wholesale prices. Some of the raw materials used are:

(a) wool (this is obtained from a local wool factory);

(b) raw cotton (this is obtained locally, and the seeds are sold to a vegetable oil factory);

(c) embroidery thread (this is imported and colour-fast); and

(d) miscellaneous (other supplies such as needles, buttons, sewing thread, clips, acrylic yarns, cloth for lining, etc. are bought from the local market).

The centre is managed by volunteers, some of whom are teachers, supervisors, production and sales managers. Production scheduling is on a time basis and indicates to workers how much work must be completed within a given period. The various types of production schedules are:

(a) Stable. (This is the same for each time period, with knitters, for example, making a certain number of items each week.) (Spinning and knitting.)

(b) Rotating. (Items made under this kind of schedule alternate with new time periods.) (Carpet making, drawing embroidery.)

(c) Fluctuating. (This type of production schedule is used for isolated orders of either standardised or non-standardised items, e.g. cloth weaving.)

(d) Combination. (When two or more kinds of schedules are combined, e.g. as was noticed in the sewing room.)

The quality of work is controlled by the craftsman himself. External supervision is provided, however, to maintain quality standards. The workshop has not been making great profits. However, in 1974, the project took in between Eth.$58,000 to 59,000 - 92 per cent in sales and 8 per cent in gifts and donations. It spent slightly less than that amount - 53 per cent in salaries, 42 per cent in supplies and the remainder to cover operating costs, which are usually low. The project does not pay administrative salaries, and much of the work space is rent free. There was a profit of Eth.$600 which was reinvested in the project.

Most workers are paid by piecework method. This allows them to work in their homes and also helps the project to maintain its high quality standards. Some workers are being trained for management responsibilities and receive a salary in addition to their piecework earnings. The basic salary is Eth.$30 per month. Sometimes this basic salary is raised or lowered, depending on the production schedule.

Plans for future expansion are:

(a) a board will be established and a full-time manager;

(b) it is the aim of the project to be self-supporting;

(c) more people will be trained when sufficient accommodation is obtained;

(d) production of local and saleable products will be increased.

The workshop does not provide housing for workers. Once they have been patients, they continue to receive free medical attention from the hospital. Nurses pay regular visits to them in their homes and the workshop. Serious cases are referred to a medical officer.

Social welfare services are made available to the workers. They have their own community loan society. Counselling services, too, are provided through the social welfare.

Opportunities are offered to illiterates to learn how to read and write.

Leprosy is a disease found in all African countries and the group feels that similar projects should be initiated to help leprosy patients and ex-patients to sustain themselves and their dependants.

Observations

(a) The group feels that the manager should be appointed as soon as possible.

(b) The workers' salary based on a minimum of Eth.$30 should be raised.

(c) Since two-thirds of the workers operate from their homes under piecemeal arrangements, the group feels that some managerial adjustment should be made so that the workshop can be converted into a workers' co-operative.

(d) More attention should be given to developing sales outlets, both locally and for export.

J\

(e) The group felt that ALERT[1] organisation should become more involved in the rehabilitation of their patients.

(f) The group wishes to express its appreciation for the arrangements for their visit and congratulate the centre staff and particularly the volunteers on their dedicated efforts.

III. Special studies at the United Abilities Company workshop (24 October 1975)

The company was started in September 1964 with initial capital of Eth.$80,000 and employed 27 disabled persons. Land and premises were provided by the Government.

The company recruited skilled and unskilled disabled workers from various sources, e.g. the local deaf and blind centres, but many were self-referrals and former beggars on the streets of Addis Ababa.

Originally, umbrellas were assembled from imported finished components.

As part of the expansion programme, manufacture of umbrella components was eventually undertaken (plastic handles, metal frames) and in 1972/73 a dry cell battery manufacturing plant was established, adjoining the umbrella factory. This expansion programme was possible from profits earned from the sale of umbrellas, grants from the rehabilitation agency, donations, and also from loans and overdraft facilities from the banks.

The admission procedure is processed through the company's personnel and social welfare department. The number of workers currently employed, according to types of disabilities, is as follows:

Disability	Male	Female	Total
Blind	54	26	80
Crippled	142	38	180
Arm amputees	24	1	25
Deaf	39	22	61
Multiple	14	3	17
Miscellaneous	5	3	8
Able-bodied	22	4	26
Totals	300	97	397

Top management prepares the production programme, such as the annual production target. Anticipated production from each factory, each department and each individual is prepared and distributed. Periodic follow-up is carried out to check control and amend (where necessary) production targets.

Raw materials are imported and equipment is mainly of Japanese origin.

Tariff protection is provided for umbrellas and similar protection is being sought for dry cell batteries.

The management consists of:

(a) a board of directors (the policy-making body);

(b) a general manager (the executive officer of the board);

(c) two deputy general managers (one in charge of the operation and technical matters for the dry cell battery plant and the other in charge of finance and administration at the umbrella plant.

---

[1] All-African Leprosy Rehabilitation and Training Organisation.

Production scheduling and control are planned and implemented through established factory management procedures.

Profits are ploughed back into the company with a view to creating more employment opportunities for disabled persons.

Salaries and wages are established according to job content, but increments are awarded as follows:

(a) after a successful probationary period;

(b) for good individual work performance; and

(c) as flat rates agreed upon by the labour union and the company.

The minimum salary is Eth.$39 per month.

Sales and marketing of products are effected through subcontract arrangements (Ethiopian National Distribution Agency) but limited quantities of products are also sold in the company's sale shop at retail prices.

As illustrated by the establishment of the dry cell battery plant, it is the company's main objective to expand the present operations and establish new projects whenever additional funds are available.

The services offered by the company to its workers include:

(a) assistance in finding accommodation through the social welfare department (housing is not provided by the company);

(b) free medical treatment for workers and their families at an Addis Ababa hospital. The company pays 50 per cent of treatment expenses at other hospitals; it maintains a fully equipped clinic and provides a medical check-up service three to four times per week through a visiting doctor;

(c) canteen building and facilities, but meals are organised by the workers themselves;

(d) a qualified social worker who provides guidance and counselling on family, educational, legal and other problems; and

(e) a social security fund available to all workers of the company.

The group felt that similar small-scale industry projects could be recommended for other African countries but only after a careful feasibility study had first been made.

Observations

(a) the group felt that the layout of the factory (particularly in the frame department) could be improved to facilitate freer movement of workers and materials;

(b) there appeared to be a considerable wastage of some materials;

(c) future expansion should take into account the need to establish similar factories in other parts of the country;

(d) there was a lack of safety measures relating to operations which involved health hazards (e.g. battery dust, fumes, etc.).

Report of group "B"

I. Special studies at the United Abilities Company (23 October 1975)

The United Abilities Company is a business organisation whose primary objectives are:

(a) to create employment opportunities for disabled people; and

(b) to train the disabled to be productive and self-reliant.

The United Abilities Company was established in September 1964 with 27 disabled beggars who were recruited from the city streets. Initially, they were trained in the assembling of umbrellas from imported components. The initial capital of the workshop was Eth.$80,000. The amount covered the cost of fixed investments on the machinery and raw materials required. Land and premises were, at first, provided by the Government.

As the trade was new to the country, the company obtained the services of two Japanese experts who installed the machinery and trained the staff on the job. An Ethiopian was later sent to Japan for further training. After six years of operation, there was a change from mere assembling to a complete manufacturing process. This was possible, mainly due to availability of more funds and new machinery for manufacturing components which had previously been imported. This meant more employment for the disabled and brought the total number of disabled people employed to 286. At that level of employment, production and profits increased.

In view of this, the management was able to expand the company's activities into sideline productions. Accordingly, a complete feasibility study was made on the possibility of manufacturing dry cell batteries. The company obtained Eth.$1 million as the initial capital for the purchase of machinery, etc. In addition, the company had $500,000 for running costs. The capital was mainly from the profits accrued, overdraft facilities and the AID Bank and a large grant from the rehabilitation agency.

The machinery was bought from Japan and the raw materials from various countries, including Japan and West Germany.

Unlike the umbrella plant, the dry cell plant recruited more qualified people such as technicians and electricians. There are also more standardised quality and process control measures. Unlike the umbrella plant, there is no tariff protection in the dry cell battery plant.

The management of the company consists of a board of directors who deal with policy matters, the general manager, and two deputy managers, one for finance and administration and the other who deals with technical aspects. There are also a chief of factory, supervisors and section heads.

The salaries have been assigned for each job. When employees are first recruited, they earn a fixed basic salary. After a probationary period of three months and depending on the worker's performance and type of job, he may move to a higher salary scale.

Distribution

The company has a distribution system, mainly through the Ethiopian National Distributors, who sell the products to wholesalers and likewise, the wholesalers to retailers. There is also a limited selling by the company's shop.

Services provided

The company provides the following services for the workers:

(a) medical;

(b) canteen system (run by the Workers' Association); and

(c) three social workers (serving both at the factories and at their homes).

The company has future plans for expansion. Then there will be an opportunity to employ more disabled people.

Records

Records such as a daily output record card, raw materials store cards, cost statements and the like are also well kept at the factory.

24

Observations

This project could be applicable to other African countries in various forms, depending on each country's needs and available resources. However, it is strongly recommended that a thorough feasibility study be undertaken before any small-scale industry workshop for the disabled is established.

II. and III. Special studies at the Ethio-Craft Workshop and ALERT Volunteer Rehabilitation Project for Leprosy Patients (24 October 1975)

Basically, both the Ethio-Craft and ALERT projects were started with the aim of providing employment to handicapped people by using local materials and skills. Equally important, they were both started by two dedicated and highly motivated ladies, who had no technical or social work backgrounds.

In the case of Ethio-Craft, a social worker was employed in 1967 and started recruiting destitutes from the city streets. Thirty people were first selected for the project. Recently, Ethio-Craft is employing 450 people of whom 329 are disabled men and women, while at ALERT four groups of people are benefiting from the scheme as follows:

(a) 62 village spinners and weavers;

(b) 90 craftsmen;

(c) 12 village crocheters; and

(d) 28 rehabilitation groups.

The workers at Ethio-Craft were recruited on the understanding that:

(a) apart from disability, they should be healthy and free from contagious disease;

(b) they must have lived in Addis Ababa for five years or more; and

(c) they must be destitute.

Unlike Ethio-Craft, the workers at ALERT are ex-leprosy patients and some are members of patients' families. There are also some poor people from the neighbouring villages who came to seek a means of earning a living.

The initial financing of Ethio-Craft came from the contributions of the local people, the Government and non-governmental agencies. In the course of time, the volunteer founder at ALERT donated Eth.$200 to help buy the necessary production materials for the project. At that time the finished products were sold to people within her circle of friends.

At Ethio-Craft, marketing of finished shamma cloth and carpets had the guaranteed assurance of highly placed individuals in the country. At present, the Ethio-Craft project sells its finished products through its own established shops, whereas ALERT sells its products through the Cotton House in the city, its own shop at the centre and the Ethio-Craft shop.

There was no proper staff recruitment at either place at the beginning but at ALERT volunteers offered services in running the project. There are presently a dozen volunteers working there.

The staff at Ethio-Craft, which includes the manager, chief accountant, social workers, production manager, chief administrator and the purchasing officer, are all government employees under the rehabilitation agency.

Production at both places has expanded, but production lines have not changed. This has been possible owing to the fact that more people have been recruited and also the availability of more funds. The coming into being of the rehabilitation agency in 1971, which also took responsibility for Ethio-Craft, made the annual budget for the place possible.

The workers at Ethio-Craft have a fixed wage scale system according to entry point, whereas at ALERT, most workers are paid by piecework. However, some workers receive a salary in addition to their piecework earnings.

At both places the material and equipment are locally obtained. There is no tariff concession at either place.

The two projects have promising future plans. ALERT has funds from the Swedish Save-the-Children Fund which will be used to pay for a full-time manager and a part-time accountant. At Ethio-Craft, there is ample space for expansion of buildings. There is also provision for more workers to be recruited from the reception centres already established.

Plans are equally under way to find more market outlets for the finished products, particularly outside Ethiopia.

Report of group "C"

I. Special studies at the Volunteer Rehabilitation Project for Leprosy Patients (23 October 1975)

From discussions held and information received at the centre, the following was ascertained:

That the project originated in 1970 from the efforts of a volunteer, a doctor's wife, whose aim was to provide an income for destitute women by teaching them a marketable skill. The women were taught sewing and embroidery which they sold, thus earning money to meet their needs.

It is believed that no market survey was done but that they worked on an individual order system.

There was no capital investment as such but the volunteer founder began the project on her own in one small classroom. She was assisted by two other volunteers.

As regards the recruitment of staff, the project has relied entirely on volunteers who work part or full-time as unpaid managers, teachers and consultants. It has been decided however, that in the near future, a paid business manager-cum-accountant should join the staff. A grant from an organisation in Scandinavia "Save the Children" will be allocated for two years to pay his salary.

Originally production mainly covered embroidery because these goods had a ready market and were based on local handicraft material. Products reflect a blend of modern design and traditional Ethiopian styles.

Production has expanded because the products are of high quality and have had a ready market. Products are varied to adopt the changing demands of the local market, but the main areas of production are:

- hand-woven rugs and tapestries;
- knitted and crocheted items from handspun cotton;
- hand-woven cotton fabrics;
- embroidered cotton clothing;
- towels, table linen, purses and other accessories;
- stuffed toys;
- baskets.

Regarding admission procedure all are referred by ALERT (doctor and social department). It was revealed during discussions that doctors refer some patients to the centre and all attend on an out-patient basis. The social welfare worker is usually contacted to make sure that they are leprosy patients from ALERT (All-Africa Rehabilitation and Training Centre) based at the Princess Zenebeworq Hospital, Addis Ababa) and that they have no source of income. Out of a total of 90 workers, 60 are females, 30 are males. Twenty per cent are severely handicapped, 75 work at home and 15 at the workshop. These figures relate only to workers under the first group of volunteers.

Production is based on sales.

As regards the supply of raw materials, they are all purchased at Merkato (the local market).

In connection with wages, workers are generally paid piece rates. Each piece of work is paid for according to its quality. No payment is made for faulty work. Signatures are required for work taken home and returned. Material is weighed on issue and return.

During 1974, receipts totalled approximately Eth.$59,000 (92 per cent in sales and 8 per cent in gifts and donations). Profits amounted to Eth.$600 and were re-invested in the project. Salaries accounted for 53 per cent of expenditure, supplies 42 per cent, and the remainder, operating costs.

Some six workers who have some supervisory responsibility are paid a small salary in addition to their piecework earnings.

There are three sales points for the products - the Cotton House in Addis Ababa (sales-on-commission basis), the Ethio-Craft shop (no commission) and the shop on the workshop premises.

Whilst there are tentative plans to export products, there are also definite plans based on local markets. If the market becomes more profitable, the workshop will consequently be expanded.

The hospital provides free medical services for the workers and their families. Baby food bought from a local welfare organisation (FAFA) is sold to them at cost price. Free advice on maternal and child care is given to mothers in their own homes. Workers pay their own rents and there are no canteen facilities provided, since workers live within easy reach or at their homes.

The group congratulates the director and his staff on their dedicated efforts and wishes them continued success in this humane work.

II. Special studies at the United Abilities Company and the Ethio-Craft Workshop (24 October 1975)

The umbrella and dry-cell battery factories of United Abilities Co., situated on the southern outskirts of Addis Ababa, are attracting the attention of many African States. The umbrella plant, the story of which is told in the UN/ILO film "The Umbrella Man", was the brainchild of an ILO expert, Mr. Edgar Marland. Whilst working in Ethiopia in the mid-1960s, he noticed that there was a universal, all-the-year-round demand for umbrellas which were used against the rain, the sun and at church ceremonies.

This was not the case with the Ethio-Craft Centre - for with this centre and the dry cell battery plant, the origin in each case is seemingly more gradual than innovative. There were many disabled people in Addis Ababa who needed rehabilitation, and it was not until the mid-1960s that government attention was focussed on the huge problem. In 1966 a woman volunteer launched the Ethio-Craft Centre on the outskirts of Ethiopia about seven kilometres east of the capital. It was housed in a small rented building and the number of workers initially was 30. This is the origin of the Ethio-Craft Centre, while the dry cell battery plant was started because there were no other such factories to supply local needs in this field. Whatever the side-needs were, the main objective was to provide employment for disabled people.

Three Ethiopian technicians were sent to Japan for training and on their return worked side-by-side with two Japanese experts who had come to install the plant. This is how this project emerged, with capital obtained from profits of the umbrella factory, grants from Government and bank loans.

As indicated above, there was little need for a market survey in respect of umbrellas. The ILO expert himself knew little about the assembly of umbrellas, and the factory would not have succeeded had it not been for his simple but logical initiative in buying an umbrella, dismantling and reassembling it. The lady who started the Ethio-Craft Centre had managed to convince some neighbours that her products were worth buying. This was the extent of the market survey and in those days it sufficed. This was, however, not the case with the dry cell battery factory, whose market survey revealed a total consumption of 3 million units a year.

On this figure production was based. It is worth mentioning that the factory needed an initial capital of $1 million to launch it and Eth.$500,000 for running costs. This is as opposed to the umbrella factory which was started with capital of Eth.$80,000, in equal instalments of $40,000 and equivalent to US$32,000. The Ethio-Craft Centre operated purely on donated funds by government agencies and totalled Eth.$678,000.

If by staff we mean shop-floor workers, disability was the main qualification for entry - mainly disabled beggars taken from the streets for the umbrella factory. The Ethio-Craft Centre followed a similar pattern except that their criteria for admission were:

- free from contagious disease for five years;
- resident in Addis Ababa; and
- in need of a job.

As for the dry cell battery factory, a similar, though not exactly the same pattern was followed.

Except for a few parts, all umbrella parts were at first imported. It therefore followed that production, in the absence of local material and trained manpower, simply started by sewing together and assembling all necessary parts to form an umbrella. As for the Ethio-Craft Centre, production started with the making of "shamma" cloth and carpets. There was a good market for these products and all materials used could be obtained locally. The dry cell battery was a purpose-built factory which could not start operating until the specialised plant had been installed.

Production in the umbrella factory has changed. There has been a significant expansion as a result of installation of new machinery. Spacious premises were bought and the labour force increased, resulting in increased production, hence more profits. All these achievements were made possible during the first five to six years of operation. It is important to stress here that all these favourable changes have been a result of profits made during the said period. This, however, has not been the case with the dry cell battery factory where no changes have occurred yet in terms of production. It would seem that automated production gives little or no room for expansion although the production belt has been modified on more labour-intensive lines. As for the Ethio-Craft Centre, the manager was able to inform us that production of the two main products, namely shamma and carpets, has not changed substantially except that weaving of various types of cloth has been developed. To mention a few - coat cloth, shirting, bedspreads, etc.

In the umbrella factory, the admission procedure is concurrent with the availability of a vacant place, yet taking into consideration the capabilities of the handicapped client. This is done by the company's social welfare department who keeps records of all applicants. Age is another factor determining entry to the factory. A total of 397 persons (97 females, including four able-bodied; 300 males - 22 of whom are able-bodied) are currently employed by this factory. The handicapped employees comprise those with multiple handicaps, physical deformities, amputees and blind or partially sighted. As for the Ethio-Craft Workshop, intake of clients is arranged through the rehabilitation agency. This is done after consultations with the manager as to the availability of a place. In this connection, 221 disabled male workers and 108 disabled female workers totalling 329 are currently employed. There are also 121 able-bodied workers, many of whom were originally destitutes, beggars or orphans, etc.

NOTE: The employment figures regarding the umbrella factory include those employed in the dry cell battery plant.

In the umbrella factory and the dry cell battery plant, production is organised by the manager, together with his foremen and supervisors (one chief, two foremen and four supervisors). This is the same with production organisation at the Ethio-Craft Workshop, except that in their case there is no factory manager. However, one manager is responsible for the entire production and another for the purchase of raw materials.

Equipment for the umbrella and the dry cell battery factories comes from Japan and raw materials from Japan, Czechoslovakia, China, India and Italy. But as for the Ethio-Craft Centre, most if not all, raw materials are locally obtained. It is worth mentioning here that only when they run short of locally available white wool is it necessary to import this material.

The umbrella factory has a tariff protection; the dry cell battery and Ethio-Craft Centres have no such protection. (A sum of Eth.$3 is levied by Government on any imported umbrellas. This is to discourage importation of umbrellas when they can be obtained locally.)

A board of directors formulates policies for the umbrella and dry cell battery factories. Such policies provide for a sound and efficient administration. The factory manager is also a member of this board. The manager, in consultation with his production assistants, schedules production tables in line of course with demand. This process is similar to that employed in the Ethio-Craft Centre, except that there is no board of directors responsible to the rehabilitation agency.

The umbrella and dry cell battery factories are profit-making institutions. Profits from both industries will be to establish other small-scale industry factories and hence create more employment opportunities for the disabled. This is not the case with the Ethio-Craft Centre which makes only minimal profits; hence there are slim chances for its further expansion or development. Its survival is purely dependent on subsidies from the Ministry of National Community Development and Social Welfare.

The umbrella and dry cell battery factories, like the Ethio-Craft Centre, have in common a fixed wage rate. At Ethio-Craft the wage range is Eth.$30-130 per month. The umbrella and dry cell battery factories' wage rate for shop-floor workers varies from Eth.$50-95 per month, flat rate.

At the umbrella and dry cell battery factories, products are disposed of through the Ethiopian National Distributors, while the Ethio-Craft Centre has its own shops without government or private distributing agencies.

In the umbrella and dry cell battery factories plans for future expansion, it is hoped to introduce a shift scheme rather than building expansion; as for the Ethio-Craft Workshop, there is need to expand on the buildings, shops and possible labour force.

Apart from free medical services, there are few supporting services provided by Ethio-Craft to its employees. There is no canteen provided but a permanent qualified social welfare officer is employed. In this field the umbrella and dry cell battery factories are better equipped in that: (a) management helps to find council housing facilities for its employees; (b) free government medical service is provided and where payment is required, management pays half of the bill. A canteen is run by a well organised association of workshop employees and provides services to all members who contribute a dollar every month. This association also undertakes funeral arrangements, mutual aid assistance, etc.

Lastly, all members of the group felt that, the umbrella factory was more applicable to other African countries than the other factories. This was felt so because firstly, in this modern world of industrial development, many governments want to see institutions for the disabled which are free from heavy government subsidies and are self-reliant. Secondly, that such factories are not very common in many African countries and therefore would provide excellent markets for small-scale industry products. The group also felt that the simple training techniques developed in the umbrella factory were less costly than the more formal training courses usually provided for disabled persons.

Training course certificate

A certificate was presented to each participant at the formal closure of the training course on 31 October 1975 by His Excellency Ato Tadesse Terefe, Minister of Labour and Social Affairs.

CHAPTER III

FINAL CONCLUSIONS OF THE TRAINING COURSE

The following conclusions were unanimously adopted by participants at the review session of the training course on 31 October 1975. They take into account the objectives of the training course and the ideas and suggestions put forward by the participants in group and plenary discussions.

A. The problem of disablement in African countries

1. Based on UN and WHO estimates, the number of physically and mentally disabled persons in African countries accounts for 10 per cent of the population, or some 30 million people. Blindness, deafness, crippling conditions due to accident or disease, leprosy, tuberculosis, mental retardation and mental illness are the main causes of disablement; the numbers are increasing at an alarming rate owing to rapid population growth, wars, natural disasters (such as drought and floods), malnutrition and the increasing tempo of life in towns and cities. The majority of the disabled could be rehabilitated or trained to do useful work, thus contributing to their own, their families' and their own countries' well-being; but vocational rehabilitation services in many African countries are very limited indeed, covering in many instances, only a few thousand of the disabled population each year.

2. The enormous cost of providing various kinds of medical, social and welfare support for the disabled is reflected in increased public budgets or in hidden costs of extended family care and family dependency.

The participants of this training course wish to stress most emphatically that the disabled have the same responsibilities as others for work and should not have to rely on others for support. They should have the chance of engaging in productive work whether it be in open or sheltered employment or work on their own account. The disabled must be thought of as part of the general population entitled to the same rights, privileges, services and consideration as others. They are not second class citizens. Development plans should take these factors into account and every effort made to develop the necessary services to ensure that disabled citizens are rehabilitated for and integrated into the active social and economic life of their country.

B. Co-ordination of services

3. Many vocational rehabilitation services for the disabled in African countries have been planned and developed on an individual basis by particular ministries or voluntary organisations. With a view to widening the scope and effectiveness of these services and to make the fullest possible use of limited resources and trained personnel, it is imperative that African countries should develop their rehabilitation services on a closely co-ordinated basis both at local and national level. This can best be achieved through the medium of a national rehabilitation board or council for the disabled on which all interested ministries, voluntary organisations, employers and trade unions are represented.

C. Production and sheltered workshops for the disabled

4. In African countries, particularly those which have high levels of unemployment, "employment-creation" projects such as sheltered/production workshops should be a main feature of resettlement programmes for the physically and mentally handicapped. Governments should give high priority to promoting new workshops as well as supporting existing workshops run by voluntary organisations. Every effort should be made, through careful planning and sound management, to ensure that such workshops are economically viable, such as the small-scale industry workshops for the disabled established in Ethiopia.

5. Prior to establishing sheltered/production workshops for the disabled, it is essential to undertake a careful feasibility study. Such a study should take into account the following:

(a) what product or products were suitable for manufacture, with particular reference to marketing possibilities and availability of local raw materials, equipment and labour;

(b) sources of finance available and capital required for establishing and developing the workshop;

(c) accessibility of the workshop in relation to disabled workers, good road and rail communications;

(d) availability of land and/buildings;

(e) availability of water and power;

(f) alternative sources of production, such as subcontract work from local firms and government departments;

(g) availability of trained management, instructors and other staff;

(h) careful study of the production process to facilitate selective placement of. disabled workers on labour-intensive lines;

(i) every possible cost that might affect the trading position;

(j) availability of essential supporting services (educational, social, medical, industrial and commercial); and

(k) possibility of obtaining protection for the products in the form of tariff concessions and tax exemptions.

6. The success of a production workshop for the disabled will depend to a large extent on correct product selection and development. This may include:

(a) an analysis of the local market demand;

(b) an estimation of possibilities for export;

(c) a survey of local indigenous materials;

(d) a survey of bureaucratic procedures which constrain export-import; and

(e) an estimation of the physical/mental capacities and vocational skills of a sample work population.

7. The establishing of a product and process development service or group is essential once managerial goals and manufacturing objectives have been clearly defined. At the outset, and particularly in the case of small workshops, the workshop manager or one of his staff should take responsibility for such a service, making contact with various business organisations, agencies, etc. The eventual aim, however, should be to form a group of specialists (on manufacturing processes, marketing, ergonomics, systems design, the consumer sector, personnel and finance questions) and to advise the workshop (or group of workshops) on all production planning and development problems. Such a service or group could also advise on product selection, adaptability of the workshop in relation to current and future demands as well as comparing objectives and criteria for product manufacture in the short, medium and long-term horizons. The possibility of utilising existing expertise likely to be available in industrial estate facilities should also be considered.

8. Production scheduling and control measures are vital for the successful development of any workshop for the disabled. They should include:

(a) preparation of sales forecast (i.e. demand);

(b) budgetary estimates for production, material, personnel purchasing and other requirements; and

31

(c) a regular feed-back of information from the shop floor to ensure that corrective quality and quantity control measures can be applied in good time.

9. Industrial engineering principles are an important tool of management in helping to improve layout techniques for equipment and services in production workshops for the disabled. Their application can also result in improved operating methods through small tool, equipment and stores control, and help avoid production stoppages through effective maintenance procedures.

10. At the early planning and development stage of a production workshop, every effort should be made to ensure that:

(a) the workshop is accessible to disabled workers;

(b) the design and construction of the workshop building provides for the elimination of architectural and environmental barriers adversely affecting the employment of disabled personnel;

(c) there is proper placement of machinery;

(d) there is sufficient space between machines, work benches, etc. to facilitate movement of disabled workers (particularly blind persons and wheelchair cases) and transportation of materials;

(e) there is easy access of materials, control switches, etc. to disabled workers;

(f) there are moveable workshop partitions to allow for any subsequent reorganisation of workshop sections, particularly when new types of production work are introduced; and

(g) special attention is paid to safety measures in the workshop, particularly guarding and adaptation of machines.

11. The introduction of a task analysis system which helps to break down an assembly or manufacturing process into a number of simple operations should be considered in all workshops. This can open the way to employing larger numbers and more varied categories of physically and mentally disabled workers.

12. Serious consideration should be given to developing the homogeneous production group system in workshops for the disabled. Such a system (which provides for small groups of persons working together to make part or all of a particular product, rather than dividing the work up according to machine processes or production lines) has many advantages, not the least of which is that it allows workers to take more responsibility for production, thus giving them a sense of pride and feeling or involvement in the over-all production process. The system also helps to avoid monotony and inculcates a sense of self-discipline and team-work. It also provides an opportunity for training workers in more than one operation or process; permitting interchange of jobs and helping avoid bottlenecks in production when some workers are absent through sickness or other causes.

13. A continuous programme of maintenance for machinery, tools and other equipment must be established in all workshops for the disabled. This can best be achieved through the introduction of a maintenance schedule based on a production equipment register. To ensure that maintenance is undertaken at the correct time, a two-box card/file system - one giving plant and equipment details, available spare parts, etc., and the other arranged on a daily activity basis - should be developed. As most maintenance operations involve simple cleaning, repair and servicing tasks, a full-time maintenance engineer is not required in small workshops. Effective maintenance of machinery, tools and other equipment facilitates the introduction of shift work, thus increasing production and job opportunities for more disabled workers.

D. Employment schemes for leprosy patients

14. All countries should endeavour to eliminate the main obstacle likely to be encountered in rehabilitating and employing leprosy patients, i.e., the lack of understanding of the disease on the part of the general public, with the resultant stigma and prejudices leading to segregation of leprosy patients from the rest of the

community. It is suggested that this can best be achieved through carefully prepared, well-balanced and factual information programmes aimed at removing stigma and prejudice and to convince the public that leprosy is curable and not highly contagious.

15. Every effort should be made to integrate recovered leprosy patients into rehabilitation centres and workshops established for other disability groups. If this proves impossible, attempts should be made to encourage able-bodied and disabled people to take part in the day-to-day life and activities of leprosy settlements. This is being tried out with some success in Ethiopia, where sharing of common services, e.g. water, co-operative land settlements, food supplies, social services, workshops and markets is accelerating the integration process.

16. The practice in some African countries of providing treatment to leprosy patients in general hospitals is fully supported and should be extended to all countries. Conversely, the admission of non-leprosy patients for treatment at specialised hospitals should also be encouraged. The research and medical work carried out by the All-African Leprosy Rehabilitation and Training Organisation (ALERT) was appreciated. It was felt, however, that ALERT and other similar organisations should put more emphasis on the vocational and social aspects of the rehabilitation of leprosy patients in order to attain a higher degree of success in their endeavours.

17. Leprosy patients should avoid occupations which might result in injury to insensitive hands and feet, particularly those jobs involving heat, working with sharp tools, etc. The agricultural and rural craft sectors are likely to offer the best form of resettlement for leprosy patients, particularly poultry and pig-raising, weaving, spinning, sewing, carpet and rug making. Much more attention should be given, however, to vocational assessment, job selection and provision of proper tools.

E. Employment of the deaf

18. The problem of communication is the greatest single obstacle to placing deaf people in normal employment. To help overcome this problem and with a view to widening the employment horizons of deaf people, the following actions should be taken:

(a) training of supervisors and instructors in the use of sign language;

(b) greater use of visible rather than audible signals in workshops;

(c) greater concentration on the pre-vocational preparation of deaf children, including provision of hearing aids;

(d) development of literacy, social integration, vocational guidance and training courses for deaf persons;

(e) training of special placement and technical staff (such staff should not only assist deaf persons in finding jobs, but should also help them overcome communication problems at their places of work, particularly throughout the induction period and through an active follow-up programme); and

(f) a public information campaign to convince employers of the good employment potential of deaf persons.

19. In many countries, it has been customary for deaf persons to be employed in noisy jobs in the textile, printing and other industries. It should be remembered that noisy conditions may aggravate the condition of those suffering from nerve deafness. In any case, the widest possible range of employment in the professions, commerce and industry should be considered for deaf persons (as indeed for all disabled persons) in line with their training, aptitudes and abilities.

F. Employment of the blind

20. The fullest possible integration of the blind into normal social and working life should be the main objective of rehabilitation programmes serving this group of disabled people. Actually, however, it is essential to provide special training and orientation courses for the blind, including the use of braille, activities of daily living, mobility, and provision and use of special tools.

21. In African countries with high levels of unemployment and underemployment, where limited opportunity may exist for integrating the blind into normal industry, commerce and agriculture, their employment in sheltered or production workshops together with sighted persons should be considered. The Ethiopian experience has shown that by breaking down the production process into simple operations in workshops for the disabled, and by employing sighted persons alongside the blind in those operations, this allows for greater numbers of blind workers to be employed and widens their range of employment activity.

22. As in the case of other disabled groups, the widest possible range of employment opportunities should be considered for blind persons. In African countries, the blind are successfully employed in a wide variety of professions and occupations, including teaching, physiotherapy, administration, religious instruction, agriculture, rural craft work (weaving, carpentry, carpet and basket making), telephone operating, stenography, blind placement work, etc. In rural areas of Africa, the blind, together with sighted members of their families, have been successfully integrated in land resettlement schemes based on small farming and subsistence agriculture. As most of the blind in Africa live in rural areas, it is felt that high priority should be given by governments to the further development and expansion of such schemes.

G. Rehabilitation and employment of the mentally ill

23. Rehabilitation services for the mentally ill in African countries are very limited indeed, and much higher priority needs to be given by governments to providing resettlement opportunities for this group of disabled persons. It is not generally recognised that, in numerical terms, this group presents one of the largest single rehabilitation problems and is likely to increase substantially in the years ahead.

24. Social readjustment and vocational preparation of the mentally ill should be co-ordinated with medical rehabilitation. In the case of long stay patients, the rehabilitation process should be a gradual one, until they are stable enough and sufficiently readjusted socially to face up to normal living and working conditions.

25. A combined team of psychiatric social worker, psychologist, psychiatrist, nursing staff and placement officer should assist in the planning and implementation of rehabilitation programmes for the mentally ill.

26. A production workshop and agricultural training unit attached to or associated with a mental hospital can help considerably in preparing and training patients for transfer to outside rehabilitation facilities, open or sheltered employment. The provision of intermediate arrangements, such as agricultural schemes, "halfway houses" or special hostels should also be considered to help the patient bridge the gap between hospital and full resettlement in the community.

H. Rehabilitation and employment of the mentally retarded

27. As in the case of the mentally ill, rehabilitation services for the mentally retarded in African countries are very limited indeed. Vocational rehabilitation of the mentally retarded should be accorded higher priority. The rehabilitation of this group, which should give special emphasis to training in activities of daily living, is often a long process, involving much patience and "over-learning".

28. Parents and the community as a whole should be involved in the "normalisation" process for mentally retarded persons. Training for subsequent employment in simple repetitive work (packing, assembling, etc.), supervised group work in parks, orchards and other horticultural and agricultural activities offer suitable resettlement opportunities for the retarded. The modular system of training is particularly relevant to the mentally retarded.

I. Employment of disabled persons through co-operatives

29. Employment through co-operatives could offer a good avenue of resettlement for disabled persons, both in urban and rural areas, and should be developed by African countries within the context of their national development programmes. This would first necessitate training in co-operative principles.

30. Consideration should be given to integrating disabled persons into existing co-operatives for the able-bodied and also helping the disabled to form their own co-operatives. Initially, however, it would be preferable to adopt the first (i.e., integrated) approach for the following reasons:

(a) the co-operative movement works on principles of equality of membership and there is no segregation of members;

(b) integration of the disabled and able-bodied in the same co-operative helps to reduce negative attitudes on both sides;

(c) the correlation of ideas and skills of the disabled and able-bodied would be of great benefit to the co-operatives.

31. The possibility of converting existing urban-based sheltered and production workshops into co-operative-type establishments should be considered. This could help to improve profitability and also lead to increased self-reliance of disabled workers who would be playing a positive role in running the project.

32. In rural areas consideration should be given to employing disabled persons in co-operative-type projects in agriculture and related activities, such as:

(a) animal husbandry;

(b) poultry-raising;

(c) bee-keeping;

(d) pig-keeping;

(e) agricultural implement making and repairing;

(f) fruit and vegetable growing; and

(g) preservation of fruits and vegetables.

J. Vocational training of the disabled

33. The introduction of the ILO-sponsored system of modular training (embracing modules of employable skills) in training programmes for disabled persons in African countries should be seriously considered for the following reasons:

(a) th[illegible]ystem allows for greater numbers of disabled persons to be trained for skilled, semi-skilled and unskilled work, thus opening the way to greater employment opportunity for the disabled;

(b) whereas under traditional forms of training, entry is often limited to persons who have attained a certain level of education, under the modular system, training can be provided in a limited as well as a full range of operations in a particular trade;

35

(c) the system provides greater opportunity for integration of the disabled into training classes provided for the general population;

(d) it encourages employers to employ disabled persons in well defined areas of employment, consistent with the training they have received;

(e) it permits a more rapid through-put of trainees in vocational centres when courses of long duration are replaced by shorter, more intensive courses under the modular system;

(f) the system is flexible and applicable to all trades - industrial and agricultural - and to all groups of disabled persons;

(g) it allows for further training and the acquisition of additional skills;

(h) it encourages the introduction of tne homogeneous production group approach.

K. Resettlement of the disabled in rural areas of Africa

34. The vast majority of Africans, including the disabled, live on the land. It is undesirable to encourage movement of people to urban areas, and it is imperative that rural rehabilitation and resettlement facilities be established and developed for the rural disabled. There are many obstacles to be overcome, however, in providing such services, not the least of which are:

(a) ignorance (stigma and prejudice);

(b) mistaken attitudes (over-protection);

(c) lack of basic health and welfare services;

(d) illiteracy;

(e) lack of transport facilities;

(f) shortage of trained personnel; and

(g) lack of funds.

35. Rehabilitation services for disabled persons in rural areas should concentrate on reintegrating these persons into the active life of the rural community, leading to the fullest possible economic and social independence. Particular attention should be paid to providing diversified training embracing some of the varied jobs a rural worker is expected to perform, e.g., animal husbandry, simple tailoring, maintenance of homes, crop raising, cottage industries and handicrafts, etc. Attention should also be paid to activities of daily living as well as literacy, hygiene and civic education. Rehabilitation facilities should not be on a higher plane than those to which the disabled person is accustomed to in his community. Full involvement of the community and family should be sought.

36. Several avenues of resettlement for the disabled in rural areas are suggested:

(a) individual home settlement - this should be the most usual form of resettlement, following completion of a course at a rural rehabilitation centre on the lines described above;

(b) special farm settlements - these are particularly appropriate for the blind and displaced disability groups and have been developed successfully in several African countries (e.g., Zambia, Malawi, Uganda). The success of such family resettlement schemes depends to a great extent on the industriousness of the disabled, the full support of their families, government financial and material support (until full independence is achieved) and the resourcefulness of the scheme's management;

(c) co-operative farms and villages - these have the advantage not only of providing resettlement for the disabled in their own environment, but also of affording them the opportunity of full integration and some experience of farm management. Tanzania provides a good example of this type of resettlement in that trained disabled persons have access to the 7,000 Ujamaa (socialist co-operative) villages;

(d) sheltered employment - many rural activities and industries offer excellent opportunities for the development of sheltered employment projects in rural areas. These include fruit and vegetable packing, carpet and rug making, rural carpentry, leather work, tailoring, wool processing, tobacco processing, etc.;

(e) open employment - this would include many of the outlets mentioned above to which could be added poultry rearing, chicken sexing, repairing and upkeep of farm equipment, administrative work in co-operatives, fertiliser packing and distribution, tree planting, etc.

37. Governments are urgently requested to take positive action in developing vocational rehabilitation and resettlement services for disabled persons in rural areas on one or more of the lines described above. Every effort should be made to provide such services within the framework of existing agricultural, health, education, community development, rural industry etc. services, ensuring that there is regular and adequate budgetary support for their full development.

L. Other conclusions

38. Since the lack of properly documented data makes proper national planning of rehabilitation services difficult, ILO and other relevant organisations should provide technical assistance in the assessment, evaluation and documentation of necessary statistical information. General population censuses should be so designed as to provide information on the various aspects of disability. Locally available research programmes should also be encouraged to carry out studies related to disability factors.

39. The need for closer co-operation between disability prevention and social and vocational rehabilitation services should be emphasised.

40. In order to promote employment opportunities for the disabled, governments of African countries should consider introducing legislation which would (a) oblige employers to employ a percentage quota of disabled persons and (b) reserve certain occupations for the disabled.

41. Public and private communication facilities should be utilised for effecting attitudinal changes in the general public and among the disabled themselves in an effort to eradicate the stigma, prejudice and other negative social relations that create difficult living conditions for the disabled.

42. International seminars on rehabilitation should be followed up by national seminars in order to ensure proper dissemination of information, knowledge and newly acquired methods of work.

M. International assistance

43. The International Labour Organisation, in co-operation with the United Nations and with other specialised agencies and non-governmental organisations concerned, should step up its vocational rehabilitation activities and give all possible assistance to those African countries seeking to establish, develop and expand their vocational rehabilitation programmes. In particular, it is essential that the existing ILO Regional Vocational Rehabilitation Adviser post for African countries should be maintained and that his services should be sought, as required, by African governments through the ILO Regional Office for Africa in Addis Ababa, Ethiopia. In view, however, of the magnitude of the disability problem in the African continent, diversity of languages, etc. the ILO should seriously consider creating a second Regional Vocational Rehabilitation Adviser post for Africa. Moreover, the ILO should encourage a wider dissemination of information on all vocational rehabilitation subjects and promote and facilitate a greater exchange of vocational rehabilitation staff between African countries. The ILO should also organise regional seminars and training courses for these staff.

CHAPTER IV

A SELECTION OF PAPERS PRESENTED AT THE COURSE

1. Ethiopia's Rehabilitation Programme for the Disabled

by

Ato Kassa Kebede

I. Historical background

Historically, services for the disabled in Ethiopia used to be carried out exclusively by the extended family, traditional mutual aid associations, and local institutions such as the Church. When a person was disabled, it was the accepted duty of his family to maintain and support him. In such a society, a disabled person was usually not displaced from his family environment unless there was an additional factor in his disability which was strong enough to break down traditional family obligations. This factor was found in crippling diseases, such as leprosy, which were surrounded, as they still are, by ancient prejudice and stigma. Another spontaneous expression of concern for the disabled was the tradition of almsgiving, which is strongly established in both the Christian and Moslem religions in Ethiopia, based on the belief that almsgiving was necessary for eternal salvation. As far as treatment for disabilities went in ancient Ethiopia, the only remedies were such supernatural ones as bathing in holy waters, visiting witch doctors and the like, because disability was believed to be a curse from God or some other supernatural being.

In the year 1900, the first medical treatment centre for leprosy patients was established in Ethiopia by a Catholic Mission in the town of Harra, 530 kilometres east of Addis Ababa, being the first modern rehabilitation programme. Following that, medical rehabilitation centres were established by voluntary organisations with special emphasis on the treatment of leprosy, a treatment that has since gone through various stages, and a revolution of its own. In so far as the treatment of diseases directly related to disability is concerned, leprosy treatment was also the first programme to be given government attention. Other than medical rehabilitation programmes, which were largely implemented through general hospitals, rehabilitation and social welfare programmes were mainly the concern of voluntary organisations, without government involvement until the early 1960s. Since 1945, however, various top-level government committees were appointed to examine existing social problems and recommend solutions. The problems of the disabled were investigated and recommendations made, but it was not until 1963 that regular budget appropriations for social welfare were made: this established government's acceptance of the responsibility of caring for the unfortunate, and gave social welfare its legitimate place in government planning.

Though there was no government department for either social welfare or rehabilitation, the Ethiopian Government, through its Ministry of Community Development, submitted a request to the ILO for a rehabilitation expert in 1959. In response to this request, Mr. Edgar Marland, who is always remembered in Ethiopia for having established the umbrella factory owned by the United Abilities Company, was assigned as an expert from July 1961 to January 1967. Though the United Abilities Company, at this time a share company, was established there was no government rehabilitation programme until 1966. In 1966 the Ministry of National Community Development and Social Affairs opened a vocational rehabilitation centre in Addis Ababa, which is now called the Ethio-Craft Workshop. This centre trained and employed the disabled in the production of hand-woven carpets, table-cloths, napkins, curtains, bedspreads and shema - the national costume.

The establishment of this centre, however, was no answer to the massive problem that prevailed at the time. The need for co-ordinating the efforts of non-governmental as well as those of governmental organisations was also recognised, more than ever, during this period. It is as a result of this perception that the Rehabilitation Agency for the Disabled was established by law in 1971 as an autonomous public authority, with the purpose of assisting, co-ordinating and supervising the non-governmental organisations besides running rehabilitation programmes of its own.

In order to attain optimal co-ordination at the highest level possible the rehabilitation agency is directed by a national rehabilitation board, the chairman being the Minister of National Community Development and Social Affairs - other members of the board include the Minister of Interior, the Minister of Public Health, the Minister of Finance, the Mayor of Addis Ababa, as well as representatives of the Ethiopian Orthodox Church, the Moslem faith, the Protestant Churches, the Chamber of Commerce and the national university. Regional rehabilitation boards are in the process of being established along the same pattern, having the regional representatives of the governmental and non-governmental organisations represented in the national board.

II. Definition of disability

The legislation which established the rehabilitation agency provided a functional definition of the term "disabled" as follows:

> Disabled shall mean any person who because of limitations of normal physical and mental health is unable to earn his livelihood and does not have anyone to support him; and shall also include any person who is unable to earn his livelihood because of young or old age.

The preamble to this same legislation also states that the purpose of establishing the agency was to create a suitable machinery for the rendering of assistance to those in need of social, physical and mental rehabilitation. Included in the Ethiopian definition of the disabled, therefore, are destitute children, physically and mentally disabled people and the aged who are in need of assistance. The emphasis, then, is on the inability to earn a livelihood as an important determining factor in the classification of a person as disabled.

III. Definition of rehabilitation

A locally organised seminar on "the reassessment of social welfare needs in Ethiopia", following the 1968 UN meeting of ministers responsible for social welfare, redefined social welfare as a programme having three inter-related functions - developmental, preventive, curative or remedial. The developmental functions of social welfare are those that help create conditions conducive to the development of human and material resources, ultimately improving living conditions. The preventive functions are those that concern themselves with measures taken in anticipation of the creation of social problems. The remedial or curative functions are those that concern themselves with the treatment and cure of existing social problems.

Since Ethiopia's rehabilitation programme aims at increasing the chances of obtaining gainful employment for those groups of people who are unable to earn a living, one may assume that it plays only the developmental and curative/remedial role of social welfare but not that concerned with prevention. This may be true and possible in the case of more developed countries, but we cannot afford to omit this role. Ethiopia is a country where the prevalence of disabling diseases is still on the increase. It is with this in mind, for instance, that the Ethiopian leprosy relief programme concentrates more on the control of leprosy than on its treatment. This approach is not unique to Ethiopia; for example, like some other well-reputed organisations the WHO has declared a shift in its policy of rehabilitation away from its past policy of promoting development of comprehensive rehabilitation centres, in favour of disability prevention in the community at the level of primary medical care. Rehabilitation in Ethiopia is, therefore, a service that carries out the developmental, preventive and remedial/curative functions of social welfare through its programmes - medical, vocational and social.

IV. Rehabilitation organisations

Rehabilitation programmes are carried out by four types of organisations - missionary organisations, voluntary agencies, municipalities and government - and all have characteristics that can differentiate them. The mission organisations usually generate their funds from overseas, operate mainly in the rural areas, are in most cases registered with the ministries of public health and education, are mainly involved in medical and educational services, have a dual purpose, that of evangelism and service, and have expatriate personnel as major executives of their programmes. The voluntary agencies (non-governmental and non-missionary in this paper) are mostly private associations eatablished for the purpose of carrying out programmes specifically declared in their constitutions, are registered with the Office of Associations of the Ministry of Interior, operate mainly, in urban areas, generate their funds through fund-raising schemes from local and international sources, and usually have Ethiopian voluntary staff in decision-making bodies. Municipalities operate within the municipal areas, have not yet given emphasis to rehabilitation services, as a result of which only eight municipalities have organised programmes for the needy, generate their funds through municipal taxes and are run by Ethiopians. Government programmes are fully Ethiopianised but often benefit from the assignment of advisers from organisations such as the ILO. Government organisations that render direct rehabilitation services are the Ministry of Public Health and the rehabilitation agency. Rehabilitation programmes that were earlier initiated by other government bodies in the past are being incorporated with those operated by the rehabilitation agency. It has been mentioned earlier that all government ministries concerned with social services are represented, through their ministers, in the national rehabilitation board which runs the agency. Rural farmers' associations and the urban neighbourhood communes that are in the process of being established, as a result of the change that is taking place in Ethiopia at present, will in the future play a major role in rehabilitation.

V. Programmes

Since there are over 60 governmental and non-governmental organisations rendering rehabilitation service in Ethiopia today, it would be time-consuming and unnecessary to detail the organisations and their programmes in this paper. Therefore, I will briefly and in general discuss the medical, vocational and social programmes of Ethiopia's rehabilitation service.

The major components of Ethiopia's medical rehabilitation programmes are such services as leprosy control, leprosy treatment, appliances for the disabled, smallpox eradication, trachoma eradication, and other preventive and medical services rendered through specialised hospitals, general hospitals, health centres and clinics. Discussing medical rehabilitation programmes for Ethiopia, I would like to reiterate the need for priority measures in the preventive field to combat disabling diseases. Establishing and running rehabilitation centres without recognising and preventing the causes that created the need for individuals' or groups of individuals' rehabilitation is an unrealistic approach to the problem. The medical rehabilitation programme of Ethiopia, and possibly those of other African countries, need to be designed differently to those of the developed countries. Our programmes should follow a course which would lead to a condition which creates less demand for rehabilitation than one which perpetuates it.

The social rehabilitation programme is inter-related with the medical and vocational programmes, and in most cases is relatively more supportive than independent. Social rehabilitation services are given before, during and after medical and vocational rehabilitation and are aimed at assessing the needs of the individual, his capabilities and potential in order to enable him to fulfil his functions as an accepted productive and self-supporting member of his community. Social rehabilitation in the Ethiopian context includes the following services: social casework through which the background and needs of the rehabilitant are assessed and proper guidance and counselling given, to enable him to adjust to his environment; group counselling services through which the rehabilitant is enabled to develop confidence in himself and to participate in the activities of the programmes around; special education facilities for different disabled groups such as the blind and the deaf; civic education through which the individual is taught his rights and duties, is taught to change his attitude towards himself and others, and through which the general public is helped to change its attitude towards disability and the disabled; social services such as health education, mother and child health programmes, given importance as they are contributing factors in the general social and physical upbringing of the individual; and institutional care for the young and the old who are in need of care and support. Placement and follow-up, the last and most vital stages in the rehabilitation process, are also categorised as part of the social rehabilitation programme, as well as being a great support to the vocational rehabilitation process.

In explaining Ethiopia's vocational rehabilitation programme in the following lines, I will limit myself to an account of the rehabilitation of the physically disabled. Vocational rehabilitation is distinguished and differentiated from medical and social rehabilitation because its primary objective is the realistic and permanent vocational adjustment of the disabled. Though vocational rehabilitation is relatively independent, its process in most instances depends on the medical and social aspects of rehabilitation in order to ensure that the individual has been placed in gainful employment and lives as an accepted member of society. In the past, some voluntary agencies used to run training programmes for the disabled in order to increase their chances for employment. Most of these training programmes have proved unsuccessful because of the employment situation in the Ethiopian economy. Such training programmes have now been discontinued, thanks to the good advice of Mr. Edgar Marland, who went through the trouble of organising a seminar on "sheltered employment opportunities for the disabled" after the expiration of his assignment as the ILO expert in Ethiopia in 1967. During those days, and also now, the labour supply greatly exceeds the demand for labourers, as a result of which there is very intense competition in the open labour market from which only the best of the able-bodied survive. This situation is the major rationale behind the argument favouring the establishment of sheltered workshops for the employment of the disabled. The sheltered workshops such as the Ethio-Craft Centre, the umbrella and the dry cell battery factories have proved to be productive, and their success has enabled them to become projects that can be explained in straightforward economic terms. Since planners, financial institutions and other organisations in the economic sector have also recognised their productivity and usefulness they are today classified among major priorities in economic development plans. The ILO and its field experts as well as able Ethiopian managers like Ato Wondimagegnehu Asseffa should be congratulated on this. Vocational rehabilitation services such as vocational evaluation, prevocational preparation, and adjustment, as well as vocational training have now become a means of assuring the right abilities in a given disabled person to the right job in a given sheltered employment venture.

The sheltered employment approach, in the sense of being a production enterprise where the disabled are placed and expected to produce with the use of the able functions of their body, has been tried in agriculture in Ethiopia; it has proved to be successful because most of the disabled have farmer backgrounds, because the capital input compared to the number of people employed is very low, and also because agricultural produce has easy market demand. Today in Ethiopia, therefore, the term sheltered employment opportunity does not necessarily mean industrial but also agricultural enterprises.

VI. Problems

During the course of the seminar, problems encountered by national rehabilitation programmes and sheltered workshops will be fully discussed: in order to provoke thought and provide a framework for this discussion, I would like to present in brief outline some of the problems encountered in Ethiopia.

1. The identification of feasible workshop projects based on proper studies in the production, management and marketing fields.

2. When feasible projects have been identified, the lack of necessary resources for their implementation.

3. When necessary resources have been obtained, the number of sheltered workshops being limited to large population centres, thereby attracting and being unable to absorb the disabled migrating from the rural areas, and consequently increasing the number of disabled in those centres.

4. The lack of readily available trained manpower for all the facets of the national rehabilitation programmes.

5. The general public's failure to recognise the productive capacities of the disabled, their treatment of the disabled as inferior groups, and the disabled person's acceptance of his inferiority and continued dependence.

6. The identification of proper media and the development of appropriate communication materials for changing the general public's attitude towards the disabled, and that of the disabled person towards himself.

7. The lack of sufficient information and well-documented statistical data on the disabled for preparation of the national plans.

VII. Future plans

Motivated by the various problems encountered and being unable to find straightforward answers, we have been forced to establish some experimental programmes. One good example is the Siga Meda Project. Last year the rehabilitation agency made a survey of the destitute in Addis Ababa which revealed that there were over 5,000 streetboys and over 11,000 adults on the streets, making the Addis Ababa destitute and mostly beggar population over 16,000. Following this, the Siga Meda Project, 30 kilometres outside Addis Ababa and which has the capacity to accommodate 4,000 people, was constructed. The centre will provide the basic human needs such as food, clothing and shelter for its clients, and a rehabilitation team composed of a social worker, health officer and vocational instructor will assess each individual client through the means of a case conference and determine the rehabilitation measures required to make the client an independent and productive citizen. The location of the site outside the city was a decision based on the findings of the survey, that most of the destitutes were migrants from the rural areas. The rehabilitation service will therefore take place in a rural environment, and in concentrating on agricultural training will enable the agency to send clients back to their home communities or resettle them in agricultural ventures. The major functions of the centre are to receive clients, screen them through a case conference, provide training to those who cannot be placed without further assistance and ultimately place those who have been trained. Other than the agricultural training programme, there are also other vocational training programmes geared to rural needs. Children who have to attend schools, the aged and crippled with multiple disability will be forwarded to long-term care institutions run by the agency or non-governmental organisations, or reunified with their families with a government grant at the initial stages of their admission to the centre.

Since a future rehabilitation plan cannot be separated from the general national plan, rehabilitation programmes will be related to the social, economic and political conditions which are undergoing revolutionary changes at the moment. Most of you will have learnt that the country is in a transition from a feudal-bourgeois to a socialist system. This change has brought land reform, which created the basis for farmers' associations in the rural areas, and urban land nationalisation, which initiated the establishment of neighbourhood communes. This new system provides the framework for decentralising services and for the active participation of farmers' associations and urban communes in planning and implementing programmes for satisfying their community need.

In recognition of this situation, the rehabilitation agency has chosen two cases for experimentation, one in a semi-rural area, Debre Zeit, and the other in one of the subdistricts of Addis Ababa. In both places the agency is encouraging the local associations through grants in aid and technical guidance in order to plan and implement their own programmes. The successes of these experiments will determine the future working relationship between the rehabilitation agency and the rural and urban associations. The agency will continue to serve on a national scale as a clearing house of information for rehabilitation, a co-ordinator of plans, programmes and funds, a liaison between local and international organisations and also an operator of rehabilitation programmes for the already dispossessed and disabled members of Ethiopian society, who cannot gain acceptance in the newly formed associations.

2. The Extent, Incidence and Special Problems of Disablement in African Countries

by

Dr. F.A.O. Owosina

1. Greetings and appreciation

1.1. Mr. Chairman, distinguished participants, I bring you hearty greetings from the President, Professor Alphonsus Jocheim, the council and the entire assembly of the Rehabilitation International and its Nigerian chapter.

1.2. I also wish to congratulate the ILO, the DANIDA and the Government of Ethiopia for their initiative in organising this kind of course. This is the kind of co-operative, inter-agency activity we very much desire and require to improve rehabilitation programmes in Africa.

1.3. The advantages derivable from an international inter-agency course of this nature are many and varied.

I can only hope that the way each of you participants utilises the knowledge and experiences gained here in your own country will encourage the co-sponsors to make this type of course a regular event and perhaps inspire them to consider organising training and retraining programmes (with WHO, UNESCO, RI, or ISPO) for other groups of rehabilitation personnel e.g. prosthetists and orthotists, physiotherapists etc. in other parts of Africa.

I also hope that you will leave here sufficiently inspired to urge your government and people to establish, if they have not yet done so, more rehabilitation centres, sheltered and open workshops, urban and rural co-operatives etc. for the disabled persons in your respective communities.

THE LECTURE

1. Introduction

1.1. African evolutionary scene

1.1.1. The static scene of our ancestral undeveloped Africa was marked by scourges of uncontrolled disabling diseases, squalor, poverty, malnutrition, low productivity and mental apathy which paved the way for her evolution into the scene of colonial underdevelopment.

1.1.2. Thanks to the initiatives and contributions of individuals e.g. Dr. Albert Schweitzer, missionaries, private foundations, WHO, ILO, UNICEF, and indigenous African workers etc., preventive and curative medical services emerged which reduced though insignificantly, the incidence of disabilities from diseases.

1.2. The emergence of some 30 African countries to full indpendence and sovereignty throws the continent into a dynamic scene marked by rapidly changing socio-economic developmental activities.

Though rightly considered in the world among the least developed countries (LDC) and most severely affected (MSA) by the world monetary crisis and inflation, yet relative to our past experiences many African countries are undergoing rapid economic and industrial development, rapid population growth, civil wars, uprising against imperialism etc. all these result in creation of more disabilities on the continent.

2. The magnitude of the problem of disablement

2.1. The former Secretary-General of the United Nations, U Thant, summarised the situation very well in his address at a luncheon of the World Rehabilitation Fund on 20 October 1971 in New York as follows:

43

I shall illustrate the magnitude of the problem by pointing out that there are today over 300 million persons in the world who require some kind of rehabilitation services and are unable to attain them. Population growth, wars, greater longevity and above all an ever-increasing number of industrial, traffic, and other accidents add a few million disabled every year to the "waiting list" for rehabilitation services.

The very advances in medicine which result in saving human lives can also result in adding thousands of temporarily or permanently disabled people who require rehabilitation in order to return to active life.

2.2. The quoted figure probably emerged from a survey conducted by the Rehabilitation International in 1968 which stated further that the majority of disabled persons to whom rehabilitation facilities are unavailable exist in the developing countries.

2.3. Although no one has carried out epidemiological surveys aimed at determining the number of disabled persons and/or the number of rehabilitation services available for them in Africa, the scanty figures at our disposal show that in almost every disability group African countries record:

(a) some of the highest incidences of disablement per unit of population; and

(b) some of the lowest financial, technological and manpower resources to provide rehabilitation services for her teeming population of disabled persons.

3. Disability groups and preventive measures being taken

3.1. Partial or total loss of sight.

3.1.1. Africa records a very high incidence of blindness.

	Blind per 100,000 of population
West Africa	1 056
East Africa	851
Central Africa	660
West Indies	302
Far East and Pacific	264
England	205
United States	196

3.1.2. The common causes of blindness are:

(a) infestations, e.g. onchoceriasis, infective or purulent keratitis e.g. smallpox and measles, other diseases such as cataract, trachoma etc. are also etiological factors.

3.1.3. Preventive measures

Include: WHO onchocerciasis control.

Programme in the Volta River Basin launched in January 1974.

The project covers an area of 200,000 square kilometres and involves a population of 10 million people, over 1 million of whom are infected with onchocerciasis with 70,000 already blinded. Various funding agencies, and donor countries have contributed millions of dollars into this project aimed at ridding the waterways of the vector agents and thus controlling infestation.

3.1.4. Available information suggests that this is an uphill task as land irrigation for agricultural purposes provides new breeding habitats for the vector agents and encourages the spread of infestation. The WHO is making a success of the programme which is expected to extend to other affected areas soon.

3.1.5. Immunisation against smallpox has been very successful in most African States; control of measles on the other hand is not yet so successful because the immunisation programme has not yet received universal acceptance and trial and vaccines are not always readily available in large enough quantitites.

3.2. Deafness and hard of hearing

3.2.1. This is another cause of disablement in Africa. The incidence is very high. Middle ear infection as a principal cause of deafness is now being happily controlled by immunisation (as described above) and by early and vigorous administration of antibiotic therapy.

3.2.2. Another observation in northern Nigeria is that 50 per cent of deafness results as a sequel of cerebrospinal meningitis. WHO is co-operating with various governmental agencies in the control of this infection.

3.2.3. Sound-induced deafness - as a result of urbanisation and industrialisation persistent loud noise is a known cause of auditory impairment. We do not know yet the incidence of deafness from this source in Africa but it is opportune to advise industrial health precautionary measures to prevent it.

3.3. Lameness from communicable diseases and poliomyelitis is receiving great attention from the WHO, missionaries, government health authority, etc. Immunisation against poliomyelitis is spreading to the rural communities and in certain areas 30-40 per cent of the vulnerable population are already covered.

3.3.1. Early detection and vigorous curative treatment of leprosy controls its spread thus reducing the incidence and severity of disablement from this source.

3.4. Bone and joint infections requiring limb ablation or causing disabling ankylosis or arthritis of the joints e.g. pyogenic infection or tuberculosis must be mentioned. Whereas immunisation against tuberculosis holds the incidence of chronic chest and bone infection in abeyance, pyogenic bone infection are unfortunately still neglected until they result in disabilities.

3.5. It is in the area of industrial accidents and diseases, agricultural, sports and road accidents, however, that sufficient disability prevention is still lacking.

3.5.1. The "5 E's": education, enactment, enforcement, engineering and economic measures designed to prevent accidents are yet ineffective and the worst forms of disabilities, e.g. quadriplegia, tetra and paraplegia resulting from falls from palm trees or road accidents; tendon and hand injuries etc. occur daily to young males and females; the highest age incidence being between 16 years and 40 years of age.

3.5.2. The worst victims of these accidents are the few young skilled persons on whom our developing economy depends.

3.6. Mental illness and drug abuse create a grave problem, the magnitude of which is unknown but the situation is alarming particularly among the youth at school in urban and rural areas. This was the topic for the technical discussion at the 23rd Session of the WHO Regional Committee for Africa meeting in Lagos in 1973 The various associations of psychiatrists in Africa, the WHO and individual African countries are jointly examining the problems with a view to finding lasting solutions to them.

In Nigeria, among the preventive measures applied are:

3.6.1. stiff penalties for offenders (up to 10 years sentence);

3.6.2. ban on the importation of the amphetamin group of drugs;

3.6.3. education of parents, teachers and the general public through all available news media.

3.7. Cerebral palsy and mental retardation

This is still a very neglected group. The incidence is very high but improved antenatal, perinatal, and maternal care, particularly in the rural communities, prevention and early curative treatment of meningitic infections seem to be effective in reducing disabilities from this source.

3.8. Genetically determined diseases e.g. sickle-cell anaemia. The "s" gene has a 20-25 per cent incidence in some African countries. The "SS" and "SC" conditions cause severer disabilities and morbidity than rheumatoid arthritis and haemophilia do in Europe

3.8.1. Genetic counselling (eugenic) appears to be the most realistic approach to reducing the "S" gene in our population, but this is almost an impossible task.

3.9. Disability from warfare

3.9.1. There is no doubt that activities of liberation movements, civil wars etc. involve young men and women, many of whom suffer disabling injuries.

3.9.2. The disruption of economic development in the areas involved aggravates unemployment among able-bodied citizens thus limiting the occupational opportunities for the disabled.

3.9.3. Prevention of wars may appear impossible in young emerging countries some of which are still under colonial and imperial yokes. For as long as the law of economic justice and equity is ignored, as long as oppression and suppression glory in power and strength it will be difficult to prevent war. We can only hope that the day will dawn when every individual and every nation can hope to live an independent, dignified, peaceful existence as a matter of right.

4. Special problems relative to disability prevention and rehabilitation

4.1. The problems and constraints related to proper disability prevention and planning of rehabilitation programmes include the following:

4.1.1. lack of epidemiological and demographic data;

4.1.2. insufficient awareness of the economic and social value of rehabilitation process;

4.1.3. the illiterate background of a large percentage of disabled persons;

4.1.4. general lack of rehabilitation facilities;

4.1.5. lack of technical and human resources;

4.1.6. high rate of unemployment;

4.1.7. insufficient co-operation and liaison with other disciplines involved in community development;

4.1.8. insufficient co-ordination and administration of rehabilitation programme.

4.1.1.1. Lack of epidemiological data

Preparatory to planning a meaningful and cost-effective rehabilitation programme, it is essential to conduct country-wide epidemiological and demographic surveys. This should be a continuing process. It should endeavour to prepare and keep an inventory of all disabilities group by group. It should reflect the locations or addresses at which each disabled person can be reached. It should also contain a statement of the rehabilitation services (educational, social, medical or vocational) they require or are receiving. It should also keep an inventory of available rehabilitation service centres or facilities as well as the numerical strength of the available manpower and their disciplines or specialities.

4.1.2. Insufficient awareness of the economic and social values of the rehabilitation process

4.1.2.1. It has been stated above that road, agricultural, and industrial accidents and diseases rank highest in the causation of disabilities today. The victims are the few skilled persons on whom the growing economy depends.

Since incapacity and disablement of "man" as the most valuable investment in any economy is a drain on that economic growth; also since its goal is to assist the disabled person to regain his working capacity in the shortest possible time to enable him to live a social, economic independent existence within his own community, medical and social rehabilitation should therefore be an integral component of the national economic development programme of each African State.

4.1.2.2. It is short-sighted and unfortunate that employers of labour have not recognised the wisdom in investing in programmes which can ensure that:

(a) they retain, on the jobs, the highly trained and skilled personnel who keep up their high productivity;

(b) they reduce the time loss at work by such personnel due to incapacity;

(c) they reduce the amount otherwise payable on workman compensation by prevention of disability at work or by early curative and early rehabilitative measures.

4.1.2.3. In 1969 the Ontario (Canada) Workmens Compensation Board compared the post-accident earnings (until a retiring age of 60 years) of disabled persons who received rehabilitation services with those who did not, and found that "rehabilitation services produced to the injured workmen an average increased income of more than 15,000 dollars" (B.J. Legge QC).

This study established the economic benefits to the injured workman, his family, his employer or government and to his nation, of investment in rehabilitation services.

4.1.2.4. To share the experiences of the industrially developed countries as demonstrated by that study, economically developing African countries require to create enlightened public and industrial communities to whom ability counts rather than disability.

4.1.2.5. It is encouraging to note that some African countries are now aware of the great benefit of rehabilitation and now list rehabilitation services high on their planned development programmes. For instance my own country, Nigeria, has now created a new Ministry of Social Development, Youth and Sports which budgets for rehabilitation in our Third National Development Plan.

4.1.3. Problem of illiteracy

4.1.3.1. In most African communities, unfortunately a very high percentage of the working population are non-writing and/or non-reading illiterates who qualify, by their limited skills and narrow areas of competence, only for manual and physical occupations.

4.1.3.2. Any physical disability to such low- or medium-level category of workers constitutes a disastrous occupational handicap since their basic illiteracy limits their access to other skills and information required to retrain them for a variety of alternative vocations.

4.1.3.3. To expand the occupational opportunities of these semi-illiterate injured workmen, rehabilitation programmes in Africa must lay emphasis on, and include basic general adult education.

4.1.4. Limited existing rehabilitation facilities

4.1.4.1. Mutually supporting and comprehensive rehabilitation facilities are non-existent in most African countries. The few facilities that exist do so in isolation and are inefficient. For example, educational rehabilitation facilities are not often supported by medical or prosthetic services, therefore locomotive or transport problems constitute a barrier to their full usefulness for some disabled children.

Similarly occupational training facilities are not often supported by adequate job placement and follow-up services.

4.1.4.2. In fact, perhaps the majority of disabled persons, particularly children, adolescents and the aged, are cared for at home through the extended family system. Even at its best the extended family system emphasises disability and tends to perpetuate dependency. It offers nothing in the direction of vocational training. Fortunately or unfortunately, the current massive drift of the rural population to urban centres and the exhausting and the full-time demand of urban industrial jobs reduces home assistance and is rapidly exterminating the "extended family" care enjoyed by some disabled persons in the past.

4.1.4.3. Favoured group

However, the organised and the fairly well-developed rehabilitation services received by the blind, the victims of leprosy and tuberculosis in other continents have extended to many African countries by the activities of charitable and missionary organisations e.g. the Royal Commonwealth Society for the Blind.

4.1.4.4. On their inspiration, national charitable organisations: e.g. the National Society for the Blind, government agencies, WHO etc. have jointly or severally provided some, even if inadequate, educational and vocational rehabilitation facilities and clinics, for the disabled in this favoured group.

4.1.4.5. Neglected group

Unfortunately, the mentally retarded, cerebral palsied, the sickle-cell anaemic children, the epileptic, the victims of industrial accidents and the paraplegics etc. require more attention and vocational services than are hitherto available to them.

4.1.4.6. However, I observe with joy the existence in East, Central and West African countries, services such as:

(a) the ILO-assisted "battery" and umbrella-producing workshops for the disabled in Addis Ababa;

(b) the DANIDA-assisted prosthetic/orthotic workshops in Moshi, Tanzania;

(c) the German-assisted prosthetic/orthotic workshops in Lomé, Togo and in Tunis.

I cannot enumerate all the rehabilitation services available. I only wish that the various funding agencies can merge some of these projects into more comprehensive multilateral rehabilitation programmes the organisation and administration of which can be co-ordinated and supervised by the UNDP or WHO/ILO/Rehabilitation International.

I also hope that if and when the donor agents withdraw their services that the African recipient countries will have enough men and materials to keep the services going.

4.1.4.7. The Nigerian Armed Forces Rehabilitation Centre at Oshodi in Lagos which offers adult educational and occupational training opportunities to the victims of our civil war was established in recognition of the need to integrate the military disabled personnel into active social and economic life of the community.

4.1.4.8. The initial success of that project has inspired Nigerian government planners to propose in the 1975-80 development programme the establishment of four strategically sited demonstration civilian rehabilitation centres.

4.1.5. Limited or no technical and human resources

4.1.5.1. Lack of technical and human resources is another great constraint to development of rehabilitation services in Africa.

4.1.5.2. For maximal and economic use of the little national technical and/or international technical aids and manpower resources available development of national or inter-regional pilot demonstration rehabilitation centres should be seriously considered by each African country.

4.1.5.3. Considering that 80 per cent of our population live in rural areas, some of these demonstration centres should be sited in rural areas and others in industrially-oriented urban areas.

4.1.5.4. In each pilot project medical, educational and vocational service facilities should be closely sited so that they can share facilities as well as relevant staff.

4.1.5.5. It would be a good teaching centre for many professional groups that constitute the rehabilitation team. It would indeed be a rehabilitation community in that its staff would extend its influence to the lay community who would in return be fully involved in the process of reintegration of the disabled into the community.

4.1.5.6. Training of all cadre and levels of staff on whom the extension of rehabilitation services to other parts of each nation will depend should be the most important goal of such a project.

4.1.6. Creating employment opportunities for the disabled

4.1.6.1. The high unemployment rate among our able-bodied citizens reduces the employment opportunities for the disabled persons.

4.1.6.2. Yet most of the few available rehabilitation facilities limit their efforts to physical restoration and/or vocational training programmes.

4.1.6.3. Every vocational programme should be planned with the local employment market and framework in view; it should commence with assessment of the disabled person's work potentials and end with his placement, where possible, in competitive employment in his own environment.

4.1.7. Removing environmental barrier

4.1.7.1. Even if and when we complete the medical and vocational programme outlined above for the disabled, our urban and rural environments contain so much static and dynamic barriers that makes it almost impossible for him to gain access to, or work in a public office or workshop.

4.1.7.2. If we care to educate and involve our town planners, architects, engineers, transport owners and others who participate in community development in our rehabilitation programmes and the need of the disabled persons, then modification of houses, public offices and building, public transport to meet the special needs of the disabled, will be accepted as an essential and normal requirement for our environment and community development in Africa.

4.1.8. Co-ordination of and co-operation in planning rehabilitation programme

4.1.8.1. From the foregoing, it can be said that rehabilitation is a complex multidisciplinary process which will require careful planning and special administration of its own.

4.1.8.2. Its practice is best based on sound and secure government legislation.

4.1.8.3. At national levels it is best planned and administered by a national rehabilitation advisory council whose membership includes:

(a) representatives of the ministries of health, economic planning, education, labour and social welfare;

(b) representatives of employers' associations, labour unions and a society or association of disabled persons;

(c) representative of a non-governmental national society for rehabilitation of the disabled and a representative of the insurance companies.

4.1.8.4. This body should be charged with the responsibility:

(a) of providing comprehensive medical, education, social and vocational rehabilitation services;

(b) of looking into the problem of housing, transport and technical aids or appliances for the disabled;

(c) of organising training programmes for all levels, and disciplines of personnel for rehabilitation services;

(d) of establishing demonstration centres from where services can be extended to every corner of the nation.

It should also introduce legislation that guarantees:

(a) social security benefits for all;

(b) insurance cover to provide medical treatment and complete rehabilitation and/or compensation for victims of road traffic or industrial accidents;

(c) education for the disabled child.

4.1.9. Co-operation and co-ordination at international level

4.1.9.1. Neighbouring African States can jointly run an inter-regional training centre to meet their manpower needs in this field.

4.1.9.2. The United Nations (and its agencies WHO, ILO, UNESCO) can co-operate in, and participate with groups of African States in developing pilot demonstration rehabilitation centres.

Such a centre will be most ideal for training and retraining of rehabilitation personnel and will be a practical and vivid illustration of how rehabilitation services should be run by the individual African States.

4.1.9.3. Bilateral government agencies, and charitable organisations will find it easy to give financial and technical aid for such an inter-agency programme.

4.1.9.4. Jointly organised rehabilitation seminars, workshops, conferences and training courses for rehabilitation personnel at national and regional levels will further increase public awareness of the true meaning, the need for, and the economic value of the rehabilitation process to the African nation today.

5. Summary

5.1. Over 15 per cent of the African population is disabled. Warfare and civilisation diseases add millions every year to the population of our disabled persons.

5.2. Over 80 per cent of these receive no rehabilitation services hence the high population of disabled beggars.

5.3. Our modern urban designs and development are creating social and environmental barriers for the disabled.

5.4. Limited financial, technical and manpower resources are formidable constraints and impediment to provision of rehabilitation services.

5.5. There is an urgent need to increase the awareness of the economic advantages of rehabilitation among our employers, general public and the planners of a national development programme.

5.6. The financing of rehabilitation services for the disabled is the responsibility of the government of each country which should not be shifted to charitable organisations.

5.7. Rehabilitation services should be accorded a high priority on national development plans.

5.8. Consideration should be given to early introduction of appropriate legislative measures for proper organisation and administration of a national rehabilitation programme. This should include the establishment of a national rehabilitation advisory council as well as modifying the insurance laws etc.

5.9. Each African country should include on its priority list the establishment of demonstration rehabilitation centres.

The objectives of such centres include:

(a) training the very much needed rehabilitation personnel;

(b) illustrating to the community the true meaning and value of rehabilitation;

(c) acting as a source of spreading proper service facilities to every corner of the country;

(d) providing material for research into local materials etc.

5.10. Available local material and manpower resources should be relied upon for executing national programmes.

5.11. Neighbouring African countries should consider sharing institutions and resources that would have been very expensive for individual countries.

5.12. The Rehabilitation International, United Nations and its agencies (WHO, UNESCO, ILO, UNICEF, etc.), bilateral government donors and other private funding agencies possess both the experience and machinery to assist groups of African countries in developing rehabilitation service and training programmes. Their assistance should be sought particularly in respect of co-ordinating multilateral inter-agency rehabilitation manpower training programmes and in organising African seminars and conferences etc.

Locating medical, educational and vocational rehabilitation programmes together in the form of a rehabilitation community will most likely be an economic way of utilising the limited manpower resources for demonstration rehabilitation centres.

Thank you for giving me an audience.

3. The Role of an ILO Regional Vocational Rehabilitation Adviser

by

Sam Niwa

Terms of reference

The main purpose of the assignment of the African Regional Vocational Rehabilitation Adviser is to assist the Director of the ILO Regional Office for Africa, Addis Ababa, with the planning, negotiation, execution and follow-up of technical co-operation projects in the region in the field of vocational rehabilitation of the disabled.

The principal duties include:

(1) investigating, at the request of governments, the needs and possibilities of starting and expanding vocational rehabilitation programmes, ascertaining the need for technical co-operation projects, and advising accordingly;

(2) advising governments on organisation, consolidation, co-ordination and any other problems connected with vocational rehabilitation of the disabled;

(3) conducting local, national and, if possible, regional staff training courses on various aspects of vocational rehabilitation work;

(4) stimulating national interest in the development of vocational rehabilitation services and in the establishment of national staff training schemes;

(5) following up previous technical co-operation projects whether expert assignments, fellowships or the provision of equipment;

(6) collaborating with ILO experts in the region, particularly those working in the programme of human resources, in the development of integrated and co-ordinated programmes of vocational rehabilitation;

(7) working closely with experts of other international agencies or organisations working in the field of rehabilitation;

(8) supplying information and reports to the ILO on development of technical interest in the region;

(9) as required, representing the ILO at regional meetings on rehabilitation.

In addition to the above-mentioned duties, the regional adviser is requested to undertake the following additional responsibilities in connection with the rehabilitation of drug-addicted persons:

(1) during the course of normal missions to attempt to clarify with the relevant officials and ministries the national situation with regard to drug addicts' rehabilitation needs.

(2) to inform relevant officials, ministries and planners as to the role that ILO can play in drug addicts' rehabilitation programmes and how this broadly differs from that of WHO;

(3) as a matter of policy, vocational rehabilitation regional advisers may be called upon to undertake drug rehabilitation survey missions at the request of the UN Fund for Drug Abuse Control (UNFDAC).

Major role and contributions

It should be appreciated that the mission allocations for a regional adviser are so limited that the adviser could only spend a week or two in each country requesting his services. In spite of this time limitation, he can provide some useful services for government and voluntary organisations during his visit. Some of the major contributions which the adviser coull provide to meeting individual government requests are mentioned below.

(1) Providing practical advice and assistance

Each country has different problems. There is diversity of customs, beliefs and religions, not only within the region but often within the individual countries themselves, and there are problems which arise from these differences.

It is important to realise that vocational rehabilitation services should be adapted to the particular needs and circumstances of each country (see ILO Recommendation No. 99). Such services should also be planned and developed within the limits of the available national resources.

The adviser would help the government concerned in identifying what its most pressing needs are and what form its programme should take. Often a less costly, less sophisticated approach is desirable with short intensive and multi-purpose vocational rehabilitation courses being organised in the country. In certain countries aid to the disabled in rural areas is accorded higher priority.

Because of the opportunities he has had in discussing various problems and experiences in other countries in the region, the regional adviser would be in a helpful position to discuss with all concerned during the visit similar problems and to try to find practical solutions to them.

The areas for discussion may include:

(a) legislative measures;

(b) co-ordination and co-operation of rehabilitation services;

(c) identification and registration of the disabled;

(d) urban vocational assessment and work preparation facilities;

(e) sheltered workshop facilities;

(f) rural vocational rehabilitation facilities;

(g) marketing of goods produced by the disabled;

(h) employment placement services;

(i) training of vocational rehabilitation staff.

(2) Convincing development planners

One of the greatest drawbacks to the successful commencement and development of rehabilitation services has been a lack of understanding on the part of national development planners and economic advisers as to the socio-economic values of such services. In order that the rehabilitation programme receives a fair share in the national development plan and its budget, decision makers of the development plan should be made aware of the magnitude of the disablement problem in the country and what could be done to rehabilitate the disabled.

The regional adviser would usually have the opportunity of meeting with these development planners during the visit to a country. On such occasions the adviser would ensure that:

- the whole problem of rehabilitation should be considered in the context of integrated socio-economic development plans;
- government should accept responsibility for financing rehabilitation services which should be offered as a right, not a privilege, to their disabled citizens;
- government should accord proper priority to allocation of funds for rehabilitation programmes, thus permitting the development of services which in some cases have stagnated owing to lack of essential financial support. Such support is required not only for capital outlay but also for recurrent expenditure on salaries, allowances, raw materials, maintenance and running costs.

53

(3) Following up previous ILO assistance

In the past the ILO has provided technical assistance in the field of rehabilitation in the form of expert assignments, fellowships or the provision of equipment to the following African countries:

- Algeria
- Cameroon
- Egypt
- Ethiopia
- The Gambia
- Ghana
- Kenya
- Liberia
- Libya
- Malawi
- Mauritius
- Morocco
- Mozambique
- Nigeria
- Senegal
- Somalia
- Sudan
- Swaziland
- Tanzania
- Tunisia
- Uganda
- Zambia

It is considered that technical assistance efforts would not produce a willingness on the part of governments to carry out the recommended plans.

The regional adviser would follow up the development of previous ILO assistance to ascertain whether the recommendations have been implemented effectively. In some cases adjustment and modifications may be required due to changed circumstances and needs and the adviser would give further advice accordingly.

(4) Assisting in the formulation of new projects

The UNDP funds allocated to rehabilitation projects during 1972-76 represented one-tenth of 1 per cent of the total of United Nations Development Programme (UNDP) assistance. It is obvious that assistance received from UNDP and other UN agencies for rehabilitation projects has been insufficient.

The UNDP's country programme procedure is not well known to technical or administrative officers in charge of rehabilitation programmes at the national level. This may be one of the reasons why not many country programme documents prepared by governments make reference to rehabilitation programmes. It should also be appreciated that the funds are allocated for projects, at the request of the governments, to which they accorded the highest priorities.

The UNDP Resident Representatives are key persons in country programming and they should be asked bearing in mind the economic and social importance of rehabilitation programmes not only during programming exercises but also at the time of the annual reviews of the programming. The regional adviser would have the opportunity of discussing relevant matters with the UNDP Resident Representatives on the spot.

The regional adviser is also in a position to explain to the government officers concerned with rehabilitation the purpose and procedure of the country programming exercises and help them, if required, to draw up a draft project document on behalf of the government. Such assistance has proved to be most helpful and because of this many new vocational rehabilitation projects are being formulated under UNDP arrangements.

If UNDP financing is not possible for a rehabilitation project, the adviser would also help in identifying other sponsoring agencies under bilateral or multilateral arrangements through such agencies as SIDA, NORAD, DANIDA, German Church Organisation, etc.

Great contributions could also be made by United Nations and other international volunteers to rehabilitation projects in developing countries. Our experience has proved in some East African countries that the services of volunteers helped to offset the lack of technical personnel and enabled planning of international rehabilitation programmes to be undertaken on a more ambitious scale than would otherwise have been possible.

(5) Ensuring the development of a balanced rehabilitation programme

In most countries, several ministries are involved in developing rehabilitation services, often working independently. It is, therefore, important to ensure that a well-balanced and co-ordinated rehabilitation programme is planned, organised and developed for all categories of disabled persons in the total area of rehabilitation covering medical, psychological, educational, para-medical, social and vocational aspects.

Whilst the ILO adviser's main duty is to assist in the development of vocational and employment aspects of rehabilitation within the context of the over-all balanced programme for the disabled, he should have the opportunity of meeting and discussing with government officials and leaders of voluntary organisations concerned with medical, para-medical, educational and social aspects of the programme. On such occasions the adviser would outline available international assistance in the field of rehabilitation, i.e. the role of UN, WHO, UNESCO, UNICEF, UNHCR, etc.

Addis Ababa,
30.9.75.

4. The Planning and Development of the Umbrella Factory

by

Mr. E. Marland

This is 1975; the idea of establishing an umbrella factory for the disabled, occurred - I think - in 1962; therefore the memory which is mine coupled with the lack of the files on the subject may lead to a confusion of dates and figures, but certain features of the origins stand out in my mind.

I was standing at the window of the UNTAB office, where I was acting Deputy Resident Representative, when across the road outside the Jubilee Palace, came a funeral procession with the women in their white Shama and carrying umbrellas of all colours. The sun was hot and bright, and they were being used as sunshades, to avoid the darkening of their skin as is the custom of Ethiopian women. I wondered if umbrellas were easy to make, so I bought one and took it to pieces. It did seem easy, so I wrote to ILO headquarters in Geneva to see if they could get details of the manufacturing processes. In due course came a reply from the ILO Branch Office, Tokyo, together with a reasonably detailed feasibility study prepared by Messrs. Shibamoto and Company of Tokyo.

This study described briefly the several processes required to produce an umbrella, a list of equipment necessary, types of raw materials and production norms for individual processes. This added up to being a job admirably suitable to disabled labour.

It had always been my hope to be able to establish a factory employing disabled labour which could be run on commercial lines and without the patronising charitable approach normally associated at that period with employment of the disabled. My view was, and still is, that carefully selected disabled can be matched carefully to selected jobs, with the aim that they would achieve a normal level of productivity in relation to the able-bodied. If this productivity from all the workers was achieved and management was good, then the factory would operate at a profit, or at the very least, at no loss. This, in comparison with the many, many sheltered workshops across the world which were operating under the shelter of government or charity subsidies. To recommend to any government of an economically underdeveloped country that a costly subsidy would be necessary to employ disabled would result in a negative reaction.

Ethiopia, in 1962-63, had no social services, no orthopaedic hospital, no prosthetic appliances, only one blind school in Addis Ababa for 30-40 pupils and a small school for the deaf in Keren in Eritrea, and the only organisation having interest in this work was the Haile Selassie I Foundation to which I was attached from mid-1961. In the period 1961 to 1964 the major event in rehabilitation was the opening of the School for the Blind at Sabata, which also had a prevocational training centre. Into this vacuum of rehabilitation the idea of the umbrella factory was introduced.

The concept was put on paper and sent to the Foundation for consideration. I had costed the minimum financial requirement at some US$40,000, allowing for initial capital equipment, tools, etc. and sufficient raw materials to maintain operations for a year until the sales became the main source of forward financing. It is still evident that at least four months must elapse between ordering raw materials and their delivery to the factory site.

After submitting the proposals to the Foundation and initiating a request to ILO for a technical instructor on umbrella manufacture, I was detached for a period of eight months to the ILO Field Office in Tanzania. While I was away, the Foundation approved the scheme and the machinery was set in motion to establish the factory. Unfortunately, only Ethiopian $40,000 instead of US$40,000 was provided as initial capital. At the rate of exchange in those days, Ethiopian $40,000 was equivalent to US$16,000. This lack of adequate running capital was the major problem over the next three years.

In fact, the Ethiopian $40,000 was insufficient to cover the initial stage of opening operations; when the first disabled entered the factory, we were already in debt to the tune of Ethiopian $1,374 - this figure sticks in my mind. I am emphasising this financial aspect as it is of major importance in any operation of this kind. Later experience has shown that unless adequate running capital is assured before the project is started, then the factory can fail. Only by devious methods of raising finance did the Ethiopian factory survive. To become an operational entity, the factory was named the "United Abilities Company" (a little plagiarism from Abilities Inc. of the USA) and the three original shareholders were the Haile Selassie Foundation (who operated the blind school), the Fund for the Disabled (20,000) and the School for the Deaf. The latter had started late and had no spare funds.

The buildings used were those originally occupied by a children's orphanage owned by the Foundation and a few walls were knocked out to give a reasonable working space. The Foundation held the title deeds of the land and buildings and these were lent to the company for use as security for a loan of, I think, Ethiopian $110,000 from the Development Bank of Ethiopia. This loan took weeks of negotiation. The idea was new and the financial position of the company very shaky and it is to the credit of the Development Bank authorities that they eventually took the risk. This was also the position of the Commercial Bank, and the Addis Ababa Bank, which also helped with overdrafts, though there were occasions when only direct guarantees from the Head of State saved the company's position. The Japanese companies were also of great assistance as they, contrary to their normal practice, gave 90 days' grace on payments of letters of credit for their materials and the company must be always grateful for this type of sympathetic understanding. So, to anyone at this training course contemplating such a factory, I would emphasise very strongly that assured long-range financing must be available before embarking on such a venture.

At this stage, I would also emphasise two other major factors necessary to success. The first is that management must be of a very high standard, and salaries paid for management personnel must equate to those in normal industry of the country. The second is that the manager must be allowed to manage and have the flexibility of operation which goes with management.

So the factory in Addis Ababa came into being and, before I returned from Tanzania, the Foundation had brought in a technician from the Japanese company who planned the layout and installed the machinery and an Ethiopian manager was in post.

Training started with some ten disabled, I think, three deaf and the others orthopaedic cases. The Japanese technician spoke no English or Amharic; I spoke no Amharic; the disabled spoke no English. The deaf spoke not at all. Within six weeks, about 25 disabled, including four blind, were employed, the basic training ended and umbrellas were being produced. This was done without any language communication which tends to suggest that, in vocational training, visual methods are the most important factor.

Selection of the disabled was not on any organised basis. It was mainly on trial and error but it was not too inaccurate in the event. The major aspect in relation to vocational rehabilitation techniques here was not the production of umbrellas but in fitting the different types of disability into the processes of manufacture. Some 16 processes were broken down to about 40, fitting a suitable disabled person into each new process. In many cases, the disabled themselves who, after all, know their own disability and their capabilities better than able-bodied ILO experts, social workers and the like, found jobs they could do and also suggested improved methods of production as they gained experience.

Entry into the factory was based upon the criteria that the factory was not responsible for where the disabled lived or how they reached the factory. These were their problems and it was most heartening to see how the initial entrants faced up to this responsibility, in many cases with extreme difficulty, several literally crawling to work. Once their wages became adequate, these problems were diminished as they mostly obtained communal living quarters near the factory. The facilities, which are today available to the disabled in the form of medical services, pension funds, etc. are a result of a policy which decided that money was rehabilitation and, that to obtain money, the disabled had to work for it with all the disciplines involved in normal factory work. Many of these original disabled persons are in responsible positions within the staff structure of the company today and it is due to their own initiative and perseverance in the difficult early days, together with the exceptional talents of the Ethiopian manager in the period after I left, that the UAC has become a major factor in the field of employment of the disabled.

I have not seen the company since the opening of the new factory buildings in 1971 and have not yet seen the operations of 1975, so I am looking forward to seeing what has happened in the intervening years. I can say for myself that the early days of the United Abilities Company gave me the most rewarding years of my life in rehabilitation - and a lot of hard work too!

5. Training of Personnel for the United Abilities Workshop

by

Wondimagegnehu Assefa

I. General

The United Abilities Company is an organisation engaged in habilitating disabled persons by giving them the opportunity of gainful employment. I have used the word habilitating instead of rehabilitation deliberately to stress the fact that the problems faced by the developing countries in this hemisphere are not the same as those the developed countries faced. In developed countries, where the idea of rehabilitation originated, the causes of disabilities are mainly due to industrial mishaps, war and/or misuse or abuse of the fruits of technological advances. In the developing countries most of our disabled brothers and sisters are the products of malnutrition and diseases which, the society they live in could not afford to get rid of due to poverty and lack of resources.

The idea of establishing the United Abilities Company was to create an economically oriented welfare institution which would, instead of merely caring for the disabled by providing them with food, clothing and shelter, give them an opportunity to engage in creative work and thus earn their livelihood. Even more than money, a disabled person needs a sense of his own dignity. He needs a useful place in the society. The best habilitation measure is then that which enables the disabled to gain his personal dignity along with his economic independence. This, I feel, is achieved and well-demonstrated in a very practical way by the United Abilities Company in its first ten years of existence.

II. Training at the United Abilities

At the United Abilities Company, where nearly 400 disabled persons are gainfully employed, the programmes are not geared to training the handicapped for placement elsewhere. The disabled are recruited to fit the jobs and then are given on-the-job training on how best they can be productive with their remaining ability. The formal training period varies from ten minutes to a maximum of one month, depending on the intricacy of the job content and the activeness of the trainee. The most time-consuming and/or the most difficult portion of the whole programme is the planning and the breakdown of the activities required for a certain job - down to its basic element so as to be able to match the remaining ability of the employable disabled with the activities required. This technique is referred to as selective placement and is one of the techniques used by rehabilitation workers all over the world. In developed countries, the most popular technique used is adaptation of jobs for the disabled. This technique is no doubt the best means of utilising the handicapped person's ability and residual capacity to the best advantage. However, its implementation could entail massive capital outlay beyond any developing country's allotted resource for rehabilitation programmes.

The general principle of adaptation of jobs for the disabled can very well be followed in the selective placement of the handicapped person, the basic difference being that the former tends to aid the handicapped person to carry out the total functions of a job's requirement with the help of special equipment to supplement his disability; the latter implements the division of labour amongst the various disabled as a team.

III. The basic principle

The basic principle followed by the United Abilities Company is job analysis. For the purpose of selective placement of the handicapped on a job which he can perform with his residual ability, a study is made as to how a job is done, why it is done in that manner, what part of the human body it requires, and whether or not it can be performed in a sitting position. Once this detailed analysis is made, it is relatively easy to match the residual skill of the individual handicapped person with the demands of the particular job.

58

IV. The practical implementation

This basic principle has been implemented practically at the United Abilities umbrella and dry cell battery factories, and the blind, the deaf and people with impaired limbs and extremities are working as a team and turn out useful and attractive products.

To analyse more deeply how this basic principle is implemented, let us take the activities carried out to assemble umbrellas.

The job	Suitable disability
Cloth splitting	Blind and deaf - team work
Cloth edge sewing	One leg amputee
Cloth folding	Deaf
Cloth cutting	Deaf
Cover sewing	One leg amputee
Cover stitching on frames (first stage)	Below waist paralysed
Cover stitching on frames (second stage)	Blind
Inspection and packing	Blind, deaf, paralysed - team work

V. The advantage and disadvantages of this technique

The advantage of this system is that any project can be implemented without the need for special equipment suitable for certain categories of handicapped persons and equipment which is beyond the acquiring capacity of developing countries. As the job is broken down into its basic elements, the skills required to perform such limited and repetitive activities would also become minimal.

Splitting the various functions to be carried out to perform a job to several handicapped persons might be considered a disadvantage in terms of economy. However, if, at the time of planning, the optimum level at which the job breakdown can be made economical is ascertained, this disadvantage would be turned into a golden opportunity to reduce unemployment.

VI. The achievements of the United Abilities Company

In September 1964, the first group of disabled trainees totalling 27 were introduced to assembling umbrellas. The division of labour was made following the basic principle of analysing job content and matching that with the residual ability of the handicapped trainees. By November 1964, the workshop had already been transformed into a productive unit. Every year the unit kept on growing until it developed into a modern umbrella-manufacturing unit and the total disabled people employed in the trade reached 286 in 8 years. As the number of people employed in the umbrella factory reached the optimum level, a second manufacturing unit in the dry cell battery factory was planned and established and nearly 200 disabled are productively engaged there. In 10 years the small assembly unit was transformed into a holding company and further transformed the employed handicapped people from a status of helpless dependency into active, productive and useful citizens.

6. The Organisation of Production Work and Sales Outlets

by

Mr. E. Marland

To organise production work and sales outlets, it presupposes that you have a production manager and a sales manager, or lower down in scale, a foreman or supervisor and a salesmen. In either case, these are the most important posts in a centre or workshop employing the disabled. You can do without the general manager of a company for a month or two, but not the man in charge of production or sales. It is possible that the sales manager, when the factory is operating, is the key individual, as he must sell the product to the consumer. He does, in effect, decide production: if the market requires a new design, then he must acquaint the production side of the change. If one particular item is not selling, then he must advise the production manager that the item be dropped. He is the external eye of the internal management.

These are theoretical positions, as is so often the case in employment facilities for the disabled, the production manager and the sales manager are the same person, though at times, one does find there are managers and superintendents who are purely administrative, and production is left to the instructor and sales to a low paid officer. Another problem is that many workshops for the disabled have several trades being operated. Each trade has its own production methods requiring a technician or specialist in each particular trade, each trade requires a different sales technique, in addition to an individual product costing and wages system. In a multitrade workshop there will always be a higher overhead cost to be covered by the sales income. I refer, of course, to sheltered workshops or factories, not to training centres which may have a subsequent responsibility for selective placements.

Where you have sheltered workshops which work on a basis of obtaining subcontract work from external product manufacturers, this being a popular and cheap method of maintaining employment for the disabled, then the sales function changes to one of obtaining and maintaining a regular supply of subcontracted orders. The salesman does not sell a product, he sells labour.

Whether the factory is producing a single item, a variety of items, or is on subcontract work, production methods are the key to high productivity and high productivity means elimination of loss, and/or making a profit. Productivity per head is even more significant when the labour force is disabled, and even more so, when the main content of labour are blind persons. The product made has to reflect the abilities of the disabled, and is necessarily labour intensive due to the limited job possibilities. Mechanisation in the disabled employment field is only to be encouraged where it is absolutely essential in the production process. (Umbrella covers could be stitched by hand but a sewing machine is an obviously necessary item.)

The production manager or supervisor must be technically competent in the total processes of manufacturing the particular product as a basic qualification. He must be totally aware of the cost of raw materials, the cost of labour and the overhead costs of the production unit. With all these factors he will then be able to decide the total cost of the item produced on the shop-floor level. It is usual that higher management, in consultation with the sales manager, will establish the selling price to the market.

Where you employ disabled labour, then the work of the production manager becomes more difficult: he has to have a good knowledge of the vocational rehabilitation process, understand the capabilities of each type of disabled person employed, and decide which job or part of a job is suitable to the person, having in mind that full productivity from each individual disabled man or woman is the aim. The disabled person too plays an important part in the selective process. In Africa generally, the disabled have had their disability for a long period, possibly due to lack of medical treatment at an early age, and may not come through to vocational rehabilitation for many years. He will have adopted a pattern of living to suit his disabled condition and he, better than anyone, knows his capabilities. He should be allowed to indicate what process or processes in a factory he thinks he can do, what machines he can operate, etc. This selection process is also possible where a high level assessment unit and prevocational training facilities exist.

Another major attribute of a production manager is that he must be innovative. Production can be considerably improved by the use of better methods, where a production line system operates, as in umbrella manufacture; lay-out of the factory is most important. The movement of the product from one operator to another must be minimal. Time is wasted when a worker has to walk across the room to fetch an item which should be at his side. In the early stages of the umbrella factory, the shape of the buildings were far from suitable and several times the production lay-out was changed, but not until the new factory was built did it become satisfactory. Working methods can be improved. The best example on umbrellas was with the blind who hand-sew the rib stitches. Originally they used the special needle threader developed for the blind (and these are useful for anyone who finds it difficult to thread a needle). This slowed production so was changed to allow the needle to be threaded by the sighted disabled person who worked alongside the blind person. This also facilitated colour selection of the threads. Another example is the metal cap which fits on the end of the umbrellas. Originally this was done by drilling a fine hole through the cap and the shaft and putting a small nail through the hole. This method took about two minutes per umbrella, but by using a centre punch, the two pieces of soft metal were forcibly joined and this takes about five seconds. The result is increased production, and incidentally, a much less complicated process. Several examples of this nature can be quoted, whether in the saving of labour costs or, equally important, in the elimination of waste materials. In umbrellas it is probably more important to avoid waste than to save labour costs as raw materials are 80 per cent of the final cost of umbrellas.

The emphasis on production methods will apply to any product manufactured. A final example, seen in an Asian country recently where blind persons were packaging the minor items for airline meal trays, the sugar, salt, toothpicks, knives and forks etc. were put into a small plastic bag and then sealed. Each blind person had these items in a box in front of him and a small sealing machine on his right (it should have been at his left), and completed each bag with its contents himself. It took approximately five minutes to fill and seal the bag. Had this job been slightly mechanised, the bag moving on a continuous belt, with one blind person putting only one item into the bag as the line moved and it being sealed finally by one person, the time taken would have been cut to one minute per bag. As piece-work rates were being paid, all the blind collectively would have earned more, though the sales organiser would have had to find more packaging orders to cope with the higher productivity.

Turning to the sales outlets aspect of this paper, it is hoped that the factory for the disabled that was started was the subject of a feasibility study before it was opened, and that this study indicated that the product was saleable over a period of years. If it was not so indicated, then the factory should not have been opened. It may be that there are competitors producing the same item, or as in most developing countries, the competition comes from imported items. In either case, an aggressive sales policy is indicated, remembering that business transactions are not based on sympathetic considerations even if your business is also assisting disabled persons. The market has to be fought for against opposition and any advantage, preferably legal, that can be obtained should be taken. Against a local competitor, the factory for the disabled is not compelled to make a profit, a no-loss condition may be satisfactory, but the competitor has to make a profit. The factory for the disabled has, in these circumstances, at least a 25 per cent edge on price and can undercut the competitor. The alternative, if it is possible, is to produce a higher quality article at the same price as the competitor, but in the economic situation existing today in most countries, the public tends to buy on purely cheapest price considerations.

If the competition is against imports, then the usual and quite legitimate resort, is to request the government to increase the import duty on the imported article. A generous government, if sympathetic to needs of employing its own disabled, might even make it a prohibitive duty which would stop all imports and give the factory a virtual monopoly. This too, is to me reasonable, as long as the factory does not abuse this monopoly situation.

Given that the product is totally saleable, the method of sales must be studied. One assumes that quantity sales are the aim, not individual items. Then, if import substitution has been achieved, the first thing is to establish whether the previous importers are prepared to handle the local product. This has the advantage of being able to use existing distributors who are knowledgeable of the product and have a national sales distribution system existing.

A second method is to give the sole distribution rights to one trading company, and this has the advantage that you do not effectively need any sales organisation in the factory. The sole agent takes away the production and sends one cheque, probably on a monthly basis. This simplifies the factory administration considerably. The only danger in this system is that being completely tied to one company, that company may decide that they can progressively ask for price reductions to increase their profits, at the expense of the factory's manufacturing profit.

The third method, where neither of the other two methods is possible, is to institute your own sales structure. This means a sales manager, a squad of salesmen usually paid on a salary plus commission basis, the provision of suitable transport for the salesmen and of large delivery vehicles, and the expectation of bad debts, etc. This is costly but may be essential, therefore sales costs must be included in the sale price of the article produced. This assumes that the article is a consumer requirement and must be sold through retail shops. Acting as your own distributor does, of course, mean that you obtain a higher profit income as you are eliminating the wholesaler, and this off-sets the cost of sales included in your marketing price. It does have an advantage in that you may increase the numbers of disabled in employment by using them as salesmen.

In conclusion, you will appreciate that I have only touched on a few aspects of production and sales. There cannot, in fact, be any well-defined policy for both these important aspects, it will vary with the product produced and the local conditions where the factory is established. But, as I emphasised earlier, make sure that all the relevant facts are gathered before you decide to open a factory for the disabled.

7. Expansion of the Umbrella Factory and Introduction of New Products

by

Wondimagegnehu Assefa

I. Objectives of the United Abilities Company

The primary objectives of the United Abilities Company were:

(a) the creation of employment opportunities for the disabled;

(b) the training of the disabled and transforming the unused labour into productive and active manpower.

To translate this set of objectives into deeds, the company established an umbrella-assembling unit in September 1964. The first 27 disabled were picked from the street and given on-the-job training on how to assemble umbrellas from imported components. Japanese technicians and an Ethiopian-trained technician were involved at the first stage as the trade was totally new to the country. The ILO played a very active role by actively providing two of its experts as well as giving fellowships to the technical staff of the company.

By November 1964, the training period was over and the trainees were ready to produce marketable umbrellas.

II. The capital invested

The initial capital that was at the disposal of the company's management group was one hundred thousand Ethiopian dollars (Eth. $100,000) - contributed by three private welfare organisations. This initial capital was just enough to cover the cost of fixed investments on machinery and some costs of the raw material required. Hence, for working capital and expansion programmes, the help of financial institutions was sought from time to time and the help was made available by the said institutions as and when a tangible and viable programme was submitted by the management of the company. These financial backings, coupled with the retained earnings from the company's activities, helped the company to grow from year to year. Now the company's net worth is in the region of two and a half million Ethiopian dollars (Eth. $2,500,000) or 250 times as much as the initial capital.

III. Progress of work

From the date of inception, the company was gradually growing in every aspect of its activities, and in the third year of its operation, the number of handicapped people engaged in its programmes was 176. Production in that year alone was in the region of 420,000 umbrellas, which brought in a gross sales income of Eth. $1,389,175. In the fourth year, employment grew to 196 and production to 610,[illegible]36 umbrellas. As this production level was thought to be the maximum marketable in the country, the groundwork for expansion of the company's activities into other programmes was made and that year the assembling of umbrella frames from imported components was started to serve as a base for the manufacturing of the components at a later date.

By 1970 the additional auxiliary production unit for the manufacture of metal components and parts of the umbrella frame was operational. The addition of this unit not only transformed the initial assembly unit into a fully fledged umbrella-manufacturing factory, but also gave the company the opportunity of creating employment for an additional 90 handicapped persons, thereby bringing the total number of disabled persons engaged in the trade to 286.

This additional production unit also increased the profitability of the total operation of the company, thereby giving it more retained earnings to accelerate its rate of growth.

At that level of employment, the company was able to produce the total requirement of the country for umbrellas, and it was thought uneconomical to engage additional hands in the trade. Therefore, the company's management was compelled to expand the company's activities into side-line productions as it was daily being approached by more disabled people seeking profitable employment. Accordingly, a complete feasibility study was made on the possibility of manufacturing dry cell batteries by using a disabled labour force. The study was finalised and submitted to the company's board for approval in 1970.

In 1971 the industrial license was granted to the company to manufacture dry cells and all the necessary machinery and equipment was ordered. Incidentally, I would like to mention here the fact that none of the machinery and equipment installed either in the umbrella factory or in the dry cell battery factory is specially designed to be operated by the disabled. It is the normal equipment generally operated by non-handicapped people.

IV. The industry selected (dry cell battery factory)

Ethiopia had no dry cell battery manufacturing industry prior to 1973. All batteries used in flashlight torches, radios and other devices were imported at the expense of the nation's much-needed foreign currency. The growing demand for dry cell batteries throughout the country is likely to continue to increase steadily for an indefinite period due to the wider use of flashlight torches in both the rural and urban areas and by the advent of low-priced battery-powered radios made possible by the development of transistors.

As technological advice and know-how were readily obtainable from the developed countries, the establishment of this industry by the United Abilities Company to substitute for imports was found to be a feasible proposition.

V. The job analysis

A section of the feasibility study of the selected industry was devoted to the analysis of the various jobs required to be performed to manufacture dry cell batteries in order to determine the residual capability required to perform the jobs.

The following table was extracted from that section which contains personnel required to meet a full single and double shift production along with the groups of disabled persons who were considered suitable for the jobs in question.

Job specification	Employee's disability	No.
Store keeper	Leg cripple, or one arm amputee	2
Accounting clerk	Leg cripple, or one arm amputee	1
Electrolyte making	One deaf, one leg amputee	2
Mixing	Deaf, leg amputee	4
Tamping	Deaf	2
Zinc can arranging	Blind	1
Lower washer inserting	Leg cripple	1
Paper wrapping	Leg cripples	7
Centre piece inserting	Leg cripple	1
Centre piece removing	Leg cripple	1
Top collar inserting	One leg amputee	1
Asphalt pouring	Leg cripple	1

64

Capping	Deaf	1
Brushing	Deaf	2
Voltage reading	Leg cripple	1
Amperage reading	Leg cripple	1
Washer inserting	Blind	2
Tube inserting	Cripples, blind	5
Seal and metal jacket inserting	Cripples, blind	3
Steel inserting	Cripples	3
Curling machine operation	Cripples	3
Packing	Cripples, blind, deaf	5
Section supervisors	One leg amputee	5
Paper tube making	One leg amputee	1
Tube cutting	Blind	2
Tube curling	Blind	6
Metal sheet shearing	Deaf	2
Metal jacket making	Cripples	2
Zinc can making	One leg amputee, deaf cripple	4
	TOTAL (single shift)	71
	TOTAL (double shift)	136

The introduction of the new product to be manufactured by the disabled labour force was never a problem, as every handicapped person engaged in the process was assigned to perform a job which was within his residual ability.

V. Conclusion

In conclusion, I would like to say that for those who know the United Abilities Company well, it will come as no surprise if I say that the object of that organisation was to give opportunities to the disabled, but not charity. As far as I am concerned, I wish to see constructive changes soon in the way the problems of the handicapped are looked upon and resolved by the developing countries, including mine.

I proudly recognise, too, that the United Abilities Company, of which I have been a member for nine years, has been relevant for the last decade to one of Ethiopia's neglected social needs, and I hope it will continue to lend its considerable experience in the field of vocational habilitation of the disabled to other developing countries. However, the pace of yesteryear was entirely too slow at the United Abilities Company. Things are now happening in a revolutionary way, on a scale and scope bigger and faster than ever before. So, as the United Abilities Company is actually a part of that revolution, it should welcome the considerable challenges of the years just ahead.

8(a). Production Workshops for the Disabled in African Countries

by

Sam Niwa

Definitions

1. "Production work"

Manufacturing or processing in which many units of a similar kind are produced. This kind of work ordinarily lends itself to division of labour (Dictionary of Personnel and Guidance Terms, edited by W.E. Hopke, Chicago, 1968).

2. "Sheltered workshop" is often, but should not necessarily be, a cost-subsidised establishment where work is offered to persons who, due to a combination of severity of disability and/or labour market conditions, cannot secure competitive employment.

3. "Rehabilitation workshop"

A rehabilitation facility which uses work principally as a means to enable an individual to achieve the ability to work under competitive conditions. It stresses a transitional work experience rather than extended employment.

4. "Co-operative"

An association of persons who have voluntarily joined together to achieve a common end through the formation of a democratically controlled organisation, making equitable contributions to the capital required and accepting a fair share of the risks and benefits of the undertaking in which the members actively participate (ILO Recommendation No. 127).

Organisation

5. In many developing countries with high levels of unemployment, sheltered/production workshop programmes are likely to continue to be a feature of resettlement programmes for disabled persons, both in rural and urban areas, for some considerable time. The employment-creation role of such workshops is of the utmost importance. Government should give priority to the development of production workshop schemes. This could be done by promoting new projects or supporting existing workshops run by voluntary organisations.

6. There is a prevalent concept that sheltered workshops are establishments for those disabled unfit for open industry, and by implication those disabled employed will have a low level of productivity and thus the workshops will incur losses and require subsidies both on the wages and trading sides.

7. In setting up a workshop, apart from capital investment and running costs, location is important. Consideration needs to be given to:

- availability of suitably trained workers in the area;
- transportation of raw materials and finished products;
- wholesale or retail outlets;
- availability of land and buildings;
- good road and/or rail communications;
- availability of water and power;
- availability of essential supporting services (education, social, medical).

8. Production workshops schemes should start as modest projects in existing buildings (rather than purpose-built), with the type of production work being determined through a careful market survey.

9. In establishing a pilot production workshop scheme special consideration should be given to examining the possibility of developing, as a temporary measure, facilities in the form of a modest multi-purpose centre providing such services as assessment, guidance, training, placement, etc. in addition to sheltered employment. Such a multi-purpose centre might be an ideal starting point for solving a wide range of resettlement problems of individual persons.

Production work

10. Developing countries do present unequalled opportunities (which do not exist in developed countries) for the establishment of production workshops. Most are still importing the bulk of their consumer goods and each trade related to these goods is a potential local industry.

11. The work programmes in workshops should be as flexible as possible in order to meet the ever-changing job requirements, market demands and training needs. Market research is essential, combined with the maintenance of quality of product through management and administrative control.

12. Various kinds of industrial assembly work present new opportunities for employment of the disabled in workshops. A complicated work process may be broken down into a large number of simpler operations so as to enable even a severely disabled worker to participate in some work best suited to his capacity.

13. More emphasis should, therefore, be given to the operation of workshops on small-scale industry lines rather than in conventional trades traditionally accepted as suitable for the disabled. Indigenous traditional crafts are often overcrowded, making it impossible for the disabled to compete.

14. Sheltered employment is a labour-intensive rather than a capital-intensive measure and therefore the introduction of any expensive automatic machines in workshops should be carefully considered in the light of the need for high productivity against the need to employ the maximum possible number of disabled workers.

15. In some cases labour-only subcontracts, with all materials and tools supplied, may be a beneficial arrangement for a workshop if long runs can be negotiated.

Feasibility study

16. The establishment of any production workshop scheme should be based on the findings of careful feasibility studies on:

(1) prospective employees;

(2) building facilities and equipment required;

(3) possibility of obtaining subcontract work;

(4) source of raw materials;

(5) marketing;

(6) availability of qualified staff and management;

(7) financial support;

(8) relevant import and export figures;

(9) bank and loan charges for initial and working capitals;

(10) every possible cost that might affect the trading position.

17. There must be a reasonable certainty that the workshop will operate profitably before any investment is made. Far too many schemes for the disabled have been established in a completely opposite manner; the product is introduced simply because it was seen to be in another country by disabled persons which may have an entirely different market demand.

Financial support

18. Whilst the tendency in the past was to regard vocational rehabilitation and resettlement schemes from a humane and charitable point of view, the economic value of employing large numbers of persons who would otherwise be a charge on society is gaining wider recognition.

19. There is every reason to hope, therefore, that government planners will accord higher priority to allocation of funds for vocational rehabilitation programmes, thus permitting the development of services which in some cases have stagnated owing to lack of essential financial support. Such support is required not only for capital outlay but also for recurrent expenditure of salaries, allowances, raw materials, maintenance and running costs at least for a period of initial development (say three years).

Disabled workers

20. The question of mixing various disability groups in a workshop has been the subject of much argument, particularly in developing countries, over the years probably because many schemes followed a pattern of voluntary body ownership with some degree of autonomy. Each disability group tended to look after itself in its compartment, and co-operation between these voluntary organisations was not always at a maximum level.

21. To set up separate establishments to cater for each of the various disablement groups is an uneconomic and not so effective way to solve the problems of education, training and employment of the handicapped. This principle of integration is particularly important when considering the establishment of production workshops. The sooner individuals become accustomed to working in mixed groups the better are their chances of success.

22. Integration should therefore be the established pattern. If the blind are integrated with other disabilities, the physical deficiencies of each are complementary, when jobs are carefully selected and full productivity obtained from each of them.

23. The failure rate of rural rehabilitation and production workshops may be due to disabled workers because of:

- nature of the long-term disabilities;
- lack of desire of many of the disabled to be rehabilitated and employed;
- the fact that the disabled have become so well adjusted to their disabilities;
- sophisticated patterns of rehabilitation only serve to upset an established life pattern.

24. Care should be exercised in recruitment as, even in the presence of severe physical defect, function may remain to carry out a particular process in industrial or commercial activity.

25. Although the individual disabled person must be given the benefit of any doubt, on the other hand manpower programmes would lose their purpose and economic value to national development if valuable time is wasted in attempting the impossible.

26. The charitable approach and soft welfare cushion should be removed from under the disabled workers at workshops. He must conform to the rules and disciplines which apply to ordinary factory workers. He must arrive on time, keep up production at high tempo. In short, he is being treated as a normal person.

Facilities

27. Residential accommodation, which usually absorbs a heavy share of an available budget due to round-the-clock manning, should be avoided if at all possible.

28. In the absence of convenient public transport, some countries provide coaches or other specially adapted vehicles to take workers to a workshop each day and back to a district central point.

29. It is considered that sheltered/production workshops offer an ideal setting to demonstrate how job adaptation techniques may effectively be practised and to obtain expert guidance for relatively inexpensive modification and adaptation of tools and machines for individual disabled workers.

Wages

30. There is need for carefully planned incentives for workers either on a group or individual basis as in payment by results or efficiency payment schemes.

31. All the wages paid should be based on productivity from each employee. Continuous checks are necessary to see that production norms are reached. When an employee falls below his daily quota he is warned, and if he does not improve his wage grade may be dropped until he improves.

Management

32. The success of any workshop depends largely on the managing staff who control productivity.

33. There is a need to avoid a top-heavy administration in relation to the number of disabled in the workshop. It is not uncommon to find that the number of staff employed on administration and technical supervisors outnumber the disabled, with a consequent disproportionate cost ratio.

34. Salaries and conditions of service should be commensurate with those standards and the level of work to be done. The salary scale should compare favourably with those in comparable posts in other fields and have a similar scale of progression. It is considered that one of the main causes of staff shortage (and also the difficulties often encountered in retaining personnel) is the lack of an adequate salary scale.

35. In the case of selecting a sheltered workshop manager, it is imperative that his inherent capability for management and his management knowledge be the main criteria for his selection.

36. Suggested staffing cadre for production workshops (100 workers):

1	Manager
1	Welfare/resettlement officer
1	Sales officer
1	Account clerk
1	Storekeeper
4	Workshop supervisors
1	Van driver
1	Watchman
1	Labourer
1	Cleaner
13	Total

37. Those in charge of workshops should constantly be aware of the trends of technological advance, mechanisation and automation in industry with particular reference to their possible effects on the management and operation of workshops and employment potential of disabled workers.

Community involvement/publicity

38. Community involvement at the earliest possible stage of planning is essential and this can be realised through the formation of a committee on which all rehabilitation interests are represented (governmental, non-governmental, employers' and workers' organisations, etc.). It can help to educate the public, modify its attitudes and prejudices and explain policy in vocational rehabilitation of the

disabled. Through the committee, good public relations can be fostered, encouraging fund raising in support of projects for which government funds are not readily available.

39. Every production workshop scheme should have a well organised publicity programme in which all forms of communication media are fully utilised to build up a favourable public image concerning disabled workers in the community. In countries where there are no other facilities for employing the disabled, production workshops would be a good means of educating the public about the working abilities of the disabled. These schemes should also provide a stepping-off place for the later establishment of further vocational rehabilitation services.

8(b). Production Workshops for the Disabled in African Countries

by

Otto Wandall-Holm

Why are we at all interested in arranging production workshops for the disabled?

First of all, it is, of course, the problem of unemployment. When the assessment and the rehabilitation has ended, it is, as most of us, I am sure, have experienced - extremely frustrating if there is nowhere to place the handicapped. In this situation, where the strict normalisation fails, it is natural to start to think of some sort of ersatz (substitute). Before going closer into that I should like to offer a few remarks on two questions:

- To what extent - in which situations - is it acceptable, or not acceptable, that a handicapped is refused placement in open industry?
- Do unemployed handicapped people more so than other unemployed people need to have special arrangements for employment, or should they share the burden of unemployment with the rest of the unemployed part of the population?

I. A handicapped person refused placement in open industry

There might be many reasons. It may well be that it is the handicapped who is not rehabilitated and trained properly. It might also be that the well-trained handicapped, after all, has not the right personality and that he cannot work together with other people; that he interrupts the flow of work. Perhaps he is really unwilling to work. We should not here waste much time on such cases, which normally should not have been presented for placement, as they might spoil the chances for others. More interesting for our discussions is the situation where both the disabled person and rehabilitation are satisfactory but where the handicapped is refused placement in a vacant job. Here, I think we should be a bit more sensitive as to the reason given by the employer as well as the number of occasions such refusals take place. All of us here know that there are plenty of normal jobs which could easily be performed by a well-rehabilitated handicapped person. When the employer or shop-steward, therefore, refers to the handicap as an excuse for not considering the application, this could be considered as a form of discrimination. Such discrimination is contrary to the fundamental principles of human coexistence; handicapped or disabled people should be dealt with on the same lines as other questions of human rights, where the problem also is that someone, for unjust reasons, is prevented from participation in important activities of life. The measures to be taken against such phenomena are in general: public relation activities, and towards the one who discriminates: some unpleasant sanctions.

My conclusion so far is that we should diminish the need for special workshops for the disabled as much as possible through a vigorous public-relation activity to combat discrimination and the ignorance of the problems of the disabled and towards a better knowledge of the situation of handicapped people.

II. Do unemployed handicapped people more so than other people need special employment arrangements?

This argument of discrimination is, in an unemployment situation, only the argument that some disabled should be taken into consideration for the limited number of jobs. But should the burden of unemployment not be shared by the disabled with the rest of the population? Do unemployed handicapped people more so than other people need special employment arrangements? It might, to some extent be some sort of a segregation to set up special workshops for the disabled but are there, nevertheless, strong reasons to do so? Warm-hearted feelings of charity and pity are, I think, not enough here where we talk of a preference for the disabled to the general public. Such feelings are, furthermore, often rather damaging to vocational rehabilitation. I shall not tell you what is right or wrong in this respect, but some arguments could be given in favour of providing the disabled or handicapped with more job opportunities than the rest of the population:

- The discrimination mentioned does not disappear from one day to the other and some support for the disabled in the fight against discrimination is certainly necessary. A good production workshop could be of use here and at the same time by way of example serve as a platform for public relation activities.

- Some disabled people prefer to work together with other disabled people. Such personal wishes should be respected even though the disabled people, in the long run, unavoidably have to shoulder themselves, the public relation activities for general acceptance.

- A number of handicapped, usually the severely handicapped, are only able to work under such individually adjusted working conditions that it is practically impossible to arrange this in normal industry.

- In the case of special groups such as the leprosy-handicapped, where the social acceptance causes special difficulties, a production workshop might make it easier to arrange a normal life in normal surroundings outside working hours.

- Work is of special importance for many handicapped people and not just from the economic standpoint. To have a job strengthens one's position in daily life and may provide the only opportunity for contact with other people.

- The handicapped already have the heavy problems of being handicapped to cope with - it is not fair and just that they also suffer from the ill-effects of unemployment.

- From an ideal point of view, all handicapped should be entitled to receive full training and rehabilitation. The rehabilitation is almost completely wasted if it is not closely followed by permanent employment.

- It might be much more difficult for a handicapped person to get into work again than for other people.

I am sure that much more could be said both against and in favour of certain privileges for handicapped as far as employment is concerned, and many of the arguments I have mentioned need to be much more substantiated. What I want to stress is, that the question of having special production workshops at all for disabled persons might certainly be looked at from many different angles and that this question is a part of the general placement problems.

III. How big is the problem?

The World Health Organisation has estimated that 10 per cent of the world's population or 400 million persons are physically or mentally disabled and in need of special services to enable them to participate in active social and economic life. I think it is worth noting that the mentally retarded form the biggest group with 25 per cent and that the number of all the mentally handicapped - both the mentally retarded and the mentally ill - equal the number of physically handicapped people. I wish to point this out very strongly because mentally handicapped people in general are not able to plead their own cause or able to form pressure groups. It is, therefore a special obligation to all governments and planners of social and rehabilitation services as well as to the administrators and the professionals working in the field to ensure that equal efforts are made to rehabilitate and employ the mentally handicapped as for all other groups.

Ten per cent of a population - the handicapped - is a very large number and it is evident that the need for special services which, as we heard is necessary if these people should participate in active social and economic life, is not met by setting up some workshops with 20 or 50 places. We have to think on a much bigger scale. This also means that we should claim a much bigger part of the national budget. Then, of course, you will immediately ask: how could we afford this? It is not necessary here to mention that if mankind stopped wasting money on wars and other destructive activities, there would easily be money enough. What I should like to point out is that this way of spreading out the national income by moving a greater part of this income into social schemes including vocational rehabilitation, might be one way of starting new production workshops for the disabled; it could also start a new circle of demand and supply and thus create new activities in a country.

The ILO, in a report called "Employment, Incomes and Equality" (Kenya, 1972) strongly stressed the importance of promoting greater equality among regions, districts and individuals with regard to income, education and other opportunities. It is also pointed out in this report that inequalities in incomes and opportunities are not merely among the consequences of unemployment and other employment problems but among their causes as well. I must also mention the Scandinavian countries where a long peaceful development and a consequent redistribution of growth, over decades into social arrangements has created wealthy societies even though those countries are not rich in natural resources.

As already indicated, 10 per cent is a very large proportion of a population and the inactivity and inequality of such a big group is certainly a great drawback to the national well-being. This problem is naturally far from being solved by setting up production workshops. It would, as I said before, even be some sort of a segregation if we tried to set up workshops specially for the disabled on such a scale. If we want to solve the enormous problem of employment of all disabled, we should, therefore, first consider the preventive side: that means, for example, that we should pay special attention to all children and especially to exposed groups of the population which might develop some sort of handicap or disability. We must ensure - this assumes an effective administration - that all in danger of being handicapped are kept in a normal life situation and not debarred from normal schools and other normal social and employment arrangements. Then we must also ensure that inactive disabled persons, as far as possible, are reintegrated into the normal system and then for those who are not reintegrated in this way, we must try to create special employment opportunities, including production workshops

IV. Development of production workshops

These production workshops should, wherever possible, be developed on the lines of industry and set up on a scale where it is possible to make rational running and layout of production and economically favourable buying of raw materials. As a matter of fact, this is the small-scale industrial enterprise we are looking for or, if we are sure that our organisational arrangements are able to carry it - large-scale industry. This is the reason why we in the ILO do not use the term "sheltered workshop" so much any more. We should like to get away from the traditions which are associated with this expression for it is often associated with some sort of welfare institution with low productivity and poor wages where the handicapped groups are segregated, producing very traditional articles with very little thought given to price and marketing and, therefore, depending on charitable support and donations. As a matter of fact, such workshops are not really socially or economically integrated. That is the reason why we must start to think in a new way and/or in other terms.

Do we then have examples of such new types of production workshops, which, next to the object of producing and selling, have the aim to cater to the employment of handicapped?

First, you have already seen the umbrella and dry cell battery factories here in Addis Ababa. In Rwanda, 600 severely disabled earn a living by producing the cheapest transistor radios on the African market. A shirt factory there is now looking for export possibilities. Also, the highly developed programme of the Polish Invalids' Co-operative Union which provides employment for more than 200,000 disabled persons must be mentioned as well as the Dutch system of workshops, some of which have more than 1,200 disabled workers.

In Africa, we must naturally consider that most of the population live in rural areas. Of course, all efforts should be made to keep the disabled within normal activities of farming, gardening, etc., as well as within the employment possibilities in the service sector, but in these areas, attempts could be made to set up smaller workshops and not least, co-operatives, special plantations, etc. The problem here is the transportation costs both of raw materials and of the finished products and eventually of the disabled workers to and from work. These problems could be met by recruiting workers who live near to the workshop by using local raw materials or by producing small and light items where the transportation costs could be minimised in proportion to the production costs. Also the utilising of local craft skills to produce jewellery, articles for tourists, etc. should be mentioned, but often it will be difficult to obtain a reasonable price for the products compared with the output of work and very often the sale will depend upon swiftly changing and very uncertain marketing conditions.

What factors should be taken into consideration when establishing such a workshop?

- A production workshop scheme for the disabled or handicapped should not be set up as an isolated programme, but only as a part of a predetermined practical and strongly supported policy towards full rehabilitation, training, integration, placement and normalisation of the handicapped.

- The production workshops should play their important role within this pattern but at the same time be an integral and active partner in trade and industry.

- Often the sales and marketing create the greatest difficulties when establishing a workshop. The problem is to find the type of production where the products can be sold at a reasonable price - this means a price which can give not only a normal wage to the workers, but also covers the costs of raw materials and also some depreciation and reinvestment. It is usually necessary to have some protection or financial support, at least in the initial development stage. A field of production which we possibly should have in mind nowadays and which also should be in the interest of the Government is the re-use of waste products.

- As for the production itself and also when we select the product or products, we need technical skills to secure a rational layout. It should be remembered here that if a complicated work process is broken down into a large number of more simple processes this might reduce the length of training required and facilitate the employment of a wide range of disability groups.

- We must, of course, consider the employees, their handicaps and abilities, and also the ways and means of remuneration. Productivity-promoting methods of payment should be considered, but in some cases, protective tariffs are preferable. Good working spirit and discipline and, above all, a good atmosphere in the workshop are essential. Not least for this reason, the employees' participation to the highest possible degree in the whole running of the enterprise should be aimed at.

- The accounting system and the control of the economy and store should be given special attention.

- Also, great importance should be attached to the finish of the products and their quality control. In all, the general reputation of the workshop as to delivering the products on time, their quantity and quality are of paramount importance for the prospects of the workshop. It is, therefore, very important that the workshop never takes orders which it cannot fulfil. This could adversely affect the climate at the working place where the workers are pressed; it could also damage the reputation of the workshop. It goes without saying that the fact that the workers are disabled should never be used as an excuse for such negligence, which really is due to bad management.

- Government support is normally necessary especially in the initial stage. Both some kind of monopolisation, e.g. import restrictions and direct economical support can be used. Government might also be instrumental in seeking foreign aid and assistance from international agencies such as the ILO for experts, volunteers, equipment, etc. More constant economical support from government could be related to the number of handicapped workers or eventually take the form of a contribution to the salary of the individual handicapped, after an evaluation of his working capacity.

- The government, for its part, should be well informed on the running of the workshop and especially of the financial implications. As a general rule, it is important that the responsibility and the independence of the workshop are respected to enable the management of the workshop to follow the rapid changes in the open market.

Final remarks

We all live in a world of industry, division of work and mass production. There is, in spite of oil crises or financial crises, no way back for mankind. We may slow down the speed, we may try to spread out our activities, we may be forced to economise the resources and to start big programmes for reuse of wasted raw materials, but without an enormous disaster we cannot go back to a natural economy.

It is our job to try to discover how the handicapped can be included in this vast process. The way is equalisation, normalisation and participation which were the items for this paper - participation in the productive activities in such a way that no one is left to his own devices.

8(c). Production Workshops for the Disabled in African Countries

by

Wondimagegnehu Assefa

First of all may I stress that the process of setting up and establishing a production workshop for the disabled should not be treated any differently from that of establishing any production unit. All the necessary studies as to the economic viability of the unit should be made but with additional details of what part of the production process should be undertaken by which particular categories of handicapped people.

It should also be remembered that a certain product being manufactured by the disabled in one country, is not reason enough for another country to start a production workshop for the same article. There might not be a market for it in that country and/or it might be costly to produce locally due to special indigenous problems.

To summarise, I would, therefore, like to mention in sequential order the important steps that must be taken and considered before any investment is made in developing production workshops for the disabled.

1. Feasibility study

A thorough feasibility study as to the viability of the identified production unit should be undertaken prior to investment so as to guarantee a reasonable degree of certainty in the continuity of the project without a massive subsidy or aid from the government or sponsoring agencies. The market situation and the acceptability of the product in relation to cultural, regional and climatical factors must also be carefully analysed.

2. Selective placement

Next, a detailed analysis of the job content of the items to be produced must be made with a view to finding out what part of the human body would be required to perform a particular function in the process. Such an ergonomic approach will help ensure that the skills of the several disability categories can be fully utilised. The part of the exercise will also help the planner in making his choice of the type of machinery and equipment to be used in the production workshop.

3. Selection of equipment

For almost any production workshop, machinery and equipment and know-how can be readily obtained from the developed countries. However, in selecting equipment, more care should be taken to ensure its labour intensiveness, since the primary objective of any production workshop for the disabled should be the creation of work opportunities for as many handicapped people as possible.

A production workshop once established, after taking into consideration the above factors and properly managed by a qualified management team as ordinary workshops are managed, will surely have a good chance of success thereby becoming the source of economic independence for the disabled in that locality.

4. What is the chance in Africa

The chance of developing production workshops for the disabled in African countries is great. Africa is still importing the bulk of its consumable industrial products and any country can easily identify a product currently in great demand in that area.

9(a). Selecting and Developing Products for Rehabilitation Centres and Sheltered Workshops

by

Prof. D. Lockwood

INTRODUCTION

In modern rehabilitation centres, and also in sheltered workshops, there are an infinite number of strategies, lines of action, or practical applications to be considered within the framework of the selection and development of products.

To know which of these strategies will lead to improvements in living conditions for handicapped people, we shall have to develop an improved sensitivity and a greater skill in making both suitable and appropriate choices of products from the many possibilities open to us.

1.00 SELECTION OF PRODUCTS

How do industrial enterprises decide upon which new product, or products, they can introduce successfully into their manufacturing system? Usually they begin by trying to answer a series of questions, such as:

a) Demand - Will there be a continuing demand for the product over a planned period of time?

b) Market - Are product marketing facilities readily available? (local/export)

c) Cost/Price - Can the enterprise make the product at a cost level which allows for it to be sold at a price which is attractive to consumer?

d) Product Consumer - Is the product produced by the enterprise attractive to the consumer so that he will purchase from this source rather than from a competitor?

e) Resources - Including finance, labour, materials, equipment, facilities;

   i) Is finance available to support the initial stages of the venture, and until the product is self-supporting?

   ii) Are sufficient managers, skilled and unskilled workers available to carry out the manufacturing tasks?

   iii) Can local material resources meet primary or secondary needs according to product specification?

iv) Is the local plant, with its machinery and equipment, able to manufacture the product?

v) Are necessary facilities like land, energy, communications, transportation, etc, readily available to support the new product?

f) Technology - Is technology sufficiently advanced in the manufacturing enterprise so as to allow the required technical production system to function effectively?

These same questions must also be considered by managers of rehabilitation centres and sheltered workshops if their enterprise is to be financially stable and economically viable.

Of necessity, the answers to equivalent questions given by a manager from a manufacturing enterprise when compared with those given by a sheltered workshop manager will be different when graded according to their respective priorities. For instance, the industrial manager may be concerned with financial improvement and capital reserves as a first priority, whilst for a sheltered workshop a higher priority may be that concerned with available material, plant and human resources.

From these considerations it can be seen that a careful statement of managerial goals for a sheltered enterprise is very important before decisions can be taken on the most suitable type of product to be selected and developed.

2.00 SETTING UP A PRODUCT DEVELOPMENT GROUP

Once managerial goals and manufacturing objectives have been clearly defined then the workshop manager can set up a product selection and development service.

In the first instance, it would be sufficient to employ one person partly or wholly on this task. The task of this product development officer would be to continually look at goals for the development of his sheltered workshop, set objectives for the development of new products, and eventually decide on manufacturing methods to be used so that the new development can be introduced into the workshop without disturbing the activity which is already taking place.

Product development may be carried out by one person but in those work situations which affect human behaviour, social relationships, or employment generation amongst handicapped people, a product development group approach is favoured.

97

A product development group can contain a series of specialists, including those with experience in finance, market planning, system design, information gathering, manpower development, engineering processes, economics, human behaviour, etc. The members of the group should be complementary to each other, but do not necessarily have to be homogeneous in status, knowledge or skill, and this development group can be closely connected to a university department, or productivity centre, or training institution. (See Diagram 1).

One of the first problems for such a group will be that concerned with comparing objectives and setting criteria for product manufacture which correspond to different time horizons. The group will have to compare objectives which have to take into account:

a) short-term horizons

b) medium-term horizons, and

c) the longer term

and these will be affected by:

a) environmental factors

b) temperamental factors

c) psychological factors

d) ethical influences

a) Environmental factors

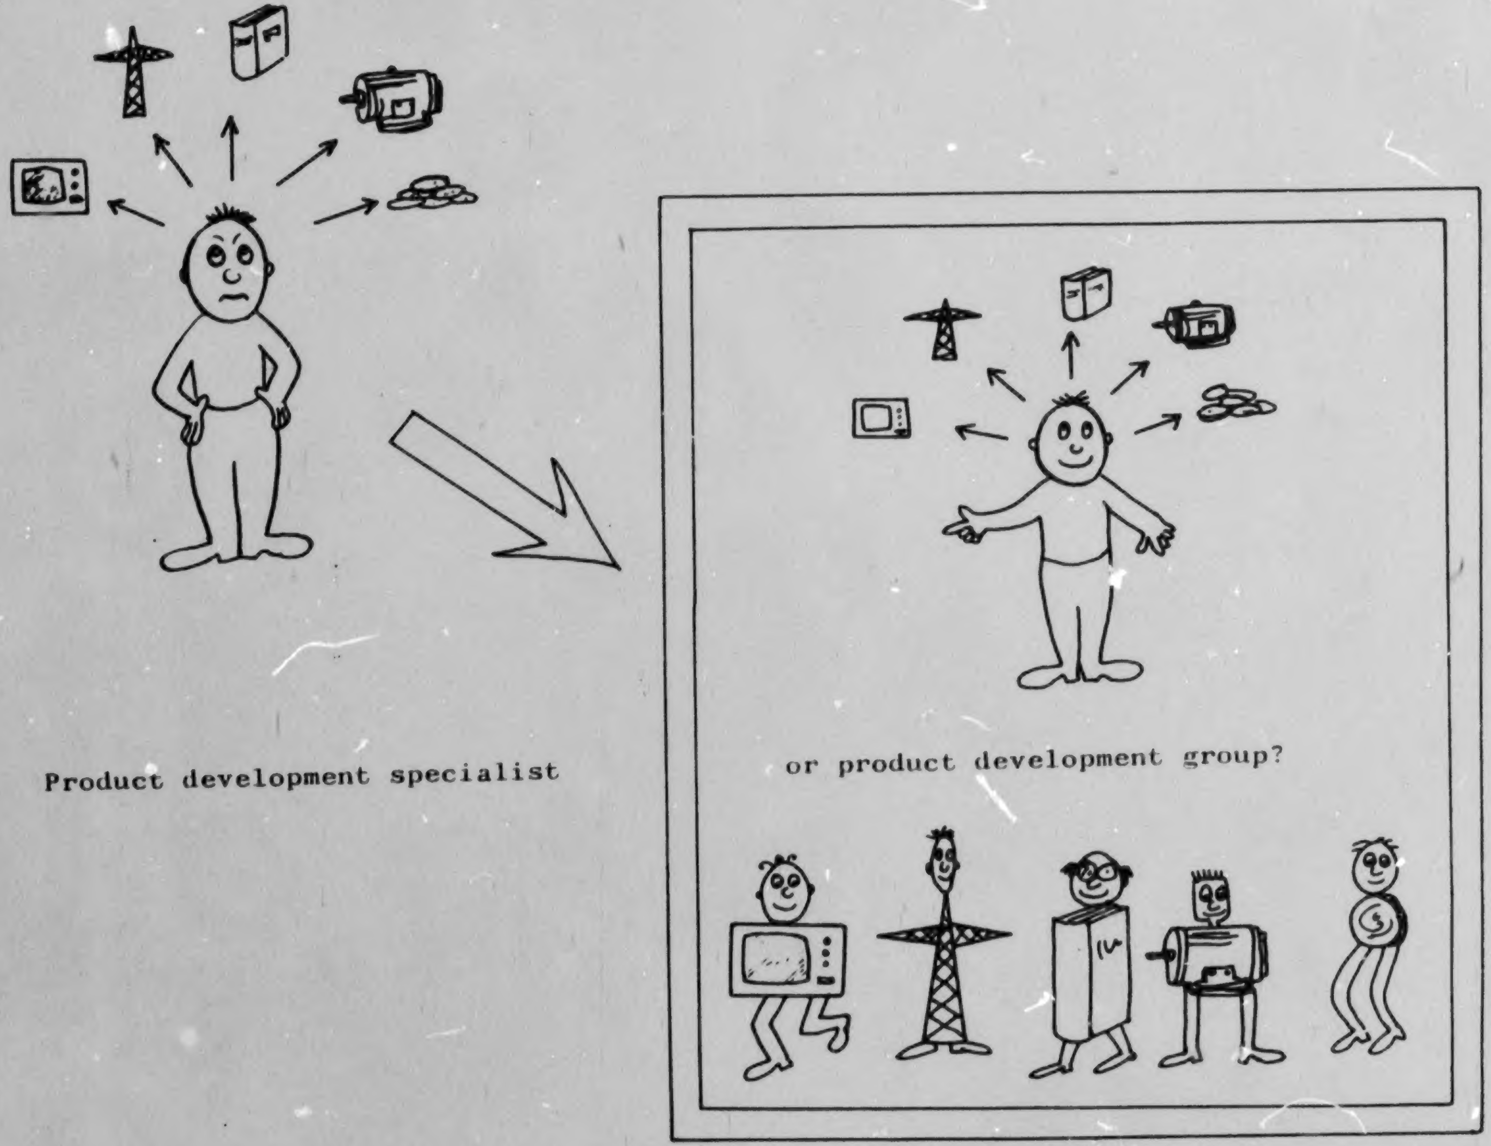
The ability or inability to introduce one or other product into an already existing workshop will depend upon those technical methods which fit within the workshop environment. Technical methods, in turn, will depend upon the types of disability and handicap within the working group and this, in its turn, will affect objective decision making in respect of the development of new products.

b) Temperamental factors

In respect of temperamental factors, the sheltered workshop has to operate so as to produce an equilibrium which suits the temperament of the society within which it is set up. The success or failure of a sheltered workshop can depend upon social pressures which either support it or mitigate against it.

c) Psychological factors

In respect of psychological factors, if a member of the group will only be staying for two or three months, his decision processes will be quite different from those of a person who will stay for a number



Product development specialist
or product development group?

Diagram 1.

of years. Also, a man who has just had a member of his family injured in a road accident may make decisions on rehabilitation quite differently from those he would have made one year previously.

d) Ethical influences

These will affect the goals of the development group. If the development group considers that the major goal of the workshop is to improve happiness in the workers of the enterprise, to develop living standards of disabled people and to contribute to the welfare of the community as a whole, the type of product they will develop will be quite different from those products they would have decided upon if their major goal had been that the workshop should operate successfully on a sound economic basis.

3.00 CHOICE OF PRODUCT

What type of product should be developed in a rehabilitation centre or a sheltered workshop? Firstly, let's consider who might be the major customer for the products of such a workshop. These customers can generally be classified as:

1) The government sector:

likely to be interested in products or services concerned with education and training; hospitals and medical requirements; administrative supplies.

2) The public consumer sector:

likely to be interested in products for daily living such as housing, kitchen and clothing accessories.

3) The industrial and agricultural sector:

likely to be interested in those small tools and accessories which are in constant demand and which tie up foreign capital where such implements are commonly imported from abroad.

(See Annex 1). (See Diagram 2).

Specialised domestic products

A word of caution - Many workshops have tried to enter the field of domestic consumer production manufacturing such items as telephones, industrial starter mechanisms, air conditioning fans, simple eva-

poration refrigerators, or cold boxes and heating stoves.

The major problem with these types of domestic consumer item is that they require either plastic injection moulding processes or some form of press for forming, stamping or bending metal. Whilst these processes are easy to operate by disabled workers, it is necessary to have high precision dies or moulds to make a machine of this kind operate successfully, and in most countries these have to be imported because local indigenous skills in precision die and mould making do not exist.

4.00 NEED FOR PRODUCT RATIONALISATION

Products should have uniformity, there should be minimum variations in production methods at each stage of manufacturing, and at the same time the product should give an apparent range of choices to the customer. If a large number of variations is allowed in the form or style for each item produced, then the more diverse will have to be the operations of management, workshop organisation and planning, production skill and worker training procedures.

This does not mean, however, that choice should not be given to the customer, but this can be done by small changes in the finishing operations which produce more customer appeal from the same product by variations in colour or packaging or presentation.

5.00 EFFECTS OF DISABLEMENT ON CHOICE OF PRODUCT

For physically or mentally handicapped workers work demands which continually change will require the worker to keep changing manual skills from one process to another. At the same time he will need to change quickly from one mental concentration to another, and this restricts productive capacity resulting in uneconomic functioning of a workshop complex.

In selecting products it is necessary to consider carefully alternative manufacturing processes that may be utilised during production.

If an ordered, discrete sequence of operations can be found for manufacturing a product, then it should always be chosen in preference to another which depends on a non-sequential production pattern.

Comparison has to be made between the range of mental and physical skills required in the manufacturing stages of a product and those available in the work force population. This indicates that all selected products have to be carefully analysed in terms of job content during the development stage and the precise skills and required mental abilities carefully defined and noted.

The workshop manager should also obtain a precise estimation of the physical and mental capabilities of the work group who will be required to produce the selected product.

The worker's thought process should be stepped during manufacturing; this then enables a retarded person who is presented with a repeating series of thought steps to learn quickly, and the associated manual sequence and also the amplitude of his physical responses will gradually become more accurate.

For physically and mentally handicapped workers production development should be based on reducing all movements, skills and mental requirements to the simplest form possible and with the need to constantly make comparative judgements, on what step to take next reduced to a minimum.

Further, each complex task or series of tasks must be redesigned to fit within a simple, ordered, no-choice latitude pattern.

In time, with a gain in experience and confidence, the handicapped worker can be moved stage by stage to tasks requiring simple decisions to be taken, after which he may be able to leave rehabilitation and accept a normal post in local industry or commerce.

(See diagrams 3, 4 and 5).

From diagram 5 it can be seen that on initial entry to the rehabilitation centre, the worker should be put on to tasks associated with a selected product where

a) each act of perception is of the same dimension and amplitude and can be taken in logical sequence;

b) the motor skill pattern varies little above a norm, so as not to impose undue stress in changing from one manual dexterity to another.

After the rehabilitation period has been completed the handicapped worker should be manufacturing products within a system which permits him to:

a) gain useful employment outside the rehabilitation centre;

b) develop mental competence and make small choices on a progressive scale;

c) require simple - complex motor skills arranged in a progressive sequence.

6.00 OTHER FACTORS

In the day to day activities of a workshop it is very easy to overlook the development of worker potential, and, through it, workshop potential, therefore one of the main goals of the workshop manager should be to have production needs which change and up-date continuously.

More precise estimation of the physical and mental capabilities and vocational skills of the workers who will be concerned with the production of the new products should be carefully carried out.

Barriers to the sale and development of products should be carefully studied and attempts made to overcome those bureaucratic procedures which hold up production through non-availability of indigenous or foreign materials.

The final aim of production should be to reach as large a market as possible, and this will eventually mean a consideration not only of the local market but of those requirements of customers further abroad. Often, products which have been successful for a long period of time in the local market will need to be considerably changed if customer appeal is to be developed for export.

To summarise, the difference between success and failure in a sheltered workshop depends initially on the manager's choice of a product range which meets changing market need and to which he gives a customer appeal whilst staying within a minimum production cost.

At the same time he has to manage and develop those human and physical resources which are under his direct responsibility.

Finally, he should ensure that the personnel who make up his work-force are able to live a better life than would be possible if the workshop did not exist.

ANNEX 1.

Products suitable for manufacture in vocational rehabilitation centres and sheltered workshops.

1. Government sector

a) Schools and training establishments:

- Classroom furniture
- Desks
- Chairs
- Chalkboards
- Gymnasium equipment
- Training aids

b) Hospitals and medical services:

- Ward furniture
- Beds
- Chairs
- Trays
- Patient supports
- Walking aids
- Wheel chairs
- Trolleys
- Stretchers
- Artificial limbs
- Dressings } Repacking
- Bandages } Repacking
- Blankets
- Bed covers
- Mats
- Screens

2. Public consumer sector

a) Household goods:

- Cooking utensils
- Household gadgets
  - . safety pins
  - . hooks
  - . chains
  - . bottle openers
  - . vegetable racks
- Cutlery
- Packing (putting products into boxes - perhaps making up cardboard boxes from stamped shapes - not manufacturing)
- Toys

b) House construction:

- Building construction accessories
- Electrical installation accessories
- Plumbing and water system accessories
- Screws, clips, fastenings
- Window and door frames
- Doors
- Light unit plain furniture

c) Printing and reproduction:

- Printed materials
- Packaging and box making
- Bills, tickets, order forms
- Document reproduction services
- Book binding

3. Industrial and agricultural items

a) Industrial items:

- Industrial tools
- Plastic headed hammers
- Chisels and punches
- Screw drivers
- Light trucks
- Wheel barrows

b) Agricultural items:

- Hoes, rakes, drills
- Spades, shovels
- Seed and fruit boxes
- Olastic tube accessories
- Netting
- Pumps
- Irrigation accessories

9(b). Production Scheduling and Control of Manufacturing Operations in Rehabilitation Centres and Sheltered Workshops

by

Prof. D. Lockwood

INTRODUCTION

Production scheduling is concerned with the pre-planning of production activities, whereas control is associated with those techniques which have to be employed to maintain activities in balance.

In a rehabilitation centre or sheltered workshop, if it were possible to produce each customer's order immediately, without stoppages, then the production control system would be extremely simple. Unfortunately, this is seldom the case, and there are many factors which affect the issue, such as

(a) machine breakdown;
(b) wastage of material
(c) loss of production through worker illness
(d) variation in motivation of the workforce, particularly where mentally disabled workers are concerned
(e) variation in production rates caused by changes in working speeds of handicapped personnel

(See Diagram 1)

1.00 PRODUCTION CONTROL

Under these circumstances there is a need for a sophisticated production control system and this can be seen in Diagram 2. The institution of a total production control system in a sheltered workshop will ensure that a required production output is maintained. The first part of such a production control system is to forecast the manufacuting schedule for a fixed period of time, such as one year. This, of course, is like gazing into a crystal ball, but up to the present there is no system or method by which acurate forecasting can be made. The workshop manager has to rely upon his experience from the past manufacturing plan of his workshop and, of course, take into account those demands he expects may occur in the future

Diag. n 1

PRODUCTION SCHEDULE CORRECTION
PRODUCTION OUTPUT
REPORT ON QUALITY LEVEL REPORT ON QUANTITY LEVEL
ANALYSIS OF QUALITY/QUANTITY VARIANCE

TOTAL PRODUCTION CONTROL FOR SHELTERED WORKSHOPS period of the workshop operation. During the period for which the forecast has been made, or even before that, orders will be received from customers and customer demand has to be balanced against the manufacturing schedule forecast, obviously there will be a variance in customer demand when compared with forecast and this will require a forecast correction. The second action to be taken by the manager is to develop a day-by-day production schedule for the forecast period, and the forecast correction will make adjustments in the production schedule in terms of output required from the workshop according to the variation in customer demand. Thirdly, the production schedule will be adjusted according to the production schedule correction, and production schedule correction is based upon daily measurements of the quality and quantity level of the workshop output. In this way, these two corrections ensure that production meets the demand of the customer on time.

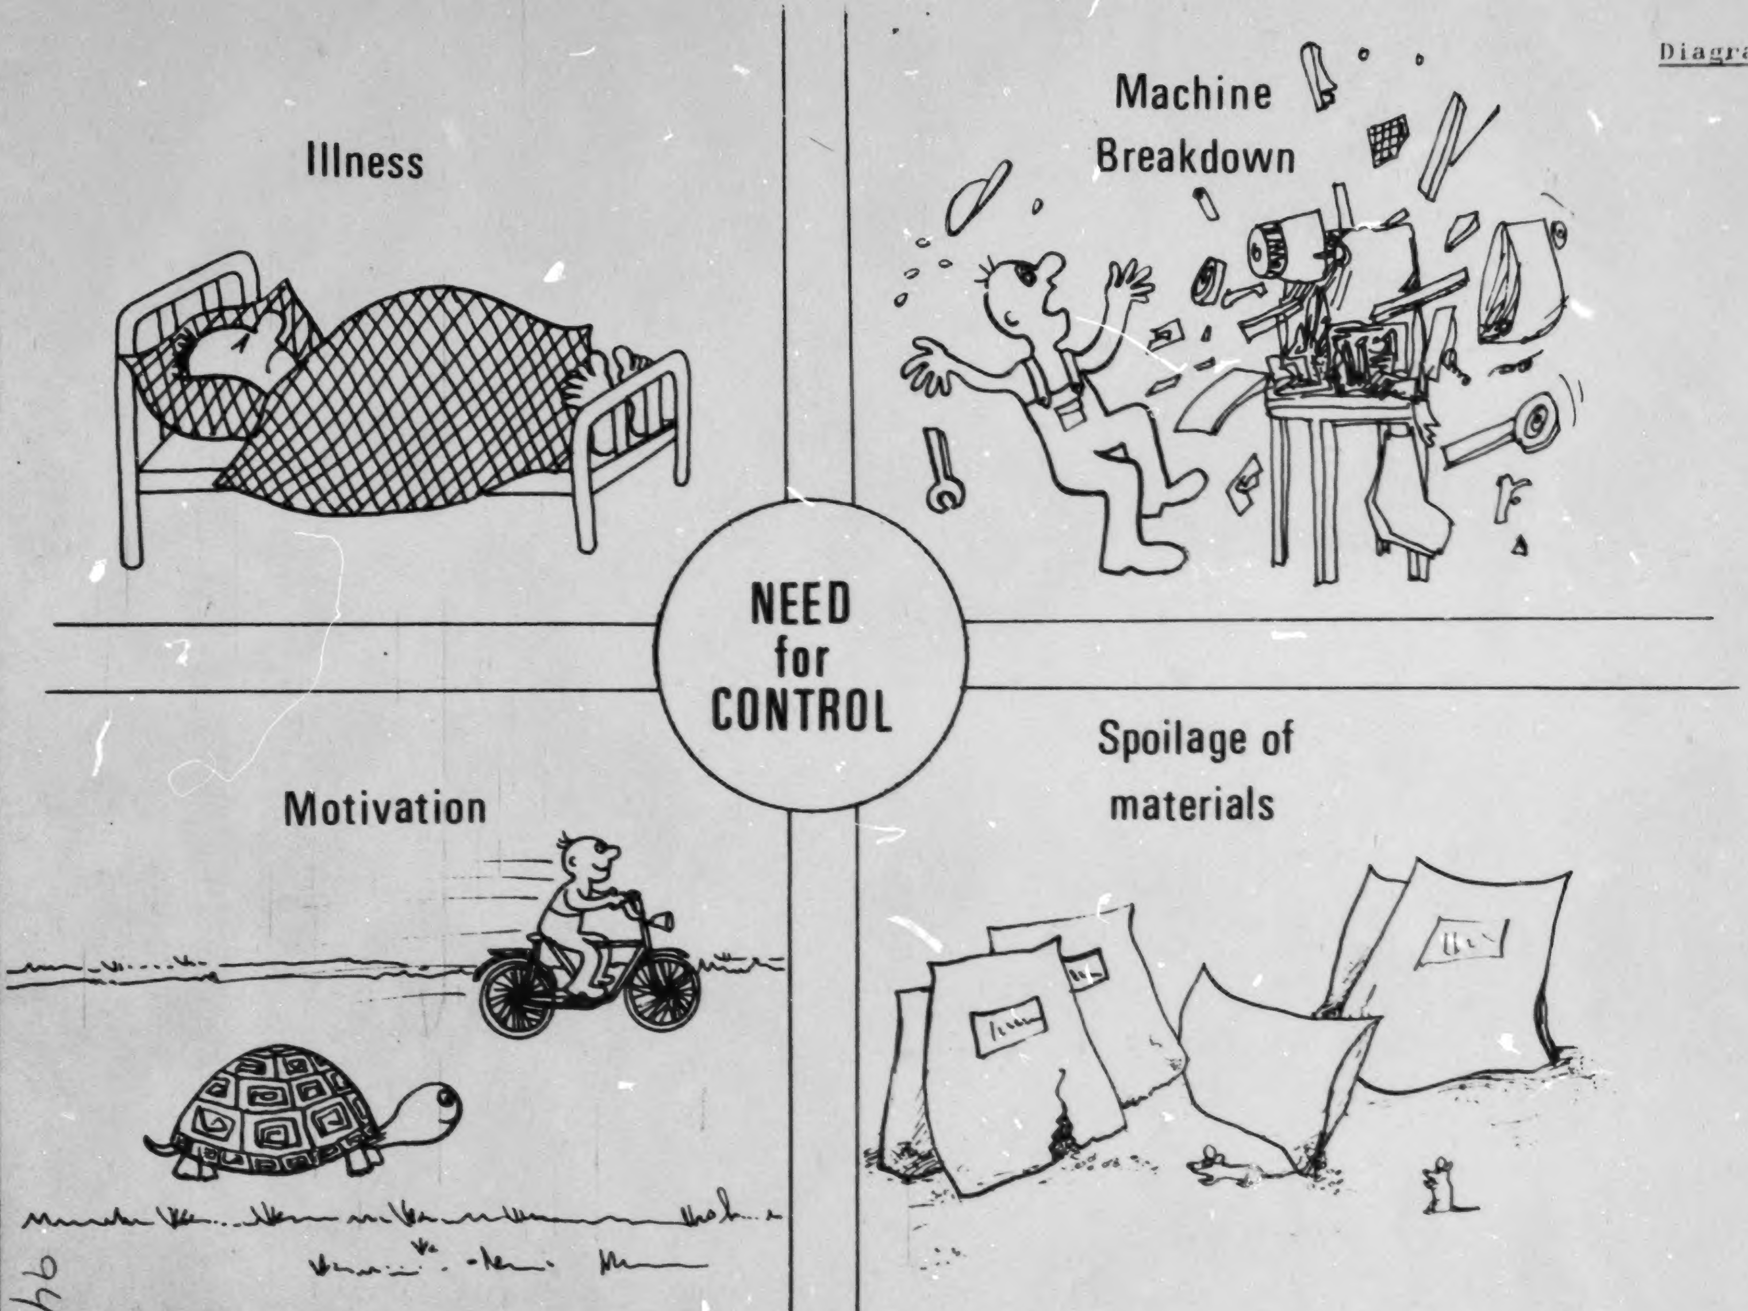
2.00 TARGET AND GOAL SETTING

It can be seen that for a total production control system to be operated, the setting of targets for the production schedule is one of the major items to be considered. Many workshop managers state that because of the complexities involved in handling physically- and mentally-disabled workers it is not possible to set production goals, but unless production goals are set, a realistic production schedule cannot be achieved and therefore the whole system fails.

The types of goals that have to be considered are those concerned with producing in the required volume, at the right quality, at the right time to meet an acceptable price. Scheduling is defined as that activity concerned with the determination of when each and every operation must be performed to meet an agreed delivery date. Consequently, schedules must be based on information relating to operations required, delivery date, material availability, capacity of resources and labour available.

In the majority of sheltered workshops, work is carried out in discrete stages, and owing to the nature of batch and jobbing work, the total through-put time of the workshop is not equivalent to the sum of the individual operation times; indeed, allowances for delays due to queueing and parts held in progress through material and work delays are often considerably higher than the actual synthetic production time. To give a visual presentation of the day-by-day situation schedule charting is used. The most common and versatile technique is that known as GANTT charting, GANTT charts and the method of their construction and operation are included in many text books on production management and are outside the scope of this paper. (Reference may be made to the bibliography).

Diagram 2



Illness
Machine Breakdown
NEED for CONTROL
Motivation
Spoilage of materials

The main advantage of this visual charting is that the loading on a workshop, or a section of a workshop, or a process, is seen quite clearly, and the consequences of additional loadings are immediately obvious.

3.00 SETTING UP BATCH PRODUCTION

Rehabilitation workshops, and sheltered workshops, usually produce their products in batches and in situations where products are manufactured in batches, there is a problem of determining the most economic batch size, bearing in mind that the larger the batch the more economic becomes the activity, but against which must be weighed the increased costs of storage. It is normal practice to keep storage to a minimum level and to try and produce the batches to meet customer target dates; in this way storage costs are reduced to a minimum. Diagram 3 shows a simple workshop situation where complete replenishment of material stocks is made immediately the stock level is at zero. It also assumes constant usage, or demand, for the products and at the end of the consumption period the stock level is raised to the batch size. If we adopt a total-cost approach we can quantify the various factors to determine the economic batch size.

Let U = batch size in number of units

I = storage cost per unit, per unit of time

B = set up cost for each batch

D = rate of demand per unit of time

C = total costs per unit of time for a full batch

Then C = cost of storage + cost of setting up each batch

$$= \left(I + \frac{U}{2}\right) + \left(\frac{D}{U} \times B\right)$$

where $\frac{U}{2}$ = average storage cost

$\frac{D}{U}$ = number of batches per unit of time

The effects of varying the batch size are shown in Diagram 4.

From this figure it can be seen that the economic batch size will correspond to the lowest point of the total cost curve. Using a simple calculation to determine the first derivative of the cost curve

$$C = \frac{IU}{2} + \frac{DB}{U}$$

$$\therefore \frac{dC}{dU} = \frac{I}{2} - \frac{DB}{U^2}$$

D gram 3

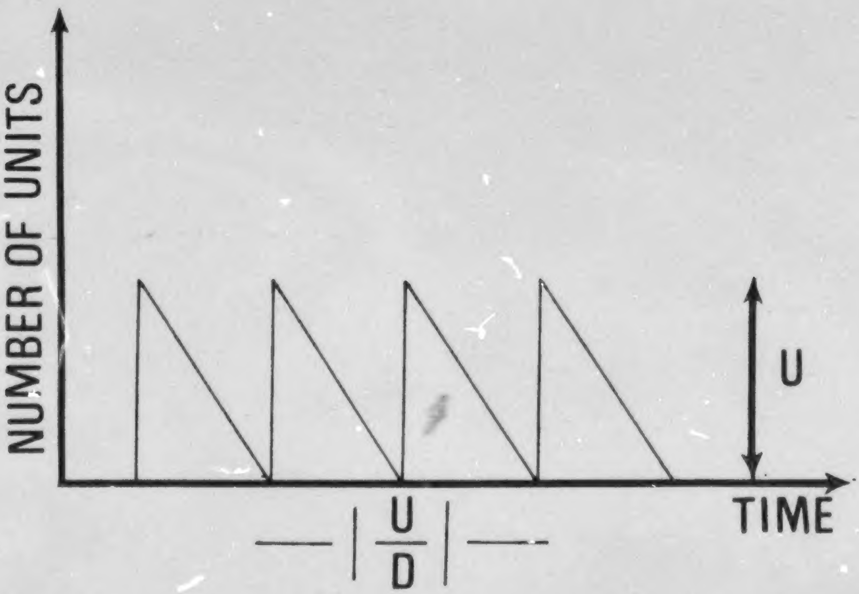


Diagram 4

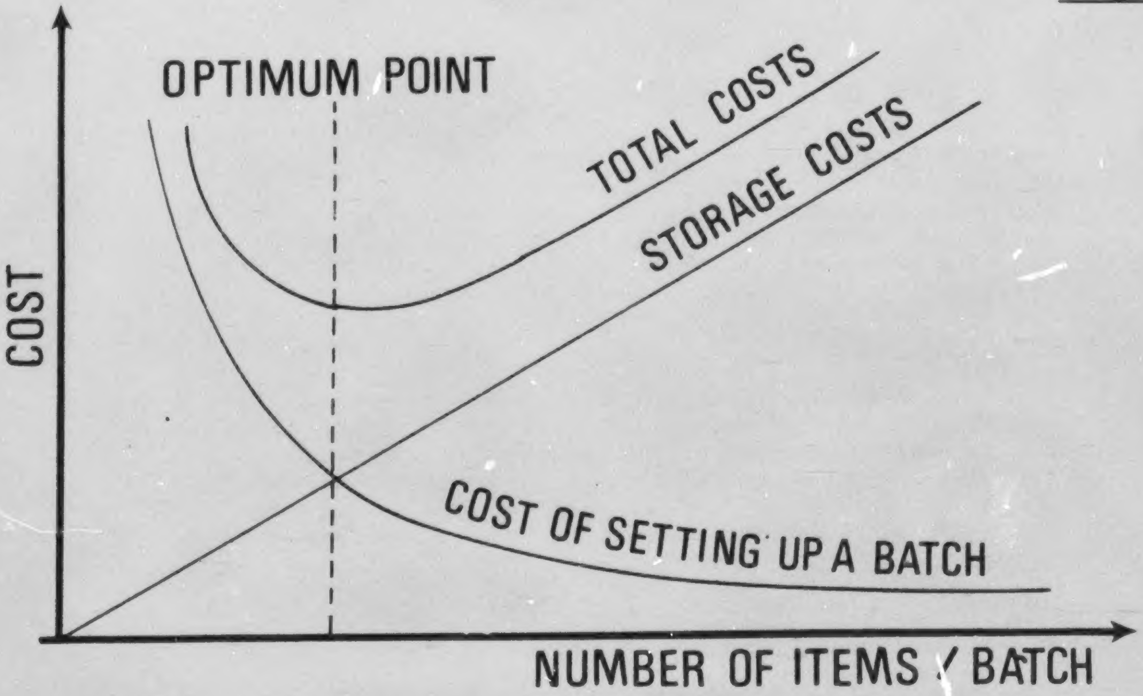


96

for the minimum point $\frac{dC}{dU}$ must equal 0

of $0 = \frac{I}{2} - \frac{DB}{U^2}$

$$\therefore \quad U = \sqrt{\frac{2DB}{I}}$$

Example

The annual demand for a particular hand tool (e.g. a tree saw) is 5,000 per year, the setting-up cost, including overheads is \$50 per batch and the storage cost \$4. The economic batch size would be:

$$U = \sqrt{\frac{2DB}{I}} \qquad \begin{aligned} D &= 5{,}000 \\ B &= \$50 \\ I &= \$2 \end{aligned}$$

$$\therefore \quad U = \sqrt{\frac{2 \times 5000 \times 50}{2}}$$

$$= \quad 500 \text{ units/batch}$$

$$\text{batches/year} = \frac{5000}{500}$$

$$= \underline{10 \text{ batches}}$$

Because of the flatness of the total curve, by simple quadratic mathematics, it is possible to show that if an increase or decrease in demand is not allowed to progress beyond an additional 10% extra cost, then in slow production periods the batch size may decrease to 320 and in high production periods the batch size may increase to 780 units. (See bibliography).

4.00 PLANNING PRODUCTION

Production planning and control in rehabilitation centres and sheltered workshops is completely dependent on the way in which these workshops are organised, in respect of their methods and systems of production.

Let us now consider what is the present position.

For several years past, sheltered workshops have been employing persons with various kinds of disease, or disability; and the development of the multi-handicapped kind of workshop is now the rule rather than the exception; for that reason this will be the framework within which we should develop. Not only differing degrees of disability, but also individual differences in physical incapacity, personality and mental approach must be taken into account when organising the workshop system. Technical expertise taken from modern production methods and processes can help the disabled worker to become adjusted to his work and at the same time facilitate production through standardisation of work processes. Items to be considered are:

1. the selection of work to match the abilities of the disabled individual;

2. the adaptation of the work requirement to match the mental and physical capabilities of the disabled person; in particular the adaptation of machines, tools and equipment so that they can be ergonomically satisfactory in their use;

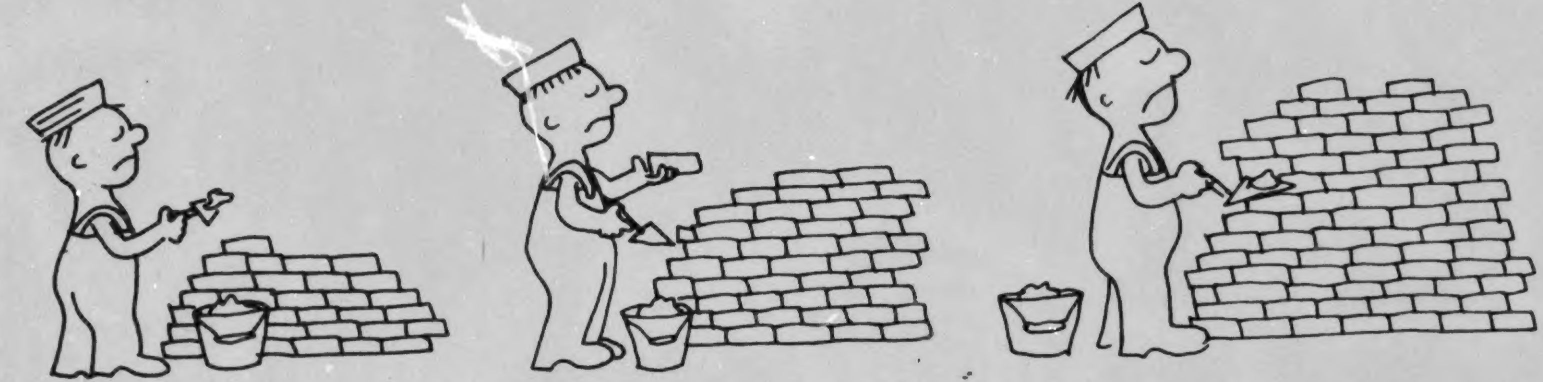
3. the development of working conditions which gives full personal dignity and motivation. This can be better done by getting them to work in small groups, rather than isolating them as individuals. In fact, each group becomes a small workshop within a workshop and this leads to improved job satisfaction and enrichment of the disabled person's working life.

5.00 HOMOGENEOUS PRODUCTION GROUPS

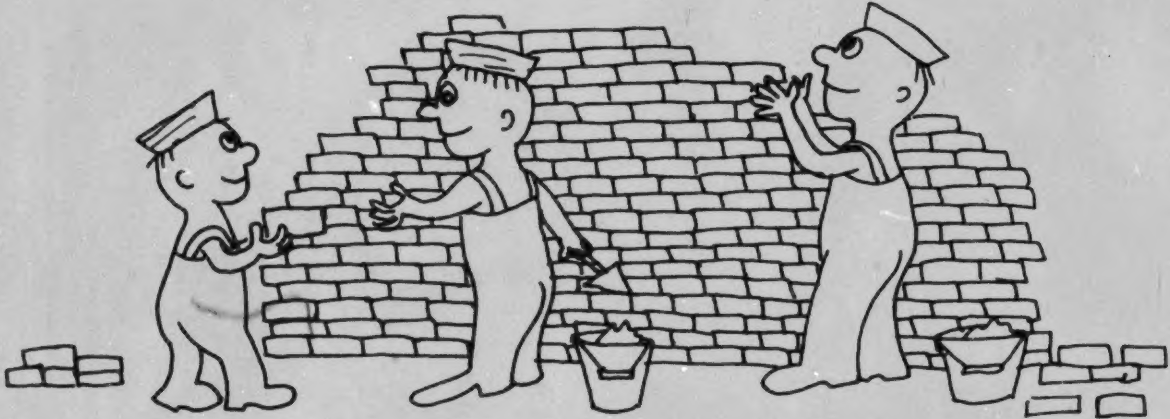
One of the recent concepts in production engineering has been the development of manufacture through families, or groups of persons working together to make part, or all, of a particular product rather than dividing the work up according to machine processes, or production lines, as had traditionally been done before. For a sheltered workshop this idea gives the opportunity for enlightened managers to develop an environment where disabled work people can be fully involved and give of their best. Handicapped persons can be allowed to take more responsibility in their dealings with process matters which they understand, and this will not only enhance the total success of the workshop but, equally important, it will allow the development of a contented workforce in an honest manner and develop a feeling of pride and respect in each disabled worker; a factor which is often missing in many work situations where invalid people are employed. (See Diagram 5).

Diagram 5

UNIT WORKING



HOMOGENEOUS PRODUCTION GROUP



Success in obtaining such benefits will depend on the workshop manager being less traditional than previously and on his giving sufficient confidence to the workers to let the development of the groups happen gradually. Homogeneous production groups allow for the systematic organisation of work into balanced stages. It also allows for variations in work flow from one stage to another. This can be permitted by setting up groups which take into account those differences in physical disability and mental speed which occur between one worker and another. Further, it allows for systematic training of each work group through a modular method based on the development of individual skills required by each person who is to be employed in a group.

For the homogeneous production groups to be successful a number of rules should be followed.

Firstly, objectives should be defined for the tasks of each group in order that there shall be no conflict between one group and another and each individual knows his authorities and responsibilities within the group.

Secondly, it will be necessary to develop a communication system between each group and the workshop manager so that there is a constant feedback of information from each group showing whether they are achieving and maintaining the objectives set for them.

Thirdly, the work of each group must, as far as possible, be meaningful and interesting and lead to clear-cut terminal production.

Fourthly, the work unit must be equipped with the necessary resources, and take into account differences in personal skill and equipment facilities so that the group can achieve, maintain and control their own specified objectives.

6.00 ADVANTAGES OF THE HOMOGENEOUS PRODUCTION GROUP CONCEPT

The way in which the group will pursue its assigned objectives will depend foremost on those objectives being clear. A sense of purpose is the vital element which differentiates this homogeneous production group from any other aggregate of people. Organisation into groups can contribute significantly to the workshop manager's job of target setting; it makes targets meaningful for the workshop as a whole and for the sub-groups within it. It makes it easier for workshop managers to communicate to their workers when discussing production targets. It leads to better work scheduling and improved control of production, because of the clearly defined objectives for each group. When feed-back is effective, problems are highlighted and the necessary action to resolve them can be more quickly put into effect. With homogeneous production groups, communications about work problems start to flow upwards and suggestions about how to remedy the faults begin to emerge from the disabled workers themselves. They start to talk with pride about their successes, relative to quality and productivity, and that all-important negative factor - low motivation (which affects disabled workers) - disappears. Finally, as work experiences become more positive, the aspirations of the workers will grow. At this point their jobs can be enlarged either horizontally or vertically.

Horizontal job enlargement takes place by adding to a given job module a pre- or post-modular task. Vertical enlargement comes with development of skills and the willingness to take more responsibility. In this way the job becomes more absorbing and hence more satisfying.

7.00 SUMMARY

To summarise, a total production control system for a sheltered workshop can operate where a manager is using traditional manufacturing methods, but if a workshop manager is willing to accept an exciting challenge and completely re-organise his workshop on the basis of homogeneous production groups, his rewards will be in the economic and human development of the resources under his control.

9(c). Industrial Engineering Principles Applied to Rehabilitation Centres and Sheltered Workshops

by

Prof. D. Lockwood

INTRODUCTION

This paper, which looks at the application of industrial engineering methods to sheltered workshops and rehabilitation centres, is divided into three main sections:

1. Layout techniques for equipment and services which lead to efficient workshop operation;
2. Improvement of operating methods through small tool, equipment and stores control;
3. Avoiding production stoppages through effective maintenance procedures.

These three items will be dealt with through a consideration of the homogeneous production group concept mentioned in a previous paper. (See bibliography).

1.00 WORKSHOP LAYOUT

The layout techniques described can be applied to a number of locations such as multi-storey factory buildings, commercial offices, wholesalers' stores and holding warehouses, etc., but as most sheltered workshops and rehabilitation centres tend to be single-storey buildings, with departments inter-connected at one floor level, the paper will concern itself with single-floor layout only.

When a manager has to lay out a new workshop, or has to change the existing set-up of a workshop that has been operating for quite some time, he should think in terms of a check list, and this list should contain items such as:

(a) Where should machines, work places and storage areas be placed in respect to external access and exit doors?

This is important because with disabled people, in case of a fire or other emergency, it is necessary that the personnel should be able to leave the workshop easily and without obstruction.

(b) Will all external and internal doors permit the passage of invalid chairs or other equipment used by handicapped personnel?

(c) Is it necessary to put ramps between one floor level and another, even though it may be a single-storey building?

Following the same principle, it is necessary to establish the minimum width of gangways, or passage ways from one work operation to another, along which handicapped workers must move and take into account the minimum radius on corners of gangways, or roadways, so that wheel chairs or other devices can pass easily in two directions at right angles.

(d) What is the minimum distance that must be allowed between one work place and another so that work in progress can be stored in a bank on the workshop floor or in racks or shelves?

For this kind of workshop, centralised storage of raw materials, tools and completed work which will later have to pass to another production operation are not satisfactory. By locating tools, raw materials and components in progress at, or near to the working post, the requirement for handicapped people to continuously move from one location to another, so that they can continue their work effectively, is greatly reduced.

(e) Following the decision on the type of product, or products, to be manufactured in the workshop area, a production operation breakdown can be compiled. This breakdown will show in logical sequence the operations to be followed for the production of each product, stage by stage. At this point it is advisable to make a flow process chart which will reveal where operations have been carried out, when inspections or quality-checks are needed between processes, and where delays are likely to occur in the production operation sequence.

(f) By comparing the production operation breakdown schedule and the flow process chart, it should be possible to determine where homogeneous working groups should be located.

(g) Each working group will need machines, tools, or production aids, and the location of this equipment has to take into account installation requirements and maintenance needs. For example, installation of the working groups should be near to service points if electricity, gas, water or compressed air is required. Similarly, positioning of machines and equipment has to take into account the fact that at some future time maintenance work will have to be carried out on the items installed.

Often, equipment is placed against a wall, or in the angle made by 2 adjoining walls, and at the time of maintenance it is impossible to remove motors, belt drives, or other parts of the equipment without serious interference. Most production processes produce waste material at the operating stage and this has to be collected, stored and later disposed of. In planning the workshop layout, facilities for processing waste material should not be overlooked.

1.10 Layout Techniques

The simplest layout technique is to use a drawing board approach. That is, that the workshop is laid out to scale by a draughtsman who indicates the position of each item of equipment, work post, gangway or walkway, storage areas and power supply points. The main difficulty with this approach is that if, at a later stage of planning, it is decided to change the labout, the drawing has to be modified, adapted or re-drawn, which is a time-consuming process. A better method is to use a hybrid system, that is, to draw out to scale the main external features of the workshop, including the entry and exit doors. Next, to cut out paper shapes, to scale, for each storage area, workpost, machine or other item of equipment which will be located in the workshop area. This system allows for movement of paper shapes, within the layout of the main features of the workshop, until the best solution for effective production has been decided upon. At this stage, the paper shapes are fixed in position with scotch tape or by pins, and the layout is considered as being the master layout until such time as changes may be decided upon. Where changes have to be made, it is a simple matter to move the paper shapes to new locations, without having to completely re-draw the whole situation.

Once the final version has been decided upon, it is possible to mark in, in colour, locations for each power supply that will be required at the workposts.

An improved method for this form of two-dimensional layout is to:

(a) draw out the main external features of the workshop, including entry and exit doors on plain white paper;

(b) to cut out the machines and equipment shapes to scale from an adhesive sheet, simi[illegible]o that used by designers or by hous[illegible] for decorating shelves, walls or c[illegible]rds, etc. These adhesive shapes are s[illegible] on to transparent acetate sheets, like those used for overhead projector transparencies;

(c) A second over-head transparency sheet is used to mark the position of power supplies such as electricity, gas, water or compressed air;

(d) A third transparency is used to mark the position of gangways and storage areas between work posts.

With this method the three overlays can be placed on top of the original drawing and the total presentation of the workshop layout can be quickly seen. If it is decided that the machine positions, for instance, are not in correct location with respect to power points or gangways, one or other of the transparent overlays can be modified or substituted. This gives a flexibility in layout planning which is not possible by the previous two methods.

The only criticism that can be levelled at the two-dimensional layout method is that it is difficult to get a three-dimensional impression of what the workshop will look like after the new layout has been introduced. For this reason many planners prefer to use scaled three-dimensional models and certain enterprises specialise in making replicas of common machine-shop equipment to architectural scales. There is no need to go to this degree of complexity. Simple wooden shapes or even, if it is available, polysterol sheet, (cut with a hot wire to form a scale model replica) can be laid on to the outline workshop drawing to produce a three-dimensional impression. The work is then completed by drawing in gangways and power points as before.

2.00 CONTROL OF TOOLS, EQUIPMENT AND WORK IN PROGRESS

The first objective of control in a production workshop is to eliminate or prevent waste occuring, and the major item under this heading is the waste that occurs through loss in production of working time. A main cause of loss of time is through workers having to search for tools, equipment, or other items which are needed before the worker can continue his process. A new approach to the elimination of this type of waste is to consider the tasks which have to be performed by the work force in order that a required process can be completed. For industrial purposes, task analysis can be broken down into the following steps:

(a) the total process to be completed is divided into a sequence of logical operations;

(b) the task or tasks involved in each operational step are then identified and recorded;

(c) finally, the required manual skills and their associated mental aptitudes for each sub-task are identified and recorded.

In a rehabilitation centre it is usual to find wider variations in manual skill capacity and mental ability than would be the case in a more standard form of industrial workshop. For this reason, when thinking of applying task analysis to a rehabilitation centre, or sheltered workshop, one has to think in terms of applying task analysis to the working group rather than to individual cases. As a consequence, the capacities and abilities required to carry out a series of tasks in a production process can be matched with the manual skills and mental levels of a number of persons contained within an homogeneous production group.

2.10 The H.P.G. - A Workshop within a Workshop

A homogeneous production group (H.P.G.) is a completely self-contained production unit and as such will require:

(a) materials to arrive at the correct time sequence;

(b) to be supplied with all necessary tools, equipment and working aids;

(c) to achieve pre-determined production output targets.

The H.P.G. has the difference that it permits its workers to move from one task to another, provided that their physical or mental handicap will allow them to do so. Therefore, as a general principle, the work posts (which may be either individual or combined) are designed according to task needs and not according to the physical or mental handicaps of the workers. Thus, within the group, workers can move from one post to another, at any time of their working day, so long as their disability will allow them to do so. Of course, there will be exceptions to this rule because some workers may be so handicapped, or disabled, that they can only work at one specially designed work post, and this can be included within a working group. In this case the individual will not be able to move around the group in the same way that other workers can and it is necessary to provide other means of improving his motivation and thereby reduce monotony.

Work posts can be designed so that a task may be completed by using more than one method, and this allows for different types of handicapped persons to work at the same task, even though members interchange with each other.

From this concept of an individual or group working post, it is clear that each work station must have the materials, tools, equipment and operating aids which may be needed by any or all of the workers in the H.P.G. so that a specific task can be carried out without having to move outside the working group. They should be able to reach the production target more easily by eliminating lost time delays. For the handicapped worker long delays between one operation and another lead to boredom, lack of interest and general dissatisfaction with workshop management. The H.P.G. concept of dividing a total production into units of work carried out by separate groups, with each group complete in itself, allows the manager to control:

(a) the situation and condition of tooling in each group;

(b) the equipment being used by each work group and its condition;

(c) the work in progress at or between each work stage

much more easily than can be carried out in a more traditional manufacturing organisation.

3.00 EFFECTIVE MAINTENANCE PROCEDURES

The three basic objectives of effective maintenance procedures are:

- firstly, to establish a programme of maintenance for workshop machinery, production aids and tooling;

- secondly, to provide a means to ensure that the programme of maintenance is carried out continuously;

- thirdly, to develop simple methods of recording repair and maintenance activities, maintenance costs and other relevant information.

The first objective is achieved by the introduction of a maintenance schedule based on a production equipment register. Into this register must be entered a complete inventory of those items of plant or production aids which have to be maintained and this is better prepared as a loose-leaf manual or as a card index system, so that items can be added or removed easily. Maintenance schedules should detail the inspections, lubrications and other preventive measures necessary if each item on the production equipment register is to be kept in working order.

To meet the second objective a control system has to be introduced which triggers off the necessary maintenance work at the correct time. The simplest form of triggering employs a manually operated two-box card/file system. In

108

one box the cards are arranged according to plant and equipment details and in the second box the cards are arranged on a daily activity basis. Where a machine or other item of equipment breaks down in service, the history of previous maintenance work can be quickly found by referring to the first card index arranged according to production items. The second card index has a different purpose in that it allows the manager to direct operatives to essential maintenance tasks on a day-to-day basis, according to which of the workshop personnel is the more lightly loaded at a given time. In this way maintenance work can be carried out by selected workers from the homogeneous production groups without having to maintain a staff of maintenance and repair personnel constantly in the workshop complex. Of course the occasion will arise when a complicated repair is required and maintenance staff of high specialisation are not available in the sheltered workshop. This can be dealt with by the manager contracting local craftsmen to carry out the work for him, and as an overall policy this method is cheaper than maintaining skilled maintenance and repair men permanently on the payroll of a sheltered workshop or rehabilitation centre.

The third objective is achieved by training the workers to complete work sheets or other documents which indicate work done, faults located or spares fitted during their maintenance tasks. This type of recording is necessary because management control depends on knowing how much is being spent on maintenance and repair including overhead costs, from one planned budgeted period to another. Once cost figures show that, for certain items of equipment, maintenance costs are reaching a high level, the manager has then to consider whether to continue using this piece of equipment or whether it should be adapted, modified or substituted and a request made for new capital funds. The workshop manager should regard maintenance procedures in a similar way to that in which a doctor considers his patients. In other words, it is better to prevent loss of condition than to have to later cure a serious defect and there must be a balance between how much time and money can be spent on preventing loss of condition and the excessive costs of remedying breakdowns when they occur. One of the most difficult questions for a manager is: how to achieve a balance between how much planned maintenance to use and how much breakdown repair to allow? The answer will vary with the complexity of equipment in use, the size of the workshop and the type of product being produced, but as a general rule it can be said that when the total annual maintenance costs approach 5% of the value of the product being produced, the manager must give serious attention to revising his maintenance procedures.

4.00 SUMMARY

To summarise, workshop layout techniques, which take into account the working conditions and the work satisfaction requirements of handicapped personnel, who will spend most of their daily life within the workshop boundaries, need to be given serious attention. The fact that a workshop is not new does not mean to say that workshop layout techniques should not be kept constantly in the back of the mind of the manager because technological methods are continually changing and an original workshop layout may soon become out-dated. Secondly, control of workshop equipment and tooling can be much improved by setting up individualised or group work posts in units dependent on the homogeneous production group principle. When designing these work units, a manager should be able to make full use of creative thinking by taking into account both the ergonomic needs of the worker and his work place (for example, to allow a worker, if at all possible, to change his position or work post from time to time, rather than being fixed to one operation).

Finally, the manager should set up an effective maintenance procedure which strikes a balance between production needs and maintenance needs and should not relegate maintenance and repair to that item which is only to be considered when production operations have completely failed.

10. Contribution by a Team at ALERT on the Subjects of Employment Schemes for Leprosy Patients and Training of Staff for Rehabilitation Centres

The contribution took the form of presentations at the time of the visit to the rehabilitation workshops at ALERT (the ERDATA project) on 21.10.75, and a lecture/ discussion on 22.10.75.

Aims

The aim of the contribution was to introduce the participants to the particular problems associated with the employment and training of leprosy patients, to show that these problems can be overcome, and to show how the principles of training in use may be applied to the training of rehabilitation centre staff.

Objectives

After participation in the sessions, the participants should be able to:

1. describe the particular problems likely to be encountered in the employment of leprosy patients;
2. outline the principles upon which employment schemes for leprosy patients must be based;
3. show an understanding of the problems presented by resistance to employment of leprosy patients by employers and fellow workers;
4. show an understanding of the problems presented by resistance on the part of the public to purchase goods made by leprosy patients;
5. discuss solutions to the problems of patients' self-image, employer, employee and sales resistance;
6. describe the effects of gainful employment on the patients themselves and on the attitudes of society towards the patients;
7. outline the principle matters to be considered in choosing a particular type of employment for leprosy patients as a group and as individuals, and in setting up a training programme for those to be employed;
8. describe the processes of training using handicraft training as an example;
9. describe how the principles of training discussed may be applied to the training of rehabilitation centre staff;
10. appreciate the usefulness of a financially independent handicraft project employing leprosy patients as a model for the training of staff for rehabilitation workshop staff generally.

Programme summary

21 October

1. Introduction;
2. leprosy patients' concepts of themselves and their disease;
3. changes in patients' self-image which take place as a result of employment;
4. visit to the workshops to see patients at work, to have an opportunity of observing their attitudes, their competences and their particular disabilities;
5. the principles upon which the workshop has been established;

6. discussion by participants of the material presented so far;
7. overcoming employer and fellow employee resistance;
8. overcoming sales resistance;
9. discussion;
10. visit to the shop (sales outlet);

22 October

11. principles of selection of employment and of the development of training programmes;
12. the training process as exemplified by handicraft training;
13. application of the principles to the training of rehabilitation centre staff;
14. closing discussion.

11. Employment of the Deaf

by

Ato Hailu Yesuneh

Introduction

It is my foremost desire to define the term deafness which will then be frequently appearing in the subject matter that I want to discuss.

Deafness, which is derived from the word deaf, is the inability to hear ordinary speech with or without hearing aids; to say it in other words:

> Listening and talking are so much a part of everyday life that most of us take them for granted. It is difficult to conceive of a world in which some or all sounds are blotted out or distorted. The most serious effects of hearing disorder are that communication between persons is interfered with and that the individual's sensitivity to his environment is distorted.

For instance take your hands and cover your two ears firmly. You will be lost in a world of silence and immediately realise how beautiful and essential the world of sound is.

Deafness can occur at any time to anybody. By looking at the crutches and the wheelchair as well as the seeing eye, the dog and the white cane of the blind, we will be deeply touched by the person's handicap and find a solution to assist him. This is not the case with a deaf person. Deafness is a notorious handicap not visible to the naked eye, as a result of which the deaf are passed unnoticed.

Among children deafness may have far-reaching consequences:

1. The most serious effect is its interference with normal development of language which is the vehicle of all human thought and learning. This effect pervades all the language functions of the hearing-impaired child with the obvious lack of speech or distorted speech being only the most apparent manifestation.

2. It may interfere with a child's normal processes of speech development. Children who cannot hear cannot learn to talk without special help. Children who hear some sounds but not others often develop such distorted speech that it is almost unintelligible.

3. A child born with severely impaired hearing or the victim of early hearing loss is deprived of the close give-and-take interaction with his family and his surroundings which serves as the basis not only for speech and language but for social growth and behaviour and personal satisfaction.

4. If untreated, hearing impairment may interfere with education especially through the child's failure to comprehend and use language. Children with uncorrected hearing loss may be thought to be mentally retarded, particularly when they fall far behind their classmates in school.

5. Children handicapped by hearing loss may have serious problems of adjustment. With inadequate management some may be over-agressive, defiant or disobedient; others become withdrawn and may avoid competitive situations or shun group activities with classmates, thus forfeiting opportunities for stimulation and participation.

6. Parents may have difficulty in adjusting to their child's handicap and the increased responsibilities it imposes. Lack of knowledge about hearing impairment, anxiety about their role as parents, feelings of blame or shame about the handicap may seriously disturb family relationships.

7. The financial burden of providing special diagnosis, treatment, education and training may fall hard on families and communities alike. The cost of education for deaf and hard-of-hearing children is three to six times greater per child per year than for children in regular school programmes.

193

8. The child's future as a contributing member of his society may be at stake - especially as concerns his vocation and his ability to relate to and communicate with his neighbours.

In Ethiopia, we have few services for assessment, education, training and employment conducted by volunteer private organisations. However, unless full support is given by the public to already existing programmes, it would be very hard to overcome the problems faced by these organisations. To generalise about the problem of the Ethiopian deaf, the absence of special educational, vocational, social or psychological as well as medical programmes, other than the private ones, so far has left many thousands of hearing impaired persons to vegetate in a life of riddle.

On the other hand, in many parts of the country, the society and parents of the deaf still harbour the traditional attitude and belief that God gave them deaf children because they have sinned, and the once universal belief that the deaf are ineducable is still prevalent and accounts for the limited participation of the deaf in their communal life, as a consequence of which they are deprived of social and language development. Here, we are very grateful for the mission-sponsored deaf schools in the country that have helped to initiate change of this very attitude in some parts; but there is a great deal more to be done. We must realise that the deaf, like hearing persons, want to improve themselves for better living; like others, they marry, work, communicate, attend religious services and social centres.

Present educational and training facilities in Ethiopia, and general problems arising with these

The education of the deaf is conducted by the following missionary groups:

1. The Fino-Swedish Mission is running the Tsehai Memorial Deaf School in Keren in the northern part of Ethiopia. This is a boarding school where up to 60 deaf children are given special education up to sixth grade by means of total communication. After the sixth grade, a two-year vocational programme in tailoring, carpentry, etc. is given. This school is trying its best to find employment opportunities for its graduated students. This school has certified and professional teachers and proper equipment.

2. The Church of Christ. This mission runs the Amha Desta School for the Deaf in Addis Ababa. It has about 50 children attending as day school students. It gives academic education up to the sixth grade and also needlework classes for the girls. It has not given serious attention to further assist the deaf in getting necessary vocational training and employment opportunities. Total communication using the American sign language is used as a means of instruction. The school lacks professional leaders and certified teachers.

3. The Baptist Bible Fellowship runs the Ezne Tsimuman School for the Deaf in Addis Ababa. Here, students teach each other using total communication. It lacks the necessary requirements to be called a school. It is somewhat like a social gathering centre. There is not any form of vocational training. It has no professional leader or certified teachers. Twenty to 30 deaf children go to this school as day students.

Excluding the Keren deaf school, the students going to the other schools in Addis Ababa have problems of attending classes because:

1. The schools are located at the outskirts of Addis Ababa in the same direction to which most of the children go from the centre and other parts of the city. They face transportation problems.

2. Both schools are charging their students school fees which are above their ability to pay and as a result, some of the students withdraw from the schools.

3. Both schools are interested mostly in Bible education, and a student graduating from these schools is not able to get employment opportunity since he is not equipped with the necessary skills for training.

4. Both schools are short of money to improve their programmes; but they never let the public know this handicap.

All of the three schools use English as the language of instruction to which Ethiopian parents are ignorant. Thus, a child, after acquiring the ability to communicate in the English language, is not able to communicate either with society or his family since Ethiopians use Amharic as an official tongue and also speak many tribal languages. So far, these three schools work separately which hampers them in following a systematised programme and the sharing of problems.

In addition to the above three schools, the Mennen Handicraft School and the Fine Arts School in Addis Ababa have come to realise the needs of deaf persons and access to training is also given in these public schools. There are deaf students attending other public schools, but they have no special facilities and assistance; thus students are left to tackle their own problems.

The primary concern of special schools for the deaf is to provide the deaf with speech and auditory training after assessing the extent and nature of their deafness so as to help them develop language. It is hereafter that the deaf should be helped to obtain the necessary training and be prepared for the job market.

Facilities necessary for special schools include

Audiometer

used to evaluate the extent and nature of deafness.

Hearing aids

used by the deaf who have some residual hearing.

Group auditory training units

used in the same way as hearing aids but in this case programmed auditory training is conducted.

Phonic mirror

used in the same way as that of group auditory training units, but in this case a single student practices with his teacher.

Mirror

very useful in teaching speech. The student will look at the lip movements of his teacher through the mirror and tries to imitate them himself.

There is also other equipment necessary for the education of the deaf. How many of the existing schools use the above teaching aids? I have to leave these for you to see on the spot.

Present employment facilities in Ethiopia and general problems arising with these

To the deaf Ethiopian it would be very hard to state that there are employment facilities whose primary concern is for the deaf. However, a few organisations have given access to a few deaf persons.

1. The Rehabilitation Agency. A few deaf have been trained in carpet weaving and are now employees of the Agency at the Ethio-Craft Centre.

2. United Abilities Company. This is the biggest employer of the deaf. In its umbrella and dry cell battery factories it has about 60 deaf who have obtained on-the-spot training and employment.

3. Birhanena Selam Printing Press. This organisation is giving on-the-spot training and employment opportunities to the deaf. There are about five employees at the organisation.

4. The Ethiopian Tourist Organisation. Deaf artists are given work opportunities in the handicraft workshop that is found at Bole. There are about seven deaf employees who practise art.

5. The Mennen Handicraft School. This school occasionally trains deaf persons together with other students in carpet weaving, jewellery, carpentry, basketry, etc. The skilled deaf are either given employment opportunity right there or are employed in other organisations or have established their own workshops.

There are also some companies which gave employment opportunities to one or two deaf people. Most employers would have allowed the deaf to attend on-the-spot training and to gain employment had they been reached by placement officers and had they been well informed about the deaf. Few deaf have organised their own workshops in the field of tailoring, shoe making, etc. These groups have even provided employment opportunities to many hearing persons. The absence of a national programme has left many deaf dependants and those employed are either working in underpaid, unskilled or semiskilled work. Because a deaf person gets his/her work after an arduous job hunt, he/she sticks to what he/she was assigned to do. Despite the fact that deaf persons are hard workers, they are not given promotion and experience a stagnant existence. But like hearing persons, the deaf too should have a choice of job. If a deaf man is placed or given a job that he does not like he may not be productive. So, identifying the type of job a deaf person wants is worth noting. For example, to place a deaf person who knows accounting in unskilled work, like carrying things from here to there, will create dissatisfaction on the part of the deaf person and result in poor production.

In the developed countries major emphasis is given to the education and training of the deaf at earlier ages, and such actions have obtained excellent results. For example, there are deaf persons who are scientists, dentists, engineers, lawyers, executives, artists, teachers, social workers, psychologists, etc. who have gone far beyond helping themselves. The deaf man's field of work and specialisation is as large as that of the hearing, except in telephone operation and the piloting of an aeroplane. The deaf man could be a farmer, printer, carpenter, driver, etc., to state but a few of the jobs available.

There are people who wonder what sort of jobs deaf people can do. The sort of jobs deaf people can do are many and varied. According to the World Federation of the Deaf, there are over 2,000 different types of jobs in which the deaf could be employed. ENAD has also listed some 28 different types of vocations in which the deaf in Ethiopia are at present engaged.

Despite these facts, the number of organisations which give employment opportunities for the deaf are very few. Thus, those deaf people who manage to get employment tend to cluster in some particular organisations only. For this reason many deaf people find it hard to secure employment since those organisations which give employment are already crowded.

Those who manage to get employment mostly end up by landing in a job that, in one way or another, emphasises their deafness to them. The result is that they leave after a few days. We are familiar with many such incidences. One deaf man found a job as a weaver after job-hunting for many days, but he left it after working for a couple of weeks. Asked why he left it, he said that it was a very simple job and that the pay was small. Even among the deaf workers at the umbrella factory, there are many who complain about their jobs.

One deaf fellow, who had a secret hope of becoming a mechanic as it later became clear, was placed at the umbrella factory through the mediation of one organisation. After working for about two years he left. He has now managed to learn to do car body repairs, but he has not got permanent employment since he does not have a certificate. But he is a lot happier now than before.

Such incidences make it clear that it is not enough to secure employment for the deaf. As in the case with the deaf man who said this job was too simple, there are deaf people who expect to be given a tough job where they might prove their mettle. It does not matter to them if they do not have the necessary skills, because they attribute the absence of such skills to their deafness.

Thus, deaf people tend to shun certain types of jobs. A close examination will often reveal that they are not against the particular job in question. When given a simple job they feel as if the employer has said to them "like it or not, you have no other alternative but to take this job ... because you are DEAF".

The limited employment opportunities for the deaf can now be seen as the result of the fact that most employers reject the hiring of deaf persons because:

1. They are uninformed or misinformed about the deaf and think that deaf employees would be dangerous and may spoil their work.

2. Communication problems do not allow the employer to explore the potentiality of deaf job hunters.

3. Employers are much concerned about their profit and they think if they employ the deaf their business will decline; they thus prefer to employ the able-bodied.

Future needs and possibilities

To open new employment opportunities and expand existing ones; it is thus necessary to look at it both from the employer's and the deaf person's point of view.

1. From the employers' point of view information on what the deaf can do must be made available to employers. Such information must emphasise what the deaf are capable of doing rather than their handicaps. The information must also include what communication techniques the deaf use among themselves and when communicating with hearing people. In some cases, not only employers but the general public needs to be educated about the deaf. In many developed countries and some developing ones for instance, deaf people work as bus drivers and in delivery services. Despite the fact that the deaf are among the safest drivers, they are not licenced to operate motor vehicles in Ethiopia. This, it seems, is due to lack of information.

2. From the deaf present point of view this must be seen from two ways:

(a) For those without employment, training must be given to them so that they acquire some skills. If they have skills, they will not have to take those simple jobs which make them feel inferior any more. After the end of the training proper placement is necessary. This is because some deaf people do not feel at home in the presence of many hearing people (bias towards working conditions).

(b) For those who are already employed, a follow-up programme is necessary. We know of one such incident. About four years ago, there were many complaints from the deaf employees of the umbrella factory. Most of them used to be absent from work without taking permission. The result was that their already small pay had to be reduced to a meagre sum through pay cuts. It was very hard for them to see why it had to be cut. Our frequent advice was answered with the complaint that they do a very tough job. But the employers simply cut down their pay for which they had sweated for a whole month. This got better only after I and two other deaf friends had worked for a week at the factory, during which time we explained to the deaf about labour relations and the regulations of the factory.

There is hope for the expansion of training and educational facilities for the deaf. It is a good sign that our Government has established the following agencies and departments whose primary concern is for the social promotion of the handicapped, including the deaf.

1. The Rehabilitation Agency for the Disabled, and

2. The Special Education Department within the Ministry of Education.

As young offices they are striving to plan total programmes for the deaf in addition to the services they now give to other handicapped persons.

Other than those aforementioned organisations, a third but private organisation whose prime concern is also the social integration of the deaf with hearing persons has been established by the deaf and their friends. The Ethiopian National Association for the Deaf with the assistance of expatriate professional advisers has prepared a national plan which will serve as a guideline for future programmes.

In addition, ENAD has been able to pull together parents, teachers, government officials and other interested persons acting as a forum where debate on the problems of deafness are discussed frequently. Presently, ENAD has prepared and come up with a project proposal for a comprehensive diagnostic, prescriptive, treatment, educational and training centre, a badly needed diagnostic service for those disabled persons commonly referred to as suffering from hearing impairment. The purposes of the centre are numerous and include the following:

1. To provide a service for persons with impaired hearing which is not presently available in Ethiopia via educational or medical institutions or agencies.

2. To work closely with the Rehabilitation Agency for the Disabled and the Special Education Department of the Ministry of Education as well as the Ministry of Public Health in developing and implementing its subsequent plans for alleviating the problems of the handicapped, especially those with hearing impairment.

3. To provide a facility through which many people with impaired hearing may have their hearing loss diagnosed (extent and nature) under professional supervision and through which individually fitted hearing aids can be provided for those unable to purchase them.

4. To provide the very essential diagnostic service prior to providing prevocational education and training. During the initial stage of the centre's operations plans will be made for a wide range of prevocational education and training which may take the form of (a) communication skill training in speech and audition, (b) manual communication training for the profoundly deaf (sign language), and (c) basic literacy training for adults with impaired hearing.

5. To provide a diagnostic service and to co-operate closely with parents leading to a better parental understanding of the problems faced by their deaf children. Also, to provide the beginning of sign language/communication training for parents so that they can better communicate with their deaf children.

6. To provide a service for the early detection, diagnosis, treatment and training of the very young, leading to pre-school classes for their much-needed speech and auditory training.

7. To perform a liaison role between the rehabilitation agency, the Special Education Department of the Ministry of Education and various other agencies (hospitals, clinics, private doctors, schools, etc.) particularly in matters pertaining to hearing impairment.

8. To initiate steps whereby the public can become better informed about the importance of the prevention of hearing loss and where loss has already occurred, early detection, diagnosis and treatment. More specific objectives will be those providing accurate diagnosis of the nature and extent of hearing loss among hundreds of persons already identified as having hearing impairment, to supply hearing aids where indicated to those who cannot otherwise afford them, and to plan programmes for prevocational education and training.

During the preliminary phase of this project ENAD will be taking note of the psychological problems of the deaf and will consider these variables as special programmes for the future. The total cost for establishing such a centre is about US$70,000 which we have not been able to acquire as yet.

The Ethiopian National Association for the Deaf has been faced by many deaf who need work and education. It has tried to find training centres and employment opportunities for a few. The majority who are members are still expecting the Association to do something that will enable them to obtain employment. Thus a committee was formed which decided that individual placement, although one way of getting a job, would take time and energy to meet the demands of all the adult deaf. The committee decided that for the first time a garment factory would be established to alleviate the unemployment problem faced by the deaf members of ENAD. The proposed garment factory could give employment for 50-70 deaf at the start. It can be extended through a shift system. The total cost estimated is about US$80,000 for which we need the support of national and international organisations. Once we get the necessary operational and capital expenditure it is believed that similar programmes will be developed and started in other parts of the country where the mass of the deaf are found. It is not our intention to sell out the deaf for sheltered workshops and kill their professional aspirations; however, at this stage we have no alternative for the unskilled adult deaf.

ENAD provided needlework training for 18 deaf girls last summer, most of them students in the existing deaf schools. Today we are training 10 deaf girls and letting them sell what they make. We have the idea of expanding this programme and also another plan to start art work provided a suitable compound is found.

Conclusion

To start effective programmes and to avoid repetition, waste of money, energy, etc., it is my sincere belief that serious attention should be given to the special education of the deaf; for this the co-ordination of ministries, agencies and organisations is most vital to reflect the problems arising because of deafness for society.

Here, I do not mean that we have to disregard the needs of the adult deaf. Because nearly all of the deaf are uneducated and could face the problem of finding employment at this stage it is necessary to train them for sheltered workshops.

At this era of technological change and advancement where machines have all types of written information, sound education and training for the deaf will make them better prepared for the type of work they want.

In order to launch a sound total programme it is of prime importance to note that Ethiopia should have professionals such as special teachers, guidance and counselling officers, psychiatrists, placement officers, national interpreters, etc., without whom all efforts will be in vain. Now is the right time to select candidates who should be provided with scholarships to attain professional qualifications from experienced higher institutions abroad. In the meantime, it is possible to attain expatriate advisers to launch such programmes.

In a developing country like Ethiopia where the mass of the population are uneducated it is the responsibility of the Government to initiate and lead such programmes. Perhaps the Government may have certain problems such as the rehabilitation of drought victims, but UN specialised agencies like UNESCO, UNDP, ILO, etc., and the developed countries could help in the establishment of programmes for the deaf and in providing scholarships. It is after this that we may make the deaf creative and competitive employees.

12. The Problem of Blindness in Africa

by

Mr. T.L. Wijenje

KENYA

Blindness in Africa is one of the consequences of the complex underdevelopment situation which exists in nearly all countries on the continent. It is associated with the characteristics of low incomes, low educational standards, undernourishment, low health standards and therefore low work output. The fight against blindness and its after-effects is therefore part and parcel of the whole process of development in every country.

The African continent is a vast land mass which is inhabited by people of various races under different countries and governments. Their development problems are, however, similar and there are few differences in approach to these development problems. One of them is blindness.

There have been significant advancements in the general economic development in most of the countries of Africa since the 1960s when most of these countries achieved their political independence. These advances in development have not, however, been able to match the constant high increase in population which in some countries such as Kenya, averages more than 3 per cent per annum.

In view of the complexity of the problems of underdevelopment in Africa, and the machinery that has been employed to manage the economics, it is not quite clear whether the problems arising from blindness have received the priority they deserve in the planning of development in the countries affected.

This is evidenced by the fact that in most African countries, it is voluntary organisations that were pioneers in the field of rehabilitation of the blind, and that government involvement is a recent development.

There is no doubt, however, that the consciousness is there, and it has in many cases been exploited by private organisations to the benefit of the countries concerned, and the blind people themselves in particular.

The African continent being so large, with more than 58 countries, has a very difficult work in counting its inhabitants, although the recent survey from the United Nations, through Whitakers Almanack 1975 manual, reveals the African population to be somewhere above 303 million people. No one can number the blind people with certainty. Census returns are quite inaccurate in enumerating the disabled, let alone the blind in most parts of Africa. Authorities in African countries have been more concerned to save eyes, polio, etc., than to count heads. If the definition of blindness recommended by the World Health Organisation (Report of Expert Committee, November 1972) were adopted, it is likely that an average incidence of 500 per 100,000 would be the minimum credible figure for the whole of Africa with, of course, much larger figures in areas heavily afflicted by trachoma and onchocerciasis.

.130

The National Blind Welfare Organisation exists in all the Commonwealth countries of Africa but there is still insufficient training for senior administrative staff. Particular importance therefore is attached to the plan now being implemented by the Government of Nigeria, in consultation with the Royal Commonwealth Society for the Blind, to establish at the Kaduna Staff Training College, a comprehensive course at graduate level for blind welfare administrators. This course, which we hope will begin next year, will offer training to senior administrators of national programmes for the handicapped.

Blind persons' most important need is for education, rehabilitation and opportunities of employment. Great numbers of blind African citizens live in destitution and loneliness. We are aware of the diversity of customs, traditional beliefs and religious divisions, not only within the continent but often within the individual countries themselves, with big problems created from these differences. It is not possible here to go into details for all areas of our continent. The one essential point is the fundamental and inalienable right of all blind people to be allowed to work according to their capabilities and not to be excluded on account of blindness alone. It is a duty of all of us who are concerned with the future of blind persons to ensure that opportunity and training are made available. Taking into consideration our own country's economical structure, its future development plans and its ability to absorb into these plans not only blind workers, but those with other disabilities.

Most African Governments have realised the importance of including disabled persons into their respective country's development plan which was not the case before. This brings in people of all stages, children, adolescents and adults, both male and female. As to the blind, there are those who were blind in infancy before formal education was possible, then uneducated peasants who become blind in later life, young blind of the generation who are able to go to school and be educated at special schools or by the integration method, and newly blinded educated adults. Each must be approached differently, having different standards of past achievement which should be matched with appropriate plans for the future.

This brings us to the problem of rehabilitation and the tasks of assessment, which is to assess education, retraining, mobility, dexterity, training, etc. All these require properly qualified and dedicated teachers, who must be constantly learning and experimenting in a new field of activity.

Every country, whether predominantly agricultural or industrial, tries to acquire the highest standard of living for its population by increasing production in all branches of its economy. The government of a predominantly agricultural country should be induced to accept blind persons into agricultural colleges provided the educational standard is right and there has been a period of rehabilitation with great emphasis on mobility techniques.

Industrial countries with modern machinery and transport use complicated equipment and improved technology in manufacturing and their distributive industries in public and other services, with the result that a higher level of knowledge and skill, but less physical effort, is required from the working population. Even in countries which have large numbers of unemployment, specially qualified labour is always in demand and this kind of labour can only be prepared through the best possible practical and theoretical training of the available and trainable human resources of the country.

Vocational training in the generally accepted sense includes a wide range of activities essentially aiming at providing the skills and knowledge required for the employment in a particular sector of economic entity.

Often there has been great disregard for the traditional rural crafts of blind people, such as mat and basket making, weaving, simple carpentry. With this I do not agree. Of course there must be a market for the finished article and more important the blind man must not be working too far below his intellectual capabilities, resulting in mental stagnation and frustration. There is a host of profitable rural crafts easily within reach of the simple blind man's skill given good training and market research done by the placement officer and the case worker. This is the most important point to be borne in mind, especially by blind welfare workers in Africa.

At the level of the family there is much spontaneous charity and it may be that in this, as in other matters, Africa will develop its own charitable institutions, providing programmes appropriate for the special needs of the blind.

There is much to be said, particularly in new countries, for breaking unnecessary administrative divisions.

One of the objectives should be that blind persons will be educated and trained in line with modern practices. Many African countries have advanced due to the general acceptance of the system of open or integrated education of the blind. Such systems are now in operation in Uganda, Tanzania, Zambia, Malawi, Rhodesia, Botswana, Nigeria and Sierra Leone. Teacher training establishments exist in Malawi, Zambia, Uganda, Nigeria and Ghana. In most African countries more has been done for blind boys than girls. This being International Women's Year, there should be emphasis in our African countries to extend opportunities for blind girls. However, the most impressive advance of the past few years has been the development of secondary education facilities for blind students and these now exist in most of the African countries with which we are concerned.

Another objective is that the fullest use should be made of existing facilities, providing these can be modernised, have adequate capital available, and use professional management and rigorous marketing.

Rural employment has unfortunately not progressed satisfactorily in Africa during the past few years. This is not due to any lack of practicability in such training, but largely to administrative failures. It was estimated 3 years ago throughout Africa that during the previous 12 years, some 2,000 blind farmers had been trained and resettled. I do not believe that number has increased since then, and may have receded. I wish to make a strong plea for rural employment so as to stop our people from flocking into towns where they later drift to begging in the streets, yet they could easily earn their living staying with their relatives in their villages with less risk of the complications of town life.

Urban employment. Urban workshops or urban training centres for the blind now exist in most African countries. For the most part they are small and not highly productive. The policy followed is that employment and training facilities should be along one of two lines of development. If they really are serving the needs of a modern urbanised community, they should be mechanised, expertly managed, and based on the subcontracting principle and in most cases, should employ sighted labour including, of course, sighted disabled people. If they are serving a traditional area, productivity should be based firmly on local requirements and the use of indigenous materials. Generally speaking we have not been nearly imaginative enough in developing new trades and markets for the blind.

Industrial placement. This has hardly yet begun in Africa. There are some small schemes in Ghana, Nigeria, Kenya and Zambia but nowhere has a really effective staff of expert placement officers been established. If a suitable programme were worked out on a regional basis, developed countries or international bodies (such as the Royal Commonwealth Society for the Blind, England; American Foundation for the Overseas Blind; Christophe Blinden Mission, Germany, etc.) could be approached for assistance, probably to collaborate with staff training and initial support.

Those who are not absorbed into the workshop should be assisted to work in unsheltered industry. This depends on sustained effort by a devoted social worker or expert placement officer who are greatly needed in Africa.

In order to succeed in our work so as to alleviate the problem, we should consider some of the following:

- the goal of successful training means satisfactory job placement;
- to ensure placement at the end of training the actual needs of the labour market should be borne in mind;
- training must be conducted in an efficient and businesslike manner;
- careful selection of trainees is essential to successful training;

- the training and appointment of a dedicated and trained employment officer;
- the vital importance of mobility and the need for expert training in technique;
- a willingness to integrate all disabilities where there can be a common advantage to all;
- the creation of public goodwill and understanding by the improvement of the blind man's image in Africa. The climbing of Mt. Kilimanjaro by a group of blind people is a superb example of this.

Personal experience

Through working with blind people for the last 10 years, I have developed a personal love of my work of rehabilitating the less fortunate, who in most cases succeed in accepting their blindness and achieving their goal of independence through suitable employment.

I have trained people in various trades, e.g. simple carpentry, mat making, basketry, weaving, leatherwork and leather tanning, shoe repairing, factory operative, typing and telephone operating.

In many cases, I have had to struggle with the students who successfully complete their training to find them jobs in factories, government offices, hospitals, manufacturing companies, or start them in a co-operative society so that they can work for themselves with the assistance of social workers, community officers, etc.

It has not been easy to find devoted and qualified manpower to man the workshops or teach in schools for the blind in Kenya, and I think this is true for Africa as a whole. There are a few people who can do the job but not enough for the country's needs. There is great need for assistance to establish centres for the training of teachers, workshop managers and administrators for the blind in Africa.

There are many problems in this field. To resolve them, we must first have a properly planned programme. Basically we must examine the manufacturing possibilities as well as carry out a market survey. We must offer good training to the blind, observing established social welfare patterns.

This reminds me of one of the most challenging activities I undertook in this field. This was when I led the Kilimanjaro expedition sponsored by the British Royal Commonwealth Society for the Blind (during the year 1969) to whom I am very grateful. I suggested the event to the Director of the Royal Commonwealth Society for the Blind, Sir John Wilson, who gave me full support and encouragement. It was a hard task training and advising the blind participants and then climbing with them to the 19,321 ft. summit. That all of us returned safely demonstrates that trained blind people have the mental and physical stamina to achieve important goals.

Finally, the man who has satisfied his needs for esteem or a fair proportion of them, moves on to his need for what behavioural scientists commonly call self-actualisation. When I refer to self-actualisation, I mean the desire to become more and more what one is, to become everything that one is capable of becoming, e.g. "a musician must make music, an artist must paint, a poet must write" if he is to be ultimately at peace with himself. What a man can be must be.

13. An Outline of Employment of the Blind in Ethiopia

by

Ato Shoarega Zewde

Background information

In Ethiopia as well as in most other countries, blindness is considered as the most severe handicap. Since in Ethiopia a greater number of people earn their living by farming which embraces a wide diversity of tasks, we should not wonder that blindness be thought of as the severest handicap.

Generally in our society blind people are considered as dependants and recipients of alms; a great many blind people, nevertheless, have tried to be self-supporting. In the past in Ethiopia, blind people have worked as lawyers, educators, advisers and the like.

In Ethiopian society a blind man is encouraged to go to religious schools: blind people are thought of as wise and open-minded for knowledge. There are many blind people who have spent years being trained in church education, but unfortunately they are not able to obtain self-supporting employment.

The braille system is considered a key to the education of the blind in modern times. Braille was introduced to Ethiopia around the second decade of the twentieth century by the American Mission. Braille, however, remained inert until the early 1950s.

The Swedish Mission was the first institution to open a school for the blind using the braille system. It was soon followed by the opening of a school for the blind, jointly run by the Mennonite Mission and the then Haile Selassie Welfare Trust. After then, three more schools have been opened. All the schools are elementary and include some sort of handicraft. The kinds of handicraft include: basket making, brush making, weaving, etc. Training the blind in handicrafts has been useful to some extent. For example, in Bako, a co-operative of blind weavers has been established, and other blind people use their knowledge of handicrafts as a hobby.

Problems faced in education and job placement

Education of the blind has many obstacles and problems:

1. the equipment necessary for the education of the blind is brought from foreign countries at high costs;
2. families of blind students are not able to share the burden, firstly because of poverty, secondly because of carelessness;
3. since the education of the blind was started by philanthropic private organisations, the Government did not take responsibility for problems of the blind.

Sometimes the Government has been a stumbling block in the progress of the education of the blind. The Ministry of Education, for instance, stopped blind students from continuing education above seventh grade and, at other times, it was not willing to accept blind students in normal high schools. Reasons given by the Ministry were:

(a) that normal high schools did not have the necessary equipment for the blind;

(b) that the Ministry did not have teachers trained to teach the blind.

All these things were not, however, essential for the blind student: what was essential was to give him a chance of learning with the sighted with the meagre resources available. Blind students were given the chance of trying and this has opened the way for the Ethiopian blind to go to colleges and universities.

At this time, Ethiopia has two blind people at master's degree level, about ten at bachelor's degree level and five at diploma level. There are now 18 blind students in college and university.

We consider the opening up of educational opportunities a great success. Still there are great problems in all areas of education and more work to be done on the education of the blind.

A table showing young blind students in different schools and colleges in Ethiopia follows:

Schools and colleges	Number of students
Sebeta School for the Blind	142
Abreha Bata School (Asmara)	50
SIM School for the Blind (Wolamosodo)	108
Swedish Mission School (Bako)	48
West Cyno School for the Blind (Gimbi)	45
German Church Centre (Addis Ababa)	12
Junior high school students in various schools	50
Senior high school students in various schools	70
College and university students	18

Employment opportunities for the blind in Ethiopia are thought of as the greatest problem by the blind themselves and institutions established to rehabilitate the blind. However, the number of unemployed blind people who have been to modern schools is very low. There were times when educated blind students were not able to find jobs. Many blind students are disgusted with pessimistic employers who cannot see what the blind might do: such employers only see things that the blind cannot do.

The first official request for jobs was presented about 19 years ago by about ten blind students who were not allowed to continue their education above seventh grade. These students asked the Ethiopian Government to give them jobs according to their level of education. Their request was taken into consideration and they were given an allowance until they obtained jobs.

Since then their requests for employment have been directed to the Head of State and the Parliament. Still the struggle continues.

There are some basic reasons for the lack of employment opportunity for blind in Ethiopia:

(1) Employers have no confidence in the blind employees; they are biased against the blind and do not give them a chance to prove themselves.

(2) There is a high rate of unemployment in Ethiopia, therefore it is more difficult to get jobs competing with able-bodied persons. Naturally the employers would prefer an able-bodied person.

(3) Blind students have not been educated to a high standard. School curricula have not been arranged in such a way as to make the blind student self-supporting. If a blind student fails to reach an academic standard, then he is doomed to either beg or be dependent on his family. There are no organised institutions to help the blind student find jobs or to encourage self-help.

The vocational training given at Sabata School is well known by name; it produces various articles but those trained in these crafts do not use them at all. The school claims to have trained a certain number of blind students in its training centre who obtained employment in UAC. Sending trained blind students to UAC is a waste of time, energy and money. This is because job places in UAC could be filled by untrained blind people from the streets. I think the Sabata School or other schools should train their students with specific employment goals in mind or else resources which could be useful for other purposes are wasted.

It is recommended that schools for the blind should train their students with a view to making them useful to themselves and society.

There should be organised institutions to guide and aid the blind in training and job placement.

Present employment of the blind

It is believed that there are many blind people who are self-supporting in various walks of life. Here we shall try to indicate employment areas which are in one way or another rehabilitative and include a form of training or organisation.

A table showing areas of employment of the blind in different walks of life

Areas of employment	Number of blind people employed
Teachers in various private and government agencies	38
Law practitioners	8
Physiotherapists	5
Preachers	7
Administrators	1
Telephone operators	1
Social workers	1
Printing press workers	5
Musicians	1
Ethio-Craft Workshop employees	86
United Abilities Company	90
Birtholomus Carpet Workshop	20
Ethio Co-operative Union for the Blind	30
Co-operative of Weavers	24

Though we cannot be proud of the small number of blind people in employment, it is believed that this is an achievement despite existing obstacles in the way of rehabilitation of the blind. As indicated in the table, the greatest number of blind people are employed in industrial workshops.

The educated blind are mainly teachers. Past and present experience has shown that blind people could become good educators. So far in many schools, blind teachers have been appreciated both by students and staff. If we work harder, other areas of employment could be created and the existing areas could be expanded.

Possible areas of employment for the blind

There are many possibilities of employing the blind. As we have seen from the table, there are many areas in which blind people earn their living. We do not see much hope in improving the rehabilitation of the blind in the near future; however, with the new philosophy of "Ethiopian Socialism" it is believed that blind persons should not be left as unproductive and destitute members of society.

A glimpse of hope is seen in aiding and rehabilitating the blind through the Ethiopian Co-operative Union for the Blind. According to information obtained from the union, there is a plan to open a school which would train blind children and train them in a way they could be useful to the farm co-operatives in their neighbourhood. This school will include both academic and vocational training. The vocational training includes handicrafts, poultry, horticulture and the like.

This union is planning to establish a brush-making centre in co-operation with the Makane Yesus Church. The union has also mentioned that it is arranging to start a training centre for telephone operators in co-operation with the Ethiopian Telecommunications Board and foreign companies who produce telephone switchboards for the blind. If the Co-operative Union for the Blind works hard, the future of the blind could be bright.

Recommendations

Until this time, private organisations have been helping in the work of rehabilitating the blind. I feel it is the right time for the Government to assume more responsibility in this direction.

The blind or other disabled people should not be segregated in a sheltered workshop. This type of segregated rehabilitation centre creates social problems, i.e.:

(1) inferiority feelings in the disabled persons themselves;

(2) inferiority feeling in the family of the disabled person;

(3) the first problem may lead to discrimination of the disabled and create enmity between the disabled and the able-bodied population.

It is strongly recommended that disabled persons be integrated in active social and economic life. Selective placement would help ensure that the blind are placed in jobs within their individual capacities.

136

14. Employment Through Co-operative Schemes

by

Mr. J.J. Bochet

Introduction

1. Like able-bodied people, the disabled can exercise their profession either on an individual basis, or as workers in business firms, or as workers in non-profit-making enterprises, run by welfare associations or by government services.

However, one type of enterprise which seems to be the best in many respects is the Co-operative Society, provided it is well managed.

2. The main features of co-operatives are listed in the following definition:

- "a co-operative is a business organisation that is owned by those who use its services, the control of which rests equally with all its members; and
- the surplus earnings of which are divided among members in proportion to the use they make of its services".

However, this definition covers only the "business aspects" of a co-operative and shows the difference between a co-operative and other types of business organisation.

In fact, a co-operative is much more than a mere business organisation.

Dr. Georges Fauquet, first Director of the Co-operative Branch of the ILO and a well-known co-operative thinker of the twentieth century, wrote in his famous book "The Co-operative Sector":

> The primary aim of co-operative institutions is the improvement of its members' economic position. But, through the means which it employs and the qualities it demands of its members and develops in them, it achieves a higher purpose. The goal of a co-operative is to create a sense of individual and joint responsibility in all men, so that they may rise individually to a full personal life and collectively to a full social life.

3. The conclusion that can be drawn from the above definitions, is of course that co-operatives require a lot of qualities from their members, the most important being: reliability, honesty, self-sacrifice and efficiency in their activities.

The better qualified the members are, the greater the success and the benefit that can be expected from the activities of a co-operative.

How to start

4. Somebody should take the initiative. Who? Logically a group of potential members of the co-operative. However, often an outside supporter or a civil servant (from one of the ministries or departments concerned: social welfare, rural development, trade and industry, co-operatives, community development, health, etc.) suggest the constitution of a co-operative.

At this stage, a preliminary feasibility study should be carried out and, if its results are encouraging, the objectives of the co-operative should be well defined.

5. The potential members should be contacted, motivated and educated

No need for special training for this purpose. Co-operative organisation could be one of the subjects of the vocational training curriculum.

Voluntary leaders of the group could be invited to participate in special courses for their preparation as future members of committees and of boards of directors.

Concurrently, investigations should be undertaken, with a view to obtaining the minimum support required, e.g.:

- assistance for organisation, advice on legislation, approach to authorities concerned, etc.;
- accommodation, financing, management, etc.;
- detailed feasibility study (supply of materials, manufacturing, marketing of products, storage, etc.).

6. Preparation of a detailed plan of operations: e.g. layout of the workshop (or organisation of homework), distribution of responsibilities, according to skills and aptitudes of the members.

7. Constituent meeting: formal decision by the members to join the co-operative; approval of the by-laws; election of board of directors and committee members.

8. Launching of activities: appointment of manager, deputy managers, technical and clerical staff, beginning of operations.

Main obstacles to be avoided or overcome

9. Obstacles of a human nature:

(a) Impatience of members to benefit from great advantages from their co-operative, before they have contributed to its development by their own efforts and contributions.

(b) Confusion in the mind of members as to the real meaning of co-operatives which are neither welfare societies nor government institutions.

(c) Members usually illiterate and unable to carry on their statutory right of "control" of the activities of the co-operative. This may lead to abuses and dishonesty of managers and committee members.

(d) unreadiness of the members to defend their rights and to combat abuses. They usually prefer to abstain from appearing in meetings and cease their activities with the co-operative.

(e) Difficulty of implementing the true co-operative principles in traditional societies, in developing countries.

10. Obstacles of an economic nature:

(a) Very limited resources of the members at the start of the co-operative. Impossibility for the co-operative to benefit from the services of a highly qualified manager. The vicious circle: "poor business due to poor management and poor management as a result of poor business" can be broken by subsidising salaries of managers, on a decreasing scale.

(b) Imbalance between production capacity and marketing possibilities.

(c) Seasonal activities (mainly in agriculture).

(d) Lack of sense of business and of notions of profitability of the members, who prefer to distribute the surplus (bonus), instead of reinvesting it to develop co-operative activities and establishing the co-operative firmly.

(e) Difficulty of getting the minimum of credit required for investment in buildings and equipment, working capital for stocks of materials and for recurrent expenditures.

(f) Inadequate infrastructure.

Remark: The purpose of this review of the most common obstacles to the smooth progress of co-operatives is to warn the promoters of co-operatives so that they can be prepared to avoid or overcome them.

Special characteristics of co-operatives with regard to disabled people

"Employment through co-operatives" is the subject of this lecture.

11. Very often in developing countries, especially in rural areas, persons possessing a spirit of entrepreneurship are rare. Thus, locally available materials and manpower remain unused or underused.

"Unity is strength" is one of the mottos which describe well the purpose of a co-operative.

Co-operatives can be used by people with limited resources, to mobilise local means of production and to raise their income, in agriculture as well as in various other trades.

12. The disabled are usually persons with very limited resources, yet with even greater needs than the able-bodied. For that reason, co-operatives can be of great assistance to them.

13. One may ask the following question:

"Should the disabled organise their own co-operatives, or should they join in co-operatives together with the able-bodied?"

One advantage of having disabled and able-bodied in the same co-operative is that they can share out the activities in accordance with their aptitudes. Another advantage is that the disabled will have the feeling of being fully integrated members of society.

On the other hand, co-operatives consisting exclusively of disabled may benefit from some additional privileges, like, e.g.:

- tax exemption or reduction;
- state grants for rehabilitation purposes;
- exclusive or priority option with regard to the production of certain products and services.

14. Which types of co-operatives are the best suited for the disabled?

For years, welfare associations have endeavoured to provide employment to disabled persons in various craft activities, usually at a loss.

Nowadays, efforts are made by some private enterprises to employ not only able-bodied but disabled, as well. I know of a preserves factory recruiting as much as 20 per cent of its total staff from among the disabled, making them partially or fully independent economically.

In rural areas, many disabled can also be employed in agriculture or related activities, such as:

animal husbandry, in general, but more specifically -

- poultry raising;
- pig raising; and
- beekeeping;
- agricultural implement making;
- repair of agricultural implements;
- preservation of fruits and vegetables.

Of course, disabled who had the privilege of being educated can be employed by co-operatives as accountants, secretaries or even managers.

15. Which type of assistance do the co-operatives comprising disabled require?

While in industrially-developed countries this assistance is mainly necessary for rehabilitation purposes, in developing countries there is in addition a great need for assistance to the co-operative itself, for its organisation and its management. However, it should never be forgotten that co-operatives should be profitable and self-reliant as soon as possible.

16. Source of assistance? Welfare organisations? Government?

Role of governments

17. Since its foundation in 1919, the ILO has inserted the promotion of co-operative ideals and activities in its programmes. Albert Thomas, the first Director of the ILO, was himself prominent in the co-operative movement, in his own right.

In June 1966, at its 50th Session, the General Conference of the International Labour Organisation adopted Recommendation No. 127: "The Co-operatives (Developing Countries) Recommendation".

The following paragraphs of that Recommendation concern the role of governments:

> 4. Governments of developing countries should formulate and carry out a policy under which co-operatives receive aid and encouragement without losing their independence.
>
> 5. (1) In elaborating such a policy, regard should be had to economic and social conditions, to available resources and to the role which co-operatives can play in the development of the country concerned.
>
> (2) The policy should be integrated in general development plans in so far as this is consistent with the essential features of co-operatives.
>
> 6. The policy should be kept under review and adapted to changes in social and economic needs and to technological advances.
>
> 7. Existing co-operatives should be associated with the formulation and, where possible, application of the policy.

18. As long as the co-operative movement lacks sufficient resources of its own, the main responsibility of the Government is to provide the following assistance and support:

- extension services and technical advice;
- training facilities for co-operative personnel at all levels for members and office bearers;
- educational programmes at all levels, including the provision of specialised schools and colleges for co-operative education;
- funds. Government can also supply financial aid to co-operatives, especially in the initial stages. Such financial assistance should, however, be designed to assist rather than to inhibit the initiative and effort of the members of co-operatives and it should never be used as the initial "bait" to attract popular participation in co-operatives.

Co-operatives and the Second United Nations Development Decade (DD2)

19. In connection with the DD2, the 52nd Session of ECOSOC adopted Resolution 1668 (LII), in 1972, on the Promotion of the Co-operative Movement during the Second United Nations Development Decade.

This proves that the importance of co-operatives is recognised at the highest level.

Periodically, the Secretary-General of the United Nations is requested to report to the Council, as part of his over-all appraisal of progress, on the contribution made by the co-operative movement to the objectives of DD2.

15. Organisation of Vocational Training Workshops

by

Mr. R.J. Percy

In training, as in most other things, if you know where you are going you are more likely to get there efficiently.

This may seem very elementary but it is nevertheless true that most of the mistakes made in training can be traced back to lack of sufficient thought at the beginning of the programme.

It is essential that proper planning should be carried out, for this will greatly simplify the task of training.

This planning should include first of all an identification of training needs. The planning of a training programme begins by asking the question "What do I want this trainee to do at the end of training?" If the training is for entry into employment it will be necessary to make a close study of employment needs in the area and, even more important, to find out what are the exact skill and knowledge requirements for each occupation by means of a job analysis. Once you know exactly what the trainee will be required to do, the planning of the programme follows a logical sequence.

For example, once you know what practical work has to be done, it becomes a relatively simple matter to determine the theoretical knowledge needed to perform this work, and from this the educational level required for entry into the training scheme. On the other hand if the trainees do not have the required background, it may be necessary to conduct a pre-entry course to bring them up to this level. Alternatively, it may be possible to include the additional subjects as part of the training programme. The point is that it is only by knowing exactly where you are going that it is possible to get there by the best route. Unfortunately, many people start the planning of a training programme without this knowledge and fail to achieve the desired results.

It must be remembered that most employers are in business to make a profit and each employee is expected to make his contribution to this.

Put yourself in the employer's place and ask yourself "If I am going to employ this person and pay him the rate for the job, what do I expect from him?"

It must also be realised that unless the trainees obtain employment in the occupations for which they have been trained, the training will have been a waste of effort, time and money.

If the training is to meet a need within an organisation it must be based on a clear and exact understanding of what need and a systematic analysis of the work to be performed.

When the training is to be carried out in a training-cum-production centre it is important to remember the old adage "If you can't eat it, wear it, use it or sell it - don't make it!"

In other words you must have a market for your products. This brings in the question of market surveys to determine the type of product and the need to develop production techniques which enable the centre to produce articles which are competitive both for price and quality and also for the meeting of target dates for orders which are placed. When considering what is to be produced it is important not to be too ambitious at the outset but to select items which the trainees are able to produce to the standard required. This is especially necessary in the case of disabled trainees and the production may have to be broken down into a number of less skilled operations that the trainee is capable of performing.

In every case training should be productive as far as possible and useful articles produced, provided that they have training value in teaching the required skills. The use of graded exercises, which may be necessary in the early stages of training, should be kept to a minimum and vocational training workshops should not be allowed to develop into "scrap factories". No country, and especially the less developed ones, can afford this luxury. As one example, trainees can make tools which will be of use to them when they enter employment. The making of useful articles also has a tremendous psychological effect for the trainee feels that he is really producing something and consequently shows much more interest in addition to being able to see the application of what he is being taught.

Publicity should also be borne in mind and potential employers should be invited and encouraged to visit the training centre to see for themselves exactly what the trainees are capable of doing. It is also important to keep in close contact with these employers and potential employers to ensure that the training programme continues to meet their needs. For this, a systematic and continuous follow-up programme is necessary.

The training system to be adopted must also be considered. I should like to speak to you for a few moments about the concept of training evolved by the ILO through what it calls modules of employable skill or MES. Within this concept, ways in which people earn their living, or could earn a living, are analysed. Combinations of skills and tasks are then grouped into sets which have been called "useful functions". These useful functions are akin to what some occupational classification systems identify as "major duties". The key to the ILO system, and its unique feature, is to create completely self-contained training packages around each useful function. These packages, called modular units, contain, and are limited to, the necessary skills, knowledge, and attitudes to perform that useful function. Through this approach, it at last becomes feasible for the ILO to build, on an international basis, a comprehensive inventory of small, self-contained, functional training packages. At the national level and, more importantly, at the local level, these modular units can be grouped in any combination to form modules of employable skill which are training programmes designed to enable people to gain the necessary qualifications needed to obtain employment wherever it exists and whatever form it takes. Thus, training programmes for employment, or modules of employable'skill, can vary in size, depending on local analysis of the actual needs, from one modular unit and a training programme lasting a few hours to programmes consisting of a hundred or more modular units and training programmes lasting one, two, or even three years. Moreover these training programmes based on modular units can be taken modular unit by modular unit interspersed with periods of employment, providing a training/employment/training continuum throughout a working life - the final modular units dealing with preparation for retirement and old age - and so not only help people grow with an expanding economy, but also help people keep absolutely up to date in periods of rapid technological change.

The significance of such an approach is profound. At long last it becomes feasible to provide an international system of vocational training infinitely variable in its diversity; sufficiently flexible to match real local needs; capable of producing easily acceptable norms, standards and certification at local, national, regional and international levels; and capable of exactly matching employment needs and training programmes at the least possible cost. It is the match of an expanding economy, and it is the means of keeping that workforce trained and retrained in a changing economy and technology.

The layout of the training workshop requires special attention, especially for handicapped trainees. Safety and efficiency should always be borne in mind and it is also very important to simulate actual working conditions as far as possible. All too frequently training workshops are more like classrooms than workshops and the trainee feels lost when he first enters the actual production workshop.

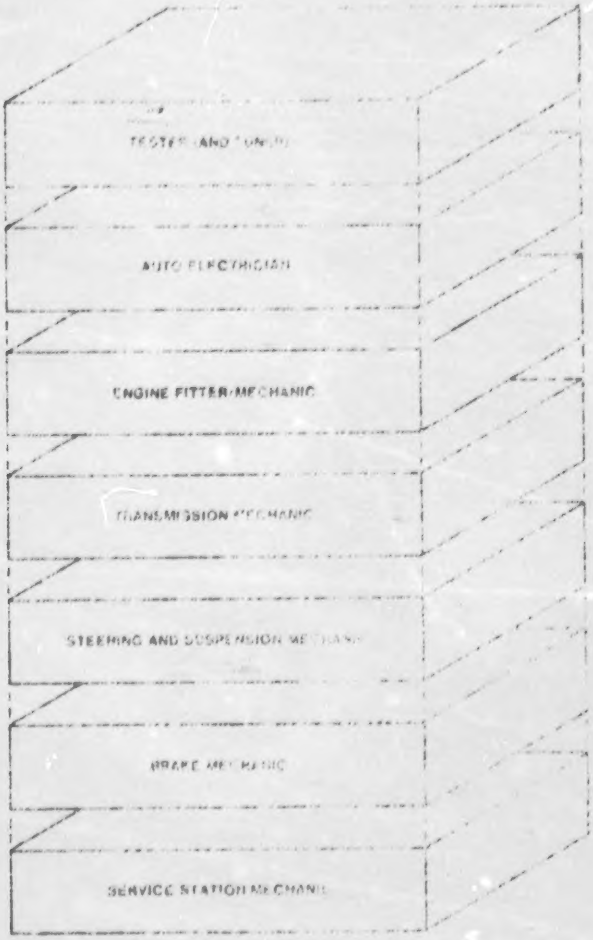
Obviously, the shop layout may have to be modified for handicapped workers but the trainee must not be given an exaggerated idea of his handicap. In my own limited experience of dealing with handicapped workers, I have found that they prefer to be treated as normally as possible.

Another very important point to be considered is the selection of instructors for these are the people on whom the success or failure of the training scheme will largely depend. It is only possible to teach what you know and it follows that an instructor must first of all be a craftsman. He must also be able to teach what he knows and be able to transfer his skill and knowledge to the hands and minds of his trainees. For training handicapped people he must have, in addition, a special sympathy for them and an appreciation of their problems. To employ instructors without the necessary skill, training and experience is an expensive way of wasting money, whilst good instructors can pay big dividends by producing well-trained workers who can produce goods of a high quality and create a multiplier effect by increasing demand and in turn training other skilled workers.

It is essential to insist on a high standard from the beginning for any vocational training scheme is judged by the quality of its graduates and a beautiful diploma is of little use unless it is backed by ability. If diplomas or certificates are to be awarded it must only be to trainees who reach the required standard and this standard will be determined to a great extent by the quality of the instructors. A good instructor can instil that important quality called "pride" which brings us back to the subject of diplomas, for a trainee can have little pride in obtaining one after a training course in which everyone passes, especially if he is unable to obtain employment.

Much can be done to inspire confidence in handicapped persons by showing them what can be done by people with greater handicaps. Douglas Bader, the famous legless fighter pilot of the Second World War is a good example of this, although only one of many. By demonstrating that he could live a normal life including flying and playing golf, with two artificial legs, he made people who had lost only one leg for example feel "If he can do that with two artificial legs, surely I can with only one." Personally, I am constantly amazed at what paraplegics for example are capable of, after seeing the splendid work being done for and by them in various hospitals and rehabilitation centres. It is largely a question of attitude development and this is where a good instructor with the right approach can do so much by showing the trainee what is possible and giving him or her encouragement.

There is no doubt that handicapped people, given the right approach and suitable training can live a useful life and make their contribution to society. I wish you every success in your efforts.



Individual Modules Grouped to Form a Training Programme for an Automobile Mechanic as defined by ISCO 8.43.20

16. Rehabilitation of the Mentally Ill and Disabled

by

Mr. N.E.Cooper

In a recent United Nations report on the world social situation[1], indications were given that 1 per cent of any population group is incapacitated throughout life as a result of severe psychiatric illness, and that at a conservative estimate, one person in ten is likely to suffer from illness of this kind at some time in life. The same report also emphasises that the developing areas of the world are not exempt from this problem and that what few studies exist indicate that severe mental disorders are probably as prevalent in these countries as elsewhere among comparable age groups; moreover, as a result of the gathering pace of industrialisation and urbanisation which appears to be one of the main factors leading to a rise in the incidence of neurotic and psychological problems, the burden of mental illness imposed on these communities seems likely to increase.

The extent of the incidence of mental illness and the serious problems it presents in socio-economic terms, to say nothing of the anxiety and suffering which it leaves in its wake, are well portrayed by the following data published by the United States Department of Labor and the US President's Committee on Employment of the Handicapped:

- each year about 600,000 persons are admitted to hospitals for psychiatric treatment. Of these at least 100,000 are admitted for the second or third time;
- each year some 1,450,000 persons receive treatment in public, federal and private mental hospitals or in the psychiatric wards of general hospitals;
- on any one day of the year about 790,000 persons are under the psychiatric care of these hospitals;
- the annual over-all costs of the public hospitals alone run close to US$2 billion;
- at least 50 per cent of all the millions of medical and surgical cases treated by private doctors and hospitals have a mental illness complication;
- more than half of the hospital beds in the country are occupied by mental patients.

The need for drastic rethinking in the approach to vocational rehabilitation of the long-term psychiatric patient became apparent in Europe in the 1950s when pharmacological developments resulted in changes in the patterns of several types of mental illness. As a result, large numbers of patients who had spent 10 to 20 years in the sheltered environment of a mental hospital were declared fit for discharge into the community. The increase in referrals of these former patients to vocational rehabilitation centres was quite dramatic; in fact, at some centres - particularly those located near large mental hospitals - the influx was so great that entry had to be restricted to maintain a balance between physically and mentally handicapped, so essential if the full benefits of group support and integration are to be achieved.

Not surprisingly, it was found that many of the patients had lost all desire or ability to help themselves; they were socially withdrawn to varying degrees, extremely dependent, slow to react, reluctant to converse and in many instances devoid of initiative or ability to plan a realistic future for themselves. It soon became obvious that the standard vocational rehabilitation course averaging eight weeks was totally inadequate to help the patient attain a standard of work which would be acceptable to employers, and enable them to become an independent member of society.

---

[1] 1970 Report on the World Social Situation (X. Health) (E/CN.5/456/Add.10, 14 October 1970), 22nd Session, UN Commission for Social Development.

The influx of these problem cases had immediate repercussions on the organisation and day-to-day running of vocational rehabilitation programmes particularly in the workshop sector. As the proportion of psychiatric cases rose, the tempo in the workshops tended to fall as so many of the rehabilitees required individual tuition and attention. The number of people in all disability groups abandoning their courses increased and placement results were adversely affected. Reluctantly, but quite understandably, many of the long-term psychiatric cases who failed to respond to the industrial therapeutic treatment had to be returned to hospital, their course having been prematurely terminated on the grounds that they were unsuitable for competitive employment.

Many valuable lessons were learnt from this and similar disappointing experiences in the early 1950s, in attempting to vocationally rehabilitate the long-term psychiatric patient, and these can be summarised as follows:

- the complete rehabilitation of the long-term psychiatric patient is a long-term process;
- vocational preparation must begin while the patient is still in hospital;
- the introduction to work should be gradual;
- to offset the ill-effects of institutionalisation and to develop motivation, the work should be realistic and undertaken not in the sheltered atmosphere of the hospital ward but in a separate workplace or workshop;
- great care should be taken by the hospital staff in selecting patients for more intensive vocational rehabilitation outside the hospital service;
- the patients themselves should be aware of their progress towards recovery and should show some initiative and motivation towards resettlement in employment;
- adequate support both during and after rehabilitation must be provided for the patient;
- in evaluating readiness for vocational rehabilitation each case should be judged on merit and not by means of diagnostic labels;
- the need for close collaboration and consultation between hospital staff and vocational rehabilitation centres is imperative at all stages, i.e. selection stage, and both during and after the course has terminated;
- the psychiatric social worker can play a key role in the co-ordinating process involving medical, social and vocational services.

The important role of the mental hospital in preparing their long-stay patients for subsequent training and/or employment in the open labour market (or in sheltered workshops not attached to the hospital) was vividly portrayed by Professor T. Lynch, Head of Psychiatric Services of the Dublin Health Authority, Ireland at the Eleventh World Congress of Rehabilitation International, viz. "For the majority of long-term patients work therapy within the hospital provides an entirely new purpose in life. It is found that all men and women have a latent work ability higher than previously appreciated and industrial work can be carefully graded to bring this dormant skill to the surface. In a re-employment unit, with the right supervision and the correct type of work, patients make dramatic progress and can attain a higher standard of manual dexterity.

One of the most important aspects in this highly specialised selection of therapeutic work for patients is the provision of a mature supervisor who will have experience in production techniques and in the art of man-management. It is necessary to ensure that the work is broken down into simple stages .... With the right supervision and the correct type of work, quite rapid and dramatic progress can be achieved. One must, however, never forget that these people are still sheltered completely ... and have still to learn about the work-day world outside the walls of the hospital. Previously, these people, if deemed medically fit, had to plunge straight into the frightening new world outside the hospital and tackle the various problems of public transport, checking into work, normal working hours .... Also the problem of obtaining suitable accommodation had to be faced. Indeed to many these dramatic changes were too much and the patients

145

returned time and again to hospital defeated, only because of a lack of proper preparation for what was ahead. The necessity of finding suitable accommodation is of paramount importance. It is unreasonable to expect a patient who has spent many years in the artificial atmosphere of the hospital, to settle immediately in the community where he obtains employment. Unlike short-term illness, long-stay patients are not unfit for work today and fit for full-time employment tomorrow. As the industrial training of a patient may take a considerable time, so too may his social training. Together with industrial training and resettlement must go social rehabilitation. The need is apparent for some half-way houses to bridge the enormous gap between the hospital wards and open employment."

An extension of the hospital work therapy unit facility involving the use of transitional employment in the rehabilitation of psychiatric patients has been developed in the United States at a day centre operated by the Fountain House Foundation of New York City, in co-operation with commerce and industry. The purpose of the scheme is to facilitate work adjustment of vocationally disabled psychiatric patients and its main characteristics are:

- job positions in commerce and industry are made available for rehabilitation purposes;
- all patients placed receive the prevailing rates of pay;
- a social worker can accompany the patient to the job if necessary and assist with job induction and familiarisation;
- the level of technical skill required for the job placement is purposely below the capacity of most patients;
- patients can remain on the job for as little as one hour per day, increasing their hours of work as confidence and assurance are developed;
- regular employees of the firm are made fully aware of the purpose and objective of the project;
- the length of time a patient may spend on the job is limited to three or four months.

The full value of the scheme has still to be assessed but first results indicate that it helps psychiatric patients to face the transition from the protective atmosphere of a rehabilitation setting to the more exacting demands of industry and commerce with a greater degree of confidence. Equally important is the direct involvement of employers in the scheme, thus resulting in a better understanding and appreciation of the employment needs and potential of the psychiatrically disabled worker.

During the past 20 years, the need for the establishment of hospital work therapy units and half-way house facilities for psychiatric patients has been generally accepted, although opinions differ as to whether the work itself should be regarded in the light of a specific group therapy and accompanied by some form of group psychotherapy. What is generally recognised, however, is the fact that the pre-vocational preparation stage for the majority of long-term patients cannot be completed within the hospital itself. To complete the transitional phase from hospital to employment, the half-way house arrangement and further vocational preparation and training under simulated open employment conditions are essential if permanent resettlement of the patient is to be achieved. In the latter connection (further vocational preparation) industrial rehabilitation units (IRUs), such as those in the United Kingdom, can make a significant contribution, particularly when patients are carefully selected. These units with specialised staff, including doctor, psychologist, social worker, resettlement officer, remedial gymnast and occupational supervisors, offer courses averaging seven to eight weeks in a busy workshop atmosphere. The courses are designed to enable the individual employment problems of the physically and mentally disabled to be assessed, to restore employment confidence and a sense of mental and physical well-being. In addition they provide an opportunity for the disabled to become accustomed to the mental and physical requirements of a full day's work (i.e. daily travel to work, clocking in and clocking out, employment on production work, industrial discipline, mixing with fellow workers) and for the testing of occupational aptitudes.

From 1955 to 1965 the proportion of psychoneurotic patients entering United Kingdom industrial rehabilitation units (IRUs) remained fairly constant between 12 per cent and 13.4 per cent, whilst the proportion of psychotics rose from 3 per cent in 1955 to 8.9 per cent in 1965. No doubt the willingness of IRUs to admit an increased number of psychotic patients over this ten-year period is related to the improving selection techniques and pre-vocational facilities developed in mental hospitals over the same period.

When the results of IRU courses are considered, those for the mentally disabled are similar to those for the physically disabled:

Percentage of rehabilitees placed in employment or training within 13 weeks of completing a course at an IRU

	1962	1963	1964
Psychoneurosis	63.3	65.0	71.6
Psychosis	52.2	59.2	65.6
Mental subnormality	48.1	53.0	61.4
All disability groups	59.2	64.1	69.6

When the situation at the six-month follow-up stage is considered, the relative percentages are much the same. It should be emphasised, however, that these figures do not take into account those rehabilitees whose courses are prematurely terminated for reasons of unfitness or unsuitability. In the case of psychoneurotics, premature terminations averaged 22.8 per cent, psychotics 24.4 per cent, as against 19.4 per cent for all disability groups.

Finally, a brief reference to job selection for psychiatric patients: research results certainly support the long-standing belief of rehabilitation workers that disabled persons and jobs can only be matched on an individual basis. A recent survey of 1,000 psychiatrically disabled veterans in the United States showed that they were employed in the full range of professions and occupations to be found in that country (see Annex 1). The study showed that contrary to generally-held opinion, veterans with a history of psychiatric disability were employed in jobs involving person-to-person relationships. Eleven per cent were in management supervisory and foreman-type work, 8 per cent in sales jobs and 3 per cent did personal service work. The survey also helped to disprove the concept that the psychiatrically disabled can only cope with a narrow range of employment under such headings as "outdoor work", "working alone", "work free of responsibility".

Whilst in Europe and the United States, the mentally ill and disabled constitute one of the largest disability groups in rehabilitation programmes, few if any in this category are admitted to rehabilitation facilities in developing countries. Traditionally, rehabilitation in the developing world has concentrated on helping the physically disabled. Staff shortages and lack of funds have so far prevented the development of rehabilitation facilities for the mentally ill. It is not unusual in such countries to find large institutional-type mental hospitals packed with patients, the majority of whom have little or no hope of returning to active social and economic life. There is an urgent need therefore for much higher priority to be given to rehabilitation of the mentally ill in third world countries. Moreover, any rehabilitation programme planned by experts of the United Nations and specialised agencies should take into account the needs of both the physically and mentally handicapped.

149

Annex 1

Employed psychiatrically-disabled veterans

By major occupational group division

Major occupational group division	Percentage of veterans
Professional and managerial:	
Professional	5.5
Semi-professional	2.0
Managerial and official	9.2
Clerical and sales:	
Clerical and kindred	12.3
Sales and kindred	8.5
Service:	
Domestic service	0.1
Personal service	2.8
Protective service	1.9
Building service workers and porters	2.7
Agricultural, fishery, forestry and kindred:	
Agricultural, horticultural, and kindred	4.3
Fishery	0.3
Forestry, hunting, and trapping	-
Skilled:	
Manufacturing and related	9.4
Non-manufacturing	7.3
Miscellaneous	7.9
Foremen	1.5
Semi-skilled:	
Manufacturing and related	5.4
Non-manufacturing	7.3
Miscellaneous	2.1
Apprentices	0.1
Unskilled:	
Manufacturing and related	3.8
Non-manufacturing	2.1
Miscellaneous	3.5
Total	100.0

Annex 2

Conclusions of the participants of the ILO/Danish Inter-Regional Seminar on Vocational Rehabilitation of the Mentally Handicapped - Denmark, 10-30 October 1971

Rehabilitation of long-term psychiatric patients and transition from mental hospital to employment

In many respects the rehabilitation of the long-term psychiatric patient has much in common with the rehabilitation of the mentally retarded, i.e. the process cannot be rushed - it must be a patient, individual approach to their problems with a comprehensive supporting programme of treatment, care, social adaptation and a gradual exposure to a normal living and work situation.

The mental hospital has a vital role to play in preparing its patients for employment. This may be achieved through:

- occupational therapy and active involvement of the patient in the daily living activities of the hospital;
- training in hospital maintenance departments and service areas;
- training in a hospital workshop in which normal employment conditions are simulated as far as possible;
- prompt reference of the patient to external rehabilitation and training facilities (using half-way house and hostel arrangements) when the appropriate stage of recovery and work output has been achieved.

Training and work orientation of mental patients in hospital maintenance departments and service areas (gardens, farms, kitchens, laundries, wards, etc.) should be arranged with rehabilitation, not cheap labour in view. (Too often in the past, employment of patients on such work has resulted in their becoming even more institutionalised.)

Similarly rehabilitation of patients, not levels of output and production, should be the prime consideration in the hospital workshop. If attempts are made to develop the workshop as a profit-making concern, it tends to become a terminal workshop with rehabilitation of the patients as a secondary consideration.

Government should accept full responsibility and provide adequate budgetary support and staff resources if an effective programme aimed at the smooth transition of the mentally ill from hospital to satisfactory community life is to be achieved.

Bearing in mind that eventually the long-term patient has to return to live and work in a society that may have undergone considerable social and economic changes since he was last acquainted with it, the rehabilitation process must take into account the prevailing social, economic and cultural conditions on the one hand, and the patient's background in vocational choice and aptitudes and personal characteristics, motivation, etc. on the other.

Close links should be established between the hospital's own rehabilitation services and those likely to serve their patients in the outside community. In this connection, the psychiatric social worker can play a key role.

A thorough investigation of employment opportunities should be undertaken on the client's behalf when his vocational potential has been assessed and before he is discharged into the community rehabilitation and selective placement officers should pay regular visits to the hospital so that such action can be initiated at the earliest possible stage.

Mental hospitals should be centrally located in the community (not hidden away from the public in isolated areas). This will greatly facilitate the social readjustment of the patients enabling them to keep in contact with their families and friends. In rural areas of developing countries the provision of mobile facilities, half-way houses and day centres should be considered. Also the creation of mental health units (incorporating farm training and farm-work schemes) are recommended.

There is a great need to educate the general public in the problems facing the mentally ill and the excellent possibilities for their complete recovery through modern methods of treatment and therapy.

Foster homes and boarding house facilities should be provided for homeless patients and those who cannot rejoin their families. For patients in developing countries, the possibility of integrating them in village communities should be considered.

The most important aspects of the vocational rehabilitation process involving long-term mentally ill patients may be summarised as follows:

- the complete rehabilitation of the long-term patient is a long process;
- vocational preparation must begin while the patient is still in hospital;
- the introduction to work should be gradual;
- to offset the ill-effects of institutionalisation and to develop motivation, the final preparation for work should be realistic and undertaken not in the sheltered atmosphere of the hospital ward, but in a separate workplace, or workshop;
- great care should be taken by the hospital staff in selecting patients for more intensive vocational rehabilitation outside the hospital service;
- the patients themselves should be aware of their progress towards recovery and should show some initiative and motivation towards resettlement in employment;
- adequate support both during and after rehabilitation must be provided for the patient;
- in evaluating readiness for vocational rehabilitation each case should be judged on merit and not by means of diagnostic labels;
- the need for close collaboration and consultation between hospital staff and vocational rehabilitation centres is imperative at all stages, i.e. the selection stage, and both during and after the course has terminated;
- the psychiatric social worker in collaboration with the rehabilitation officer can play a key role in the co-ordinating process involving medical, social and vocational services.

Industrial therapy organisations (ITOs)

The industrial therapy organisation (ITO) at Glenside Hospital, Bristol, England (see appropriate lecture) is an excellent approach to ensuring the smooth transition of mental patients from hospital to open and sheltered employment. Such a non-profit making company, limited by guarantee, with a board of directors from all sectors of the community (churches, local authorities, doctors, employers and trade unionists) accepts patients direct from the community as well as from the hospital. It is responsible for:

- a piece-work factory (132 patients);
- a sheltered workshop (36 places);
- a car-wash scheme (20 patients);
- sheltered groups in industry (42 patients).

Living accommodation for rehabilitated patients is provided through the industrial therapy housing association.

The ITO system could be applied effectively to developing countries but in a somewhat slightly modified form, in line with the socio-economic conditions in the countries concerned. Whereas a piece-work factory, sheltered workshop and car-wash could be organised in the large cities, the prevailing unemployment problem might preclude the organising of "sheltered" groups in industry. On the other hand, such groups could be employed effectively in rural areas on private and governmental estates and in co-operative agricultural schemes.

The half-way house

The half-way house is a vital link in the rehabilitation of the mentally ill in that it enables the patient to shake off the protective atmosphere of the hospital and to become gradually accustomed to the harsh realities of everyday life. The sheltered accommodation facilities of the half-way house provide a stepping stone towards the ultimate goal of rehabilitation - full integration in normal society.

In developing countries half-way houses should be developed as an integral part of any rehabilitation programme aimed at the resettlement of the mentally ill. Development could be on the lines of village hostels or normal housing within easy reach of a psychiatric day centre, clinic or mobile unit. The effective use of the half-way house would help to ease the pressure on the great demand for the few beds available in the mental hospitals; it would also be a means of educating the public on the problems of the mentally ill.

The role of the rehabilitation officer

The rehabilitation officer plays a central and key role throughout the process of rehabilitation and assisting the rehabilitee in planning this process. Through his activities he ensures that every person connected with the rehabilitation process plays his/her part actively.

Developing countries must ensure that they have rehabilitation officers in adequate numbers if rehabilitation programmes of any scale and at all stages are to succeed.

The role of the psychiatric social worker

The role of the psychiatric social worker (PSW) in the rehabilitation team is that of an expert on the social support and help that society can contribute to the treatment of the patient to such a degree that he will be integrated as fully as possible in a normal setting.

The PSW should ensure that:

- the whole rehabilitation team understands the social and emotional factors in each case;
- the patient is introduced to external social and vocational conditions at the appropriate time, making the necessary contacts for the patient with the specialists concerned;
- follow-up and after-care services are provided for discharged patients.

In compiling a psycho-social history of each patient the PSW should take into account:

- the patient's personality;
- relationships with the family, employer, neighbours, friends;
- the patient's insight into his problems and how he has tried or can try (with help) to resolve them;
- the patient's external situation;
- the services society can offer the patient;
- the fundamental problem in the case as seen from the PSW's viewpoint.

Research

In order to establish a firm basis for a rehabilitation programme for the mentally handicapped in developing countries, basic research and collection of data on the causative factors and incidence of mental handicaps should be undertaken. The research should be socially oriented with practical implications. Such a programme should be sponsored and financed by government but non-governmental organisations and universities should be invited to participate.

Training and recruitment of staff

In order to attract, retain and train staff required for rehabilitation programmes for the mentally handicapped in developing countries, the following action is suggested:

- improvement of salary scales to attract well-qualified personnel;
- professional recognition through graduate courses at college and university level leading to certification of proficiency;
- a career ladder for rehabilitation staff;
- organisation of specialised courses (in-service and refresher) for training of auxiliary personnel;
- organisation of regional seminars and training courses;
- a public information programme to attract young people to rehabilitation work;
- the interchange of technical staff on a regional basis.

Community involvement

Voluntary organisations, especially parent and student groups can play a very important role in supplementing government efforts aimed at rehabilitation of the mentally handicapped. In particular they could help to organise small workshop units for the mentally handicapped (on industrial therapy organisation lines - see Conclusions 46-47), recreation programmes, kindergarten and day-care programmes.

International assistance

It is recommended that governments should give higher priority to programmes of rehabilitation for the mentally handicapped.

Similarly the United Nations and its specialised agencies (ILO, WHO and UNESCO) are urged to provide much-needed additional and co-ordinated support in this field to developing countries through the provision of expert services, organisation of inter-regional and regional seminars and training courses and granting of fellowships.

The United Nations and specialised agencies are urged to include the problems of the mentally handicapped in their future research programmes.

Governments of developing countries are urged to obtain support for mentally handicapped programmes not only from the UN, ILO, WHO and UNESCO but also by requesting assistance on a bilateral basis from developed countries and from national and international volunteer organisations.

The International Labour Organisation is strongly urged to provide the services of regional vocational rehabilitation experts to give assistance on a continuing basis to developing countries with the organisation and development of their vocational rehabilitation programmes for the physically and mentally disabled.

The valuable contribution of international organisations such as the Danish International Development Agency, the International League of Societies for the Mentally Handicapped, the International Committee Against Mental Illness, the World Federation for Mental Health, the International Society for Rehabilitation of the Disabled, to programmes aimed at rehabilitation of the mentally handicapped is gratefully acknowledged.

17. Rehabilitation and Employment of the Mentally Handicapped

by

Mr. D.L. Carter

In preparing this presentation, I appreciated that I could not adopt my usual approach to my subject in that I had to remind myself continuously that my audience would not be British, nor, for that matter, were its members from western countries. I realised that I was preparing a paper which gave me a unique opportunity to point to major problems which western countries have encountered, and still encounter, concerning the provision of services for the mentally handicapped - problems which in the main have been caused by misjudgments and the taking of inappropriate decisions in the past. I believed therefore that my contribution would have to provide you with information about our blunders in the field of work for the retarded, in the hopes that forewarned, you would be able to avoid making similar mistakes.

To pursue this theme, which will also provide basic information about mental handicap, it is necessary for me to trace a brief outline of the history of services for the retarded in western countries. That background of history will provide a lead into the present day and to my major topic - training and occupation for the mentally handicapped.

Little may be found in western world historical records or ancient medical books which could lead one to believe that the educated members of the populace of times gone by were able to understand much about the workings of the brain, the human mind or concerning the differences in levels of intellectual ability which, throughout the known history of man, had been evident. Time and again references to mad people, to lunatics, to people possessed by devils, to village idiots and so on, can be found. The treatment or remedy for all of these conditions seemed to range from the afflicted being worshipped, to being subjected to barbarous punishments, to being tortured or perhaps to being put to death by must cruel methods. Evil potions of one kind or another were in common usage. Of course, one has to appreciate that at the time - and the time in fact stretched over many centuries - no one could diagnose that the people displaying bizarre behaviour or uttering gibberish or who were just feeble-minded were really either mentally handicapped or were suffering from any one of the number of disorders of the mind caused by mental illness. But, in the light of present-day knowledge we know that there is a very great difference between mental handicap and mental illness. Mentally handicapped, retarded or subnormal people all suffer from permanent intellectual impairment - their intelligence level being below, usually well below, that of normal people. Mental handicap can be caused by permanent brain damage sustained before, during or after birth; it can sometimes be inherited and many experts now believe that cultural deprivation, particularly during the formative years of early infancy, can be a contributory factor towards poor intellectual performance later in life. Mental illness is however very different in that it is the general title for many conditions of the mind which can, and frequently do, respond to treatment usually administered by a psychiatrist - a doctor who specialises in diseases of the mind. That doctor may prescribe drugs, he may spend long periods counselling the afflicted person or perhaps utilise shock therapy of one kind or another as an aid to restoration of his patients mind to normal. But the important point, which I must emphasise, is that the mentally ill are persons who are suffering from a sickness. It also has to be remembered that people of all levels of intelligence from that of the subnormal to that of the genius can suffer from mental illness. Indeed mental illness is commonplace in sophisticated western society and is commonly referred to as "mental breakdown".

I have given you condensed definitions of these two conditions and have been able to indicate the differences between the two. This is only possible however because of the knowledge gained by experts during the last few decades. In earlier days in western countries confusion between mental handicap and mental illness produced many problems in that legislation, education, training and care services designed to be in the interests of both categories could not, in practice, be made to function satisfactorily. Our failure to recognise, at an early stage, that we were catering for two distinct categories of the disadvantaged has meant that we had to make radical changes in our system, and to some extent we are still involved in putting the matter right - for example, it was only four years ago that the British decided that the Department of Education and not the Department of Health was the appropriate authority to be responsible for the provision of an educational service for severely subnormal children. In Britain, we are still having to cope with all kinds of odd situations caused by that changeover.

My history of work for the retarded in the west would be incomplete without some reference to the period when the large mental institutions, usually sited in remote areas, were in vogue. These establishments had other names - mental colony, mental hospital, lunatic asylum, madhouse and so on. In Britain we began to build them from about 1860 onwards and many other western countries provided similar facilities at about the same time. These large institutions came into being due to a combination of factors. Populations increased rapidly following industrialisation which itself caused a drift of people from the countryside to the towns. Whereas, previously the rural communities could usually absorb and provide for their own few mental cases, there was no place for the larger numbers of the mentally handicapped or ill in the towns. Perhaps the more liberal attitude of the era dictated that somewhere should be found for these problematic people but public opinion demanded that this should be in as remote a place as possible.

By comparison with today the standards of care provided were appalling. Inmates were crowded together, had no privacy, were frequently poorly fed and were often ill-treated by unsympathetic staff. Able-bodied patients were compelled to work very long hours carrying out most of the chores necessary to keep the institution clean and its community fed.

Gradual improvement in the administration and standards of care provided in these establishments has occurred during the last 100 years. The basic designs have been modified and much smaller, less isolated, institutions have been built in most western countries. The policy now is to provide homelike conditions in which patients can enjoy a more fulfilled, more enriched, more normal life. During the last 50 years, and in Britain with the introduction of the National Health Service, it has been accepted that mentally handicapped patients should not necessarily share accommodation with the mentally ill. In my country therefore, and in many others, we now have special subnormality hospitals for those mentally handicapped patients who need both constant medical and custodial care. The mentally ill are treated in entirely separate psychiatric hospitals.

During recent years, concerned people in the rich countries began to register disquiet about the apathetic attitude displayed to the retarded, and in particular were anxious to have reconsidered those systems which almost invariably led to the committal of the more severely subnormal to life-care hospitals or institutions. The Scandinavian countries took the lead by pointing out in 1967 that the retarded had special rights which should be recognised and that it was the duty of society at large to honour these rights. Shortly afterwards a "Declaration of General and Special Rights of the Mentally Retarded" was accepted by the International League of Societies for the Mentally Handicapped and adopted by the United Nations Organisation.

Thus the principle known as "normalisation" came into being. Normalisation principles require the abandonment of segregation as a policy and acceptance by the community of responsibility for the provision of early intervention, education, training and, if necessary, special care facilities - all of these services being designed to allow the retarded, with support, to lead as normal a life as possible commensurate with their own capabilities. I feel I must make a strong recommendation that the policy for provision of services for the mentally handicapped in your countries should be based on the principles of normalisation. You would thus not only avoid the costly and damaging mistakes which have been made in varying degrees in all the more affluent countries, but would also be providing for the response of your people's culture and the rate of your countries' economic development to influence the service you provide.

So far I have only referred to the retarded in general terms - as one group of the disadvantaged.

You must appreciate however that in my western terminology, the description "retarded", strictly interpreted, means all those people with less than normal intellectual ability. In practice, western countries consistently use testing methods, developed and applied by psychologists to assess a person's intelligence. Results attained refer to intelligence quotients - called IQ for short, on a scale in which 100 represents the normal. People who score less than 100 in IQ tests therefore have less than normal intelligence. Thus, many western countries categorise the retarded on the results attained during IQ tests. An example of such a classification is as follows:

IQ range scored	Category	Performance and ability
0-30 approximately	Profoundly subnormal	Mental age and ability roughly equivalent to that of infant from birth to 3 or 4 years old.
25-50 approximately	Severely subnormal	Mental age and ability roughly equivalent to that of child aged 3 to 7 years old.
45-70 approximately	Mildly subnormal	Mental age and ability roughly equivalent to that of child aged 7 to 12 years old.

Higher grades of the retarded might include the so-called "slow learners" and people with "dull normal" intelligence. Some developing countries have tried to adapt these methods for assessing the retarded but it has to be accepted that western intelligence testing systems are culturally biased and their conversion for use in countries with different cultures is a most difficult, if not impossible, task. It is understood that your own psychologists are working on this problem and no doubt they will find methods of assessment which are designed for use in your countries. Until those more appropriate methods are available I believe you might well be advised to forget all about intelligence testing and only make judgments concerning intellectual capacity on the strength of a study of actual performance and real ability.

I must now discuss possible ways in which you could contribute to the habilitation, training, employment and occupation of the adult mentally handicapped. However, since I understand you deal mainly with the physically handicapped, I think I should first attempt to point out the magnitude of the problem.

The organisers have provided me with a list of course participants and from 1971 figures I have been able to calculate that at that time the population of the countries which you represent was approximately 208 million. If the British subnormality incidence of about 1 per cent is applied it can be estimated that together your countries have about 2 million people who are retarded to a measurable extent. Another computation based on western figures reveals that in a population of 208 million about 100,000 retarded people would be unable to benefit from normal formal education.

International reports published three years ago indicate that only five of the countries represented were specialist services being provided for the retarded. I hasten to emphasise that this statement does not infer criticism since I fully appreciate that, in planning your development priorities, the claims of the mentally handicapped can have little importance particularly since the retarded cannot be trained to undertake skilled work. Yet, in spite of these harsh realities, there is much evidence which points to the fact that many of your countries desperately wish to cater for their retarded citizens - even if this means stretching beyond limits of the utilisation of existing facilities. Such schemes would be admirable in my view, since they would be following the principles of normalisation, and with this in mind I believe I can justifiably recommend that for the immediate future you ignore the requirement to provide specialist training facilities for the mildly retarded. You will find that this category of the mentally handicapped is by far the largest, but fortunately the vast majority can be integrated into normal life and work without difficulty. They cannot perhaps be expected to accept responsibility but they can be trained on the job by experienced colleagues and can then undertake a wide range of tasks varying from industrial work to subsistence-level farming. Supervision and instruction provided by sympathetic, understanding and patient people is needed but, once trained, the mildly retarded can give devoted and long service to their employers. In the farm setting, the mildly retarded should not be expected plan cropping programmes or be responsible for livestock husbandry except under supervision, but in all other respects they are capable of becoming most able agricultural workers.

I am of the opinion that African peoples are likely to be far more adept at demonstrating normalisation than we in western countries - indeed, I accept that you already practice the principles in your attitude towards the disadvantaged in your society. For this reason, I feel you will never allow lack of specialist provision for the mildly retarded to become a problem.

Unfortunately, providing adequately for the more severely mentally handicapped is likely to prove more difficult.

It has to be accepted that severely and profoundly retarded people respond very slowly in learning situations. For children special teaching methods geared to their capabilities and to the speed of their knowledge absorption rate are essential, and even after full academic schooling many are still illiterate and innumerate.

Very few retarded with such a low level of ability are capable of contributing to their own livelihoods without special training. In industrial settings, training could include instruction in simple assembly techniques, packaging, repetitive work on a production-line basis and so on. Much patience is needed by instructors who may have to repeat a lesson many, many times, but, in spite of this slow progress, response can be excellent and in Holland for example severely subnormal workers assemble TV sets!

But in Africa most people live in the rural areas and work as farmers. I have calculated, for example, that in the countries you represent, out of a total population of 208 million, no less than 171 million, or 82 per cent, are rural inhabitants. It follows that the vast majority of your profoundly and severely retarded citizens will also originate from rural districts. Logically one must conclude that most vocational training schemes should be designed to fit the handicapped for work in rural, rather than in industrial, urban occupations.

I do not have time to discuss all possibilities which come to mind concerning agricultural training for Africa's retarded. Be assured, however, that the severely subnormal can be trained to carry out, most successfully, a wide range of farming and gardening jobs. Instructors should be skilled practical farmers who are both patient and prepared to work alongside trainees rather than attempt to use lecturing techniques. In work settings the trainees always need adequate supervision and fairly frequent reminders as to what is required of them.

Bearing in mind that well-organised rural training centres can produce their own food, and when well established may even become profitable, I suggest that at least for the foreseeable future the establishment of agricultural units could be your best means of providing for the most neglected but deserving group of the disabled - the mentally handicapped.

18. Resettlement of the Disabled in Rural Areas of Africa

by

Mr. S.I. Niwa

The vast majority of Africans, well over 90 per cent of the population, live on the land and look to it as a means of livelihood. According to estimates of the distribution of the labour force, agriculture continues to occupy the predominant place as a source of employment and income of the African population.

Since the great majority of African people live in rural areas it must be expected that the greater part of the disabled also live in the countryside. It is undesirable to encourage the movement of these disabled people to urban areas and much better to provide rural rehabilitation and resettlement facilities which will enable handicapped people to become independent in their own communities or make a substantial contribution to their maintenance.

Although the stages of development and the scope of rehabilitation programmes differ from one country to another, there seem to be some common problems associated with rural rehabilitation and resettlement opportunities for disabled persons in Africa.

Dimensions of the problem

Ignorance

Some people in isolated rural areas still believe that a devil is in the person suffering from certain diseases and disabilities. Leprosy, for instance, is regarded as a result of some sinister evil influence. Such a concept has been embedded deep in beliefs and myths that are hard to die especially among illiterate societies.

Many poliomyelitis cases come to hospital weeks, months or even years after the onset. This is partly due to the mental attitude towards certain illness as "acts of God". Gradually such attitudes are being overcome, but miracles are often expected to be performed in a relatively short time irrespective of the severity of the case and the length of time left untreated. Here, public health education would play an important role to combat such problems.

Negative attitudes

In most parts of rural communities, particularly in African societies, economic and social life is largely based on the traditional type of village economy. Community relations are still governed by closed family and kinship groups, and some of the traditions and attitudes of these groups tend to restrict social and economic advancement. There is resistance to change. In some areas there is a deep religious obligation on the part of family to provide for and protect their own afflicted handicapped members often by keeping them in sheltered idleness. By tradition, the disabled believe themselves unable to work and tend to depend on their families and communities who accept responsibilities for them.

Another false attitude adopted in some developing communities is a feeling that employment of the disabled is a liability for the state to compensate and maintain. Such compensation as relief or disability benefits assumes much more importance to some disabled persons than the reward from productive activities. Such negative attitudes interfere seriously with motivation to accept rehabilitation and resettlement opportunities.

Lack of basic health and welfare facilities

In many countries the rural communities do not enjoy the same health and welfare facilities as the urban areas do. A general lack of health planning and medical services in rural areas often results in the fact that the major disabilities are usually of long standing. In many cases, years have elapsed before referrals have been made to rehabilitation services. These delays have added more difficulties to the physical restoration as well as to subsequent resettlement problems. The benefit of health planning, prevention of accidents and illness and medical care services should be made available to the rural population possibly through organised mobile health facilities.

Illiteracy

Another distinctive feature of agricultural poverty is the general lack of educational facilities and the high degree of illiteracy. Rural inhabitants are usually outside the stream of new information and learning opportunities and this is even more true among the rural disabled population. It is found in some countries that disabled persons cannot be admitted to vocational training courses for the able-bodied, not because of their physical limitations but due to the fact that they do not meet the basic academic or educational requirements for the courses.

Lack of transport facilities

Lack of transport facilities in rural areas also makes it difficult and somewhat impossible for rehabilitees and disabled workers to travel to and from a rehabilitation centre or a place of employment. A comprehensive rehabilitation service in these areas should provide transport facilities for disabled persons possibly through the organiaation of a special coach service, etc.

Shortage of personnel

The success and effectiveness of any organised programme depends upon the people who work in the programme. The serious shortage which exists, especially in underdeveloped rural areas, in all categories of health, education, labour and welfare personnel, and particularly the dearth of trained workers to serve disabled persons, presents one of the greatest obstacles to the organisation and expansion of rural rehabilitation and resettlement programmes.

Lack of funds

In developing countries everything that shows quick results in economic terms normally receives priority and attention. The concept of rehabilitation is relatively new to economic planners and development administrators who question the value of rehabilitation and resettlement services for the disabled. They often argue that other pressing socio-economic and manpower problems must first be solved before rehabilitation schemes for the disabled are considered. Under such circumstances, rehabilitation and resettlement services often receive low priority in the national development plans, and rehabilitation projects appear to be suffering from lack of funds in the government budgets.

Resettlement opportunities

In spite of these difficulties, problems and obstacles mentioned, the signs of change are apparent everywhere in rural communities. It is against this pattern of a changing society that the present and future programmes of rural rehabilitation must be considered. In fact, encouraging efforts are being made in many African countries today to develop rehabilitation programmes and resettlement schemes for the rural disabled. Resettlement is the ultimate aim of the whole rehabilitation process and this is also true in rural rehabilitation. The rural resettlement opportunities are reviewed in this paper in the following order:

158

(i) individual home settlement;

(ii) special farm settlement;

(iii) co-operative farm;

(iv) sheltered employment;

(v) open employment.

Home settlement would be a most usual form of resettlement, under normal circumstances, particularly for those completing the training courses at a rural rehabilitation centre. The rural rehabilitation centre has the task of giving guidance to the rural disabled, enabling them to understand their environment better and to discover their potential and abilities; introducing them to fundamental rural skills; equipping them for gainful activities and helping them to be reintegrated into normal society where they belong. They are expected to become self-supporting, able to feed, clothe and shelter their families with sufficient cash income and to raise the family's living standards to a satisfactory level. They would normally be given training in a variety of rural skills to the level required by their home environment. Such successful projects have been established in Ghana, Nigeria, Uganda, Kenya and other countries.

The training courses given at the rural centre are designed firstly to assist the disabled candidates to achieve the necessary psychological climate by which they will accept their own disability. Secondly, the training given encourages the disabled and those in charge of training to make relevant assessment of individual abilities. Progressively, the trainees are introduced to the various rural trades which would enable them to earn a living later. It was recognised earlier that the needs of the rural disabled would be met more satisfactorily by encouraging each trainee to gain proficiency in two, three or more trades in less than one year aiming at producing a village "all-rounder". Experience in Ghana has, however, shown that this is impractical and disabled trainees are now advised to specialise in one or two trades only and the period of training extended to a longer period of time (i.e. 18 months). The rehabilitees are usually provided with basic tools to take home at the end of the training.

The provision of a small capital sum may be considered to enable the trained disabled to set up on his own and apply his acquired knowledge as chicken farmer, animal breeder (rabbits, sheep, goats, cows, pigs), smallholder, shoemaker, tailor, etc. This money, which may be either a gift or a loan, is in any case a good investment.

The importance of follow-up cannot be over-emphasised to ensure the successful resettlement of the disabled. Follow-up should start after a reasonable time has been allowed for settling in and should cease as soon as it seems that the worker has settled down. In some countries effective and systematic follow-up action has been hampered due to the geographical scatter of the disabled people, the shortage and unavailability of resettlement officers and other interested people who could give encouragement and support to the disabled during the critical period of resettlement.

The success of resettlement of trainees may also relate to the availability of a good communication system including the supply of raw materials and sale of finished products.

A high degree of community involvement is another essential factor for the successful resettlement of the individual disabled in rural areas. Community leaders, individuals and groups of individuals who are willing to devote time and personal effort to the goals of rehabilitation for the benefit of their disabled community members should be encouraged and activated.

Special farm settlements for the blind and other disability groups have been operating in several countries in Africa. In Zambia reorganisation is taking place on the farm settlement schemes for the disabled which have been largely unproductive for many years mainly due to the lack of incentive, problems of management and poor marketing facilities in rural areas. Under the old system the schemes were regarded more or less as welfare services and disabled farm labourers were employed and paid by the Council of the Handicapped at the minimum wage rate of 18 kwacha per month, regardless of their productivity. Consequently the Council was unable to find extra funds for the expansion of more rehabilitation facilities because government grants, which form the major part of the Council's revenue, had been used for running expenses of the schemes.

The Council has recently embarked on new farming resettlement schemes based on family unit. The family resettlement policy, as opposed to the old practice, is an economically self-reliant pattern under which the disabled family settler is able to earn a living by producing its own cash crops on a free-of-charge, prepared and chemically fertilised piece of land. Farming materials, mechanical and manual implements, irrigation equipment, transport facilities and housing are provided free of charge by the Council for the Handicapped. A monthly subsistence allowance of 18 kwacha for the first 6 months is payable to the settler. Motivation for higher productivity is expected to rise since the earnings of each settler is directly related to his productivity, instead of the former scheme where the income of a settler is fixed and paid by the Council.

To give one example, the family resettlement scheme at Kambowa (Central Zambia) was first introduced in February 1974 with 16 families who volunteered to experiment with the scheme. In July three more families joined the scheme on their own accord. Although all the 19 settlers were not equally successful in so far as revenue was concerned, they were generally happy about their working progress and by the end of 1974, 14 of the 19 settlers had qualified for exclusion from the payroll.

The success of a family resettlement scheme would depend upon the efficiency of the capital employed, resourcefulness of the field management and readiness on the part of the settlers themselves to work hard.

Co-operative farms offer wider resettlement opportunities for the disabled, not only because of the greater community sense of responsibility on the part of their members, but also because of the better possibilities for division of labour.

In Tanzania today nearly 65 per cent of the population (9 million people) live in 7,000 Ujamaa (socialist co-operative) villages. Disabled people trained in specific or all-round rural trade skills, e.g. horticulture, tobacco growing, cotton farming, poultry keeping, rural carpentry, home tailoring, rural handicrafts, etc. can also join an Ujamaa village to contribute towards economic expansion of the village as well as their own welfare in self-reliance. Under this setting a disabled person takes part in normal village activities with his trained skills. The disabled man may turn his hand, along with other disabled workers and/or able-bodied members of the village, to the growing of crops, to raising chickens, to making clothes, to making furn[illegible] agricultural implements and tools, to making shoes, sandals, baskets, etc. for the village. His work is a positive contribution to the Ujamaa village where everybody performs his work as part of division of labour.

Another recent development in Tanzania is the establishment of rural co-operative resettlement schemes for the disabled workers and their families. Two experimental schemes are being established and developed. Semi-local houses have been built on a self-help basis to accommodate all workers and their families at the settlements. Each family unit is given an individual piece of land to cultivate for subsistence crops, but all the workers are expected to work together at a communal shamba for cash crops, buy raw materials together, sell products together, but live separately at their individual homes.

The co-operative farm scheme for the disabled has the advantage not only of providing work for the disabled in rural areas in their own environment, but also gives them the opportunity of organising themselves and helping them to develop initiative and acquire some experience of farm management.

There are many forms of sheltered employment to which the rural disabled can turn their hands, especially where there is intelligent integration of various disability groups. It is difficult to be specific as so much depends on local requirements, the availability of raw materials, marketing possibilities, labour conditions, etc.

In Libya, the main necessity in rehabilitation and resettlement of the rural disabled is to encourage the setting up of production workshops linked as far as possible to the type of agriculture being carried out in the area. In the country, for example, dessert dates are plentiful. Fancy boxes for dates are imported from France at the rate of some 100,000 per season and making them is a fairly simple task even for older disabled workers.

Another possibility is the making of wooden boxes as containers for all kinds of agricultural produce conveyed to the markets. Fruit and vegetable baskets are also always in demand in rural areas and making them is a useful home industry if assistance is given in measuring supply and demand, and if the collection and delivery of raw materials and finished products are properly organised.

Another rural industry suitable for most rural areas is the manufacture of wire products such as desk trays, containers of all shapes, shelving, machinery and appliance guards. Hurdle, gate and fence making are traditional rural crafts providing job opportunities for male workers, whilst carpet and rug making are possibilities for women in many rural areas.

In Kenya a woolcraft workshop was established at Nyandarua in 1973 to teach the disabled trainees how to earn a living from wool processing. The workshop has accommodation for 28 trainees and they are divided into four groups, each of seven people, who work together in hand-carding, spinning, washing, dyeing, knitting and weaving (cloth, ponchos, scarves, ties, etc.) and making tufted carpets. A group of seven is considered to be an economically viable resettlement unit which could be formed into a cottage industry and reach self-dependence by working together. Such groups can be taught to live and work together to eradicate weakness in personal or working behaviour, to make an adequate contribution to the group and develop a sense of responsibility towards it. The blind worker can be taught spinning, twisting and washing by the feel of the wool. He can be taught to overcome colour selection in weaving by laying out his coloured wools always in the same order. A numbering system for the colours, with the number of knots tied into the woven thread, would indicate the colour to use. Some polio crawlers may not be able to treadle a spinning wheel but can participate in most of the other process. Double amputees of the lower limbs will be fully able to card, wash, dye, weave and do tufting of carpets. Arm amputees, whether right or left, are capable of carpet making, using a loop needle. Some hemiplegics will be able to spin and carry out several of the other operations. Individually the members of the group should be encouraged to develop those aspects of the operation at which they are most suitable. This is a unique form of group resettlement for individuals who are trained in skills which need assistance of others to complete a given product.

Open employment opportunities for the disabled in rural areas are still very limited at present, but as specialisation in rural industry is developed, more resettlement opportunities will be open to them; for instance, sorting and packing work or inspection at vegetable and fruit auctions, poultry farming, chicken sex determination, repairing and upkeeping of farm equipment, administrative work in co-operatives, fertiliser and cattle food sales work, simple carpentry, tailoring, building and many other works - generally speaking wherever work is less heavy in character - these can be performed by disabled workers. Even persons with hand injuries may, after training and perhaps with simple adjustments to tools and equipment, be able to perform very worthwhile jobs in the operation of agricultural implements.

It should also be recognised in this connection that governments are usually the biggest employers of labour and as such should set a lead to other employers by employing suitably qualified disabled persons in the civil service, even in rural areas.

Conclusion

Today, the rural communities in many African countries are wearing a new look - primitive methods are giving way to modern techniques; numerous development schemes are being introduced and established in the expansion of farming projects, development of agricultural co-operatives, improvement of livestock and rural industries. So extensive are these development schemes that hundreds of job opportunities are now available to able-bodied rural workers.

Unfortunately, however, rehabilitation schemes for the rural disabled do not always receive such a high degree of government support. Traditional patterns of family care and pioneering efforts of voluntary groups are still making a major contribution to the welfare of rural disabled people.

From identification to training, and from training to resettlement, all difficult problems associated with rural rehabilitation and resettlement of the individual disabled should now be transferred from family responsibility to local authority level. These could then be carried further to government level to pave the way for a successful national programme of rural rehabilitation. Once the government has recognised that positive action should be taken about rural problems in rehabilitation, it should give its leadership and backing to the efforts and seek to set up a co-ordinated and integrated service which could be developed within the framework of the economy and rural development programme of the country. In particular, it should ensure the most important element - regular and adequate budgetary support.

The ILO's experience in helping to develop a vocational rehabilitation programme in African countries indicates that with the full backing of governments, local communities and voluntary organisations, simple but effective rural vocational rehabilitation and resettlement facilities could be established to provide for the employment needs of disabled persons in rural areas.

ANNEX

COUNTRY PAPERS SUBMITTED BY PARTICIPANTS

1. A Paper on the United Abilities Company, Addis Ababa, Ethiopia

by

Ato Endale Samuel

The problem of disability in Ethiopia has increased to such an extent as to necessitate a rehabilitation programme for the disabled at a national level.

In order to rehabilitate disabled people and minimise the increasing tendency of disability, several rehabilitation centres run by government and non-governmental organisations (missionaries, community associations, etc.) have been established throughout the country.

The existing rehabilitation centres provide medical assistance, vocational training, placement in various workshops, industrial and agricultural enterprises. Moreover, the national associations for deaf and blind with the co-operation of similar international associations provide additional assistance along the same lines.

One of the major objectives of the Ethiopian national rehabilitation programme is the restoration of the disabled to normal social life. In this respect, the United Abilities Company is playing a very important role.

Sheltered workshop (United Abilities Company)

Considering the scarcity of jobs and the tough competition in the labour market, establishment of sheltered workshops such as United Abilities Company is favoured.

Selection of workshops suitable for the disabled depends on several factors.

Plant location

The plant location and the integration of physically and mentally disabled people both in the workshops and the community are essential factors which have both social and technical advantages.

Design of machines, equipment, working place

Machines, equipment and supplies operated or used by the disabled should be designed and arranged for minimum effort and maximum convenience. In this case, selection, design, modification of machines and installation layout should be made to suit particular disability cases as required. Supplies, materials and tools required for operation should be placed within easy reach of workers.

Operating position (sitting, standing, etc.), type and sequence of operation should be in accordance with the disability in question.

Congestion of men, materials, long transportation lines, unsafe machines, etc. should be avoided as far as possible. Ease of movement (e.g. for the blind) should be considered as well as the installation of machines.

Placement

The importance of prior related vocational training and placing of the disabled in accordance with the demands of specific situations in workshops is of paramount importance.

163

Classification and screening of the disabled based on type, extent of disability and the potential to do various types of work is essential for placement purposes. Furthermore, placement depends on types of process, machines, equipment, raw, intermediate and final materials.

Exclusive placement of disabled people in sheltered workshops is advantageous in cases of severe disability. However, effort has to be made to avoid any feeling of isolation from the rest of society which could result in different forms of inferiority complex.

Placement of only the disabled is not always practical. Combining the abilities of disabled persons for specific jobs could be done.

Practically all positions in the United Abilities Company umbrella factory are occupied by disabled people. However, in the company's battery factory, where the technology is specialised and sophisticated, inclusion of physically and mentally able people is necessary.

In addition to some of the technical problems related to disability there are administrative problems related to placement:

- limited chance for promotion and transfer;
- type and extent of disability influencing placement and salary;
- ease of communication;
- dissatisfaction and frustration arising from placement and salary administration.

These and other similar problems force management to consider social factors when introducing salary increases and other administrative decisions.

Finally management has to find ways and means of handling cases such as:

- conflict between objectives of sheltered workshops and establishing labour unions and their demands;
- high hospitalisation, insurance and operating costs;
- providing counselling and guidance service by a social worker.

2. Cameroon's Programme of Vocational Rehabilitation of the Disabled

by

Mr. M.E. Eta

My aim in this paper is to discuss the many-sided problem of the rehabilitation and training of the disabled in Cameroon. The first facet of the problem that must be outlined is the lack of reliable statistics on the nature and extent of disability. The second problem is the lack of a large enough industrial and manufacturing sector to absorb special categories of workers. Given the lack of this industrial sector, we must then examine the problems facing the disabled in a rural agricultural setting. I then propose to examine the existing institutions in Cameroon with the problems that face them and their plans for the future.

1. Extent of the problem of disability

It will be obvious from the following statistics that some attempt has been made to quantify and classify the problem of disability in Cameroon:

Type of handicap	Number	Percentage
(a) Blind	60,000	1
(b) Lepers	56,750	1
(c) Physically handicapped (polio, amputees, etc.)	240,000	4
(d) Mentally retarded	180,000	3
(e) Mentally ill	60,000	1
(f) Epileptic	30,000	0.5
(g) Deaf and dumb	(figures not available)	-
Total	626,750	10.5

As will be seen from the information quoted above, the statistical data on this problem is not complete. The limited information available, however, provides a rough guide to the size and nature of the problem. We can see from the figures quoted that the physically handicapped and the mentally retarded comprise the two largest groups. In the case of the blind, we have no accurate information as to the age distribution of the 60,000 people mentioned. This is also the problem with the other groups enumerated. We hope to fill in the gaps in our statistical tables so that we can plan more efficiently in the future. As a country with limited resources, accuracy of statistical information is vitally necessary if we are to choose the correct options in deciding the future shape of our training and rehabilitation programmes.

2. Existing vocational rehabilitation services for the physically and mentally disabled in Cameroon

As Cameroon's present position as a developing country severely limits our ability to implement a comprehensive rehabilitation and retraining scheme for the handicapped, we are forced to select concentration areas within the wider field of rehabilitation services. In this perspective, the Government of the United Republic of Cameroon has decided to pursue a policy of "Social Justice" which has, as its natural consequence, an attempt to bring all the benefits of an increasingly developed society to the weaker segments of the community. This policy recognises that special provisions must be made if the disabled are to establish themselves as fully integrated members of society. This special provision takes the form of vocational assessment, guidance and training facilities. I propose to discuss these points in more detail, using as examples the existing services in Cameroon dealing with the problems of the handicapped.

The first prerequisite for any policy of vocational assessment and guidance is a body of trained personnel. Cameroon's solution to this problem has been the establishment of the National School of Social Workers in Yaounde. This school offers a four-year professional course of training for prospective social workers, which includes elements of theory as well as considerable practical training. In addition, a number of social workers receive their training abroad under various foreign assistance programmes.

.Training of the handicapped is carried out in various institutions in my country, such as:

(a) Bulu Centre for the Blind in Buea - Southwest Province;

(b) Centre for the Re-education of the Physically Handicapped in Yaounde - Central South Province;

(c) Centre for Re-education of the Physically Handicapped at Dachang - Western Province;

(d) Yaounde School for the Deaf - Central South Province;

(e) Douala Centre of Applied Audiology - Littoral Province;

(f) Centre for Re-education of the Physically Handicapped in Kaeli - Northwest Province;

(g) Manyemen Leper Settlement - Southwest Province;

(h) Dibamba Leper Settlement at Douala - Littoral Province;

(i) Mbingo Colony in Douala - Littoral Province;

(j) Ndonge Leper Colony in Douala - Littoral Province.

Some of these institutions are 100 per cent government-funded while others receive assistance and encouragement. From my experience as Director of the Bulu Centre for the Blind, I shall now describe in detail certain aspects of our training programme.

At the Bulu Centre for the Blind, we train able-bodied blind men in a range of skills which is hoped will enable them to become fully productive and totally integrated members of their communities. During their first few weeks we concentrate upon giving them complete freedom of movement within the bounds of the Centre. We believe that proficiency in mobility skills is the key to the success of the whole training programme and that the first attempts at independent movement within a well-known area are the most important. When the trainees are able to move around the compound unaided, their confidence is increased tremendously. The next stage in our mobility training is a series of visits to the busy main road close to the Centre and to Buea, the closest town of any size. Here we teach them the various skills necessary for movement in the midst of heavy traffic and through a series of complicated road intersections.

As Cameroon is a predominantly rural, agricultural society and as the President, El Hadj Ahmadou Ahidjo, lays great emphasis on agriculture as the backbone of the Cameroonian economy, we feel it is essential to give our trainees a thorough knowledge of modern techniques of small-scale farming. We also teach them to manufacture useful articles, utilising locally available raw materials. These articles include foot-mats, baskets, cane and bamboo furniture, leather and raffia products. We also give the trainees a basic knowledge of Braille.

Our philosophy behind the training programme is based on the fact that we take adult blind men from their villages with a view to making them responsible and productive heads of families. It is for this reason that we do not place much emphasis on an academic or industrial training. We believe that the shape of the training programme should be dictated by the over-all structure of society and the needs of the handicapped within the society.

As I have mentioned earlier, Cameroon does not have a large industrial sector capable of absorbing handicapped persons trained in special industrial skills. Most of the graduates from our existing training centres return to their villages to earn a living as farmers or take up residence in one of the large towns as a small-scale producer of specialised articles.

3. Services for special groups

From the list of our specialised institutions mentioned earlier, it is clear that Cameroon is making strenuous efforts to establish training programmes in the various areas of disability which make up the entire handicapped population. As most of these institutions are still relatively young, they have not assumed a fixed pattern. We are still in the experimental stage with many of them. It is hoped that this Seminar will provide a reservoir of ideas from which we can draw for purposes of future planning. The new Ministry of Social Affairs under the first woman Minister, Madame Delphine Tsanga, is in constant contact with overseas advisory organisations with a view to improving existing specialised institutions and establishing new ones. While this section is somewhat sketchy, we would wish you to bear in mind the fact that we are still expanding and are always interested in new ideas.

4. Co-ordination of these services with health, social and community services

The closest co-operation of the specialised training institutions with other services in Cameroon is with the health services provided by the Ministry of Public Health and the social workers controlled by the Ministry of Social Affairs. All of the government institutions engaged in the training of the handicapped are also controlled by the Ministry of Social Affairs. The connection between these institutions and the public health services operates at two separate stages. Training services use statistical information provided by the Ministry of Public Health through its provincial delegations for health to locate the various groups of handicapped people throughout the country. This Ministry also helps by providing facilities for comprehensive medical examinations for all the prospective candidates of these institutions. The Ministry of Public Health also provides free medical care and trained personnel to take care of the health of the handicapped people while they are in the training institutions.

The Ministry of Social Affairs, as well as financing the government institutions for training the handicapped, also provides social workers and social welfare services to take care of the students after they graduate. The Government also finances UGAGIC - Union Generale des Aveugles et Grands Infirmes de la Republique Unie du Cameroun (General Union of the Blind and Physically Handicapped in Cameroon) - which is an organisation which guarantees free and subsidised travel, free education, certain tax concessions and free medical treatment to all physically handicapped persons who become members. This union is designed to extend welfare benefits to all the handicapped people in the community, including those who for one reason or another, are not able to enter one of the training institutions. The Ministries of Health, Social Affairs, Finance, National Education, Transport and Territorial Administration all combine to provide the services guaranteed to handicapped people in the Presidential Decree establishing UGAGIC.

The Ministry of Territorial Administration has an important part to play in the over-all scheme of retraining and resettling the handicapped. The traditional village councils, which are the basic units of local government in Cameroon, usually draw the attention of the authorities to the existence of handicapped people in their various areas. The senior division officers who are officers under the direct control of the provisional governors, arrange for the payment of the subsistence allowances provided by the Government to specified groups of handicapped people such as the blind.

The Department of Community Development, through its community development assistants, operating at the village level, can also play an important part in mobilising the local community to help the disabled people in their areas.

167

The Ministry of Social Affairs, through its provincial chief welfare officers and local social workers, arranges for the distribution of equipment provided by the Government and by overseas organisations. They also tackle some of the personal and family problems faced by the handicapped in their area. This group of social workers operates closely with those social workers specifically attached to the various training institutions.

It is hoped that the efforts of these various ministries and departments can be even further integrated now that a separate section concerned with the training and rehabilitation of the handicapped has been set up by the Ministry of Social Affairs. We feel that an integrated approach to the problems of the handicapped is vitally necessary if we are to avoid duplication and conflict in the services provided.

5. Staff training

Our existing institutions and their related services are staffed by a combination of personnel who receive their training in Cameroon, other countries within Africa and countries outside Africa. The training institutions which exist within Cameroon are of two kinds: firstly, we have those institutions such as the Yaounde National School for Social Educators whose sole purpose is to provide professional training for those who wish to work in the welfare and disablement retraining services. Secondly, we have those institutions which, like Bulu Centre for the Blind in Buea, and the School for the Deaf in Yaounde which are primarily designed to provide training schemes for the handicapped but which also train personnel to work with the handicapped.

As yet the output of these institutions is limited but we hope that this will increase as our training programme gathers momentum. We have an increasing body of personnel who were trained in other African countries as a consequence of the philosophy of mutual co-operation which Cameroon is at present pursuing. These people are usually social workers or trained craft instructors. The period they spend in other African countries varies from six months to four or five years. This programme is a continuous one which brings benefits to both the people who are trained abroad and the countries that train them. The exchange of ideas and experiences which is a natural consequence of this programme increases the knowledge of both participants in the field of training and rehabilitation of the handicapped.

Various overseas organisations provide scholarships to enable Cameroonian nationals to study abroad. The courses undertaken by people fortunate enough to obtain overseas scholarships are usually designed to train them for a specific job on their return to Cameroon. Those embarking on such a course of study are usually required to have had experience in that field before they leave Cameroon. These courses provide opportunities for social workers in the field of management personnel such as directors of institutions in order to gain further knowledge and experience in their chosen field of operation. These courses are usually undertaken by those who not only have considerable experience in the field but who have made a firm commitment to return to work with the handicapped upon completion of their courses.

Cameroon has established a National School for Administrators and Magistrates which trains personnel to operate effectively and efficiently within the Cameroonian administrative system. This also has a spin of effect for management personnel engaged in the administration of centres for the handicapped. This school provides readily digestible material which improves the knowledge of directors about the Cameroonian administrative system.

These divergent elements are fused together in a unitary administrative system. Although the administrative system is uniform in shape each element can make its own unique contribution based on its different experiences.

6. Unresolved problems - particularly those related to management of rehabilitation centres and sheltered workshops

The major problems still confronting Cameroon in the field of training and rehabilitation of the handicapped are located in several major areas. We still have problems in locating and classifying the various forms of handicaps existing within Cameroon. The various figures quoted earlier in this paper show quite clearly that we have an estimate of the extent of disability in Cameroon, but not a comprehensive and detailed body of statistics. This makes it difficult for us to plan our training programme for the future and to predict possible future trends in the needs of the disabled. As we have no accurate information as to the age distribution within the various groups of handicapped people we cannot predict with any degree of certainty whether the handicapped population of Cameroon will increase or decline in the future.

In the sphere of follow-up and extension services we are still trying to integrate fully the existing separate services which sometimes duplicate or even conflict with each other. It is hoped that the establishment of the new Ministry of Social Affairs under the Hon. Madame Delphine Tsanga will help to establish a fully integrated approach to the problems of the handicapped. We are striving towards increased liaison between the various departments and institutions collected under the jurisdiction of this new Ministry.

Like most developing countries Cameroon still faces problems in obtaining the required amount of trained personnel and supplies of capital to run their institutions in the desired way. We require funds to erect new buildings in most of our institutions and to provide reliable means of transport for those institutions which require it. This problem gives particular trouble to the directors of institutions because they have to undertake the complicated business of liaising with suitable overseas organisations over and above the day-to-day administration that they are expected to do.

7. Plans for the future

Cameroon is planning a great expansion of its training, rehabilitation and resettlement services for the handicapped. We are planning to open two new rehabilitation centres for the handicapped in Yaounde to cope with the vast problem of the physically handicapped. It is hoped that these two centres will have an intake of from 75 to 125 students at any one time and that they will offer courses ranging in duration from 6 to 12 months. We also plan to open a new centre for the blind in the Northern Province to cope with the vast problem of blindness.

Expansion and modernisation plans for the existing rehabilitation centres are also getting under way. With the establishment of our new Ministry of Social Affairs we are making definite plans to develop a fully integrated approach to the problems of the handicapped both inside and outside rehabilitation institutions.

Integration would be helped by the establishment of a section responsible for co-ordination and regulating our extension and follow-up programmes for our handicapped people. This section will be the co-ordinating body within the Ministry of Social Affairs.

The Hon. Minister of Social Affairs is at present engaged in consultation with overseas organisations as to the best methods of establishing sheltered workshops. It is hoped that when these sheltered workshops are fully operational they will provide gainful employment for those trained at rehabilitation centres.

A Disabled Persons' Act is envisaged in Cameroon which will make provisions guaranteeing social equality, equality of employment opportunities and social security benefits for handicapped people.

Although these plans will require time before they are fully implemented, they are a manifestation of Cameroon's firm commitment to better the conditions of her handicapped persons under her policy of social justice for all which is one of the cornerstones of the policy of the Cameroon National Union as it has been expounded by the President, El Hadj Ahmadou Ahidjo.

Annex

Bulu Centre for the Blind, Buea

Ministry of Social Affairs

1. Brief history. The late Mr. Willie Bergert, formerly United Nations Adviser on Community Development in West Cameroon, first originated the idea of the Rehabilitation Centre for the Blind. As a result of this prompting, the American Foundation for Overseas Blind made available the sum of US$5,000 to help establish such a Centre. Funds were also made available by the Netherlands Organisation for International Assistance specifically for the installation of water and sanitation, the work to be undertaken by SATA. Money was also forthcoming from Oxfam, the Federal Government of Cameroon and private individuals.

From its inception in 1967 until 1971 the Centre was under the auspices of the Department of Primary Education in the former West Cameroon. In July 1972, the Centre was transferred to the Ministry of Health and Social Welfare and placed under the direct control of the Deputy Minister of Health. Since the reorganisation of the Government of the United Republic of Cameroon in July 1975, the Centre has been placed under the auspices of the new Ministry of Social Affairs.

Three batches have graduated from the Centre - making a total of 40 trainees in all. The fourth batch, consisting of 12 trainees,
middle of the second year at the Centre.

2. Training programme. The basic courses which the Centre offers its trainees are in simple farming techniques and handicrafts utilising local materials. The premier feature of the training programme, however, is the attempt to make the trainees proficient in the various skills necessary to enable them to fit into the community in which they wish to make their lives. This comprehensive aim embraces such skills as mobility and the various other techniques of daily living. The Centre offers courses in Braille and social orientation. The Centre also hopes to offer courses in some main stream academic subjects where a trainee shows a particular aptitude for these subjects. The achievement of this latter aim is dependent upon sufficient qualified staff being made available to the Centre. We place the greatest emphasis upon training the trainees to gain mastery of a wide range of basic skills - farming, handicrafts and Braille - which it is hoped will give them self-reliance and the ability to contribute positively to the family and village economy in which they live.

3. Objectives for the future. With the establishment of a separate Ministry of Social Affairs, it is believed that the way will be opened for the promulgation of a social legislation concerning the blind and handicapped in Cameroon. An integral part of this legislation would be the establishment of an extensive follow-up programme to enable the Centre to help the trainees after their training course.

4. Staff. The Centre is staffed by a combination of blind and sighted workers. We have three blind instructors who do the bulk of the training programme. The administrative domestic and general labour staff are all sighted. We hope to recruit some qualified sighted teachers in the future and also someone who can work with blind women. These two objectives are dependent upon the future expansion of the Centre.

5. Financing. The Centre is at present financed by an allocation of funds in the annual budget of the United Republic of Cameroon. This allocation is currently running at the sum of 2,730 frs. (CFA). This covers all the current expenditure of the Centre's feeding and clothing of trainees, payment of workers, fueling and maintenance of Centre vehicles, etc. Funds for capital expenditure such as new buildings, water supply, etc., are usually sought from international aid. We are at present trying to negotiate for a donation to build and finish one or two dormitory blocks of the most up-to-date design. We also hope to get a new land rover from some international agency.

6. Achievements. Since the inception of the Centre, approximately 40 trainees have graduated. Most of the trainees on graduating return to their homes and try to implement the techniques they have been taught at the Centre. One of our trainees has even gone as far as gathering the other blind persons in his community into a kind of day centre where he tries to impart to them the techniques that he was taught at the Centre. Indeed, this and all of the Centre's projects are really worthwhile.

3. Vocational Rehabilitation of the Disabled in Ghana

by

Mr. J.L. Adjei

Introduction

Years ago, the physically and mentally handicapped were considered second-rate citizens in Ghana. They were largely discounted as people of limited ability and resources, incapable of fending for themselves. They were virtually dependent upon their families for their existence. Few people thought they could actually contribute to family life, earn their own living or take part in other activities in the community.

Immediately after independence, the attention of the Ghanaian Government was directed to the large numbers of disabled persons in the country. As a result a committee was appointed to investigate the situation, assist in locating the disabled, register them and draw up a rehabilitation scheme for them.

The number of registered disabled persons as of 31 March 1975 was as follows:

(a)	deaf	5 372
(b)	blind	12 794
(c)	crippled	18 556
	Total	36 722

In view of the size and spread of disablement throughout the country, it was recommended that a special section within the Department of Social Welfare and Community Development should be set up to give each disabled person social and economic independence and to make him self-reliant. It also became necessary that the disabled should be integrated into the society. Hence, a programme using disabled resettlement officers began.

The rehabilitation scheme in Ghana has been designed to meet Ghana's particular needs. It provides industrial vocational training for disabled persons living in urban areas, sheltered workshops for those severely disabled and rural vocational training for those disabled who live in rural areas so that they can earn a living and support their families in the environment to which they arc accustomed.

Projects

Some of the crafts engaged in are carpentry, weaving, cooking, sewing, typing, music, leather work and tailoring.

For the mentally disabled there are three mental institutions in Ghana. These are the psychiatric hospitals at Accra, Ankaful and Adentan. In 1974, 1,199 males and 525 female mentally disabled persons were admitted to those hospitals and 920 males and 498 females were discharged. Four hundred and twenty-four males and 60 females absconded but 311 males and 16 females were returned to the hospitals either by the police or by their relatives. In that same year, 56 males and 36 females died and the present mentally disabled population is 1,875 - made up of 635 females and 1,240 males. The most prevalent type of mental illness is schizophrenia. Unfortunately, there has not been any epidemiological study of any areas concerning the incidence of mental illness.

To date, no well-laid programme for the rehabilitation of the mentally disabled has been planned. The only form of rehabilitation is occupational therapy, which is hospital-based. Community rehabilitation of the new mentally disabled does not exist in the country. There is a dichotomy of responsibility with regard to the rehabilitation of both the physically and mentally disabled. The Department of Social Welfare and Community Development deals with the physically handicapped and the Ministry of Health deals with the mentally disabled. There is, however, a co-ordination between the two services. It is also a medical and social fact that most physically disabled may suffer some form of mental disturbance. The mentally disabled may also suffer from physical disabilities. Services for the disabled are provided by the Ghana Education Service which runs special schools for disabled persons. The Department of Labour takes responsibility for their employment. They assist a great deal in this regard. The Ministry of Health takes care of the orthopaedic aids and wheelchairs.

Social welfare provides facilities such as industrial and rural rehabilitation centres for training and also sheltered workshops.

Problems

Owing to economic strangulation, it has not been very easy to get employment for the trained disabled. However, the Ghana Education Service employs a great number of the trained physically disabled as craft instructors in both primary and continuation schools. Some local firms also employ some of them.

Sheltered workshops

These are opened for those who cannot compete with others and cannot work in open employment.

Co-ordination

Some time ago, there was a dichotomy of responsibility with regard to the rehabilitation of the disabled whether physical or mental. This division does not prevail any more. There is a co-ordination between the three services. The Rehabilitation Section of the Department of Social Welfare and Community Development take on some of the mentally retarded children and train them.

Other voluntary organisations also play an important role in the rehabilitation programme of the disabled:

- Blind Society - caters for blind adults;
- Society of Friends of Mentally Retarded Children - mentally retarded children;
- Deaf Society - deaf training;
- Cripples Aid - wheelchairs;
- Mental Health Association - welfare of mentally handicapped persons.

Until 1968 the mentally retarded children were mixed up with the adult mental patients. The Society of Friends of Mentally Retarded Children was established by a group of public-spirited people and opened a special home for the mentally retarded children. The home gives training to those who are able to be educated and trained and gives custodial care to the severely retarded children. Sheltered workshops have been opened for the children.

4. Kenya's Programme in the Field of Vocational Rehabilitation of the Disabled

by

Mr. F.K. Boit

The first task of the programme is to provide a comprehensive picture of disablement in Kenya, outlining the kinds of disabilities from which people suffer, classified by age, sex and residence.

Poliomyelitis still continues to be the largest crippling disease in Kenya. The main form of control is through inoculation.

Blindness which is caused by trachoma and other infections takes second place. Mobile eye units visit schools and treat a constantly increasing number of patients.

Since most deaf persons are born deaf, speech therapy clinics offer services to deaf and mute children.

Kenya has approximately 6,000 mentally handicapped people. Many are admitted to a mental hospital under the care of a psychiatrist.

There are also paraplegics, accident victims, spinal injuries, leg and arm amputees, most of them disabled through motor accidents.

At present, Kenya has two categories of vocational rehabilitation services for the physically disabled.

The Industrial Rehabilitation Centre serves the disabled in the urban area; it looks to industry for wage-earning employment as a means of reintegrating the disabled.

Secondly, Kenya has six rural vocational rehabilitation centres, one for each province.

The rural vocational rehabilitation services in Kenya are designed to enable persons to support themselves and their families and live a full social life within their communities. They provide training in cash crop-growing, small animal farming, rural tailoring, shoe and leather work with rural crafts etc. Bearing in mind that more than 90 per cent of Kenya's population lives in the rural areas, it is intended that these people will be resettled in their home area.

At present, there is a sheltered workshop in Nairobi for the manufacture of orthopaedic aids, such as crutches, calipers, boots, wheelchairs, etc. The workshop functions as a sheltered workshop where the disabled are employed on a wage-earning capacity, although those employed there are not severely disabled persons. It is the intention of the Kenya Government to establish such workshops in the near future when funds are available.

Several sheltered workshops are run by voluntary agencies. These and other services provided by voluntary associations are financed from private contribution, but subsidised by government grants.

Blind

The Salvation Army in Kenya runs six schools for the blind, including a Trade Training Centre for blind adults. The Ministry of Education exercises supervision.

Deaf

There are sixteen schools and clinics for the deaf. Financing is obtained through public contributions and government grants.

The mentally handicapped

The agency serving the mentally handicapped is also supported through public donations and government grants. It provides assistance to all the school units for the mentally handicapped.

The National Vocational Rehabilitation Agency of Kenya also works closely with various other agencies in the field, and is currently employing members from International Volunteer Agencies towards promoting education for mentally handicapped children and expanding the training of special teachers.

Leprosy

There are several voluntary organizations designed specifically for the care of leprosy patients.

The emphasis [illegible] is still on treatment and control but it is recognized that rehabilitation is closely associated from the commencement of treatment.

The Division of Vocational Rehabilitation in Kenya hopes to establish on-going rehabilitation centres where groups of leprosy patients and their families may train together and learn to live as co-operative communities.

Some voluntary agencies operate mobile clinics which reach disabled persons in rural areas and provide services designed to relieve their distress and improve their prospects of rehabilitation. It is at the age of 16 years when they can be admitted to the rehabilitation centres.

The Government [illegible] is co-operating with the voluntary agencies in connection with the [illegible] programme.

Staff training

Rehabilitation programmes in Kenya started only a few years ago, and the Kenya Government is trying to create a staff training and administrative complex that would bring together under one roof all the facilities needed by the National Rehabilitation Committee and voluntary agencies when funds are available. There is no well-planned staff training at present, but staffs are learning from one another during staff meetings and through group discussions.

The staff training in vocational rehabilitation in Kenya still needs to be looked into; what is needed to achieve an effective programme is a long-term plan.

Problems

Certain problems hinder the efficient management of the rehabilitation centres. The major factor is the system of allocating funds.

Thus, the managers are finding it very difficult to administer a centre when there are no materials for the occupational instructors in the workshops. Similarly, the managers find it difficult to run the day-to-day activities of the centre when there is no money for transport operation.

There is a general shortage of staff, particularly among those with technical know-how in vocational rehabilitation programmes, who should be over 50 per cent of the total staff in every rehabilitation centre.

The managers are in the same salary scale as the occupational instructors. In fact, some instructors earn more than the boss (manager) who is over-all in charge of day-to-day running of the rehabilitation centre.

Future plans

Plans are under way to open an additional rural vocational rehabilitation centre.

Where the need arises, a special sheltered workshop will be established to cater for the needs of the very severely disabled, who cannot conveniently participate in the regular vocational rehabilitation centres.

Plans are under way to establish mobile rehabilitation units aimed particularly at taking rehabilitation services to disabled men and women who cannot leave their families to undergo courses in rehabilitation centres.

Future plans also include the following projects.

(1) Full rehabilitation schemes for the mentally handicapped.

(2) Co-operatives for leprosy patients in conjunction with the Ministry of Health.

(3) Mobile delivery and collection units, to organise the distribution of raw materials, and marketing of finished products.

(4) Suitable rural resettlement and follow-up services.

5. Vocational Rehabilitation of the Disabled in Liberia

by

D. [illegible]

The aims of the Klay Basic Crafts Training Centre are to develop in each student an active interest in industrial life and in the methods and problems of production - also to promote the appreciation of good design and workmanship and the ability to select, and care for the industrial products wisely. We want to develop in each student the habit of self-reliance, self-discipline, and resourcefulness in meeting practical situations of living. It is this Centre's hope that each student will develop in himself the ability to do useful things and to develop desirable attitudes and practices with respect to health and safety; that they should bear in mind that all skills must be accompanied with a habit of orderly, complete, and efficient performance of any task. This Centre wishes to assist the students in becoming useful to those in need in the society and to be willing to join in group undertakings. It is our hope that during the two years' training period students will learn to use tools skillfully and work constructively. Last but not least, the total training is geared towards the needs of the country, and to the goal that students put into practice their skills to the best of their ability.

Actually, in our Centre we are not only concerned with disabled persons, but also with the less fortunate, drop-outs, those lacking the ability to make normal learning progress. Our problem also involves the selection of those who will be of use to society through productive work. The problem extends to young men and women from broken homes, unwanted children and those who lack a sense of direction. Therefore, we try to assist these persons and place them in the right direction to become useful and productive citizens in our society.

As I have stated earlier in this paper, we try to place our trainees in various private enterprises. Although there have been no special provisions made, and there are no buildings for special services, private and public enterprises have given much assistance. My country at this stage is just beginning to realise the need for rehabilitation, and thus our programmes are still within the initial stages of identifying the needy. Maybe in the future Government will provide specialised vocational rehabilitation services. Few of the centres permit their patients to remain and work; our society being young in this field still finds it difficult to accept rehabilitated persons. At present we possess a private school for the mute and deaf, a government centre for the mentally disabled, a private leper colony, a social service centre, a government leper colony, as well as the Klay Basic Crafts Training Centre. Each of the privately owned centres is given a yearly subsidy by the Liberian Government.

Our Centre, because of its moderately equipped shops and its technical know-how, is used in many instances for consultations on how to assist handicapped persons through the use of specially adapted machines. Because we are not able to accept individuals as residents of the Centre, we simply provide whatever useful instructions or information we can give. Our concern then becomes to recommend useful methods that would enable the rehabilitated to become a part of our society. Not until society accepts these people, will we be in the position to aid them as the need arises. It is our hope that new programmes of general education will create conditions for an effective system of rehabilitation.

At the Klay Basic Crafts Training Centre, in conjunction with rehabilitating young men and women to become full participants of our society, regular class room courses are taught in five major fields, metal trades, electrical trades, building trades, air conditioning and refrigeration, and home economics. Each shop follows a daily schedule of 20 per cent lectures and 80 per cent practical work. Because of this scheme, we are able to produce young people who in later years have proven to be self-sufficient and productive workers in industrial areas as well as in

177

rural areas. Health is emphasised within the home economics field, the emphasis lies on health and hygiene: young ladies are prepared to assist needy families in their homes, as well as to acquire certain clerical skills. During the period of training, instructors involve students in needed community activities and these are considered part of the course. This practice serves as an act of education and a service to the community.

In 1973, this Centre sent two of its instructors for a six-month training course to Turin under the aid of ILO and the Liberian Government. Most other rehabilitation centres train their own technical personnel.

In our Centre management we still face many unresolved problems. One is to persuade the general public to accept rehabilitated persons, and to get the general staff to understand and to become willing to accept and willing to work with such groups. Another is the building of a firm understanding of the problems involved and what measures must be applied. Full co-operation from all agencies concerned and financial support is a crucial need for all rehabilitation centres in the Republic.

Plans for the future are:

1. To study how the few existing centres could co-operate effectively in tackling a variety of rehabilitation problems.

2. To initiate a strong programme of training able and interested persons to become rehabilitation workers.

3. To set up programmes for rehabilitation centres to co-operate in the utilization of resources as well as the assignment of trainees in accordance with their disability or rehabilitation progress.

6. Research for Rehabilitation Schemes in the Libyan Arab Republic

by

Mr. M.A. Tayeb

Until 1973, no law had been issued to organise the rehabilitation of the disabled or invalids to enable them to continue their ordinary work except some phrases in the Social Organisations' Law and in the basic regulations which organised committees for the blind.

In 1973, the Revolutionary Command Council issued the Social Security Law Operandus No. 72, which included certain texts for organising the rehabilitation scheme as shown in the fifth article:

"Social security may include industrial security measures and precautions and rehabilitation of the invalid and injured."

Article 27 specifies material benefits:

"Rehabilitation of the injured and sick to provide them with new opportunities to work and produce."

The Council of Ministers issued a directive in paragraph "h", article "6", to organise the Social Security Organisation creating a department for rehabilitation and medical assistance.

The Minister of Social Affairs and Social Security then established the necessary administrative staffing and organisation within the framework of the Social Security Law.

Training activities and existing rehabilitation efforts

At the present time, certain organisations are working independently in the rehabilitation of certain groups according to their available facilities and resources, such as the committees for the blind. These committees are training the blind in the following areas:

(a) typing in braille;

(b) printing books in braille;

(c) operating telephone switchboards;

(d) making handicraft items such as brushes, baskets, brooms, bamboo articles, etc.

Ministry of Health efforts in rehabilitation

Recently an agreement has been made with the Ministry of Health to train a number of the blind in physiotherapy. Three have passed examinations successfully and are now working in Ministry of Health hospitals.

The Ministry has also established a rehabilitation section which is headed by a doctor specialist and has created a small factory for the manufacture of artificial limbs.

The Government has now established a large centre in Tripoli for rehabilitation and has expended up to date a total of one-and-a-half million Libyan Dinars. When completed it will be one of the most modern centres in the world. It is located on an area of 53,000 square metres, 6,050 for the buildings with the remaining assigned for gardens, playgrounds, swimming pools and other activities. When operational the centre will be divided into two sections:

(a) The boarding section will accommodate 100 residents and will include facilities for recreation, an auditorium and a library.

(b) The day section will accommodate another 100 trainees.

The centre contains a medical treatment section which includes facilities for X-ray, orthopaedic surgery and plastic surgery; a complete physical therapy area is also included in this section.

Specialists will render services in the above medical sections.

The centre contains workshops for different trades and will be equipped with modern materials and equipment.

Specialised teachers and instructors will be selected and appointed to the various trade sections.

The centre will be fully equipped within the coming months and the dedication opening will be on 1 September 1976.

The dedication programme will be prepared with the co-operation of the ministries concerned, i.e.:

- Ministry of Health;
- Ministry of Labour and Civil Service;
- Ministry of Education.

The main aspects and emphasis of the programmes in the Tripoli Centre will be:

(1) utilising the existing strength of the individual for rehabilitating him in a new trade within his capability, environment and inclination;

(2) providing each trainee with the necessary tools to earn his own living;

(3) providing the individual with the necessary medical and psychological assistance during and after the rehabilitation period;

(4) seeking places for suitable employment through issuing laws and regulations enforcing the employers to employ some of these people for appropriate positions.

The main fields to be programmed are:

(1) secretarial;

(2) radio and television repair;

(3) telephone repairs and switchboard operation;

(4) watch and clock repair;

(5) metal engraving, wood carving and related ornamental and fine crafts;

(6) ceramics and pottery;

(7) hand weaving and rug making;

(8) locksmithing.

Special attention will be given to the programme organisation in order to provide the necessary flexibility to meet the individual needs of the trainees: these will be selected according to technical conditions from between the ages of 16 and 50 years and found to be medically fit. The programme will also enable those individuals who are capable of continuing their formal public education to do so as well as encourage and facilitate the development of the technical qualifications of those gifted with special talent in art, photography, music, etc.

This centre will be used for training the necessary manpower for establishing and operating similar rehabilitation centres which will be established in various parts of the Libyan Arab Republic in the future.

7. Vocational Rehabilitation of the Disabled in Malawi

by

Mr. G.P. Mchiela

1. Extent of the problems of disability

There are no reliable figures available of the number of disabled people in Malawi. A country-wide count has never been attempted as this would cost a great deal of money, staff and effort. In spite of this, voluntary registration of the handicapped undertaken by the Malawi Council for the Handicapped in order to assess the magnitude of the problem of disability, has provided a norm for the whole country. It is, therefore, assumed that out of a population estimated at 4 1/2 million, 9 per cent are disabled due to polio, blindness, leprosy, deafness, mental disorder, tuberculosis, industrial and motor accidents. This means that there are about 400,000 people requiring vocational rehabilitation services in the country.

2. Existing vocational rehabilitation services for the physically and mentally disabled

(a) Resettlement in agricultural projects

The main emphasis of vocational rehabilitation in a developing country like Malawi, with an agricultural economy, must be on agricultural rehabilitation. For this reason the resettlement of blind farmers in agricultural schemes is progressing very well in Malawi.

The programme which started with two blind men in 1969, with the assistance of the Royal Commonwealth Society for the Blind, now has a total of 52 blind farmers resettled successfully in five different agricultural projects. In all, the scheme's blind farmers, like their sighted counterparts, are encouraged not only to grow maize for their food but also to grow cash crops such as cotton, tobacco and groundnuts.

Prior to resettling the blind people, they undergo a six months' training course in agriculture at a government vocational training centre for the blind.

(b) Weaving project

Not all disabled people can be absorbed into agricultural resettlement; age, physique and temperament may make it impossible. It is for this reason that the Projects Officer for the Royal Commonwealth Society for the Blind in Malawi initiated a pilot weaving project in October 1971, which has since been taken over by the Malawi Council for the Handicapped (RCSB relinquished its responsibilities in Malawi in April 1975).

The project utilises mostly material that can be obtained locally. Looms and spinning wheels are easy to construct and simple for a disabled person to operate. For spinning, cotton grown in Malawi is used, while dyeing of the yarn after it has been spun is done with the assistance of a local textile factory.

After a thorough evaluation of the pilot project, it was found to be economically viable. Malawi Council for the Handicapped then approached Christoffel Blindenmission in West Germany for funds to expand. The organisation seconded a weaving expert and made sufficient funds available for the building of a weaving centre which is now under construction.

When the new weaving centre comes into operation before the end of this year, 80 per cent of the staff will be disabled and will include blind, crippled, deaf and other types of handicaps. Different designs of carpets, table mats and ladies' bags are the products of this project.

The project is not intended as a sheltered workshop but as a commercial enterprise which will be self-supporting and profit-making so that it contributes to the economic growth of the country, while at the same time providing opportunity for the less fortunate members of society to earn their own living.

3. Services for special groups

(a) Occupational therapy programme

Most of the convalescent patients participate in the occupational therapy activities at the mental hospital situated in Zomba. The emphasis is on agriculture although some do carpentry work, basket making and weaving of carpets. Some are involved in maintenance work, distribution of food, laundry and clerical work.

(b) Education for the deaf

Since 1968, Malawi has had its own programme for the deaf at Montfort Teacher Training College near Limbe. The programme includes training teachers of the deaf, a school for deaf children and an audiology testing centre for all patients with hearing problems.

4. Co-ordination of services

The need for a co-ordinated service for the disabled was recognised by the Government of Malawi, hence the establishment of the Malawi Council for the Handicapped as a statutory body, to act as an agent of the Government in promoting the welfare of the handicapped. The Council's functions include:

(i) advising the Government in all matters affecting the welfare, education, training and employment of the handicapped and in regard to all matters relating to the prevention of any type of handicap;

(ii) promoting public interest in the welfare and care of the handicapped;

(iii) administering vocational and rehabilitation services for the handicapped;

(iv) raising and receiving funds and donations which it may apply for the welfare of the handicapped.

5. Staff training

Training of staff is mainly on the job but whenever chances occur, staff also attend seminars and workshops within or outside the country.

6. Problems related to management of rehabilitation centres

The problems related to management of rehabilitation centres are mainly:

(i) lack of adequate and professionally trained local staff to manage rehabilitation centres;

(ii) inadequacy of financial resources to develop and run rehabilitation.

7. Future plans

The Council appreciates that the need for rehabilitation services is tremendous. It is realised, however, that for a country which is predominantly agricultural, such as Malawi, the major rehabilitation outlet for the disabled people must also be agricultural. Agricultural training would equip disabled people to take their place in the rural way of life to which about 98 per cent of Malawian population live and to which most of them are accustomed. Plans for new projects are therefore being developed on these lines but they can only be materialised, however, if funds are available.

8. North Central State of Nigeria - Vocational Rehabilitation Programme

by

Mr. D. Aduak

Introduction

According to the 1971 beggars and disabled census figures, the North Central State of Nigeria had a grand total of 137,309 beggars and disabled people. The census figures served as an indicator of rehabilitation problems and the need for a serious rehabilitation programme in the State. Begging for alms has remained one of the most serious social problems in the North Central State and many parts of the Federation of Nigeria. The North Central State has already taken definite steps forward towards banning begging and providing shelter and training for the disabled and infirm people in the State.

Two rehabilitation centres are already being built in two major towns in the North Central State at Kaduna and Zaria. It is expected that each of the centres will accommodate about 500 persons. In future the service will be extended to all the 14 administrative divisional headquarters of the State. Already the North Central State Ministry of Social Development has established a rehabilitation unit which will supervise and deal with all matters connected with the rehabilitation programme. Site plans, drawings and materials connected with the proposed rehabilitation centres will be brought by me to the course in Addis Ababa.

Existing vocational rehabilitation services for the physically and mentally disabled in the North Central State are:

Name and type of centre	Services provided
(a) Sheltered Workshop for the Blind, Kaduna	The centre caters for army and civilian people. Most of the instructors are skilled-sighted and blind civilians.
(b) Sheltered Workshop for the Blind, Zaria	Caters for 30 blind trainees in various crafts, like rope making, rope carpet weaving, door mats, car floor mats, etc.
(c) Sheltered Workshop for the Blind, Katsina	Caters for 40 blind trainees in various crafts like mattress making, rope making, rope carpet weaving and car floor mats, etc.
(d) Leprosarium Majeru, Zaria	The leprosarium is a treatment as well as a rehabilitation centre for lepers. They are engaged in agriculture and other vocational training while they are in the centre for treatment. Assessment and guidance is given to them during treatment and training in the centre.
(e) Leprosarium at Babban Ruga Katsina	It is a residential treatment and rehabilitation centre for leprosy patients. In this centre as is the case with the Majeru centre in Zaria, physiotherapy and vocational guidance is given to the leprosy patients.

In Nigeria most employers have prejudice against the employment of handicapped persons. In fact few employers are prepared to employ handicapped persons in their industry no matter how skilled they may be. Already plans are on the way to educate employers. The rehabilitation unit in the North Central State intends to put pressure on the Government to legislate for the employment of skilled handicapped people. In our plans for the two new rehabilitation centres in Zaria and Kaduna, we intend to make the rehabilitees self-employed as much as possible.

183

Services for special groups of people

Types of groups	Training and services provided
(a) The blind and the partially blind	They are taught rope carpet weaving, mattress making, rope making, tailoring, making of cane baskets and baby cots.
(b) Crippled and the lame, etc.	Cripples, the lame and amputees will be taught sewing local caps and straw hats, leather work and embroidery of native garments. It is hoped that textile factories will offer jobs suitable to their physical conditions. Some of them will be engaged in woodwork like carving, while others will be in pottery, etc.
(c) Deaf and mute	Not much is being done for the deaf and mute in the North Central State. There are two schools for deaf in Ibadan Western State and in Lagos. From time to time cases in need of attention and placement are referred to these schools for training.
(d) Mentally handicapped or subnormal children	There is a home for children in this category in Zaria called the Torrey Home. It was started by Miss Torrey, an American lady with the assistance of the former Northern Nigerian Government. It is now being run by the Torrey Home Society of Northern State with grants from the Government.
(e) Kakuri Mental Infirmary, Kaduna	The Kakuri Mental Infirmary is being run by the Ministry of Health, North Central State, for the treatment and rehabilitation of mental cases and drug addicts.
(f) Psychiatric Hospital, Kaduna	It is the only psychiatric hospital in the North Central State catering for acute mental patients. It is run by the Ahmadu Bello University Teaching Hospital.
(g) Lunatic Asylum, Katsina	It is run by Katsina Local Authority, for mild and serious mental patients awaiting treatment and custody respectively.

Co-ordination

The co-ordination of rehabilitation services in the North Central State is assisted by the ministry responsible for social welfare. The Ministries of Health and Education provide complementary services to the handicapped and their children. Voluntary agencies such as Muslim or Christian organisations, missionaries, the Red Cross Society of Nigeria, the Boy Scout Association of Nigeria and the Northern Nigeria Society for the Blind, have been offering services and their contributions have been very valuable. The relationship between these organisations and agencies has been very cordial.

The proposals and plan for new rehabilitation centres in the North Central State, which are well on the way to being effected, invite the full involvement of all sections of the communities in the rehabilitation programme. The State Rehabilitation Service is being established under an 18-man committee drawn from all parts of the State and from all walks of life to give a good representation of opinion and interests.

Staff training

The staff training for the existing rehabilitation services in the North Central State of Nigeria, and indeed with other parts of Nigeria, is given both locally and overseas. The training varies from non-professional to professional levels. In view of the statistics quoted at the beginning of the essay, there is a need for advanced training facilities at the local level to cope with the problems. The Kaduna Polytechnic has direction towards this, and it is hoped that it would not be long before a rehabilitation training department is opened in the Polytechnic.

Unresolved problems related to management

There is an acute shortage of trained personnel for the rehabilitation centres and sheltered workshop in the North Central State. This situation calls for more training facilities at local level and overseas. To my mind, the main objective behind vocational training in a rehabilitation centre, is that of providing the individual a means of livelihood outside the centre. The resettlement and integration of the individual into normal life of the community of his choice becomes the responsibility of the Government through the agency responsible for social welfare. The Government should explore job possibilities by all means to provide the graduates of our proposed rehabilitation centres, jobs with various organisations. If need be, a law should be passed to enforce the acceptance of trained handicapped people into the job markets. The Labour Office could be of great assistance in this respect.

After-care officers should be employed to take charge of the employment and resettlement of the graduates into industries, government and local government authorities services. They should be responsible for the resettlement of graduates into the communities of their choice. The public on their part should be educated against prejudices and superstitions of handicapped people. The after-care officers could as well take care of placement and sales of whatever products the students have produced in the centre.

Plans for the future

The North Central State Government of Nigeria plans to set up rehabilitation centres and sheltered workshops at strategic places all over the State. It is also intended that, as soon as the Zaria and Kaduna centres start functioning, street begging will be prohibited forthwith. More staff to cope with the rehabilitation services will be trained.

Grand total for the State: [illegible]

9. The Programme of Rehabilitation of the Disabled in Rwanda

by

Mr. J. Hategekimana

At the present time, there are in Rwanda:

- one centre which looks after the physically handicapped (GATAGARA);
- two co-operatives for the physically disabled (MERA and SOCORWA);
- one rehabilitation centre for the young deaf and dumb;
- one psychiatric centre (NDERA CARAES);
- one service for lepers (AMIS DU PERE DAMIEN).

HVP GATAGARA

The centre of GATAGARA was established in 1960 on the initiative of Reverend Father Joseph Fraipont-Ndagijimana. He is a Belgian, but recently was given Rwandan citizenship. The aim of the centre is twofold: to rehabilitate the physically handicapped and to reintegrate them into society.

A. Rehabilitation section

(a) Medical care

The medical section is run by one physician who looks after the health of the young and the personnel of GATAGARA. She is a European and volunteer working for the handicapped.

Three physiotherapists are in charge of physical re-education. Each physiotherapist works with an assistant physiotherapist. Two of the physiotherapists are European and work on a contract basis. The contract lasts two years but is renewable. The third is a national who was trained in Belgium. All the assistant physiotherapists are handicapped and were treated at the centre.

A graduate nurse who is handicapped herself assists the physician. Persons accepted for rehabilitation are those who show signs that they can be helped i.e., persons who have lost their lower limbs and who can wear a prosthesis, those who are born club-footed, plus other cases who present a problem of fitting.

We help those who are not accepted outside the centre by giving them advice. Those who have been treated at GATAGARA centre come back regularly to have their fitting replaced or repaired.

(b) Orthopaedic workshop

The orthopaedist and his workers make and repair the fittings and walking aids for the handicapped. It is the only orthopaedic workshop in the country. The material is imported from Europe but one kind of leather is bought from the local market. The orthopaedist is a European working with 12 workers, all handicapped.

N.B. The physician, the physiotherapists and the orthopaedist work in close collaboration in the rehabilitation of the physically handicapped.

(c) Boarding

The children between 4 and 13 years accepted for rehabilitation stay at the centre. They live in pavilions in groups of the same age and sex. Those who are young live together, both boys and girls. A group of some 15 children live in the same pavilion. The youngest live in the nursery for 40 children. There are two instructors for every pavilion. The instructors are mostly handicapped. More than 1,200 handicapped have been treated at Gatagara centre, 838 of whom were boarders.

(d) Education

During their stay at the centre, the handicapped follow their primary school at the centre itself. The school programme is the same as the one followed in government schools. There is a complete primary school of six years. Six qualified teachers teach at the school. They are paid by the government.

The handicapped who have finished their treatment go back to their homes. Those who cannot continue their education due to long distance or family problems stay at the centre. Those who are not kept at the centre are grouped in outside teams of 15 to 20. This is organised by the centre. The communities are spread all over the country. These are established as near as possible to the schools in order to avoid travel fatigue. Fellow handicapped girls head the communities. Most of the time they are under the patronage of priests or sisters of the area. At the moment there are eight teams. The personnel from the medical, orthopaedic and social section visit them every two months in order to supervise them and check their fittings.

(e) Social section

For the moment, the social section stresses the side of the family and the profession of the handicapped. They visit families of the handicapped to see the situation in the family, the geographical situation as well as the religious milieu. They also follow school activities of the handicapped who attend school from their homes and help them when necessary to find a job after spending a relatively long period with their families.

Having realised the importance of this department, the management decided to divide the centre into: the social section which remains at GATAGARA to take care of the handicapped who are less than 18 years old; and the reintegration section which will look after the handicapped who are above 18 years of age. Its headquarters will be in the capital, Kigali, and planning is under way.

(f) Workshops (see also annex)

At GATAGARA workshops have a double role: to make money for itself and to offer sound training in the shortest time possible to the handicapped. At present, the centre has the following workshops:

- a garage which employs 8 workers including 2 handicapped;
- a carpentry shop which employs 11 workers including 5 handicapped;
- iron work, welding and smithing which employs 4 handicapped;
- orhopaedics which employs 14 workers including 12 handicapped;
- the pre-cooperative for girls (embroidery and basket making) employs 13 handicapped;
- orthopaedic.

Each workshop has its own budget and an account at the main centre. They help to meet the needs of the house but also do work for outsiders so that funds are available for GATAGARA.

B. Department for reintegration

The department will help the handicapped of 18 years or more to fit them into society by helping whenever necessary in finding them a job. The organisation and installation of that service is under way. In this field of reintegration, GATAGARA has made great progress:

- 30 handicapped were in secondary schools and higher institutions in the academic year 1974-75;
- other services in GATAGARA allow more than 60 handicapped to work;

- two industrial co-operatives MERA (Manufacture Electronique et Mecanique du Rwanda) and SOCORWA (Société de Confection Rwandaise) employ more than 120 handicapped persons;

- more than 45 handicapped have succeeded in forming families. Other projects are being planned for new undertakings and workshops for the handicapped.

Other information

Personnel

At the end of the academic year 1974-75, the centre of GATAGARA employed 190 people, 180 of them paid by GATAGARA. These include the skilled personnel heads of different services and workers. Of the personnel 96 members (or 53 per cent) are handicapped. The primary school teachers, a nurse and one of the physiotherapists are paid by the Rwanda Government.

Sources of finance

GATAGARA receives money from:

- allowances paid by the handicapped who lodge at the centre. The contribution is very small;

- money earned by workshops;

- grants from outside (the aid can be in different forms, in money or in the form of food, plaster, medicine, clothing, blankets etc.):

  (a) subsidies of the Rwanda and Belgian Governments;

  (b) various organisations;

  (c) companies;

  (d) private people;

  (e) committees of the friends of GATAGARA.

All funds are channelled through the accountancy department. The regular revenues of GATAGARA are not sufficient to meet all the expenses considering what has to be done in order to better the situation of the handicapped. That is why the centre is constantly appealing for funds to keep it running up to the end of the year.

Difficulties

(a) On the medical side

Taking into account the shortage of personnel and necessary equipment, GATAGARA cannot afford to accept handicapped persons other than those who fulfil the conditions mentioned earlier. It is unfortunate that we have to refuse many who do not fall in that category; for instance the sick, IMC, etc. (Débiles - Infirmes Moteurs Cérébraux). That is why GATAGARA wishes to have some other people take the initiative of caring for those who are not accepted at GATAGARA. In order to eradicate poliomyelitis in Rwanda, it is necessary to launch an intensive vaccination campaign not only within the frontiers of Rwanda but also on border areas of neighbouring countries. Such a campaign can only be done by an international organisation such as WHO.

(b) On the social side

The centre not only rehabilitates handicapped persons but also must care for their reintegration into society. But handicapped already rehabilitated at GATAGARA are already old. A job must be found for them in an area where even those who are not physically handicapped face unemployment. Solutions are not easy to find.

(c) Financial side

The centre of GATAGARA is not sure of a constant flow of funds. The fees given by parents and money earned from the sale of goods from the workshops are not enough to cover all the expenses necessary for the good running of the centre. Consequently it is necessary to seek aid. It would be more appropriate to have conventions with different organisations so that these may finance regularly the projects developed by the centre.

(d) Projects for the future

At the start, the centre of GATAGARA does not only wish to look after the polio-stricken people but also all the handicapped. In that framework it has established a centre for the deaf and dumb. The aim of GATAGARA is to establish a school for the blind, the creation of workshops for the seriously handicapped (sheltered workshops), more workshops for the apprentices, the implementation of new projects, etc. Extra-mural teams should be increased in order to allow many more handicapped who have been rehabilitated to continue their primary-school education. These teams will eventually form a mini-GATAGARA. The creation of a mobile orthopaedic team is under study. It will visit all parts of the country to make prosthetic or orthotic appliances for the sick in different hospitals of the country.

Relations between GATAGARA and the Rwanda Government

Since its foundation, GATAGARA has been aided by the Government and there has always reigned an atmosphere of understanding. This year a convention has been signed between the Rwanda Government and ASBL, HVP GATAGARA. That convention has given many advantages to the ASBL:

- training of physically handicapped and even non-handicapped personnel;
- exoneration from taxes (exemption from tax);
- recommendation to international organisations;
- stability of government personnel working at the centre;
- salaries of graduated personnel;
- moral and material support, etc.

A law governing special training has been submitted to the Government for ratification. It will be in the framework of that law that sheltered workshops of the handicapped will be placed.

The Church helps GATAGARA in different fields and in various ways.

Two co-operatives were started by HVP GATAGARA so as to reintegrate disabled persons into social life

I. MERA co-operative

MERA (Manufacture Electronique et Mécanique du Rwanda) Rwandan electronic and mechanical manufacture was born in 1965 at GATAGARA. The manpower was chiefly composed of the young disabled rehabilitated at GATAGARA. The head of the workshop was a Belgian electronics engineer. In the beginning, the CEDES (Corps Européen de Développement Economique et Social) lent MERA 350,000 Fr. R.

After two years of existence, MERA became a co-operative composed of thirteen disabled persons (from GATAGARA). Thanks to the Rwanda Government, MERA built its new workshop at Kigali the capital. At present, the MERA co-operative gives employment to 78 clerks and workers, 54 of whom are disabled. The co-operatives number 57, of whom 43 are disabled. The management is entrusted to a Rwandan manager who is an electrical engineer.

At first, MERA wanted to manufacture transistor wireless sets by importing parts from Europe. But unwarranted (it had no social capital) MERA could not obtain from suppliers or bankers the raw material or credit; some sources of finance were found from:

- a private group of Belgians;
- some Rwandan companies such as: the Rwanda Savings Bank, the Rwanda Development Bank and the Rwanda Commercial Bank.

Since MERA became a co-operative, the members have increased the capital by their contributions.

The problem which faces MERA is to find running expenses which permit it to buy enough raw material to have sufficient stock to operate regularly. Fortunately Canadian organisation is going to provide credits to MERA.

The production of MERA:

- in 1969	3 740	wireless	sets
- " 1970	3 028	"	"
- " 1971	4 700	"	"
- " 1972	4 421	"	"
- " 1973	7 500	"	"

It will be noticed that production has been fluctuating. This situation was due to a deficiency of stock.

In the beginning of 1975, the different assembly lines were reorganised and the laboratory equipment was improved. So MERA is now able to triple its production of wireless sets.

Its financial situation is improving and its main suppliers began to trust it. This has favourably affected the production.

Up to this day, MERA has sold its produce on the Rwandan market. As production is increasing, passing from 7,500 to 25,000 wireless sets a month, MERA will export its produce to the markets of neighbouring countries, chiefly eastern Zaire and Burundi. A UNIDO expert made a market study for MERA in 1973 and that study was very promising.

The following are the activities of MERA:

- the manufacture of wireless sets;
- a repair service at a cheap price;
- manufacture of amplifiers, speakers, records, interphones, charges of accumulators,etc. This has been done since 1968;
- in 1970, MERA also began to manufacture bicycles and motorcycles; an average of 250 bicycles and 300 motorcycles have been sold since 1971. These are export possibilities.

The social activities of MERA:

MERA, ever anxious to facilitate the social life of its workers, has decided on the following:

- a canteen has been opened for the workers with meals at reduced prices;
- the infirmary has been improved;

- in collaboration with HVP GATAGARA and SOCORWA, MERA hopes to have a recreation hall, cinema, theatre, canteen, infirmary and a library.
- the HVP GATAGARA will build 36 houses, one of which can accommodate three persons or one married couple. This project is to accommodate the disabled persons working in MERA and SOCORWA co-operatives.

II. SOCORWA co-operative

SOCORWA (Société de Confection Rwandaise) is a dressmaking establishment which has been created in 1970. Its activities are chiefly based on the industrial manufacture of shirts. Initially, the workshop worked in the juridical framework of HVP GATAGARA. Since 1973 it became an autonomous co-operative. However, it always works in premises furnished by GATAGARA while expecting to install itself definitely in its new workshop which is nearing completion in Kigali.

The aim of SOCORWA is to realise, through common effort, the reintegration into active social and economic life those disabled leaving GATAGARA.

It is the reason why the workers of SOCARWA simultaneously receive a technical and social education. The management of the workshop tries to maintain the social and human evolution in parallel with technical evolution in the spirit of a real co-operative.

Technical education

The workers learn different types of work and become accustomed to the use of electric sewing machines. They are initiated into the cutting; they receive mechanical elementary courses adapted to the sewing machine; they acquire the knowledge of different parts constituting a shirt, shorts etc. The workshop has a cutter and a mechanic who can repair a sewing machine. Since 1971 a section for apprentices has operated. An instructor teaches them dress making. This system of education is very efficacious. Two workers went to Belgium at the end of September for theoretical and practical training.

Social education

Since its inception the management of SOCORWA workshop has opted for participation of the workers in the development and orientation of the enterprise. But the difficulty is that the workers do not have sufficient education. They have only finished the primary school. Evening classes were organised but the workers did not attend them because they did not understand their importance. The fact that they have to make a long journey after work contributed to their lack of response.

The management of SOCORWA has a system of favourising the workers' social education. The following measures have been taken:

- the creation of a management committee. Every final decision is taken following debate in the committee. This is meant to educate those persons who directly partake in the management and organisation of the enterprise;
- the creation of a mutual fund. This fund is managed by the workers' committee. The aim of this fund is to lend money ~~to~~ those workers who need it for valid reasons. This operation has developed in the enterprise, a sense of saving and fellowship;
- the organisation of the training courses with the help of the Government so as to explain the law governing co-operatives, the vital principle of a co-operative etc.

The social education seems slower than the technical education.

The SOCORWA workshop became a self-reliant co-operative after three years of working. This transition has not been realised abruptly but the preparation was done on the human and financial aspects: abilities and wishes of each one have been taken into consideration; the workers saved monthly one-tenth of their wages so as to constitute a social property. It is a sacrifice on the part of each worker because the wage is very small. The initial property is 500,000 Fr. divided into 1,000 portions of 500 Fr. each.

The results

The SOCORWA provides employment for 50 Rwandans, 48 of whom are disabled. Most of the workers have received on-the-job training.

(a) Production: since 1970 the average monthly production has been around 1,500 pieces. The variations in proportion with the average are explained by:

- the periods of public or unforeseen holidays (lack of fuel);
- the difficulties of supply in raw material;
- the will of the management not to omit the social aspect within the workshop. In fact, the workers must participate in the development of the institution instead of being mere spectators.

(b) The sales: as in all poor countries, the source of income is chiefly from agriculture. Then the sales increase greatly after harvests.

(c) The turnover: the average cost by article is:

	Fr. piecemeal
- in 1970	138.5
- in 1971	187
- in 1972	192
- in 1973	262

The SOCORWA prices are lower than prices of identical imported articles. For instance, a classical shirt costs 400 Fr., a similar imported shirt costs between 600 and 800 Fr.

(d) Variety of articles: at first, SOCORWA wanted to produce shirts. Later on the workshop wanted to satisfy local demand, for instance working clothes, sheets, curtains, official uniforms etc. That diversity had two aims:

- to allow the workshop not to limit itself solely to the manufacture of shirts but also to start making other types of clothing;
- to show to consumers the varieties that SOCORWA can offer in order to gain their confidence.

Sources of funds

- Belgium helped SOCORWA initially first by paying the salaries of two Belgian technicians, by giving necessary funds to buy sewing machines as well as building the new workshop in Kigali.
- The HVP GATAGARA lent SOCORWA the premises. The manpower consists mostly of the disabled who leave GATAGARA.
- Mr. Vercuyee of Belgium gave cloth, sewing machines etc.
- As SOCORWA is a co-operative, the monthly contribution of the members constitutes a worthwhile source of funding for the co-operative.

Nevertheless, the co-operative is not yet able to stand on its own feet. It must depend on foreign assistance.

The present manager of SOCORWA is a European. There is no competent disabled at the moment to take over his place. They may have to engage a non-disabled person as MERA has done.

Common problems to MERA and SOCORWA co-operatives

The managers of those two workshops which chiefly provide employment to disabled who have been rehabilitated at GATAGARA are convinced that these types of co-operative offer the best form of training and employment for the disabled. But production must increase. Unfortunately the disabled working at present in the MERA and SOCORWA workshops have a very low standard of education (six years of primary school). Thus, they are unable to participate effectively and actively in the sometimes different work which is required in such undertakings as SOCORWA and MERA.

The physical handicap itself is not the stumbling block because the working station is disposed so as to respond to individual handicaps.

But the psychology of the disabled person, due to his inferiority complex, can slow down the productivity.

The disabled who were educated in GATAGARA have lived in a fictitious world in which they were protected. According to managers, the disabled did not accustom themselves to assume responsibilities.

The managers maintain that there is a cold conflict between the disabled and non-disabled. This stems from the fact that the disabled are convinced that the co-operative belongs to them and that they must therefore assume the main responsibilities.

It seems the workers have not yet realised the real meaning of the co-operative.

III. Rehabilitation centre for the young deaf and dumb

It was Reverend Father Fraipont, the founder of HVP GATAGARA who launched the project of rehabilitating the young deaf and dumb in Rwanda in 1967. At that time there were two teachers who looked after 12 young deaf and dumb. They were using premises loaned to them by GATAGARA. At present 13 students have completed their training at the rehabilitation centre and 30 more are now following the courses in the new premises at Butare in the south.

The objective of the centre is to teach them how to express themselves. During their training they acquire an intellectual training through the general studies which they follow at the centre. The centre aims at the same time at reintegrating them in society. Eight deaf and dumb are already apprentices (two in MERA, two in SOCORWA, one at the carpentry shop of GATAGARA). The other four rejoined their respective families.

The staff of the centre is composed of an administrator, a director of pedagogics (who is at the same time a teacher) and two other teachers. Two teachers followed their courses in the centres for the deaf and dumb, one in Brussels and the other in Montreal.

The deaf and dumb lodge at the rehabilitation centre under the supervision of three physically disabled women. The latter have been trained at GATAGARA rehabilitation centre.

The money to finance the running of the centre comes from the allowance of 1,000 Rwandan francs paid by each pupil at the beginning of the year and the aid of more than 1 million Rwandan francs provided by the Brothers of St. Gabriel of the Province of Champlain, Quebec, Canada. These Brothers are the ones who took charge of the centre.

The Government helps the centre in various ways: government school inspectors supervise the studies given at the centre and two teachers of the centre are paid by the Government. An official request has been submitted to the Government to recognise the rehabilitation centre for the deaf and dumb as an ASBL.

The rehabilitation centre of GATAGARA also helps this centre as much as possible. The centre for the young deaf and dumb intends to put up similar centres in other parts of the country. There are of course the difficulties of obtaining specialised instructors and finding enough funds to run these centres.

IV. Service for lepers: APD (Amis du Père Damien)

In Rwanda, 5,000 cases of leprosy have been registered but to be nearer the truth, one has to double this number. The patients are cared for by the Friends of Father Damien (Amis du Père Damien).

In our country there are three main posts. One run by Father Terwangne and serving two prefectures in the centre "Kigali and Gitarama" and three prefectures in the west "Gisenyi, Cyangugu, Kubuye". Another is in Butare in the south and serves the prefectures in Butare and Gikongoro. A third is in the north and serves the prefectures of Ruhengeli and Byumba and also Kibungo in the east.

It is a mobile service in all these places. The patients wait in predetermined places near their homes. Of the 700 patients treated, half the number have been cured. There are, however, cases where the disease recurs especially at the age of puberty and menopause for women.

The patients treated for leprosy are also treated for skin diseases as a preventive measure, as well as for other diseases. There exists in Nyundo-Gisenyi (north west) a small hospital to treat the muscles which shrank due to recurrent leprosy.

There are three types of leprosy:

(a) (lepromateuse) leprosy whose microbes are found in the blood. It is this type of leprosy which is contagious;

(b) demorphous leprosy;

(c) tuberculosis leprosy whose microbes attack nerves. This type of leprosy is neither contagious nor does it recur.

The staff is composed of eight people; five nationals and three expatriates. Three of the five nationals who work here were trained on the job; the other two studied social sciences. Three others who are Europeans were trained in dermatology. The APD adopts the principle of having an equal number between nationals and expatriates, if not a greater number of nationals. The medical care does not consist only in curing but also in detecting leprosy. The members of the staff go to the homes of the lepers to advise them to pay attention to fire because lepers lack sensitivity. For the moment, the Friends of Father Damien do not have difficulties and have no formulated projects. The Rwanda Government supports them. The treatment is free and all the expenses are met by the APD in Belgium.

V. NDERA psychiatric centre (CARAES)

The centre was opened in 1972 near Kigali (capital) by Charity Brothers (Frères de la Charité) at the request of Rwanda Government. It is the only one in a country which has a population of 4.5 million. It has a maximum intake capacity of 120 patients. Some of the patients come from their homes, others are given beds at the centre.

Requirements for admission

The patient must be a Rwandan, having a medical certificate delivered by the nearest hospital or dispensary and a certificate from the local chief (Bourgmestre) and bearing the signature of a member of the family (this is done to ensure the return of the patient to the family). For foreigners, there must be an agreement with their respective embassies.

Running and finance

The Brothers of Charity built and equipped the centre. They also contribute to the training of nationals in the field of psychiatry. They also provide 1 1/2 million Belgian francs annually for the running of the centre. The Rwanda Government pays for upkeep of the patients (food, clothing, bedding, medicine, water and electricity). It provides lodging and means of transport to the personnel. It pays the staff and workers of the centre. The contribution of the patients is very small and social diseases are treated free.

Number of patients

Year: 1974	Men	Women
651 new cases	419	232
868 old cases (these were seen by the doctor)		
437 who were admitted	259	178
110 cases (those who fell sick again)		
483 whose condition improved	309	174
6 died	2	4
4 escapees	2	2

In the past, the patients first spent a long time in prison without receiving any treatment. Now they go directly to the centre and those who remain in prison receive adequate medical care.

Medical care

The centre provides medical care to those patients who have serious mental troubles. Those who are restored can regain their homes and return to the centre for treatment if necessary. For the serious cases, the patients spend on average between one-and-a-half to two months at the centre. The treatment is free.

Personnel

The skilled personnel include one psychiatrist (a Rwandan) and four psychiatrist nurses (foreigners). The rest of the personnel (Rwandans) received a general medical education. They undertake refresher courses while they work. For an extensive programme, an on-the-job training in Rwanda and abroad should be envisaged. The same thing is done for the assistants.

(a) Difficulties

Post-cure service is deficient. Unfavourable geographical conditions and long distances prevent patients from coming back regularly to the centre for treatment. This is very often the cause of another mental breakdown and this is a real waste of money and medicine. The most immediate solution should be decentralisation of the service so that it can reach populations in the distant corners of the country. Two psychiatric dispensaries should be set up at Butare in the south and Ruhengeli in the north.

(b) Social and vocational reintegration

In our country, mentally sick persons are accepted in the social milieu. Unfortunately the incurable patients cannot be integrated in the social milieu. They remain in the care of government and up to now such cases are treated in Kigali. There is a special prison for the mentally sick. For the mentally sick having no families, the centre has bought a plot where they live. However the plot should be enlarged and the lodging as well as the equipment improved. In our country which is not yet industrialised, where there are many unemployed even among healthy persons, it is difficult for the mentally restored to obtain employment or even to get back their former jobs. This often results in another mental breakdown, banditism, delinquency etc.

Plans

The centre has a plan for creating many workshops for mentally disturbed persons (carpentry, semi-professional activities etc.).

Annex

WORKSHOPS

There are two methods of training disabled persons:

1. In a training workshop.
2. Through a section of apprenticeship.

At GATAGARA you can find both these means.

1. A training workshop for disabled girls

At the moment there are 13 handicapped boarders. Two teachers teach them for nine months in such subjects as basket-making and sewing. After their training some of them work in the pre-cooperative for girls from GATAGARA. The others return home and work for themselves. The disabled girls who go back home meet the following difficulties:

- they do not easily find the raw materials such as tissue, fibres, wool, etc;
- they have no tools such as a sewing machine;
- they do not find buyers.

2. The pre-cooperatives for girls

It is a workshop for girls which employs 13 handicapped. They undertake embroidery, basket-making and knitting pullovers. Their production is chiefly bought by foreigners as souvenirs. The handicapped girls who are working in that workshop have been trained in the training workshop for disabled girls. We do not know yet whether that workshop will become a true co-operative.

3. The orthopaedic workshop

The orthopaedic workshop employs 14 workers including 12 handicapped, 4 of whom are apprentices. The orthopaedic workshop makes:

- prostheses;
- fittings and crutches for disabled persons;
- orthopaedic shoes.

Every Wednesday two or three orthopaedic workers with the medical and social section go to visit one of the eight teams spread all over the country in order to supervise them and check their fittings.

4. The carpentry shop

The carpentry employs 11 workers including 5 handicapped. There are at the moment 3 handicapped apprentices. A teacher teaches them woodwork on the job. The apprenticeship lasts two years. During their apprenticeship the apprentices from GATAGARA receive 300 Rwanda francs (US$1 = 93 francs), lodging and food.

The carpentry shop at GATAGARA produces to order: timber, furniture, beehives, doors, windows, etc. It works for GATAGARA and for outside customers.

5. The garage

The workers must repair and check the ten vehicles of GATAGARA and one electricity generator. When they have time they do subcontract work. The garage employs eight workers including two handicapped. The GATAGARA management wants to increase the number of workers so as to be able to accept work from private customers on a regular basis.

6. Iron-work, welding, smithery

These trades employ four handicapped in the same location. They make: iron beds, iron windows, gates, spears, iron statues, etc.

The difficulties experienced by the workshops

GATAGARA maintains that all workshops should be autonomous and train the handicapped at the same time. The first difficulty is to find running expenses which permit them to buy enough raw materials. The second difficulty is to produce more and at the same time train the apprentices who do not produce anything. The best solution is to give a workshop allowance for each apprentice.

If the law governing special training is ratified, the Government should give the necessary subsidies.

The workshop projects of GATAGARA

Up to the present GATAGARA has launched chiefly the workshops for handicapped boys. It also intends to provide more workshops for handicapped girls (biscuit-making, dressmaking, etc.).

The seriously handicapped cannot work in the workshops without slowing down the production. That is the reason why GATAGARA wishes to establish sheltered workshops.

10. Vocational Rehabilitation in Sierra Leone

by

Mr. E.E.F. Williams

I. Extent of the problems of disability

The extent of the problems of disability all over the country cannot accurately be estimated. There are those in distant areas such as "Fakais" or small villages, where roads are inaccessible, and hundreds of them have found themselves in undesirable situations, mainly or wholly depending on their families friends and missionary workers for their daily needs. They are closely tied up in their areas and cannot easily be persuaded to move to centres where they cannot be sure they will have better assistance. Apart from this group, there are those who are pupils of institutions, such as the Milton Margai School for the Blind and the School for the Deaf; the Occupational Therapy Centre for the Mentally Retarded and Ill; the Cheshire Home for Deformed Children, and the Massanga Leprosarium. The total figures in this group are not available, but the Cheshire Home and the blind and the deaf schools alone account for about 100 inmates.

II. Existing vocational rehabilitation services for the physically and mentally disabled, in general (i.e., vocational assessment guidance, training, employment and sheltered workshops)

The existing vocational rehabilitation services for the physically and mentally disabled are in their initial stages and need finance and trained personnel for expansion. There is a section in the Ministry of Social Welfare called "Community Development" headed by a blind officer who, I understand, is a graduate of the Fourah Bay College, University College of Sierra Leone, and who was further trained in the United States of America in vocational rehabilitation services. This young man, Mr. Frederick Kamara, has been doing a tremendously good job. He visits the blind and deaf schools and gives advice and guidance to inmates of these institutions. There is a farm craft centre for blind adults in one of the provincial towns, i.e., Kenema, where the inmates are taught farm craft for about three years. However, it seems that there is no provision for placement in jobs at the end of their term of training. At the end of this period, they return to their home towns and villages to set up work on their own. I understand that there is a plan for the establishment of a brush factory for the blind, but the questions of finance and trained personnel appear to be a problem.

III. Services for special groups (e.g., the blind, deaf, mentally retarded, leprosy patients, etc.)

The blind and deaf schools and the Cheshire Home for Deformed Children provide academic education for their inmates. It is unfortunate that, on leaving school, there is no provision for training to fit them into the world of work. Efforts are usually made to place them in employment, but without proper training, employers normally do not readily accept them. Thus, many cases end up in frustration because, having spent time in receiving an academic education, they are left unemployed. There is an occupational therapy centre at Kissy Mental Home in the greater Freetown area where the inmates are sometimes engaged in furniture work. At the Massanga Leprosarium inmates with plastic fingers are engaged in woodwork, producing chairs, tables and other types of furniture.

IV. Co-ordination of these services with education, health, social and community services

The Ministry of Education gives advice and assistance to the blind and deaf schools. At the Massanga Leprosarium and the Occupational Therapy Centre at Kissy, the Ministry of Health examines the health of these groups of men and women and, when necessary, gives appropriate treatment.

260

V. Staff training

It would seem that proper attention is not being paid to the training of rehabilitation personnel. Mr. Frederick Kamara, whose name I mentioned earlier on, is the only properly trained specialist. Perhaps more attention should be immediately given to the question of staff training.

VI. Unresolved problems - particularly those related to management of rehabilitation centres and sheltered workshops

The problems here are lack of sufficient finance and properly trained personnel; such problems are referred to the Government and organisations, such as the Royal Commonwealth Society for the Blind and the ILO. Also personal appeals are made to the general public, especially in the case of finance.

Authorities are most grateful for the assistance they sometimes receive from these sources.

VII. Plans for the future

The following suggestions were made for consideration:

(a) to organise vocational guidance, psychological and vocational aptitude testing, vocational training and job placement as well as follow-up services;

(b) to establish relations and close co-operation with schools and organisations for the handicapped;

(c) to work in close co-ordination and collaboration with the Ministries of Education and Labour on matters pertaining to the education, training and employment of the handicapped;

(d) to organise a resettlement programme of rehabilitation, such as the one for the trainees at the farm craft centre for blind adults in Kenema;

(e) to plan, organise and develop a co-ordinated vocational programme for the blind and the physically handicapped;

(f) to organise a nation-wide registration scheme with the kind co-operation of all provincial social development officers, district officers, medical officers, tribal authorities and all other authorities concerned for all categories of handicapped persons;

(g) to establish, if and when deemed necessary, a national co-ordinating council for rehabilitation services;

(h) to organise a public education programme and institute for training for rehabilitation;

(i) to persuade the Government to pass or legislate laws that should help in promoting the welfare, rehabilitation and employment of the handicapped.

11. Vocational Rehabilitation Services in Somalia

by

Mr. M.H. Balayah

Introduction

Allow me in this paper to emphasise the fact that the workers, who are human beings above all things else, represent the major factor in the production process. A programme to provide them with the various goods and services they require demands the active and effective co-operation of all our organisations and member States.

The developing countries are forced to accept persisting underdevelopment despite their vast national efforts. However, the people of the Somali Democratic Republic firmly support the policy designed to improve the conditions of work and to enforce productivity, social progress and economic advances. This attitude, which is and always will be the chief concern of our revolutionary Government, has enabled us to do a great deal despite the difficult present economic circumstances.

These circumstances include drought throughout the country, and the need for waging our illiteracy campaign. As regards the effect of drought on our national economy, I would point out, first, that all water sources have dried up and all underground springs as well; secondly, a great many head of cattle and wild animals have perished; thirdly, crops have been destroyed and there has been a disastrous drop in the production of agricultural goods; fourthly, there has been a very serious falling off in exports with all that that means for the balance of payments, and there was also a reduction in the citizens' purchasing power; fifthly, many Somalis have been obliged by drought to abandon the countryside and have drifted into refugee camps and into towns. The number of persons affected by drought and receiving assistance from the Government are something like 250,000 including disabled and non-disabled, and the measures taken by the Government in this field included a programme of vocational training to enable those affected by drought to settle in other areas to take on occupations other than that of shepherding cattle.

The vocational training programmes financed by domestic funds will be implemented next September. It will include training and retraining of about 125,000 persons in various agricultural occupations and 125,000 persons working in the fishing industry. This means that employment has to be found for 250,000 workers affected by the conditions of drought. At the same time, projects concerning cattle-raising, plantation and fishing are under way. Disabled persons await the completion of the proposed vocational rehabilitation centre where they will receive general care and a basic education.

Our Government has been successful with one of the major objectives of the Revolution; by this I mean the illiteracy campaign, which is part of the development of agricultural areas in Somalia. This campaign is now in its second phase; during the first phase, between October 1972 and March 1973, some 500,000 people, mainly in the towns, were offered a new and democratic education which is designed to offer equal opportunities to all Somalis. Altogether about 1.25 million citizens are being taught to read and write.

Another step was the decision of the Government of Somalia to declare formally equality between disabled and non-disabled people. Previously, the support of the disabled rested either upon their families, or the individuals were forced into begging. During recent years, however, the Government stressed that also disabled persons have an important part to play in the development of our country.

In the colonial era some disabled students could attend small schools, often only to learn how to make shoes. A large number of the mentally retarded, deaf, blind and lepers had no teachers to train them and no facilities for training.

The new Ministry of Labour and Sports now has a programme for the vocational rehabilitation of the vast number of disabled people who at present are kept in special camps. It is very essential to complete the proposed rehabilitation centre at the end of 1976. It has been designed to provide vocational orientation, vocational assessment, vocational training and placement services using trained staff who were in teams. The ultimate goal is to help the trained disabled in their successful settlement and resettlement in gainful occupation.

Moreover, the centre is also intended to be a training place for the necessary rehabilitation staff. It will also set the pattern for many future units which may be established.

The vocational training of disabled persons in our country will require a complete and careful vocational assessment of all persons to be trained. This, therefore, will be a very important function of the vocational rehabilitation centre although, due to the current lack of qualified evaluation personnel, this activity will have to be started without a specially furnished workshop for this purpose.

The following personnel are needed in order to carry out the services to be rendered:

- Director of the Centre
- Chief instructor
- Instructor in garment making (tailoring)
- Instructor in garment making (ladies dress making)
- Instructor in handicraft
- Instructor in electrical training
- Teachers in general education
- Social workers
- Placement officer
- Clerk/Storekeeper
- Driver
- Doctor, part-time
- Cook
- Kitchen helpers

There may be need for additional personnel, depending upon where the vocational rehabilitation centre is to be situated. Some of them can be trained locally at present, but the rest will have to travel abroad for further education.

The space needed in the proposed vocational rehabilitation centre is some 640 m^2, comprising the following sections:

- Workshops	140 m^2
- Garment making	70 m^2
- Clerical training	70 m^2
- Lecture room	280 m^2
- Library	50 m^2
- Doctors office	30 m^2
- Social workers room	50 m^2
- Placement officers room	10 m^2
- Chief instructors office	10 m^2
- Directors office	10 m^2
- Office	10 m^2
- Conference room	20 m^2
- Store	30 m^2
- Toilets	60 m^2

In the future we are planning the expansion of the centre as soon as funds and trained personnel are available to include the following:

- Workshops for metal work, furniture making, welding etc.
- Carpentry and joinery
- A small sheltered workshop.

I hope the Somali people will achieve full benefits from the completion of the vocational rehabilitation centre, in particular:

- Productive employment of disabled people
- A useful contribution to the national economy
- Social benefits in that disabled people will have a goal for which to work
- An easing of the support burden upon the families of the disabled.

12. Sudan's Programme in Vocational Rehabilitation of the Disabled

by

Mr. M.S. Abdel Rahman

1. Extent of the problem of disability

The lack of statistics on disability as well as the absence of general services for the disabled make it extremely difficult to measure the extent of disability in the Sudan. International estimates indicate that the number of blind, for instance, is about 0.45 per cent of the total population. In my country the figure may be higher because some of the principal causes of blindness usually found in the developing countries, e.g. trachoma, seem to be prevalent in some parts of the country.

An international survey conducted by the International Society for Rehabilitation of the Disabled some years ago indicates that the proportion of disabled persons in the total population of any given country is about 5 per cent. Even higher percentages have been presented because some crippling diseases, e.g. poliomyelitis, are prevalent in some parts of the country.[1]

2. Existing vocational rehabilitation services for the physically and mentally disabled in general

The Department of Social Welfare supervises and directs all the vocational rehabilitation services in the country. It directs the efforts for all the different groups of the disabled. These efforts can be summarised as follows:

El Nur Institute for the Blind

This is a governmental institute concerned with the blind. It provides them with educational, instructional and rehabilitational services. Forty-five children attend the Institute, seven of them are girls, 25 of them boarders. All services are delivered according to the academic system of the Sudan Ministry of Education up to the higher secondary school stage. Specialised teachers are responsible for the Institute's programme. In the technical fields the blind are given training in different types of skills. The Department of Social Welfare also co-ordinates the efforts of voluntary and governmental units working in the disabled services. Voluntary organisations play a great role in rehabilitation services. The voluntary organisations are:

(a) Khartoum Cheshire Home

"It provides accommodation for physically handicapped children under 15 years and they are also provided with school education and therapeutic exercises. Maximum capacity at present is 12 children."[1]

(b) The Society for the Rehabilitation and Welfare of the Disabled

It is mainly interested in the rehabilitation of disabled adults. It conducts research and studies on disabled groups.

(c) The Deaf and Dumb Society

It provides social and medical services. It has established a special school for deaf children.

---

[1] Assignment Report by Esko Kosunen, UN International Adviser in Rehabilitation of the Disabled, New York.

(d) The Sudanese Blind Association

Provides recreational services and helps in finding employment for the blind after rehabilitation.

(e) The National Association for the Welfare of the Blind

Provides social and medical welfare services for the blind.

(f) The Sudanese Society for the Relief of Leprosy

Its main objective is to promote and encourage all efforts and iniatives displayed in furtherance of the relief of leprosy throughout the country.

(g) The Sudanese Society for the Prevention of Chest Diseases

It provides social and medical care for patients.

(h) The Sudanese Benevolent Society

"It operates courses for girls (able-bodied) in embroidery, knitting and sewing. In the same area, another small building has recently been constructed with the purpose of setting up a workshop for training disabled children between 12 to 15 years of age."[1]

(i) The National Society for Mental Health

It conducts scientific research.

3. Staff training

There are a few trained staff who work in the blind-care field and there are others in the field of the deaf. Also, Sudan is very poor in trained personnel in the field of the mentally retarded and physical therapy.

Most of the trained staff are sent to the Al Naiton Blind Institute (usually financed by the Arab League) in Cairo, or to the Institution for the Deaf in Damascus, Syria.

4. Problems

In reference to principal problems that hinder the development of rehabilitation of the disabled and the best solutions to these problems, one could say:

(a) The lack of statistical data showing the actual number of disabled and the types of disability and their needs. Here it is essential to begin these studies, but still the problem is the lack of human and material resources.

(b) There are insufficient courses of training for the various professionals in the different fields of disabled services.

(c) Also lack of well-equipped building and institutions for the disabled is one of the main problems.

(d) The country does not have enough experts to help in planning for the rehabilitation of the disabled.

---

[1] Assignment Report by Esko Kosunen, UN International Adviser in Rehabilitation of the Disabled, New York.

5. Plans for the future in the Sudan (governmental)

(a) A special division for disabled services has been established within the Social Welfare Section and a special committee for the disabled within the National Council for Social Welfare is to conduct studies on disabling conditions with a view to reaching the best solution.

(b) Rehabilitation of the blind: within the general expansion of the Institute facilities necessary for the annual intake of new pupils, it is also planned to set up workshops for vocational training. On the other hand, the National Committee for the Welfare of the Blind is considering an agricultural training programme for the blind and has obtained from the Government a promise of suitable land for this purpose.

(c) Rehabilitation of the deaf

"Land has been acquired for constructing an institution for the deaf which will be used as a school and a vocational training centre for the deaf."[1]

(d) Medical rehabilitation and orthotics/prosthetics

"The Ministry of Health has established a long-term plan to develop medical rehabilitation services using the Orthopaedic Centre which will not only assemble artificial limbs and orthotic appliances but will also produce parts and joints for them and in addition have a medical rehabilitation service, beginning with a physical therapy unit attached to it; later it is planned to organise a physical therapy school and develop occupational therapy services."[1]

(e) Voluntary organisations

Have plans to set up various kinds of rehabilitation services for the disabled in the near future; those organisations are:

> Cheshire Home, Sudanese Benevolent Society, and the National Society for Rehabilitation and Welfare of the Disabled.

---

13. Tanzania's Programme in the Field of Vocational Rehabilitation of the Disabled

by

Mr. E.M. Mshana

I. Introduction

In September 1973 the Prime Minister's Office, in co-operation with the Social Welfare and Probation Division, carried out a national survey of disabled persons. The survey started from the village to the ward, division, district, region and to the central Government where co-ordination of activities of all the regions is done. By June 1975 some 60,000 disabled persons had been identified who would require care, rehabilitation, resettlement and other welfare services. The results of the survey were not sufficiently detailed to give precise information of disablement patterns, but the broad indications were sufficient for the purpose of planning. However, the survey is still going on, and it is considered that these efforts have already proved the possibility of establishing a national register of disabled persons without much difficulty.

II. Existing facilities for vocational rehabilitation for physically handicapped

In 1972 the Government, helped by ILO, started a national vocational rehabilitation programme for the disabled. The first step was the construction of a pilot vocational rehabilitation centre at Yombo, Dar-es-Salaam, with the capacity for 100 trainees.

A. Yombo Vocational Rehabilitation Centre

At the present time, Yombo is the only vocational rehabilitation centre; disabled candidates come from all over the country through the help and co-ordinating process of regional welfare officers in the 20 regions of Tanzania.

Tanzania has now about 13 million people. Out of these only 500,000 are employed and the rest are self-employed in agricultural activities. This is why the trades taught at the Centre are strongly rurally oriented. These trades are: carpentry, tailoring, market gardening, small animal husbandry, handicrafts and blacksmithing.

Besides the counselling which is done by a welfare officer assigned to the Centre, there is no need for vocational guidance since there are not so many professions that could cause confusion in the process of job choice among disabled trainees. Vocational assessment is done by observing each trainee perform at each of the Centre's trades for three days.

Vocational training takes one year generally, but more time may be taken for those who are slow learners.

A team approach is utilised in solving problems that confront each individual trainee.

B. Resettlement

Tanzanian development policy is to mobilise people to work in common. You have probably heard of Ujamaa villages where people live and work together to step up progress.

This is why the resettlement of trainees graduating from Yombo has been so designed as to follow this national policy line. Those who graduated from Yombo Centre have been grouped into three production workshops which operate as co-operative workshops. The aim is to support them initially and allow them to be self-supporting when their economic condition allows.

At present the resettlement scheme includes the creation of 4 production workshops built at Tanga with 29 disabled persons, Mwanza with 15 disabled, Mboya with 15 disabled and D'Salaam with 8 disabled. All of these workshops have tailoring as the principle trade, except Tanga which includes carpentry.

Nevertheless, other forms of resettlement have not been ignored. These are provided for those who could not join their companions due to family problems and they are provided with trade tools to go and resettle with their families.

In future we hope to resettle some of the Yombo graduates in Ujamaa villages where they will perform their trades as their village share of communal work.

III. Existing rehabilitation facilities for special groups of disabled

A. The blind

As is universally known, the blind all over the world have aroused more of a response to their need for help in the normal person's mind than for any other type of disabled. This has been true even in Tanzania. The blind have various rehabilitation services, such as:

1. Ten primary schools, which are under the Ministry of Education; they are integrated schools, three residual primary schools for the blind only, four integrated secondary schools, and one teacher-training centre which is also an integrated school.

2. Under the Social Welfare Division, the blind have two vocational training centres for males, and plans are under way for the construction of a vocational training centre for blind women and girls. More emphasis has been recently placed on agricultural training in both centres. Trainees graduating from these usually either go home to rejoin their relatives or to one of the two village settlements, i.e. Mwange in Masasi, or Urambo in Tabora. These villages are run on the political basis of the country with the exception that they are financed by the Government in their initial stage.

   The Royal Commonwealth Society for the Blind has been helping a great deal in developing rehabilitation services in the country since 1956.

B. The deaf

This is one of the groups of disabled persons whose rehabilitation has not yet been satisfactorily and systematically undertaken. There is one theoretical school for the deaf run by a Roman Catholic Mission at Tabora. This school covers the seven years of primary education in ten years.

The only other rehabilitation facility for the deaf is a nursery school built by the Tanzanian Society for the Deaf in 1974. The Society started in 1970 as a voluntary agency with the aim of furthering rehabilitation services for the deaf.

C. The mentally retarded

This group of handicapped persons has neither been surveyed nor made the object of rehabilitation services. The main reason is that many not too serious cases get absorbed in agricultural activities since these activities do not require much brain work. However, as industrialisation steps up, more cases are bound to need special attention.

D. The mentally handicapped

The Ministry of Health has five units for the medical rehabilitation of the mentally handicapped. In addition to these hospitals there are two so-called "half-way villages" where the recovered mental patients stay and slowly become integrated into normal life again.

209

E. Leprosy patients

Leprosy patients have attracted the attention of service-givers from very early times.

There are about 20 leprosaria catering to about [illegible],000 patients in the country. These leprosaria usually include resettlements of cured patients who cannot return to their homes either due to shame or due to rejection by their families because of their deformities.

IV. Administration

Vocational rehabilitation services are mainly run by the Social Welfare Division which also supervises, subsidises and co-ordinates all rehabilitation services in the country whether they are performed by a government or by a voluntary agency.

So far, vocational rehabilitation is only a section within the general schedule of services to the disabled. Two of its staff, i.e. Mr. N. Ndaka who has over-all charge of the national programme for vocational rehabilitation for the disabled and Mr. E.P. Nyamwihura, the Dar-es-Salaam and coast regions rehabilitation officer, were awarded ILO fellowships in vocational rehabilitation. Most of the other staff have been trained on the job with the help of several foreign experts who work in the programme under bilateral agreements between Tanzania and the concerned expert's country.

V. Problems

Two factors present problems in the evolution of the rehabilitation programme:

(a) The programme is new and hence one meets with difficulties when confronted with services that need co-ordination with other agencies which are not so familiar with rehabilitation.

(b) The world-wide economic problem's pinch is greatly felt in this still-too-young programme.

VI. Future plans

The Division of Social Welfare has the following plans in mind as regards vocational rehabilitation:

(a) the setting up of rural vocational rehabilitation centres in the 20 regions of the country;

(b) a mobile rehabilitation unit that will carry rehabilitation services to home-bound disabled persons;

(c) spreading of production workshops for the disabled;

(d) systematisation of co-ordination of rehabilitation services in the country;

(e) systematisation of placement services for the disabled;

(f) the expansion of administration directly responsible for vocational rehabilitation.

14. Vocational Rehabilitation of the Disabled in Uganda

by

Mr. R.M. Karozi

A. Extent of the problem of disability

The Government of Uganda realised the need of vocational rehabilitation in 1965. It invited an ILO expert to organise the scheme under the Ministry of Culture and Community Development. A pilot registration project of the physically and mentally handicapped persons in the country was carried out in 1965. During that week, designated "Handicapped Citizens Week", a total of 31,646 persons were registered. About 13 per cent of the disabled people had two or more disabilities.

Following the information collected, together with international principles which have been used elsewhere, it was assumed that Uganda had 650,000 disabled persons with obvious disabilities and roughly 6,000 becoming disabled through different causes annually. The national register for disabled people now has over 33,000 people.

B. Existing vocational rehabilitation services

The Uganda Vocational Rehabilitation Service provides a variety of centres for particular purposes, though all are designed to improve the prospects of disabled people and lead them to independence.

Generally speaking, it is taken for granted that every disabled person, whether or not he or she can work, is eligible for the service. However, demarcation between those capable of benefiting from vocational rehabilitation and those incapable of doing so is being fairly followed by the recruitment staff (DROs with the help of doctors).

At present the following are the vocational rehabilitation services for the physically and mentally disabled people

(i) One industrial rehabilitation centre - designed to prepare disabled persons for entry or re-entry into employment. The disabled people undergo training in the following: metalwork, woodwork, tailoring, bamboo craft, silkscreen printing, office training, etc.

(ii) Four sheltered workshops - to provide regular and protective employment for severely disabled people in activities like umbrella assembly, canvas work, cloth printing and raincoat making.

(iii) Five rural vocational rehabilitation centres - usually at district level, designed to offer training tailored to the requirements of a rural economy, i.e. agriculture, animal and poultry keeping, making local rural crafts, home tailoring, literacy, etc.

(iv) A mobile vocational rehabilitation unit - offering facilities to immobile disabled women at village level, i.e. home economics.

(v) TWo resettlement homes - designed to recover disabled beggars and their families and leading them to self-reliance through training and group resettlement on land as smallhold farmers.

(vi) Besides these there are other facilities offered by voluntary agencies.

C. Services for special groups

Special categories of disabled persons have in most cases been helped by voluntary organisations under the auspices of missionaries and associations which, under trying financial conditions, do carry out good vocational rehabilitative activities. To the extent permitted by the available resources, the voluntary organisations have the support and co-operation of the Government, i.e. some get annual subvention from the Government and staff on secondment.

Examples of these categories are:

(i) Uganda Foundation for the Blind - Established in 1954, with assistance of the Commonwealth Foundation for the Blind. It has pioneered agricultural education, training and resettlement of adult blind persons. With the support of the Ministry of Health, the Foundation organised a mobile eye unit, treating trachoma in rural areas and a trachoma eradication scheme.

(ii) Uganda Society for the Deaf - Since its establishment in 1959 the Society has concerned itself with problems caused by deafness and the means by which they can be overcome. It has established schools for deaf children at Namirembe and an annexe at Ngora.

(iii) Uganda Association for Mental Health - Although little is known about mental health in Uganda, and the number of people suffering from forms of mental conditions, the Association tries to draw public attention to the problem, its incidence and methods of help, treatment, home nursing and care of mentally handicapped persons. The Association also hopes to build a school for the mentally retarded children.

(iv) Uganda Spastic Society - It has concerned itself with problems of spastic children and their parents, and tries to devise means to overcome them. It has also established a school for spastic children.

(v) Leprosaria - These organisations are engaged in rendering medical treatment and resettlement of burnt out leprosy cases in various areas of Uganda.

D. Co-ordination of these services with education, health, social and community services

The Ministry of Culture and Community Development encourages other Government Ministries and voluntary agencies to take keen interest in the welfare of disabled people through the National Disablement Advisory Council, whose duty is to advise the Minister of Culture and Community Development on matters regarding the welfare, planning, registration, recruitment, training, and resettlement of disabled persons on the land and in employment. The Council is a link between Government and voluntary agencies which are directly or indirectly interested in the welfare of the disabled people.

Although some Ministries and organisations have separate responsibilities for the disabled, they are beginning to appreciate their interdependence and the need for co-ordinated action leading to a unified service. For example, the regular referrals of clients to the Ministries of Education, Health and Labour demonstrate that problems exist for which they provide services.

There are also officials from other Ministries, voluntary organisations and the public, who serve on the National Disablement Advisory Council and District Disablement Advisory Committees. Finally, some public establishments and individuals provide employment to the trained disabled people.

E. Staff training

There are no specific long-term training courses for rehabilitation staff, apart from periodical in-service courses, seminars and staff conferences aimed at enabling them to adjust themselves to handling disabled people. Some staff members have been offered fellowships and have attended seminars outside Uganda. The ILO has taken the lead in providing the staff with such training facilities.

F. Unresolved problems, particularly those related to management of rehabilitation centres and sheltered workshops

In a developing country like Uganda, there are bound to be problems related to management of rehabilitation centres and sheltered workshops. The following are some of the problems being experienced as far as the management of rehabilitation centres and sheltered workshops is concerned.

(i) There is a lack of raw materials and sometimes equipment for sheltered workshops, which depend on overseas supply, and this results in lack of sufficient work to keep the handicapped personnel employed.

(ii) Lack of enough staff with sound ability and business background to man the various workshops, i.e. how easily to secure contract work from industrial firms and determination of proper charge for services given.

(iii) Lack of funds to meet the workshops' financial needs, i.e. expansion of working space.

(iv) There is a lack of vocational assessment facilities in some rehabilitation centres and sheltered workshops, i.e. training for work situation. To a certain extent, due to lack of sufficient medical personnel, there is little medical assessment of the clients accepted in centres and workshops, and this makes it hard for the management to know how the disability of an individual affects his or her work capacity and work outlook now and in the future.

G. Plans for the future

The Ministry of Culture and Community Development is preoccupied with finding out how best vocational rehabilitation services can be extended to as many disabled people as possible. In doing this, plans are under way to set up a legal comprehensive rehabilitation service, defining in clear terms the responsibilities the Government and those of other bodies involved in rehabilitation activities. It is equally concerned with training of staff who will be capable of giving professional and other aspects of rehabilitation services. Funds becoming available, it is planned to open up one rural vocational rehabilitation centre in each district and one more industrial rehabilitation centre in the second largest industrial town of Jinja. Plans are also afoot to transform the existing sheltered workshops into a corporation, which will be operated on a revolving fund and divorced from government interference, so as to expedite and rationalise their operations.

15. Zambia's Programme for the Handicapped

by

Mr. T.K. Nkonde

1. Zambia, a landlocked country, is surrounded by a number of neighbouring countries. Zaire and Tanzania in the north, Malawi and Mozambique in the east; Rhodesia and Botswana in the south and Angola in the west. Zambia, a country with an area of 290,000 square miles against 4.5 million people is located below its neighbouring equatorial countries.

Out of a population of 4.5 million in Zambia, according to statistical figures from the census of national population and housing of 1969, a total figure of 89,000 persons are handicapped. I have no analytical figures for various handicaps that affect man in Zambia but the main handicaps are: blindness, mental disablement, physical disabilities resulting from accidents, congenital deformities and amputations as a result of leprosy and other diseases.

The extent of the problem of disability is viewed as high. This is seen in the enormous figure representing handicapped people, their insufficient training, coupled with the distances between their location which makes it difficult to contact them for any available training or job opportunities and for any available employment opportunities.

2. The Zambia Council for the Handicapped, a government-sponsored organisation which is attached to the Ministry of Labour and Social Services is responsible for the welfare and rehabilitation of all handicapped people in Zambia. Its headquarters which is on the Cairo road - Lusaka, receives many reports from all corners of Zambia and the provincial offices and centres; in turn it gives instructions on various issues concerning the handicapped. It undertakes annual negotiations to initiate new projects and open new provincial or district offices where they are required for the rehabilitation of handicapped people at large.

Farming is the commonest and most appropriate trade the Council has taken for family rehabilitation of handicapped people apart from placement of people in open employment, as practised by the provincial offices. The Kangonga Sheltered Employment Centre runs a commercial industry which produces various types of baskets, various kinds of cane furniture and all types of brushware. It has a workforce of 79 employees. Farm centres which are administered by provincial offices through respective farm managers and institutional heads rehabilitate a number of handicapped people with various handicaps including amputees, mentally handicapped, paraplegics and polio victims. Apart from the Kangonga Sheltered Employment Centre, workshops to train handicapped women in dress and brush making have been recently completed.

Furthermore, the Liteba Leprosarium in the Central Province and the Lukapa Leprosarium and the Kikonkomene Settlement Centre under the Council's administrative umbrella have been established for purposes of rehabilitating and treating leprosy patients. Simple trades like basket making and woodwork are taught along with low-scale farming.

3. Most services for special groups of the handicapped in Zambia have been left to two main government ministries - the Ministry of Education and the Ministry of Health. The Ministry of Education undertakes to train teachers of the deaf, the blind and the mentally retarded. No special education programmes have yet been established, particularly for the leprosy patients. The Lusaka-based special training college offers courses for teachers of the handicapped. The Ministry of Education has the responsibility for the administration of special educational institutions. The Ministry of Health undertakes to provide mobility training and furnishes related aids including wheelchairs and artificial limbs.

4. As for the co-ordination of these services, the three departments, namely, education, health and the Zambia Council for the Handicapped are interrelated. The Ministry of Health treats and trains handicapped, while the Council secures employment for them. On the other hand, the Ministry of Education trains personnel for use in the special institutions that they run. As for community services, there is little done specifically destined at alleviating handicapped people's problems.

The local community however, gives assistance by donating money or material assets to the Council or council institutions.

5. The Zambia Council for the Handicapped takes full responsibility in training its staff in and outside Zambia. In corroboration with the Ministry of Labour and Social Services, it secures scholarships abroad for such staff training. Staff who go abroad are trained in personnel management, placement work and workshop management.

6. One significant unresolved problem is that the Council places most centres and the sheltered workshop on a self-sufficient sort of management. In this way many centres are being turned into family farming settlement centres. Accordingly, the Kangonga Sheltered Employment Centre is striving to be self-sufficient by being under a board of directors, as opposed to what it is now.

7. Lastly, it is the Council's intention to persuade the Government to pass a parliamentary act to offset problems incurred by the handicapped in search for employment. Thus, the Government should be made to reserve certain jobs only for the handicapped in Zambia. Now employment for any handicapped person is dependent on how a particular employer feels about the applicant.

INTRODUCTION

Section 131(b) of Part C of the Vocational Education Amendments of 1968 provides Federal funding for State-administered research and development activities in vocational education. These Federal funds can be used for paying up to 75 percent of the costs of the State Research Coordinating Unit (RCU) and for grants and contracts covering 90 percent of the costs of research and/or developmental projects. The funds are allocated to the States on the basis of a population formula prescribed in Public Law 90-576. In Fiscal Year 1975, for example, the State of Alaska received $13,176 while the State of California received $767,355.

The total funding appropriated for State use under Section 131(b) of Part C amounted to $17,872,215 in Fiscal Year 1972 and $9 million in each succeeding fiscal year. The States used a portion of this funding to assist in meeting the maintenance and operational costs of the State Research Coordinating Units. However, the major part of the funding was used to support grants and contracts with local school districts, universities, and other agencies within each State for the conduct of vocational research and development projects.

The purpose of this publication is to provide a listing of the projects supported in each State through grants and contracts funded by the States under Section 131(b) of Part C of the Vocational Education Amendments of 1968. The listing, which is arranged alphabetically by States, shows the title of each project, the name of the grantee or contractor conducting the project, and the amount of Section 131(B) funding obligated for the project. For any given State, the total amount of funds obligated in a particular fiscal year may or may not be equal to the State's allotment for that fiscal year. There are two reasons for this difference between funds allotted and funds obligated for grants and contracts. The first reason is that a State may at its discretion, reserve some portion of the State allotment for support of the State Research Coordinating Unit, using the remaining amount for the award of grants and contracts. The second reason is that, under the provisions of the Tydings Amendment, a State could carry unused funds over and obligate them in the following year.

This listing of State-administered research and development projects was compiled on the basis of information supplied to the U.S. Office of Education by each State through the U.S.O.E. Regional Offices. Additional descriptive information on each the projects may be located in the "Research Projects in Progress" section of Abstracts of Instructional and Research Materials in Vocational Education (AIM/ARM), a journal which is published bi-monthly. Persons wishing more detailed information about a particular project than that contained in the Abstracts should correspond with the Director of the State RCU in the State concerned.

This publication has been prepared by Larry Braaten, Chief, Annette Miller, Program Assistant, and typed by Diane Nuckolls, all of the Demonstration Branch.

DESCRIPTIVE NOTE: 78P.

ABSTRACT: THE PURPOSE OF THIS RESEARCH WAS TO DETERMINE THE USEFULNESS OF SULLIMAN'S SCALE OF SOCIAL INTEREST AS A KEY VARIABLE IN COMBINATION WITH OTHER VARIABLES IN DIFFERENTIATING BETWEEN TRANSITIONAL AND NONTRANSITIONAL STUDENTS. THE OTHER VARIABLES WERE POTENTIAL ACHIEVEMENT, READING LEVEL, SEX, AGE, MARITAL STATUS OF PARENTS, AND FAMILY CONSTELLATION. TRANSITIONAL STUDENTS WERE DEFINED AS THOSE ENROLLED IN THE SPECIAL EDUCATION PROGRAM OR WHO WOULD BE ENROLLED IF THERE WERE SUFFICIENT FUNDS AND STAFFING. NONTRANSITIONALS WERE DEFINED AS THOSE ENROLLED IN A REGULAR DEPARTMENTALIZED PROGRAM. SIXTY-TWO TRANSITIONAL AND 356 NONTRANSITIONAL 7TH AND 8TH GRADE STUDENTS FROM ONE JUNIOR HIGH SCHOOL MADE UP THE SAMPLE. DATA WERE OBTAINED FROM A MODIFIED VERSION OF THE SULLIMAN SCALE, WHICH CONSISTS OF 50 TRUE-FALSE ITEMS CATEGORIZED ACCORDING TO STATEMENTS DEALING WITH THE INDIVIDUAL'S SELF-PERCEPTION, HIS PERCEPTIONS OF OTHERS AND RELATIONSHIPS WITH OTHERS, AND OF THE ENVIRONMENT. MULTIPLE REGRESSION ANALYSIS WAS PERFORMED. THE SIGNIFICANT VARIABLES WERE FOUND TO BE POTENTIAL ACHIEVEMENT, READING LEVEL, AND AGE. THE DIFFERENTIATING FACTOR ON THE SULLIMAN SCALE WAS SELF-CONFIDENCE AND OPTIMISM IN ONE'S VIEW OF THE WORLD. A SAMPLE INSTRUMENT, SUPPLEMENTARY TABLES, AND A LIST OF REFERENCES ARE APPENDED. (NJ)

ABSTRACT

DISCRIMINATORY FACTORS OF SOCIAL ADJUSTMENT FOR TRANSITIONAL STUDENTS

by

JANE B. ALLEN

The purpose of this exploratory study was to determine the usefulness of Sulliman's Scale of Social Interest (Sulliman, 1973), as a key variable combined with other relavent variables: potential achievement, reading level, sex, age, SES, marital status of parents', family constellation, social interest, subscale 1 and subscale 2, in differentiating between transitional and non-transitional students.

The sample in this study consisted of 416 students from a public junior high school. Included in this sample were 192 females and 224 males in grades seven and eight. Eight seventh grade females, twenty-six seventh grade males, ten eighth grade females and eighteen eighth grade males were identified transitional students, totaling sixty-two. Of the 356 non-transitional students: ninety-four were seventh grade females, ninety were seventh grade males, eighty were eighth grade females and ninety-two were eighth grade males.

The identified transitionals were those students who were not in the program because of insufficient facilities and staff and those students who participate in the program. The potential transitionals have been identified by staff and counselors as students who would be in the program if expanded. The non-transitional students were those students in a departmentalized program, in which seperate classes are provided for each subject field.

Data for this study was obtained through utilization of a true-false questionnaire, based on Sulliman's scale of social interest and scored on IBM answer sheets. Included on the answer sheets were additional questions pertaining to the students' personal background. The questionnaire was administered by the English Department, facilitating maximum student coverage.

Sulliman's scale is comprised of fifty true-false statements regarding social interest which can be categorized under three major heading: 1) statements dealing with the individual and how he perceives himself, 2) statements having to do with the individual's perception of others and his relationships with others, and 3) statements having to do with the individual's perception of the environment; the world around him. Subscales were also developed by the use of factor analysis. These subscales were termed "concern for and trust in others," and "confidence in oneself and optimism in one's view of the world."

Multiple regression analysis was performed as the method of analyzing the collective and seperate contributions of each independent variable (X_i) to the variation of the dependent variable (Y).

With the fourteen variables a stepwise regression was performed, entering the variables in order of assumed importance. The variables were so entered to test the usefulness of Sulliman's Scale of Social Interest (Sulliman, 1973), as a key variable combined with other independent variables - potential achievement, reading level, sex, age, SES, parent's marital status, and family constellation in differentiating between indentified transitionals and non-transitional students.

The significant variables were potential achievement, reading level, subscale 2, MS2, and age. The multiple correlation coefficient (R) was .49341 and its square (R^2) was .24641. The F ratio was 22.254, which, at 6 and 404 degrees of freedom is significent at a α=.05 level of confidence. Approximately 24.8 percent of the variance is accounted for by the five variables.

There has been a continuous search in education for a method of identifying students with special needs. Traditionally potential achievement and reading scores have been utilized as the primary determinants of students with special needs. This method has been successful in differentiating the more obvious special academic needs but have many times failed to differentiate the students with socialization problems. Socialization is one of the primary functions of education. This study has been an attempt to determine the usefulness of a social interest scale as a key variable in the identification of those students whose special needs may be social as well as academic.

CHAPTER I

INTRODUCTION

Statement of the Problem

There is a current need for educational programs to effectively deal with those students who do not function well in the confines of a normal classroom. These students with special needs can be defined as transitional students who have academic, social, socio-economic, emotional, or certain other problems. The potential consequences of these needs not being met are academic failure, behavioral problems and social maladjustment.

The basic purpose of the contemporary special education class is to provide a program for so-called transitional students who because of emotional needs and/or academic deficiencies do not function adequately within the confines of the normal classroom situation. Generally a student suffering from a physical handicap would not be considered for this transitional class unless the handicap prevents the student from learning.

Generally, the departmentalized classroom (conventional classroom) is defined as the use of strict subject fields and curriculum organization, in which seperate classes are provided for each subject field.

The transitional classroom is defined as a modified self-contained classroom in which the students are channeled into some departmentalized classrooms when they have attained a sufficient level of proficiency in certain subject areas.

Unfortunately, special education personnel can find little support in the research literature to justify special education programs. Gottlieb and Buddoff (1972) contend that assigning a stigmatizing label to a child creates an undesirable situation. The label acts to indicate that the child is somehow different and is to be excluded from his modal group of peers. Since, as Goodenough (1956) has indicated, one basic need of children is the need to belong, to be considered as one of the group, the exclusion of a child by virtue of a particular label increases the feeling of stress beyond whatever handicapping conditions he may already possess.

It has also been hypothesized that individuals who are shunted into a particular group as a result of being labelled negatively, tend to engage in role behaviors that are designed to reflect the characteristics of that group and solidify their position in the group. For example, Guskin (1963) has argued that mentally retarded children might manifest nonachievement, lack of control and helplessness behaviors because they are behaviors expected of mentally retarded individuals.

Thus, theoretical argument is advanced that the assignment of a child to a deviant group could result in his behaving in conformity with his newly ascribed status.

According to Adler (1956), the development of "social interest" depends on the degree and extent of belonging. The desire to be a part of the group is basic to all human beings. Because of the primacy of the desire to be an accepted, participating member of the group, the most painful experience for any child -- as for any adult -- is the feeling that he is inferior to others. Any hardship, tragedy, pain, and inconvenience is relatively tolerable as long as it does not imply a lowering of social status. Only then is the feeling of belonging to the group impaired. Not to belong could be one of the greatest hardships for any human being because the resulting inferiority feelings inhibit or restrict the development of social interest (Dreikurs, 1964).

The term "social interest" is a translation of the German word Gemeinschaftsgefühl. This expression is the one which Adler perferred, although translators have offered other terms to represent its equivalent such as social feeling, community feeling, fellow feeling, sense of solidarity, community intuition, community interest, and social sense (Adler, 1956). According to Adler's Individual Psychology (1956), man is a social being and can fully function only within a group. As long as a person feels that he belongs, he can devote his energies to meeting the needs of the situation. When social interest is fully developed, it implies not only the awareness of having a place, but also the ability to play a constructive part in life. According to Dreikurs (1964), deficiency in the development of social interest restricts social function.

This is an exploratory study that will attempt to determine the usefulness of Sulliman's Scale of Social Interest (Sulliman, 1973), as a key variable combined with other relavent variables (i.e. sex, SES-socioeconomic status, reading scores, potential achievement, parents' marital status, etc.) in differentiating between transitional and non-transitional students. The sample utilized in the development of Sulliman's Scale of Social Interest were high school students. However, Sulliman indicated that application of the scale need not be restricted to high school population. Hopefully, early identification of transitional students could lead to measures that could prevent their failure in the conventional classroom and stimulate their success academically and socially.

Theoretical Framework

Alfred Adler's theory of Individual Psychology has been summarized by the Ansbachers (1956) as follows:

1. Behind all human activity, there is one basic force which prevails. This is the striving from a position of inferiority to superiority, from a felt minus situation to a felt plus.

2. The striving of an individual is always towards a goal; behavior is purposive. Although biological and environmental factors may effect the exact nature of the goal, it is in the last analysis the unique creation of the individual.

3. The individual does not fully recognize or understand the goal. The part which is not comprehended by the individual is Adler's definition of the unconscious.

4. The goal, being the final cause, is the ultimate independent variable.

5. The psychological processes of an individual form an integrated whole from the point of view of the goal. This self-consistent personality structure is what Adler has termed the "style of life."

6. All apparent psychological categories are actually part of a unified system and are not discrete and separate entities.

7. Objective determiners such as environmental factors, biological factors, and past history are not the direct cause of the goal itself, but rather are relative to the goal idea.

8. Every psychological process is influenced by the individual's opinion of himself. The way in which a person sees himself and his environment is termed his "apperceptive schema."

9. It is not possible to consider the individual apart from the social situation in which he lives.

10. The important problems of an individual, which include drive satisfactions, become social problems as well.

11. The individual is socialized not at the cost of repression but rather through the development of an innate human ability. It is this ability which Adler calls "social interest."

12. Maladjustment is characterized by an underdeveloped social interest and an exaggerated concern for superiority as well as a lack of cooperation.

In further reference to social interest, Adler (1969) believes man is continuously transacting with the world around him, most importantly with his fellowman. Man has an innate aptitude for social interest (Gemeinschaftsgefühl). This aptitude must be consciously nurtured, but Adler does not imply any intrinsic conflict between man and his society.

The three important life problems -- occupational, social and sexual -- are all actually social, and require for their successful solution a well-developed social interest (Adler, 1969). The individual's goal of success, then, will include the interest of others and, ultimately, of all mankind; it will be a socially useful goal, in line with an ideal community of the future.

Rationale for Hypotheses

It is assumed that the initial goals of any child in the school system involve some degree of personally defined success in academic achievement and social acceptance. Thus, it is postulated, that failure, particularly repeated failure, in either of these areas could have negative consequences for the child's self-concept and may foster serious social maladjustment (Dreikurs, 1964).

There is much concern about the placement of maladjusted students in special education classes. The concern is with the consequences of such practices for the child including lowered self-concept, rejection by peers, social maladjustment, academic non-achievement, and effects of labeling. Towne and Joiner (1966) posited that placement in a special class has a detrimental effect on student's perception of their academic ability and that the change in these self-perceptions might account for the failure of these students to achieve as well in special classes as might be expected. The numerous effects of disability labeling probably have serious debilitating effects on the students self-image (Goffman, 1965; Meyerowitz, 1965). Gottlieb and Buddoff (1972) state that assigning a stigmatizing label to a child creates an undesireable situation. The label acts to indicate that the child is somehow different and is to be excluded from his modal group of peers. Professional educators should question the justification for continued use of special education classes in light of the absense of demonstrated validity, positive research results and the arguments alluded to above.

There is a noticeable lack of SES, marital status of parents and family constellation background information in the current available literature on transitional students. This research attempts to distinguish new variables which may be applicable in differentiating students with special needs: SES, marital status of parents, family constellation, and social interest. These new variables combined with potential achievement, reading level, sex, age and grade may be more accurate in identifying those students with special needs. Once these students with special needs can successfully be identified, their needs might be met in a conventional classroom.

In view of the above the following hypothese have been formulated and stated in the null form:

(H_1) There is no significant difference between identified transitional students as compared to non-transitional students on mean scores of social interest.

(H_2) There is no significant difference between identified transitional students as compared to non-transitional students on mean scores of subscale 1 of social interest. Subscale 1 is "concern for and trust in others."

(H_3) There is no significant difference between identified transitional students as compared to non-transitional students on mean scores of subscale 2 of social interest. Subscale 2 is "confidence in one's self and optimism in one's view of the world."

(H_4) There is no significant difference in mean scores of potential achievement between identified transitional and non-transitional students.

(H_5) There is no significant difference in mean scores of reading level between identified transitional and non-transitional students.

(H_6) There is no significant difference in mean scores of SES between identified transitional and non-transitional students.

(H_7) There is no significant difference in the ratio of males to females in identified transitional versus vs. non-transitional students.

(H_8) There is no significant difference in age category between identified transitional vs. non-transitional students.

(H_9) There is no significant difference by grade between identified transitional students on mean scores of social interest.

(H_{10}) There is no significant difference by grade between non-transitional students on mean scores of social interest.

(H_{11}) There is no significant difference in category of parents' marital status of identified transitional vs. non-transitional students.

(H_{12}) There is no significant difference in family constellation category of identified transitional vs. non-transitional students.

CHAPTER II

REVIEW OF LITERATURE

The literature relevant to this study is found in two main areas: 1) interpretations and definitions of social interest and 2) special education. In the first section, Adler's concept of social interest will be reviewed along with other authors and their tenets.

1. Social Interest

The term "social interest" is a translation of the German word Gemeinschaftsgefühl which unfortunately is difficult to translate. Ansbacher and Ansbacher (1965) indicate that social feeling is an acceptable translation of the German term. In the last paper which was written by Adler in English (1937, p.777), he declared:

> As I pointed out before, all the problems of life have a strong social value. The individual has to be prepared for a right, normal, worth-while and successful solution. It means that he has to possess a sufficient degree of social interest. Therefore, the brick which we call 'inherited possibility of social interest' must be made living and working. Such a state of mind and attitude give him more than a feeling of social interest; he behaves as a part of the whole of mankind, he feels at home in a conception as near as possible to the real world, he has courage and common sense, which are social functions, frustrated among all failures. He is ready to accept disadvantages of our social life and is a good loser whenever disadvantages cross his way. He is and

> wants to be the master of his fate with an effective regard for the welfare of others.

Adler further believed lack of social interest is equivalent to being oriented towards the useless side of life. The individuals who lack social interest are the failures in life such as neurotics, psychotics, criminals, drunkards and problem children. These individuals have built a lifestyle in which it is clear that social interest is lacking because when an individual is insecure, he is always concerned more with himself than anyone else (Adler, 1935A). Social interest is not innate but is rather a potential which must be developed within a person (Adler, 1929A).

The concept of social interest was not intended by Adler to be confined to one place, group, or time for Adler saw the goal of social interest as the perfection of an ideal society involving the whole of mankind living together in harmony while realizing the full potential of humanity (1938). So important and universal is the concept that it is referred to as "the barometer of the child's normality" (Adler, 1956A).

In healthy development "the ineradicable will to superiority is united with social feeling, and issues in courageous and optimistic activity upon the useful side of life" (1929A). However, he finds that neurosis is the logical development "of an individual who is comparatively inactive, filled with a personal, ego-centric striving for superiority, and is therefore retarded in the development of his social feelings" (1935B), for striving on the useless side of life is not to strive for true success.

Dreikurs has also attempted to explain what is meant by Gemeinschaftsgefühl. He has indicated that the term can roughly be translated as a "sense of communion, of feeling that one is embedded in the stream of life, of concern for the welfare of others" in addition to social interest. Dreikurs places social interest, confidence in others, sense of equality, and courage at one end of the continum with hostility, distrust, suspicion, inferiority feelings, and fear at the other end. In conjunction, Nikelly (1962) states that "this term not quite adequately translated as social feeling or social interest, implies belongingness, cooperation, responsibility towards society."

The sense of belonging, of feeling that one is a part of a larger whole comprised of other individuals is expressed by Adlerians in numerous publications; Dreikurs and Grey, 1968; Dreikurs, 1964; Dinkmeyer, 1971). It is impossible to understand the concept of social interest without reference to Adler's motivational construct. In Adler's later writings (e.g., Adler, 1956), man is seen as striving toward perfection as a result of feelings of incompleteness. Adler calls this striving for superiority, which is very similar to the existential construct of becoming (May, 1961; 1969); Jung's (1959) self-actualization and individuation; and Kelly's (1955) view that life is constant growth and motion. In essence, to Adler, man is a constantly emerging being.

Growth, then is also included within the concept, and as Ansbacher (1968) points out, the similarity between Maslow's (1954,1962) conception of the essential characteristics in self-actualizing people and Adler's "social interest" are great. Both imply an active striving,a continued growth toward a never to be fully realized perfection. Mosak and Shulman (1951) likewise share the emphasis on the continuous expansion and development of the individual. Ansbacher (1968) also surveyed some of the writings of Ralph Barton Perry (1959), Martin Buher (1923) and John Stuart Mill (1936) and concluded that the consensus of these authors on the definition of social interest is no longer an actual object, such as people, animals, plants, and inanimate objects, but a life process further describing it as an "interest in the interests of mankind."

In conclusion of the interpretations and definitions of social interest, there is no exact or universal definition of social interest agreed upon by all authors.

2. Special Education

A society's educational system tends to reflect the underlying political philosophy of that society. In a democracy, education reflects the belief that the state exists for the welfare of the individual. Because of this philosophy special education classes have increased tremendously in the past fifty years. A factor contributing to the dynamic growth of the special class movement has been greater public interest as shown by increased financial support, both locally and nationally. Closely aligned with the increased concern has been the increased acceptance of the belief that special educational experiences might positively alter the academic performance, personal development, and social adjustment of these students.

In many communities, special education classes have been forced to broaden their scope as well as to increase their population. This has not been due to an unprecedented increase in the number of handicapped children being born, but rather as a result of general education programs being unable to cope with special group of students functioning at a lower level of efficiency in their schools. These young people have been identified by many different titles: culturally disadvantaged, low achievers, emotionally disturbed, culturally deprived, transitional etc. Delaney and Delaney (1970) define persons with special needs as those who have academic, social, socio-economic, emotional or certain other problems which may result in their dropping out of school. Children with special needs usually have records of repeated failure behind them. Most are three to eight years behind their classmates in verbal skill, and many, because of boredom and confusion, are behavior problems (Delaney and Delaney, 1970).

Although the current trend has been to set up special classes to meet their needs, research has not provided unqualified justification that these needs are being met through special education classes. The following review will exemplify the problems that special education classes have been confronted with.

One great concern of special education classes is the students academic achievement. Reviews of studies on the efficacy of special class placement have concluded that students in special classes do not exhibit greater academic achievement than those remaining in regular classes. In fact, the reviews consistently suggest that special class placement may even hinder academic achievement (Sparks and Blackman, 1965).

Numerous considerations have been explored in an effort to account for the discouraging results. Heber (1964) notes that studies prior to 1964 suffer many methodological weaknesses. Among these are: investigators matched students who have already been placed in regular or special classes on a few attributes whereas important differences may have existed between the groups of students in regard to other variables; comparisons were made between children who had failed in regular classes for several years before being placed and children who remained in regular classes; many of the children in studies had only been in a special class for one year; the "treatment" or delineation of special classes in regard to organization, teacher competency, and method, were not specified; and many studies improvised their own instruments which may have questionable reliability and validity.

Recognizing the limitations of the previous studies, Goldstein, Moss and Jordan (1965) conducted a four year study to determine the relative effects of the special class upon intellectual development, academic achievement, and social and personal adjustment. By using random assignment of first grades, specifiying the treatment, and extending the study for four years, many of the methodological difficulties of previous studies were eliminated. However, at the end of the four year period, there was not a significant difference in academic achievement between students in the regular classes and students in special classes. The results concerning personal adjustment seemed to favor the experimental groups, however, these findings were not unequivocal (Goldstein, Moss and Jordan, 1965). Thus, probably the most definitive study to date (Blackman, 1965) resulted in the same "negative" findings as previous studies.

Thurstone (1959) has proposed a number of other possible explanations. Among these are: handicapped children profit from the stimulation provided by normal children in the regular classroom; mentally handicapped children's motivation is reduced when they are placed in a special class; and the emphasis of the special class is not on academic achievement. Johnson (1962) dismisses the first two alternatives and concurs with the latter explanation. He suggests that the regular class is academically oriented and the teachers in regular grades are continuously attempting "to bring all children up to grade level." Special education teachers, in turn, are the products of three decades of teacher preparation programs which have emphasized "disability" and the necessity for creating an environment for the development of emotional health rather than for academic achievement. The result is that there is less pressure and emphasis on learning than in the regular classes.

Although these studies indicate that the emphasis in special classes is on emotional health, Rhodes (1970) does not feel that special education classes can be justified even in this respect. He concluded that the socially maladjusted child probably tends to lose more than he gains in an overall sense from segregation because he is removed from a context where socially acceptable behavior is the norm, i.e. the ordinary class or school, and placed in a situation where unordinary behavior is the norm.

Another line of argument supporting the contention that classes for maladjusted children are not justifiable is the labeling process -- of who labels children and how they are labelled and with what effects. It is generally assumed that assigning a stigmatizing label to a child creates and undesireable situation. The label acts to indicate that the child is some how different and is to be excluded from his modal group of peers. As previously noted, Goodenough (1956) has indicated that one basic need of children is the need to belong and to be considered as one of the group. Therefore, the exclusion of a child by virtue of a particular label increases the feeling of stress beyond whatever handicapping conditions he may already possess. Thus, the theoretical argument is advanced that the assignment of a child to a deviant group results in his behaving in conformity with his newly ascribed status.

This view of the effects of labeling indicates that three components need to be considered: 1) the effects of the actual disability, 2) the accompanying stress which results from the disability, and 3) the role behaviors adopted by the child as a function of being ascribed a new status.

Becker (1964) has described this process as a formal confrontation between the deviant suspect and the representatives of the community where judgement is passed concerning the nature of the deviancy. This is followed by an act of social placement, assigning the deviant to a special role which redefines his position in society. The outcome of the process is twofold, both of which may be subsumed under what Merton (1957) has termed the "self-fulfilling prophecy".

On the societal level, in contrast to the ceremony by which an individual is ushered into the deviant position, there is no comparable public ceremony which marks his movement back out of the role and in the eyes of others he remains a deviate (Becker, 1966). On the individual level, the interaction sequence follows the pattern described by Mead (Lorber 1967): social label, self-label, awareness of societal reaction, performance, social label, revision of self-label, performance of role implied by social label. The result, in short, is that the exclusion of the deviant from participation in conventional groups and ordinary means of carrying on the routine of everyday life open to most people causes a drastic and often irreversible change in his public identity which is eventually assumed as a self-image (Becker, 1966). His performance, then, becomes congruent with the "others" definition of the deviant.

In examining the effects of these disability labels on the attitudes and expectancies of teachers Rosenthal and Jacobson (1966) found a direct relationship between teacher expectations and student productivity. To extrapolate from this study, we must expect, that labelling a child "special" reduces the teacher's expectancy for him to succeed. Secondly, in examining the effects of these disability labels on the pupils themselves, Goffman (1961) has described the stripping and mortification process that takes place when an individual is placed in a residential facility. Meyerowitz (1965) demonstrated that a group of educable mentally retarded pupils increased in feelings of self degradation after one year in special classes. More recent results indicate that special class placement, instead of helping such a pupil to adjust to his neighborhood peers, actually hinders him (Meyerowitz, 1967). While much more research is needed, we cannot ignore the evidence that removing a handicapped child from regular classes for special education probably contributes substantially to his feeling of inferiority and problems of acceptance.

Reger, Schroeder and Uschold (1968) quote a result of labeling and special educational placement.

> "Special educational programming faces a critical danger today in becoming the vehicle of preventing change in the general curriculum. It is becoming increasingly easier, as programs multiply and our alertness to problems sharpens, to remove children who do not fit the general curriculum rather than to think in terms of making changes in the general curriculum to accomodate the child. If a school believes that its curriculum program is adequate it will never be proven wrong as long as any child who is unable to fit the pattern is removed and placed in a special educational program. If a child and his curriculum are not aligned with each other we can label the child and remove him." (p.13)

Evidence from efficacy studies would suggest, then, that we need to find better ways of serving children with maladjustment and associated learning disorders than by placing them in special classes. While much more research is needed, we cannot ignore the evidence that removing a handicapped child from regular classes for special education probably contributes substantially to his feelings of inferiority and problems of acceptance.

CHAPTER III

PROCEDURE

Population

The population from which the sample in this study was taken consisted of 416 students in a public junior high. The school is part of the Rockingham County school system in New Hampshire. Included in this sample are 192 females and 224 males in grades seven and eight. The samples consists of 356 non-transitional and sixty-two identified transitional students'. Of the 356 non-transitional students: ninety-four were seventh grade females, ninety were seventh grade males, eighty were eighth grade females and ninety-two were eighth grade males. Of the sixty-two identified transitional students: eight were seventh grade females, twenty-six were seventh grade males, ten were eighth grade females, and eighteen were eighth grade males (Table 1). This school was chosen for this study due to the utilization of transitional classrooms.

TABLE 1

Sample Size of Non-Transitional and Identified Transitional Students

	Non-Transitional Students			Identified Transitional Students		
	Females	Males	Total	Females	Males	Total
7th	94	90	356	8	26	62
8th	80	92		10	18	

The identified transitionals are those students who are not in the program because of lack of facilities and teachers and those students who participate in the program. The students not participating in the program have been identified by staff and counselors as potential transitional students, who would be incorporated into the program if facilities and faculty were not limited. The eligibility for students in this special class is the following: (all of the below does not necessarily apply to each student in the program) (Denning, 1974).

1. Student has been a severe discipline problem over the years.
2. Youngster has not experienced academic success in the regular school program.
3. Student has emotional problems that prevent him/her from functioning adequately in a normal classroom.

4. Student has a negative attitude towards school.
5. Youngster needs more than the academic oriented program.
6. Student is not classified as TMP or EMR (mentally retarded).

Instruments Used and Testing Material

The instruments utilized in this study were a tape player, tape, and true-false questionnaire based on Sulliman's Scale of Social Interest. The responses were scored on IBM answer sheets for ease in computation. On the back of each IBM sheet were additional questions pertaining to personal information: age, sex, marital status of parents, and family constellation, and parents occupation (SES status), that were filled in by the students. Additional information on potential achievement scores, reading scores and SES (socio-economic status) based upon the Nam and Powers (1968) scale were obtained by the researcher from the students school's files.

Five English teachers were selected to administer Sulliman's Scale of Social Interest to their classes. Since school policy requires English for all seventh and eighth graders an optimum sample of 416 students was obtained. Sulliman's scale and the personal data sheet appear in Appendix A and B.

The fifty questions from Sulliman's Scale of Social Interest were recorded on a Cassette tape allowing five second response time between each question. The purpose of the tape was to allow for those students with reading disabilities. Each student was given a copy of Sulliman's Scale and an IBM answer sheet on which to make the responses. On the reverse side of the answer sheet were background questions to be answered by the students (Appendix B). Both pretest and posttest were administered within a six month interval. The variables, potential achievement, reading level, age, sex, grade, SES, marital status of parents, and family constellation were coded by hand by the researcher on the IBM sheet as categorical, continuous or dummy variables. Potential achievement, reading level, SES, social interest scores, subscale 1, and subscale 2 were continuous variables. The others (age, sex, grade, marital status of parents and family constellation) were coded as dummy variables. The raw data was transcribed via Berts opscan to IBM computer cards.

Description

Sulliman's scale is comprised of fifty true-false statements regarding social interest which can be categorized under three major headings: 1) statements dealing with the individual and how he perceives himself, 2) statements having to do with the individual's perception of others and his relationships with others, and 3) statements having to do with the individual's perception of the environment; the world around him. Sub-scales were also developed by the use of factor analysis. These sub-scales were termed "concern for and trust in others," and "confidence in oneself and optimism in one's view of the world." Scores were established for the scale known as the Sulliman Scale of Social Interest as well as for each of the sub-scales in order to facilitate their interpretation.

Reliability

The reliability of Sulliman's scale has been established by three different assessment methods. The first of these methods was the Kuder-Richardson internal consistency formula number 20. This gives an indication of the extent to which an individual will obtain the same score on the scale should he complete it again. This coefficient for the Sulliman Scale of Social Interest was .91.

The second method employed in obtaining a value of the scale's reliability was also a coefficient of internal consistency and this was the split-half formula provided by Guttman (1945). The reliability of the coefficient associated with the split-half method is .90. The third method for determining test reliability was the test-retest which is also known as the coefficient of stability (Anastasi, 1961). This is the correlation between the scores obtained by the same individual taking the test on two different administrations. The correlation coefficient obtained was .93. These three reliability coefficients judge both the internal consistency and stability of the instrument.

Validity of Test

The measure of concurrent validity was accomplished by the technique of validation by nomination proposed by Peters (1941). A special biserial correlation between the teachers' estimation of the social interest of their individual students and those individuals' scores on the scale was computed. A triserial correlation was also performed by the method expounded by Jasper (1946), which allows one to compare the continuous variables (individual test scores) with a variable segmented into three categories (teacher ratings). Both validity coefficients were .71.

Subscales were also developed by the use of factor analysis. These sub-scales were termed "concern for and trust in others," and "confidence in oneself and optimism in one's view of the world." These scales were then correlated with each other as well as the entire instrument itself offering an indication of construct validity. The correlation between sub-scale one and total test score was .87, while sub-scale two's correlation with total test score was .90. The sub-scales had a correlation coefficient of .65 with each other.

CHAPTER IV

RESULTS AND DISCUSSION

The total sample size of this study was 192 females and 224 males for a total of 416 students from a New Hampshire junior high school. The total sample was divided into two groups - identified transitionals and non-transitionals.

The identified transitionals are those students who are not in the program because of insufficient facilities and staff and those students who participate in the program. The potential transitionals have been identified by staff and counselors as students who would be in the program if expanded. There are sixty-two identified transitionals, eight were seventh grade females, twenty-six were seventh grade males, ten were eighth grade females, and eighteen were eighth grade males.

The non-transitional students are those students in a departmentalized program, in which seperate classes are provided for each subject field. Of the 356 non-transitional students: ninety-four were seventh grade females, ninety were seventh grade males, eighty were eighth grade females and ninety-two were eighth grade males.

There were no significant differences on mean scores of the independent variables making it possible to combine the seventh and eighth grade to increase the power of discriminatory analysis.

Table 2 illustrates the categorical variables used in this research and the number of students in each category.

Analysis of Data

Multiple regression was used in this research as the method of analyzing the collective and seperate contributions of two or more independent variables, X_i, to the variation of a dependent variable, Y. By using multiple regression the researcher is able to explain the magnitude of the relationship between the independent variable and the dependent variable. The Statistical Package for the Social Sciences (SPSS) multiple-regression program combines standard multiple regression and step-wise regression in a manner which provides considerable control over the inclusion of independent variables in the regression equation. Multiple regression equations in effect say: If X_1, X_2,..., then Y (Nie, 1970). Its major effort is directed toward explaining a single phenomenon, although the phenomenon may be complex and have various facets (for example, achievement, sex,

TABLE 2

Categorical Variables and Number of Students in Each Category

		Family Constellation			Age Groups		Marital Status of Parents			
	Total	FC1	FC2	FC3	12-14	Over	MS1	MS2	MS3	Deceased
Identified Transitionals

No. of Females	18	5	2	4	54	8	42	4	6	0
Non-Transitionals										
No. of Males	182	49	36	53						
NO. of Females	174	50	27	49	346	10	264	47	30	15

or reading level) (Kerlinger and Pedhauzer, 1973). Multiple regression is a method to draw inferences about relations among variables from the data.

Multiple regression was performed on the following variables: potential achievement, reading level, sex, age, MS1, MS2, MS3, SES, FC1, FC2, FC3, SI, S1 and S2. The multiple regression equation for the significant variables, potential achievement, reading level, subscale 2, MS2, and age is the following:

$$Y=.47731+.00568X_1+.00357X_2+.01501X_{14}-.11101X_6+.19493X_4$$

With the fourteen variables a stepwise regression was performed entering the variables as they are designated in Table 4. The variables were so entered to test the usefulness of Sulliman's Scale of Social Interest (Sulliman, 1973), as a key variable combined with other independent variables -- potential achievement, reading level, sex, age, SES, parent's marital status, and family constellation in differentiating between identified transitional and non-transitional students.

The multiple correlation coefficient (R) was .49841 and its square (R^2) was .24641. The F ratio was 22.254, which, at 6 and 404 degrees of freedom is significant at α=.05 level of confidence. Approximately 24.8 percent of the variance is accounted for by the five variables.

TABLE 3

Variables, Regression Terms and Equation

X_1 = Potential Achievement (continuous)

Y = Transitional or non-transitional class
(Dependent variable)

$$Y' = a+b_1X_1+b_2X_2+b_3X_3....b_{14}X_{14}$$

Table 4 is all the variables in the order that they were entered into the regression, giving the beta's (b) and F (beta is the change of Y with a change of one unit of X).

Discussion of Hypothesis

A multiple regression analysis procedure was performed on the data generated from the non-transitional and identified transitional students to test the differences on the following variables: potential achievement, reading level, sex, age, SES, marital status, family constellation, social interest, subscale 1, and subscale 2. The results of the analysis are as follows: the critical values of F are α=.05 is 3.842 and α=.01 is 6.636. For summary of means and critical value of F see Table 5.

Null Hypothesis 1: There is no significant difference between transitional students as compared to non-transitional students on mean scores of social interest.

The mean scores were 35.619 and 30.161 of the non-transitional and identified transitional students, respectively. A multiple regression analysis of this data indicates that the F value of .073 is not significant at a α=.05 level of confidence. Therefore, the data fail to reject the null hypothesis.

*p .05
**p .01
n =416

Null Hypothesis 2: There is no significant difference between transitional students as compared to non-transitional students on mean scores of subscale 1 of social interest. Subscale 1 is "concern for and trust in others."

The mean scores of the non-transitional students were 10.167 and 8.726 of the identified transitional students. The F value of .914 was not significant at $a \alpha =.05$ level of confidence. Therefore, the data fail to reject the null hypothesis.

Null Hypothesis 3: There is no significant difference between transitional students as compared to non-transitional students on mean scores of subscale 2 of social interest. Subscale 2 is "confidence in one's self and optimism in one's view of the world."

This variable was found to be significant at $a \alpha =.01$ level of confidence, the F value is 13.985. The mean scores of subscale 2 were 15.051 and 12.323 of the non-transitional and identified transitional students, respectively. Therefore, the null hypothesis is rejected.

The data indicates that the identified transitional students have less confidence in themselves and have a less optimistic view of the world than the non-transitional student.

Null Hypothesis 4: There is no significant difference in mean scores of potential achievement between transitional and non-transitional students.

The mean scores for identified transitional students on potential achievement were 85.211 and 104.339 for the non-transitional students. A multiple regression analysis of this data indicates that the F value of 81.327 was significant at the $\alpha=.01$ level of confidence. Therefore, the null hypothesis is rejected.

The data reveals that those students in the identified transitional classes have significantly lower potential achievement scores and that this variable may be an indicator of those students.

Null Hypothesis 5: There is no significant difference in mean scores of reading level between transitional and non-transitional students.

The mean scores for reading level were 83.825 and 102.356 of identified transitionals and non-transitionals, respectively. This variable was found to be significant at a $\alpha=.01$ level of confidence, the F value was 16.058. Therefore, the null hypothesis is rejected.

The data indicates that the reading level of students could be a predictor of the identified transitional and non-transitional students. Those students in a non-transitional class have a higher reading level than those in the identified transitional class.

Null Hypothesis 6: There is no significant difference on mean scores of SES between transitional and non-transitional students.

A students socio-economic background was estimated by his parents' primary occupation as determined by the Nam and Powers Occupational index (1963). The scale ranged from 0 to 100. Scores are assigned to occupations according to salary and prestige. The mean score for non-transitional students were 56.613 and 43.823 for identified transitional students.

These data were analyzed by multiple regression. The results of the data indicates that the F value for SES is not significant at a $\alpha=.05$ level of confidence. Therefore, the data fail to reject the null hypothesis.

Null Hypothesis 7: There is no significant difference in the ratio of males to females in transitional versus non-transitional students.

The mean scores were .694 and .500 of identified transitional and non-transitional students, respectively. It was not significant at a $\alpha=.05$ level of confidence. Therefore, the data fail to reject the null hypothesis.

Null Hypothesis 8: There is no significant difference in age category between transitional versus non-transitional students.

Age was denoted as a dummy variable in this study, one equaling correct classification in age for seventh and eighth grades and 0 equaling those students who are older. The mean scores of identified transitional students were .887 and .983 for non-transitional students.

Age was significant at α=.05 level of confidence, the F value was 4.503. Therefore, the null hypothesis is rejected.

This indicates that those students who are older are more likely to be classified as an identified transitional than those students who are in the correct age classification for the seventh and eighth grade.

Null Hypothesis 9: There is no significant difference by grade between identified transitional students on mean scores of social interest.

The mean scores were 30.801 and 29.436 for the identified transitional seventh grade, and identified transitional eighth grade. There was no significant difference at a α=.05 level of confidence. Therefore, the data fail to reject the null hypothesis. The seventh and eighth grade identified transitionals were combined to give the researcher a greater sample size.

Null Hypothesis 10: There is no significant difference by grade between non-transitional students on mean scores of social interest.

The mean scores for the seventh grade non-transitional students were 36.022 and 35.318 for the eighth grade non-transitionals. Because the data failed to find these scores significant at a α=.05 level of confidence the researcher combined the two groups to increase sample size. Therefore, the data fail to reject the null hypothesis.

Null Hypothesis 11: There is no significant difference in category of parents' marital status for transitional versus non-transitional students.

This variable was treated as three independent variables coded as dummy variables. The three seperate variables were married, divorced/seperated, and remarried.

The mean scores for MS1 (Married) were .661 for identified transitionals and .777 for non-transitional students. MS1 was not significant at a α=.05 level of confidence. Therefore, the data fail to reject the null hypothesis.

The mean scores for MS2 (divorced/seperated) were .226 and .113 for identified transitionals and non-transitional students respectively. This variable was found to be significant at a α=.05 level of confidence, the F value is 4.943. Therefore, the null hypothesis is rejected.

There was an inverse relationship between MS2 and the dependent variable (identified transitional and non-transitional students). This indicates that students who come from divorced or seperated homes are more likely to be identified transitional students than those who come from married or remarried homes.

The mean scores for MS3 were .097 for identified transitionals and .071 for the non-transitional students. MS3 was not significant at aα=.05 level of confidence. Therefore, the data fail to reject the null hypothesis.

Null Hypothesis 12: There is no significant difference in family constellation category of transitional versus non-transitional students.

Family constellation was divided in to three seperate variables; they were FC1 (Oldest child), FC2 (middle child) and FC3 (youngest child). The mean scores for FC1 were .226 and .254 for identified transitional and non-transitional students, repectively. FC2 mean scores were .177 and .153 for identified transitional and non-transitional students, respectively; and FC3 mean scores were .145 for identified transitionals and .263 for non-transitional students. The results of the data indicates that the F value for each of these variables, FC1, FC2, and FC3, was not significant at a $\propto =$ .05 level of confidence. Therefore, the data fail to reject the null hypothesis.

Summary and Discussion

In summary, the significant variables were potential achievement, reading level, and subscale 2 (confidence in one's self and optimism in one's view of the world) at a .01 level of confidence, MS2 and age at a .05 level of confidence, indicating that these variables differentiate between the non-transitional and identified transitional students.

The analysis of this data would indicate that perhaps these variables could be used in education to identify those students who have special needs. The identified transitional students are more likely to score lower on potential achievement, reading level and subscale 2 ("confidence in one's self and optimism in one's view of the world") than the non-transitional students. These students are also more likely to come from a divorced or seperated home and to be older than the non-transitional students.

As it has been established through an extensive review of literature, the transitional classroom creates as many needs as it fulfills. Perhaps as more research is done in this area the early identification of students with potential academic and social needs will facilitate ease of meeting these needs in the normal classroom, eliminating the needs for transitional classrooms.

CHAPTER V

SUMMARY

The purpose of this study was to attempt to determine the usefulness of Sulliman's scale of Social Interest (Sulliman, 1973), as a key variable combined with other independent variables - potential achievement, reading level, sex, age, SES, parent's marital status, and family constellation, differentiating between identified transitional and non-transitional students.

The data indicate that the following variables-potential achievement, reading level, subscale 2 of Sulliman's Scale of Social Interest, marital status-divorced/seperated, and age are significant at a $\alpha=.05$ level of confidence in differentiating between the two groups. The multiple correlations of the independent variables were .49, explaining 24.8 per cent of the variance.

Theoretical Implications

There has been a continuous search in education for a method of identifying students with special needs. Traditionally potential achievement and reading scores have been utilized as the primary determinants of students with special needs. This method has been successful in differentiating the more obvious special academic needs but has many times failed to differentiate the students with socialization problems. Socialization is one of the primary functions of education. This study has been an attempt to determine the usefulness of a social interest scale as a key variable in the identification of those students whose special needs may be social as well as academic. Alfred Adler (1956) defines the term social interest as denoting the innate aptitude through which the individual becomes responsive to reality, which is primarily the social situation. He further believes the educability of the child derives from the breadth of his innate, differentiated, and growing social interest. Sulliman in the development of his scale of social interest hypothesized in the implications of his study that attaining good grades in school may be highly associated with "confidence in oneself and optimism in one's view of the world." The results of this study have shown further justification of this hypothesis. Subscale 2 ("confidence in oneself and optimism in one's view of the world") was found to be the third most significant variable in identifying students with special needs. This significance has also provided the justification for the researchers belief that special needs encompass social and academic needs.

Significance of Study

This study has further justified the relationship between potential achievement and reading scores in determining students with special needs. In addition we have established a new significant variable which is a subscale of Sulliman's Scale of Social Interest - "confidence in oneself and optimism in one's view of the world." It has been further established that there is a significant inverse relationship between marital stability of parent's and transitional students.

Through an extensive review of literature the researcher has been unable to positively justify the use of special classes to meet the needs of transitional students. It is the contention of this study that placement in special classes, while attempting to meet the academic needs, has restricted the normal social functioning of the students.

Limitations

This study was restricted by the following limitations: 1) sample size - both in total sample and identified transitional students; 2) limitation to one school; 3) limitation to seventh and eighth grade; 4) necessitated combining the seventh and eighth grade students; and 5) lack of substantiating research on special education. Although these limitations existed, the researcher justifies the conclusions on the basis that this is an initial step, utilizing established research methodology, towards the solution of a traditional problem through a new approach.

Suggestions for Further Research

It is suggested that further studies be conducted utilizing larger samples, different and geographically diverse school systems, age groups, and the addition of socialization indicators as self-concept, self-esteem and social adjustment scales.

It is hoped through further determination of the specific social and academic needs of the transitional students, these needs can be met within the confines of the regular classroom.

APPENDIX A

SULLIMAN'S SCALE OF SOCIAL INTEREST

1. People are all of equal worth, regardless of what country they live in.
2. If it were not for all the bad breaks which I have had, I could really have amounted to something.
3. I often feel like I am completely alone in the world.
4. I think that most people are friendly.
5. I get angry when people do not do what I want them to do.
6. Members of my family have great concern for me.
7. I wish that everyone would leave me alone.
8. I like to watch movies where the bad guy wins.
9. If people make things difficult for me then I will try to make things even more difficult for them.
10. It seems like nothing ever changes for me.
11. A person must watch out for himself because no one else will help him.
12. Most people only appear to be honest but do many dishonest things.
13. I don't let anyone tell me what to do.
14. I would like to make the world a perfect place in which to live because then I would be seen by others as the most important person alive.
15. The world is a great place in which to live.
16. I like animals more than I like people.
17. I like to make new friends.
18. Some people do not deserve to live.
19. It seems like people are always doing bad things to me.
20. Most people have little respect for others.

21. It seems like everything I do turns out wrong.

22. There are some individuals whom I hate.

23. No one really cares about me.

24. Things usually work out for the best.

25. I would rather complete a "perfect crime" and not be caught than to complete a work of art such as a painting.

26. Most people are concerned only with themselves.

27. Sometimes I like to hurt people.

28. I wish that I could run away and leave everyone in the world behind me.

29. I am an important person in the lives of some other people.

30. I would like to help every person in the world.

31. Most people treat me more like a little kid than an adult.

32. Most people would take advantage of me if they could.

33. I am a happy person.

34. I care about people that I know but not about total strangers.

35. I sometimes like to hurt animals for no reason at all.

36. No one tries to understand me and my feelings.

37. I wish that I could destroy the world and build it back up the way that I would like it to be.

38. People cooperate with me most of the time.

39. If something goes wrong for me, I become extremely angry.

40. There aren't very many things that I care about.

41. I hope that I get the chance to get back at some people for the bad way in which they have treated me.

42. People can't be trusted.

43. This is a great time to be alive.

44. People are not very friendly.

45. I have confidence in other people.

46. To get ahead in this world, you have to step on people along the way.

47. I hate to listen to other people's problems.

48. People are basically good.

49. There are several people whom I hate.

50. If I had control over people, I would make them do what I wanted them to do.

APPENDIX B

Date of Birth: ____________ ____________ ____________

Month Day Year

Father's Occupation: ________________________________

Mother's Occupation: ________________________________

Marital Status: married ___ divorced ___ seperated ___

father deceased ___ mother deceased ___

remarried ___

Please list, in order, all brothers and sisters and their ages - include yourself.

1. ______________ 2. ______________ 3. ______________

4. ______________ 5. ______________ 6. ______________

7. ______________ 8. ______________ 9. ______________

10. ______________ 11. ______________ 12. ______________

APPENDIX C

DIRECTIONS

Directions for administering teacher of Sulliman's Scale of Social Interest.

1. Teachers should instruct students the day before to have #2 pencils.

2. Pass out IBM answer sheets.

Read to students:

1. Please turn the answer sheet so that the name grid is on your right, facing you. Please do not go ahead of what you are instructed to do.

2. Print your name in the boxes - last name first, first name, and where the box is marked MI your middle initial. If your name does not fit, write as much of it as you can.

   DO NOT BLACKEN THE SPACES UNDERNEATH YOUR NAME!

3. At the bottom there is a space marked sex, please darken m if you are male, and f if you are female.

4. Now turn your answer sheets so that the name grid is at the top and the numbers are facing you right side up.

5. Now I will pass out a ditto entitled Sulliman's Scale of Social Interest.

6. When I begin the tape, please listen for your instructions. Remember the ditto is on both sides. This is a true and false survey. There are no right or wrong answers.

7. After the directions are given and all questions are answered please do not talk.

   TURN ON TAPE

Teacher: Once the students have finished the survey please ask them to turn the answer sheets over and complete the information.

Students: This information will be confidential and is only to be used for the purpose of this study.

APPENDIX D

Mean Scores for Pretest and Posttest of Social Interest

7th Grade Pretest

Test	Non-transitionals N=183		Possibles N=21		Transitionals N=14	
	X		X		X	
Social Interest	36.022	7.797	30.857	8.805	30.714	7.730

TITLE: VERMONT SECONDARY CAREER EDUCATION. FINAL REPORT.

DESCRIPTOR: *CAREER EDUCATION; *MODELS; *SUMMATIVE EVALUATION; *PROGRAM DESCRIPTIONS; *SECONDARY EDUCATION; CURRICULUM DEVELOPMENT; JOB PLACEMENT

IDENTIFIER: ORLEANS CENTRAL SUPERVISORY UNION; VERMONT

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 75P.; PAGES 62 THROUGH 66 CONTAINING EVALUATION FORMS LISTING STUDENTS' NAMES WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: COVERING THE PERIOD OF APRIL 1973-1974, THIS REPORT SUMMARIZES AND EVALUATES A SECONDARY CAREER EDUCATION PROGRAM IN THE ORLEANS CENTRAL SUPERVISORY UNION IN VERMONT. OBJECTIVES, PROCEDURES, AND ACCOMPLISHMENTS ARE PRESENTED FOR EACH OF THE COMPONENTS OF CURRICULUM DEVELOPMENT, OCCUPATIONAL EXPLORATION, AND PLACEMENT. THE MAIN BODY OF THE REPORT DISCUSSES THE SOCIOECONOMIC NATURE OF THE COMMUNITY, THE IMPLICATIONS FOR EDUCATION, AND THE GOALS OF THE PROJECT BROKEN DOWN INTO SPECIFIC OBJECTIVES. ALSO BRIEFLY TREATED ARE SIGNIFICANT FINDINGS, PROBLEMS, DISSEMINATION ACTIVITIES, DATA COLLECTION, EVALUATION PLANS AND PROCEDURES, STAFF UTILIZATION AND STAFF DEVELOPMENT. THE THIRD PARTY EVALUATION REPORT DISCUSSES THE EXTENT TO WHICH THE OBJECTIVES OF THE THREE COMPONENTS WERE ATTAINED. A TABLE SUMMARIZING THE RESULTS OF THE PRE AND POST ADMINISTRATION OF THE CAREER MATURITY INVENTORY TO TENTH GRADERS INDICATES LOWER POSTTEST SCORES IN ALL AREAS BUT ATTITUDE TOWARD WORK. THE RESULTS OF PRETEST AND POSTTEST SCORES FOR STUDENTS HAVING OCCUPATIONAL EXPERIENCE SHOW POSITIVE CHANGE ONLY IN ATTITUDE TOWARD WORK. APPENDED TO THE REPORT IS THE EVALUATION DESIGN FOR THE THREE COMPONENTS ACCORDING TO OBJECTIVES (PRODUCT) AND MEASUREMENT TECHNIQUES (PROCESS). ALSO APPENDED ARE THE QUARTERLY REPORTS, EVALUATION FORMS, AND PROJECT LETTER OF ASSURANCE. (NJ)

SUMMARY OF THE REPORT

Project Period: April 1, 1973 through August 31, 1974

PROJECT GOALS AND OBJECTIVES

This career education effort takes the staff and students of grades 9 through 12 as its target group. In addition to restructuring its total guidance and counseling around a total career awareness, work-experience and placement program, the project will also involve all 9th through 12th grade teachers in developing learning activities which will tie together the student's academic experience and his growing career development. Also, as extensive programs of work-experience and placement require man-power and expertise in the work-study area, present work-study capacity will also be increased through this program.

The following section presents an outline of objectives and procedures for the 3 components of this project: curriculum development (9-12), work-experience (grade 10), and placement (grade 12).

I. Curriculum Development Component

This component was addressed to at least 10 teachers in grades 9-12. These teachers were, through a series of workshops, to develop career education activities and implement them on a regular basis in the classroom.

Indicators of success in the curriculum area were as follows:

- Records and documentation of activities developed and implemented
- Comparison of enrollments at the area vocational center for 1972-73 and 1973-74
- Number and content of inservice workshops for teachers
- Increasing activity of sophomores visiting the area center

6

II. Occupational Exploration Component

This component was addressed to 10th graders. The overall goal was to have 50% of the 10th graders experience three, one-week out of school work experiences in a variety of occupational clusters.

Indicators of success on this component were as follows:

- * Number of placements
- * Number of different students placed in different settings
- * Pre and post-testing using the Career Maturity Inventory to measure career knowledge, career decision making, and attitude toward work
- * Student survey to evaluate their on-the-job experiences

III. Placement Component

This component is addressed to all students leaving the high school either before graduation or at graduation. The placement effort strives to place all existing students in either a job, a post-secondary school, a baccalaureate program, or the military.

The evaluation of this component, which has no project funds, was done by reviewing the procedures and results of the placement coordinator's efforts. An early budget amendment shifted monies from this component to the occupational exploration part of the school system and was really not an integral part of the funded project.

PROCEDURES FOLLOWED

I. Curriculum Development Component

The guidance staff was to identify vocational interest data for all students and to work with the several department chairmen toward effecting curriculum changes which would tie in career awareness materials. A pre-school workshop (August) was to be held for informing "volunteer" staff of the need for career education activities and to initiate development of such activities

7

into their classrooms. This initial workshop was to be followed up with five additional in-service days to further develop and evaluate curriculum activities.

A staff member was to be maintained on a part-time basis throughout the summer to identify occupational exposure sites and to identify specific consultants for the in-service workshops. Further responsibilities for this person were to assist other staff in identifying ways of integrating the students work-experience with his academic subjects - and for involving the Area Vocational Director in better informing teachers and students of the opportunities of the area vocational center.

II. Occupational Exploration Component

The guidance staff accepted the goal of restructuring their services around the career education theme. They were to identify appropriate work experiences for 9th and 10th grade students. The occupational exploration coordinator was to identify sufficient sites and supervisor commitments to meet the need shown. The guidance personnel were then to develop a format of questions and tasks for all work experiences which would tie together the classroom and site experiences of each student.

III. Placement Component

The guidance staff was to continue its program of assisting with college applications and counseling. They were further to develop information on post-secondary occupational opportunities and to counsel and place all existing students.

RESULTS AND ACCOMPLISHMENTS

I. Curriculum Development Component

Indicators of success and results:

- Records and documentation of activities developed and implemented: Teachers were reluctant to document completed activities beyond the point of general discussion.
- Comparison of enrollments at the area vocational center for 1972-73 and 1973-74: A ten percent increase in enrollment followed conclusion of the project.

- Number and content of workshops: Two such workshops were held, without consultative assistance; content of a general career education nature.

- Increasing activity of sophomores visiting the area center; No documentation.

II. Occupational Exploration Component

The overall goal was to place 50% of all 10th graders in three, one-week out of school work experiences. Approximately 70% of all sophomores had one or more work experiences. The objective was overreached in number of students involved, but not in the number of total work experiences.

Many job sites were identified and cooperation of supervisors was outstanding. The work experience concept is being continued.

III. Placement Component

An early budget amendment shifted monies from this component to the occupational exploration part of the program and this component never really functioned as an integral part of the funded project.

EVALUATION

The project met with limited success in attaining implementation of career education oriented materials in the classroom. Twelve teachers out of thirty-two classroom teachers implemented some activities, however, these are undocumented and there is little evidence they will be continued.

The placement component was by far the most successful portion of the program. Students and employers who took an active role commented on the students abilities to successfully carry out a task or service. This activity will be continued in the future.

CONCLUSIONS AND RECOMMENDATIONS

The commitment on the part of the staff was not sufficient to insure success. Some activities were conducted but no documentation has been made. It is strongly recommended that before this type of project is attempted that at least a majority of a staff indicate an interest.

The greatest activity occurred in the occupational exploration experiences for 10th graders. A problem developed with teachers who insisted that all work missed during the job experience week be made up. It is recommended that such activity be limited to three days.

BODY OF THE REPORT

Socio-Economic Nature of the Community

The Orleans Central Supervisory Union is composed of eight school districts which are located in six townships within Orleans County, one of the northernmost counties in the state. The area is in an extremely rural setting, having a population of 5,543 for its 200.6 square miles. This results in a population density of 27.6 per square mile as compared to 28.2 for the entire county and 48.0 for the entire State of Vermont.

The population of the area has shown a steady decline since 1910. Since that time there has been a reduction of 23.8% in the population of the Supervisory Union. In the period between 1960 and 1970 these townships experienced a 4.4% reduction in population while the county showed no material change in population (an increase of ten persons) and the state experienced an overall 14.1% increase.

The primary reason for this population decline is undoubtedly the changing nature of the farm operations within the area. Traditionally, this has been an area of the "family farm". Many of these farms were of insufficient size to meet the production requirements for an economically feasible operation or have been operating on marginal lands. These operators have been forced to sell and seek other means and livelihood. Because of the recently increased production capabilities per man hour of labor these small farms have been combined into larger, more economically feasible operations but have still retained the "family farm" characteristics. As the economic squeeze became tighter, a change in ownership was made from largely "Yankee stock" owners to families from the French speaking areas of Canada. The population of Orleans County in 1970 included 8.3% foreign born and 26.99% of foreign born or mixed parentage, factors which reflect the large number of people who are of second generation French Canadian derivation.

The second most important economic pursuit in the area is wood and wood products. All of the timberlands in the area are now second growth in nature and there is only limited production of raw lumber in the area. This raw lumber is almost entirely limited to softwoods and is used mainly in pulp products, fencing and rough lumber. The hardwoods are in limited supply and usually of marginal quality. The largest single employer in the Supervisory Union, a hardwood furniture plant employing 600 - 700, finds it necessary to bring its raw lumber from outside the area.

Other economically important businesses in the area are the tourist trade, limited to the summer traffic associated with the many lakes, and the service businesses typical to a rural area of this nature. The area has been declared a "depressed area" by the United States Department of Labor. While the U. S. per capita income for 1970 was $3,921, the comparable figure was $4,277 for New England, $3,465 for Vermont, and $2,530 for this Supervisory Union. The unemployment rate has been consistently above the state and national levels and is currently in excess of 6% of the insured work force. There is much evidence to indicate that there is a higher level of unemployment in the available work force.

This Supervisory Union receives the fifth highest allocation of Title I ESEA funds in the State. Examination of those areas which receive higher funding reveals that this area has the highest ratio of Title I eligible children. This eligibility is determined by family income factors. Thirteen and eight tenths per cent of the families in the county received incomes below the poverty level in 1970 and only 9.9% of the families had incomes of $15,000 or more.

IMPLICATIONS FOR EDUCATION

The depressed economy of the area, the limited occupational opportunities and the generally low incomes have had a depressing affect on education. Only about 30% of Lake Region's graduates have attended post-secondary schools. Only about 20 - 25% of the graduates have elected to take programs offered by the Area Vocational Center. The drop-out rate has continually exceeded the state average and about one in four students leave school between the time they enter the ninth grade and graduation. It would appear that more emphasis must be given to acquainting young people of the area with a wide range of job opportunities and the availability of training programs which provide entry skills. This project was to be directed towards remediation of this problem through three components:

I. Curriculum Development

II. Occupational Exploration

III. Placement

A short summary of each follows:

GOALS AND OBJECTIVES OF THE PROJECT

I. Curriculum Development Component

Need

Through implementation of 3 extensive career education projects within the state of Vermont and through extensive

11

correspondence and travel throughout the New England region and the entire United States, personnel of the Vermont State Department of Vocational and Technical Education and personnel of the Orleans Central School District have seen career education curriculum efforts flourish at the elementary level. With the elementary teacher more concerned with the entire personal development of his or her students, a variety of career awareness and exploration activities are often quickly identified and introduced in the classroom. However, again and again, projects successful at the elementary level have found secondary teachers (particularly those in the academic areas of language arts, social studies, science and mathematics) less responsive articulating and implementing classroom activities which tie the student into the world of careers and help him or her to develop the skills necessary in making appropriate career choices. As a result of this phenomenon, this project sets the following curriculum objectives to be met through the procedures outlined.

Objective One:

Teachers in grades 9 through 12 will identify and implement on a regular basis career education activities which increase self-awareness, develop favorable attitudes and increase decision-making skills.

Objective Two:

Teachers in grades 9 through 12 will identify and implement activities that emphasize the relationship between academic subjects and careers.

Objective Three:

The school will increase participation in occupational preparation through the area vocational center.

II. Occupational Exploration Component

Need

Counseling interviews of students reveal that 40% of juniors and 60-70% of 8th graders have developed no clear vocational interest. The 9th and/or 10th graders need a heavy dose of work experience now if they are to make the best use of their 11th and 12th years of academic and vocational opportunities. The following objectives and procedures outline the intensive occupational exploration program at the 9th and/or 10th grade levels.

Objective One:

With parental approval, 9th and/or 10th graders will have 3 one-week work experiences in clusters related to their interests and abilities. Participation of at least 50%

is set as a success criteria. These students will range across all interest and ability areas.

Objective Two:

Work-experience students will significantly increase:

a) their knowledge about careers

b) their self-awareness of their interests and abilities

c) their attitude toward the value of work

d) their ability to make more appropriate career choices

e) their use of academic and vocational opportunities as shown by better grades in career-related classes, better school attendance, fewer disciplinary incidents, more realistic selection of their 11th and 12th grade academic and vocational courses, and the impact upon the grade drop-out rate will also be inspected.

III. Placement Component

Need

While efforts are presently being made to assist all students, the personnel find that while assistance in application procedures is feasible for all college-bound students, the placement of their exiting students on jobs or in post-secondary occupational programs is more difficult. Along with identifying many more prospective employers in the area, the school must improve its coordination of the 40 students presently enrolled in the nearby vocational center.

Objective:

To insure the placement of all exiting students in either:

a) a job

b) a post-secondary occupational program

c) a baccalaureate program

d) military service

GENERAL PROJECT DESIGN

The career education effort made at Lake Region involved all staff members and all students grades 9 through 12 as its target group. In addition, guidance personnel would be restructured around career awareness, work experience and a placement program. Teachers and school personnel grades 9 through 12 will develop learning activities including academic needs to student career development. A work-experience program will be initiated to increase student exposure to the world of work.

A curriculum development component was directed towards ten teachers expressing a willingness to actively participate. These teachers were to implement a total of six activities respectively on a regular classroom basis. Activities were to be documented for purposes of dissemination. Success of the curriculum component was to be based on the increase in the number of students expressing a desire to attend the regional vocational center. A change in the regular classroom curriculum oriented towards practical rise of subject matter to career opportunities also became a basis of evaluating the success of the career education project.

An occupational exploration component was directed towards students in the tenth grade. It was the goal of this component to have 50% of all tenth graders experience three, one-week out of school work experiences in a variety of occupational clusters. The work-exposure experience would hopefully reinforce or change career decisions previously made by students. Indicators of success on this component were to be as follows:

- number of placements
- number of different students placed on different settings
- pre and post-testing using the Career Maturity Inventory to measure career knowledge, career decision making and attitude towards work
- a student survey to evaluate their on-the-job experiences.

A placement component was directed to all students leaving high school either before or at graduation. The placement effort goal was to place all students in active employment, post-secondary education, or the military.

Evaluation of the placement component was to be done by reviewing placement efforts of guidance personnel and the placement coordinator. Funding of this component was not strategic as it represents a review and evaluation of the guidance program.

Procedures followed:

The project director maintained a file of implemented activities. The director designed and implemented a one-day workshop for all teachers relating subject matter offered in the existing curriculum to direct application to the field of work. The project director identified occupational work-exposure sites and consultants during the summer in order to begin the placement program.

The project director kept on hand documented activities which had been implemented by participating teachers evaluating the success or reasons for failure. This facillitated dissemination of activity information.

Vocational center enrollment for the years 72-73 / 73-74 were compared with the projected enrollment for the 74-75 school year. An increase in student participation was to indicate the success of the sophomore work exposure program.

The project director conducted five in-service workshops for the ten teachers implementing career education activities. Workshops facillitated subject matter tie-in to career development and kept teachers directly involved with the project to developments.

All teachers were informed as to the opportunities at the regional vocational center. Exposure to the vocational center increased subject matter tie-in to practical application to the world of work.

Sophomores visiting the vocational center were surveyed as to their impressions and as to increased numbers expressing an interest in participating in the vocational center.

Students placed on-the-job for exposure reasons were to document their experiences, pro and con, to aid in future placements. An evaluation as to the worth of the placement in regards to hands-on experience were also kept for future use.

A student-interest survey was conducted early in the fall of 1973 to aid in the placement of students in relation to placement sites identified over the course of the summer. Students were placed as near as possible in career clusters as indicated on the interest survey.

Pre and post testing was used for the purpose of measuring career awareness, self-awareness, decision-making and attitudes towards work. Test results aided in directing students towards areas of interest and towards occupations having the greatest potential for success.

Teachers developed a questionnaire to be used for all work experiences. The questionnaire tied in classroom work and student experience for the benefit of providing information, for other students in regards to the work exposure experience.

A record was kept of all students leaving school before or at graduation in regards to work placement, enrollment in post-secondary education, or participating in the armed service. The above aided guidance personnel in evaluating areas of success and most needed improvement for future efforts.

RESULTS AND ACCOMPLISHMENTS

A. The science department has included career education as part of the curriculum. Individualized projects related to science principles and career choice on the part of the student has become a basic part of the curriculum. As a total department, science personnel were the most involved in fostering and enhancing career education development within Lake Region's curriculum.

B. The English curriculum at Lake Region will employ career education heavily within the reading curriculum. The use of career education activities has proven to stimulate student interest in different careers as well as creating a reading interest within a wide variety of job opportunities. Career education will continue as a basic part of a student's education in the development of reading skills.

C. The math curriculum at Lake Region has incorporated a surveying course as direct application of mathematical skills to career opportunities. Student response to the activity-oriented course has been well-received as theory and direct application come forth in a plot plan. Such activities as exposure, direct application and opportunity in the surveying field will continue to be offered to Lake Region students.

D. A career education center has been established for the benefit of Lake Region students for future years. It will function as a source of information in the area of career opportunities and job information. The center has been developed by converting a former classroom. It will provide easy access and exposure for all Lake Region students.

E. There will be two course offerings "Values" and "Decision Making" offered for graduation credit available to all juniors and seniors enrolled at Lake Region. Both courses have been established to aid students in making a sound career selection and the establishment of goals for future years. Both courses will be offered through the established resource center.

F. The resource center will contain information available to teachers as well as students to supplement the development of career education within the established curriculum. It is a goal of the center to foster as many career education activities as possible to aid curriculum change and development.

G. Placement activities will continue to be offered on a voluntary basis through the career education center. Exposure activities will be reduced in time during from one week to two or three day exposures. Students, under a traditional system, have encountered fewer difficulties in shorter exposure placements rather than week-long placements. Academic work burdening the student upon his return has prompted this decision.

H. Local business establishments have indicated a willingness to continue in placement activities. Business has expressed praise and interest in continuing the placement concept.

I. A total of 141 visitations by Lake Region students to different business locations terminated placement activities for the school year. The goal of 50% of the sophomore class having three one-week exposures was met with a success criteria of 85%. The total goal could have been reached if academic pressures placed upon students upon their return and greater teacher cooperation in regards to the placement efforts of the career education program by prior program commitment. Illness and extra curricular activities also proved to hamper placement activities.

J. Placement activities for students in future years should be of higher quality for businesses providing a lack of actual interest in career education have been eliminated from further participation. Some establishments were only interested in participating for a source of inexpensive labor rather than teaching and exposing students to business and career opportunities.

K. Guidance personnel have noted an increase in students who will attend the vocational center this coming fall. A continuation of student exposure to career opportunities will be available through guidance facilities.

L. Testing of Lake Region sophomores through the use of the Career Maturity Inventory has returned little criteria in evaluating career growth and development. The use of a single edition of the C.M.I. creates a lack of validity by any test results. It remains the opinion of the project that cross-testing by use of other career test measurements would represent the best method of providing information on the career development of each student.

M. Guidance personnel have started a career maturity sheet on each sophomore as well as sophomores of future years. Such information will help teachers and guidance personnel in counseling students in career selections.

N. A series of reading activities will be developed for the development of reading skills and provision for career information for students.

O. Local businesses have expressed an interest in participating in field trips and direct exposure for the approaching academic year. Business personnel have taken high interest in providing exposure to the "world of work".

SIGNIFICANT FINDINGS AND EVENTS

A. The use of the Career Maturity Inventory as a post-test to a career education program lacks validity. Students taking the

C.M.I. for the second time displayed a lack of interest or concern. It was viewed by many as a repetitive task.

B. Testing of the program's goals of increased career awareness, exploration, and selection should be done with more than one test source. A comparison of test results plus test evaluation could be made as well as providing a sounder means of evaluation.

C. Support of a career education program must be a total commitment by the staff prior to initiation of the program at the student level. The staff and administrative personnel must be willing to fully support and actively participate in the program. Commitments at the staff level must first be made prior to any consideration of federal funding.

D. The business world will receive a career education program and actively participate in providing necessary exposure to future employees to the "world of work."

E. Parents of students found value in exposing students to career opportunities and job availability in the local area. The exposure of students to the concept of "people work for a living" is an integral part of student education.

F. The placement program of exposing students to career opportunities and fields of interest must be tied in with classroom work. Students will not participate in work exposures if non-related subject matter is left to accumulate at school. Exposures can be reduced in length, but students will demonstrate hesitation and non-participation as the result of "make-up work."

G. Students must all be treated the same in regards to the program. If make-up work be required by staff members, all students should face the same circumstances. A policy in regards to handling classroom work should be adopted and enforced by administrative personnel.

H. Short exposures to many opportunities in the "world of work" proved to be of greater student interest. A wide variety of experiences of short duration proved of greater student interest. It must also be stated that a lack of subject matter tie-in and total commitment to the concept of career education will even hamper student participation in short exposures.

I. Transportation to job exposure sites was accomplished by each student. It became evident that funds set aside for student transportation to and from job location sites would go unspent. Student visitation to a job exposure site were treated as employees in finding transportation to and from work.

PROBLEMS

A. Lack of preparation of teaching staff in regards to career education concepts hindered the program throughout the year.

Students faced the problem of inconsistent treatment by staff members in regards to making up of school work while on work exposure experiences. Preparation for a career education program must first educate all staff personnel prior to the initiation of a career education program throughout the school.

B. A lack of commitment by the total staff rather than a selected few hindered the program throughout the year. Students faced dual systems of treatment in regards to the program. The total staff must make a commitment to the program and activities to be initiated prior to the commencement of the program.

C. One week exposures are too long a period for most students. Shorter and more frequent placements proved more acceptable to most students. Students also found an easier time of returning to the demands of the academics if subject matter tie-in was not used by respective teachers.

DISSEMINATION ACTIVITIES

A. Career opportunities and offerings at the area vocational center have been made known to all freshman and sophomore students. Presentations on vocational offerings through the center were incorporated through the english program.

B. A display on the machinist trade drew high interest among all students. The display featured the work of a Lake Region student, Phillipp Brasseur. As a result of the display, four students have expressed an interest in the machinist trade and enrolled in the machinist program at the regional vocational center.

C. A display of subject-matter tie-in in conjunction with the fields of home economics, auto mechanics, and agriculture all connected to the academics.

DATA COLLECTION

A. The C.M.I. testing program was completed as required in the evaluation guidelines. Test results can be taken into consideration in giving insight into student career interest. No statistical conclusion can be made as the result of the C.M.I. having one test version.

B. There has been an increase in those students pursuing career interest through the use of the regional vocational center. However, participation of this year's junior class shows no large increase which can be attributed to the career education program.

C. There has been a sharp increase in students entering the machinist trade. Credit for this large increase is the career education program. Student participation was increased by displaying work of a Lake Region student taking the machinist course. Student to student communication in regards to presenting the program proved to be the best effective method of promoting a skill trade.

EVALUATION PLANS AND PROCEDURES

A. Mr. Keith Ober completed final evaluation of the project. Questionnaires were presented to all sophomores in their evaluation of the program.

B. Federal evaluation took place May 16, 1974. The inspection team gave the project credit in it's placement activities and success within the science curriculum. Visitations were made to participating employers, teachers, as well as first-hand information provided by students. The evaluation recommended that local support of the program be found and continued in future years. They also recommended an increase in teacher participation in career education activities.

C. More funds should be set aside for a more varied testing program. Students should face more than one career education measurement as opposed to the same test being given twice.

D. The results of student evaluation of the program indicate a lack of participation by many staff members. Some students were even noted as stating their ignorance in regards to Lake Region having a career education program.

OTHER ACTIVITIES

A. Drafting projects in regards to the needs of the community and students proved highly successful. Projects provided by local industry showed direct application of theory for a practical need. Students were paid the minimum wage by business but received valuable exposure to the world of work.

B. Displays of student's work displaying skills and first-hand information was the most successful method of interesting other students in career opportunities. Such displays will continue as part of a continued career education program.

C. Placement of seniors wishing employment has encountered difficulty in finding jobs. Seniors having received skill training while in school have found employment with little difficulty. However, students entering the job market with no skills have little work available in the local area.

D. The only employment opportunity in the local area is Ethan Allen, Inc., an unskilled and semi-skilled employer. Expansion to three working shifts has found a large and receptive working force.

STAFF EMPLOYMENT AND UTILIZATION

A. The science department has made good use of implementing career education activities throughout the year. A continuation of subject matter tie-in on an individual basis through the use of heath kits and career projects related to student interest will continue as part of the science curriculum.

B. Drafting assignments in conjunction with the building trades will continue as a direct application of skills to practical use.

STAFF DEVELOPMENT

A. Mr. Tom Warnock has been involved in heavy student exposure to the medical profession. It remains his intention to continue such involvement at personal expense for the upcoming year.

B. Mr. Carl Watras will be incorporating career opportunities in the structuring of the biology program around student interest.

FUTURE ACTIVITIES

A. Placement activities will continue through the efforts of the cooperative vocational coordinator, Mr. Peck. He will place students interested in occupational exploration in areas related to interest and availability.

B. Career education will continue as an integral part of the reading and vocational english programs.

C. Career opportunities in the fields of science will become part of the basic science curriculum.

D. A career education resource center has been established for the benefit of all student and staff members.

VERMONT SECONDARY CAREER EDUCATION MODEL

ORLEANS CENTRAL SUPERVISORY UNION

Orleans, Vermont

FINAL EVALUATION REPORT

Project No. VE 361055L

Grant No. OEG-0-73-3008

Funded By The: Department of Health, Education and Welfare
Office of Education

Submitted By:

22 Drummer Road
Keene, New Hampshire 03431

EVALUATION OF THE PROJECT

Context Evaluation

The Orleans Central Supervisory Union is a rural school district in northern Vermont. It serves the towns of Albany, Barton, Brownington, Glover, Irasburg, Orleans, and Westmore.

There are six elementary schools serving approximately 1,200 students in grades 1-8. The Albany schools, however, send their 7th and 8th graders to the Craftsbury district.

The project addressed in this report was focused at the Lake Region Union High School, the school which serves the elementary schools.

Lake Region Union High School Student Population (1972-73)

Grade 12	108
Grade 11	138
Grade 10	128
Grade 9	122
Total	496

Orleans is located in a rural setting with distant travel required for many students attending the high school. Students travel up to 50 minutes in one direction.

The employment market is not extensive in it's size, complexity, or range of occupational opportunities.

PROJECT GOALS AND OBJECTIVES

This career education effort takes the staff and students of grades 9 through 12 as its target group. In addition to restructuring its total guidance and counseling around a total career awareness, work-experience and placement program, the project will also involve all 9th through 12th grade teachers in developing learning activities which will tie together the student's academic experience and his growing career development. Also, as extensive programs of work-experience and placement require man-power and expertise in the work-study area, present work-study capacity will also be increased through this program.

The following section presents an outline of objectives and procedures for the 3 components of this project: curriculum development (9-12), work-experience (grade 10), and placement (grade 12).

I. Curriculum Development Component

This component was addressed to at least 10 teachers in grades 9-12. These teachers were, through a series of workshops, to develop career education activities and implement them on a regular basis in the classroom.

Indicators of success in the curriculum area were as follows:

* Records and documentation of activities developed and implemented
* Comparison of enrollments at the area vocational center for 1972-1973 and 1973-1974
* Number and content of inservice workshops for teachers
* Increasing activity of sophomores visiting the area center

II. Occupational Exploration Component

This component was addressed to 10th graders. The overall goal was to have 50% of the 10th graders experience three, one-week out of school work experiences in a variety of occupational clusters.

Indicators of success on this component were as follows:

* Number of placements
* Number of different students placed in different settings
* Pre and post-testing using the Career Maturity Inventory to measure career knowledge, career decision making, and attitude toward work
* Student survey to evaluate their on-the-job experiences

III. Placement Component

This component is addressed to all students leaving the high school either before graduation or at graduation. The placement effort strives to place all existing students in either a job, a post-secondary school, a baccalaureate program, or the military.

The evaluation of this component, which has no project funds, was done by reviewing the procedures and results of the placement coordinator's efforts. An early budget amendment shifted monies from this component to the occupational exploration part of the school system and was really not an integral part of the funded project.

EVALUATION OF PROJECT COMPONENTS

I. Curriculum Development

Approximately 12 staff members actively participated in developing career education activities during the year. The Science Department, some of the English Department, and teachers in clearly recognizable occupational areas appeared to be most successful.

Files of completed activities are insufficient for comment. A reluctance to document and/or collect information on completed activities appeared to be the problem, as opposed to no activities to report.

A one-day orientation on services was held for all staff in the fall. In January, 10 interested teachers attended an in-service session.

The project director can be commended for extensive follow-through work in identifying work exposure sites. Seeking out resource consultants was not as successful.

An increase from 52 to 57 students was noted when comparing September 1974 projected enrollment with actual September 1973 at North Country Union High School Vocational Center.

There is no evidence of workshops other than the one in January, 1974.

Fifty percent of the sophomore class visited the vocational school site.

II. Occupational Exploration Component

Approximately 70% of all sophomores had one or more work-experiences. The objective was over-reached in number of students involved, but not in number of total work experiences. A conclusion of the project, at least as far as LRUHS, is that a full week exposure is too long, and creates too much hardship and pressure from the non-cooperating staff members. Staff was unable, generally, to see the relationship between the work exposure and their subject matter areas.

The evaluation team feels the work experience portion was the most successful, given modifications for the local situation. It is understood this portion will continue, with less manpower assistance.

A student feedback questionnaire (See Appendix C) was developed to provide sophomores the opportunity to evaluate the on-the-job work exposures which they had during the academic year.

This questionnaire was not returned by many of the students, and only 52 completed forms were collected of approximately 110 possible.

Below we have detailed some of the interesting data provided by these students.

* Fifty-two (52) of approximately 110 sophomores responded

* Nineteen (19) boys and thirty-two (32) girls made up the sample

* The number of work exposure experiences of these students were as follows:

None	23
One	11
Two	6
Three	12

* When asked, what is the highest level of schooling you are now planning to complete?, the following was noted:

1	(2%)	Graduate or Professional School
11	(21%)	A Four-Year College or University
7	(13.5%)	Two Years of College
7	(13.5%)	A Technical Trade, Business of Beautician School
23	(44%)	High School, then to a job of my choice
3	(6%)	Training in armed services
0	(0%)	Less than high school

* Students were asked how many years they had lived in the area and had attended this school system. There was a wide gap, with students appearing in the following categories.

3	(6%)	One year or less
19	(36%)	Between one and three years
5	(10%)	Between three and six years
4	(8%)	More than six years, but not since first grade
21	(40%)	I have been in Orleans schools since first grade

* Finally, students were asked to rate their career education work exposure experiences on a ten point scale (with ten being the highest rating).

The following pattern emerged:

Rank	Number
10	0
9	2
8	10
7	6
6	1
5	5
4	5
3	1
2	0
1	4

The average ranking was 5.8, the median, 6.7, and mode, 8.0. Eighteen students did not respond to the questionnaire.

Most of the lower ratings (four of the five lowest) were given by girls, who also gave the top two rankings.

* Students were asked to list the good points of the program and to also identify the problems, the following lists were obtained.

Good Points

1. Chance to see and do things that we never did before.
2. Know more about jobs - what it was like.
3. Meet new people.
4. Try different jobs.
5. I have become interested in a career and plan to go on in it.
6. You can try a number of jobs and forget the ones you don't like.
7. The thing I liked best was that it showed what I didn't want to do with my life.

Problem Areas

1. Having to make up all the work missed (14 students).
2. Not enough variety.
3. Not enough time to work.
4. Exposures not well organized.
5. You are put in places you don't care for.
6. Watching work gets boring - must be able to do things.
7. Transportation problems.
8. Not everyone gets to go who wants to.

Pre and post-testing of the sophomore class (10th graders) was done using the Career Maturity Inventory to assess growth in career awareness, decision making skills and attitudes toward work.

As mentioned above, primary efforts were focused on the job exposure program for sophomores, so impact was anticipated with this group. Table I below summarizes the results of the pre-post testing.

TABLE I - Pre-Post Test - Career Maturity Inventory

Lake Region Union High School, Gr. 10, September 1973 - June 1974

	PRE-TEST			POST-TEST			NATIONAL PERCENTILE		
	No.	Mean	Range	No.	Mean	Range	Pre	Post	Perfect Score
Knowing Yourself	112	11.7	2-19	87	10.7	1-19	41%	35%	20
Knowing About Jobs	112	13.8	4-20	87	11.5	1-20	53%	39%	20
Choosing a Job	112	11.5	3-19	87	9.6	1-18	47%	39%	20
Looking Ahead	112	12.6	4-19	87	9.3	1-20	64%	46%	20
What Should They Do	112	9.6	1-15	87	8.5	1-19	69%	64%	20
Attitude Scale	112	33.8	25-44	87	34.1	22-43	42%	42%	50

Table I shows that results from the pre-post testing were not impressive. In all areas but one, attitude towards work, the post-test scores were lower than the pre-test scores.

Separate analyses were performed for those students who had a number of job exposure experiences. Table II summarizes these results.

TABLE II - Pre and Post Test Scores for Students Having Occupational Exposure Experiences

NUMBER OF EXPOSURES

	NONE			ONE			TWO			THREE		
		Post	Post	No.	Pre	Post	No.	Pre	Post	No.	Pre	Post
Knowing Yourself	17	12.94	11.88	8	12.88	11.75	6	13.17	11.00	9	10.44	10.66
Knowing About Jobs	17	14.53	12.24	8	14.25	14.25	6	14.50	10.33	9	15.22	14.44
Choosing a Job	17	11.47	10.29	8	11.25	10.88	6	13.17	10.00	9	13.00	12.77
Looking Ahead	17	12.35	9.82	8	12.50	12.13	6	13.17	8.33	9	15.33	13.44
What Should They Do	17	10.53	9.00	8	10.75	11.13	6	11.50	8.33	9	11.00	10.77
Attitude Scale	17	32.12	33.29	8	32.88	34.13	6	33.67	37.67	9	35.22	35.55

As in Table I, results are not encouraging. A steady positive shift is noted in the area of attitudes toward work, but other sub-tests do not reflect a pattern of change which is a function of the number of occupational experiences which the students had.

The poor results on the CMI post-test are puzzling. The evaluation team has used the CMI in other career education related projects and has never witnessed a consistent decline in performance. The post-test situation of waiting until very late in the school year was certainly a factor. Clearly, the work exposure experiences were not detrimental to the students involved as their own evaluations indicate.

III. Placement Component

As indicated above, the placement function was already operational prior to the funding of the career education project. In addition, a cooperative education coordinator is located at the school to assist in co-op education programs. These two people working in harmony has made the placement effort an on-going success. Moreover, a great deal of cooperation has been received from the armed services and employment security. Work sites identified by the career education project director and the co-op coordinator were instrumental in assisting students in being placed.

A good referral system for drop-outs was in use, including a regular follow-up procedure. A thorough follow-up study is now being conducted by the guidance director.

Table III presents a historical picture of the trends in student placements over the past six years.

CONCLUSIONS AND RECOMMENDATIONS

It is clear that the Career Education project operating in the Lake Region Union High School during the 1973-74 academic year met with only moderate success.

Teachers did receive some in-service training and as a result, developed and implemented a number of career education activities. However, these were not systematically documented and as a result can provide little utility to other secondary teachers who might wish to use them.

*Percentage of Vocational Shared-Time Students is based on the total enrollment for the Junior and Senior Class.

The most activity occurred in the occupational exploration experiences for 10th graders. Despite an energy crisis, more than 70% of all sophomores had at least one work exposure experience. A student evaluation of these experiences was generally favorable. A persistent problem area was that many teachers required students to make-up all work covered during their on-the-job experience. An attitude shift on the part of teachers is required if a work exposure program is to be attractice to students.

The CMI testing indicated no growth in career awareness or decision making. Some gains were noted in attitudes toward work. Poor post-test results may be due, in part, to the fact that the post-test was administered late in the year and a number of students failed to return their response sheets.

The placement component was the most stable portion of the -project, in part, due to its existance prior to the project's being funded. Coordination between the project director, cooperative coordinator and placement coordinator was perhaps the most important outcome of the project.

RECOMMENDATIONS

I. It is recommended that the work exposure effort be maintained, with modifications, into the next academic year. The changes suggested are:

   1) Work exposure become three days in duration so that students and teachers do not feel undue "out of school" tension.

   2) Develop a specific evaluation and measurement instrument designed to document the career knowledge and attitude gained by students in the program.

   3) Involve teachers in the design and follow-up of the job experiences so that they become a part of the process. Perhaps assign students to teachers and ask teachers to assist in job exposure selection, implementation and follow-up.

II. It is recommended that the project document in detail the work orientation aspects of its effort so that other schools may benefit from the experiences of the Lake Region effort.

APPENDIX A

EVALUATION DESIGN

RESEARCH AND DEVELOPMENT PROJECT IN CAREER EDUCATION

ORLEANS CENTRAL SUPERVISORY UNION
ORLEANS, VERMONT

EVALUATION DESIGN

The following design relates to Orleans, Vermont's Proposal for the Vermont Secondary Career Education Model (VE361055L), which was submitted to the Associate Commissioner of Adult, Vocational and Technical Education under the guidelines of USOE Policy Paper No. AVTE-V72-11. This design will be used in evaluating this project between July 1, 1973 and June 30, 1974, as outlined in the "Agreement to Perform Contract Services."

The Orleans project is just beginning its efforts to implement Career Education at the secondary (9-12) level. The project will address this effort via the three components outlined below.

I. Curriculum Development Component is addressed to at least 10 teachers in grades 9-12. These teachers will develop career education activities and implement these on a regular basis in the classroom.

II. Occupational Exploration Component is addressed to 10th graders. With parental approval, 50% of the 10th graders will have three, one-week out-of-school work experiences in clusters

III. Placement Component is addressed to all students leaving the high school either before graduation or at graduation. The placement efforts will make every effort to place all exiting students in either a job, a post-secondary school, a bacculaureate program, or the military.

The following evaluation design addresses the project objectives for each of the three components of project activities. The measurement techniques outlined below generate both "product data" concerning student growth and hard curriculum products developed, as well as "process data" on the organizational and instructional approaches employed. This measurement strategy is consistent with the Dr. Sidney C. High, Jr. memorandum of July 25, 1972, which stresses that "the evaluator should evaluate the effectiveness of both the project's administration and the career education program as it is operated in the schools". Thus, project logs and other records are seen as a primary data source for total project evaluation.

CURRICULUM DEVELOPMENT PHASE

OBJECTIVES Product	MEASUREMENT TECHNIQUES Process
1) Ten (10) teachers in grades 9-12 will identify and implement on a regular basis (at least 1 per quarter). Career education activities which will increase self-awareness, develop favorable attitudes and increase decision-making skills.	* Project director will maintain file of implemented activities. * Project director will design and implement 1 day workshop for all teachers covering techniques and career opportunities and field trips. Also discussion of film series on job attitudes before work experience. * Project director (during summer) will identify occupational work exposure sites and resource consultants.
2) Ten (10) teachers in grades 9-12 will identify and implement activities (as above) that emphasize the relationship between academic subjects and careers.	* As documented above.
3) The school (11th grades) will increase their participation in occupational preparation through the area vocational center.	* Compare 72-73/73-74 enrollments for 74-75 school year. * The project director will conduct up to 5 in-service workshops for the 10 teachers implementing career education activities. * The project director will involve the area vocational director to inform all teachers of the opportunities at the area vocational center. * Document sophmores who visit the area vocational center.

OCCUPATIONAL EXPLORATION COMPONENT

OBJECTIVES	MEASUREMENT TECHNIQUES
Product	Process
1) With parental approval, 50% of the 10th graders will have 3 one-week work experiences in clusters related to their interests and abilities.	* Document process and procedures used to place students. * Document actual student placement in career exploration. These documents will include a student evaluation of each experience.
2) The work experience activities will significantly increase - - their knowledge about careers - then self-awareness of their interests and abilities - their attitude toward the value of work - their ability to make more appropriate career choices	* A student interest survey will be completed in the fall of 1973 to guide career exploration site selection. * Pre and post-testing using the CMI instrument or other appropriate instruments will be used for the 10th grade students to measure career awareness, self-awareness, decision-making and attitudes. * Teachers (as part of pre-school workshops) will develop a format of questions and tasks for all work experiences. This will tie together classroom and site experiences of the student.

PLACEMENT COMPONENT

OBJECTIVES	MEASUREMENT TECHNIQUES
Product	**Process**
1) To insure placement of all exiting students in either (grades 10-12) - a job - a post-secondary occupational program - a baccalaureate program - military service	* Develop and implement an interview record to document services and results of service for each student when he leaves the school.

RESEARCH AND DEVELOPMENT PROJECT IN CAREER EDUCATION

ORLEANS, VERMONT

TENTATIVE EVALUATION VISIT SCHEDULE

MONTH	FOCUS OF VISIT
September	Examine results of summer inservice/orientation programs. Document full staff project. Examine initial plans for explanation placement during year inservice and job placement components. Review list of work exposure sites.
October	Ascertain progress of pre-test using CMI in grade 10. Examine format of questions developed by teachers for work experiences. Status of student interest survey.
November	Reivew materials and equipment purchased by project, their distribution and use. Visit classes using activities. Ascertain activity report format and documentation.
December	Review status of inservice program. How many held, how many more to be held? Document trend of enrollments to area vocational center and visit by sophomores.
January	Wild Card.
February	Review progress toward 50% of 10th graders having 3 work experiences. How are students evaluating these experiences? Document placements.
March	Examine in detail the placement of exiting students. What is the status? How many placed? Are special efforts underway for seniors?
April	Plans for post-testing - are they all set? Review those career education activities developed and implemented by teachers.
May	Ascertain post-test schedule and status of other documentation procedures (inservice, activities, work experience, placement, vocational enrollments).
June	Tie up year-end activities and have preliminary draft of evaluation report.

Introduction

The Vermont Secondary Career Education Model is a 15 month effort to design and implement three components to deliver career education services to students in grades 9-12.

I. A Curriculum Development Component is addressed to at least 10 teachers in grades 9-12. These teachers will develop career education activities and implement these on a regular basis in the classroom.

II. The Occupational Exploration Component is addressed to the 10th graders. With parental approval, 50% of the 10th graders will have three, one-week out-of-school work experiences in occupational clusters.

III. The Placement Component is addressed to all students leaving the high school either before graduation or upon graduation. The placement service will make every effort to place all exiting students either in a job, a post-secondary school, a baccalaureate program, or the military.

The third-party evaluation team has accomplished the following events during this quarter.

April 29-30, 1973 - Work with career education projects across Vermont, including Orleans. Two-day workshop at Stowe, Vermont to develop project plans of action.

June 20-21, 1973 - Work with teachers from Orleans at Fox Run workshop. Focus was upon designing classroom activities.

August 7, 1973 - Meeting in Montpelier with Mr. Paul Henry, Mr. Wood, and Mr. St. Pierre to draft evaluation design for Orleans project.

September 27, 1973 - on-site visit by Keith Ober to ascertain progress toward stated objectives for each component.

Numerous telephone and written materials have augmented the on-site visits and meetings.

Below we have documented our findings for each of the project components to date.

I. Curriculum Development Phase

A. Areas of Success

The teachers present at the Fox Run workshop in June have developed a number of career education activities. In addition, the project director has identified the concerns of local employers about the employability of students.

Information relative to drafting and mathematical skills needed for future employment has been obtained and forwarded to the appropriate staff.

Seven field trips have been arranged and the promise of a commercial sewing machine has been obtained from a local employer.

B. Areas Having Problems

There seems to be less than enthusiastic staff response and support at this time. The Fox Run participants are not actively initiating career education activities. No inservice was held during the summer although, one orientation session for staff was held.

Materials and equipment ordered are not arriving as anticipated.

C. Future Plans

Some English teachers will be working with Mr. Edward Cornelsy in Essex Junction to obtain more career education ideas in their subject area.

A student developed media presentation concerning their field experiences will be presented to the high school staff.

On Saturday, November 3rd, ten teachers will be involved in a workshop to develop six activities each. These are to be implemented before January 5, 1974.

II. Occupational Exploration Phase

A. Areas of Success

This component represents by far the most successful effort to date. Over 50 placement sites have been identified with one group (forestry) already placed. There are nearly 50 students who have received permission to explore careers. It appears that all students will be out in at least one experience prior to Thanksgiving. Those involved to date have shown active interest.

Resource people have also been brought in to speak with small groups.

A "patio" building project and compass/geometry project are just getting underway.

The CMI pre-test for all sophomores was completed ahead of schedule and the answer sheets sent-out for scoring.

B. Areas Having Problems

Some faculty have expressed concern over the amount of time some students have missed. This will probably be a continual problem area as more and more students go out on exploratory experiences.

Only about one-half of the sophomores have volunteered for participation so far.

OSHA is causing some employers to look hard at the safety and liabilities associated with student exploratory experiences. The health areas seem to be difficult to identify in large enough numbers to provide many students with experiences there.

C. Future Plans

Contact has been made with the Newport Express and good news coverage has been assured in the future.

As mentioned above, interest in the occupational exploration experiences is gaining increased acceptance on the part of students, and it looks as if more and more students will want "in".

III. Placement Component

A. Areas of Success

Contacts with local employers have been made on an extensive basis. Some of these same potential employers are already providing occupational explorative experiences for sophomores.

B. Areas Having Problems

None at this time.

C. Future Plans

As the year progresses, placement services to exiting students will take more definitive shape and will be geared to provide service.

Recommendations

I. If curriculum activities continue to receive less than enthusiastic faculty responses, identify one or two faculty members and work specifically with them using their subject matter. A few teachers doing solid career education activities (perhaps one per week) will enhance the acceptance by others.

II. Students should be encouraged to identify or stress the academic subjects identified in their exploratory experiences and point these out to "concerned" faculty.

III. With limited staff and resources settle for a few distinct, identifiable successes, rather than going for total program success initially. These visible gains are also more likely to receive attention in the Newport Express.

Introduction

The Vermont Secondary Career Education Model is a 15 month effort to design and implement three components to deliver career education services to students in grades 9-12.

I. A Curriculum Development Component is addressed to at least ten teachers in grades 9-12. These teachers will develop career education activities and implement these on a regular basis in the classroom.

II. The Occupational Exploration Component is addressed to the 10th graders. With parental approval, 50% of the 10th graders will have three, one-week out-of-school work experiences in occupational clusters.

III. The Placement Component is addressed to all students leaving the high school either before graduation or upon graduation. The placement service will make every effort to place all exiting students either in a job, a post-secondary school, a baccalaureate program, or the military.

The third-party evaluation team has accomplished the following events during this quarter.

October 31, 1973 - on-site evaluation visit to review curriculum development and occupational exploration progress.

November 27, 1973 - on-site evaluation visit to review equipment and materials purchases, inservice training, and classroom activities.

In addition to these on-site visits, Mr. Ober is in frequent contact with Mr. St. Pierre. A December visit was not made because of scheduling difficulties. This visit will be made in early January to make up the work required.

I. Curriculum Development Phase

A. Areas of Success

Three English teachers visited Essex Junction, Vermont, the site of an Exemplary Career Education project. The Essex staff will provide an in-service program on November 6, 1973, at the Lake Region. Ten staff members will develop six activities each, and carry out before a follow-up in-service scheduled for January 5, 1974. An agenda of the in-service was obtained.

Many materials and equipment items have been purchased by the project. These are available through the project director, the co-op coordinator or the classroom teachers. As part of an earlier inservice, it was "discovered" that some staff did not know what materials were available for them to use. It appears the earlier problems may have been based on lack of knowledge, not dis-interest.

An all day inservice program was held on November 5, 1973, in which each teacher was requested to develop six career education activities which would be implemented by January 5, 1974. A follow-up session is scheduled for January 5th.

Approximately ½ of the participants are now active in Career Education. Many tried short, ten to fifteen minute in-class activities, have been successful, and are willing to try more.

One or two earlier critics are trying career education "their way", and achieving success (as they see it). The criticism related to values games, the area of activities now being tried is in value clerification domain. Only the method is different.

Approximately one half of the non-Fox Run participants are active in Career Education.

Approximately one half of the Fox Run (6/73) participants are active in Career Education.

Twelve field trips have been planned or executed. The majority are academic teachers taking classes to subject related occupational sites.

The drafting department has several hands-on type projects with direct application to specific job requirements in several fields.

B. Areas Having Problems

Staff cooperation and activity in career education activities is better than it was during the first quarter.

Staff members have been reluctant to record their career education activities on the activity report form. This could create problems when the project attempts to disseminate its successful activities.

C. Future Plans

The January 5th inservice should reinforce earlier involvement and increase the number of teachers actively doing career education in the classroom.

II. Occupational Exploration Phase

A. Areas of Success

As during the first quarter, this component continues to function well.

Work Experience

The forestry work experience is complete. Student interest was high; products were sold; mathematics skills were applied to the experience. (for example: the average hourly wage was 46¢); a slide presentation has been prepared, but the quality was disappointing.

Sixty sophomores have expressed an interest in participating in the work experiences. By November 1st, thirty will have had a minimum of a one-week long experience. By December 22nd, it is anticipated that at least 75 will have had a minimum of a one-week work experience.

The evaluator spoke with two students who were placed in a local grocery store. They were enthusiastic about their experience, and were able to identify academic relationships to their work.

It appears that the project will meet its objectives in this area. (50% of the tenth graders having three one week work experiences).

B. Areas Having Problems

There continues the problem of faculty requiring make-up class work from students. As a result some students have expressed reluctance to participate in the week long work experience.

The full crisis has already effected the work-experience transportation and may curtail future field trips.

C. Future Plans

Continued contact with local businesses and industry to evaluate student performance and identify additional positions for student work experience.

III. PLACEMENT COMPONENT

A) Areas of Success

Mr. Howard Murphy, director of guidance, is in charge of the placement component. The placement effort has been organized and operational for some time, even before the project was developed. Accordingly, a budget revision was submitted and approved earlier in the year. This revision moved additional funds into the 10th grade occupational exploration component where extra emphasis has been placed.

A comprehensive follow-up study of graduates has been completed with every graduate accounted for. A similar study was completed for the last two years. These data are now being tabulated for trend analysis.

All seniors have had initial interviews with Mr. Murphy. Those applying to higher education have been assisted in the application process. The GATB and ASFAB tests have been used with those students who plan to enter the world of work.

If a student plans to drop-out, he is given special service in making the transition. This includes referral to the adult education program with recommendations to pursue the GED or equivalency diploma effort.

B) Areas Having Problems

None - This component is fully operational in excellent fashion

C) Future Plans

The emphasis during the third quarter will be working with those seniors who plan to enter the world of work. Continued assistance from the department of Employment Security is also planned.

IV. CAREER MATURITY INVENTORY - PRE-TEST

The Career Maturity Inventory was administered to all tenth (N=112) graders in September of 1973. The results of this six-subtest instrument are summarized in Table 1.

The CMI has five competence based subtests and one attitude scale. The instrument has had extensive research and development and preliminary norms have been determined. As Table I indicates, the Orleans 10th graders were slightly above the norm group on subtests 2, 3, and 4; and slightly below the norm on subtests 1, 5 and 6.

However, the purpose of the project is to demonstrate significant growth in occupational information, attitude and self appraisal. Therefore, a post-test in the Spring of 1974, will enable us to measure growth. A repeated measures ANOVA model will be used to test for statistical significance.

TABLE 1: Pre-test results using the Career Maturity Inventory - Lake Region Union High School - Grade 10 - September, 1973. (N=112)

SUBTEST	MEAN	RANGE	MEAN (Norm)	TOTAL (possible score)
1) Knowing Yourself (Self Appraisal)	11.7	2-19	12.06	20
2) Knowing About Jobs (Occupational Introduction)	13.8	4-20	12.23	20
3) Choosing A Job (Goal Selection)	11.5	3-19	11.12	20
4) Looking Ahead (Planning)	12.6	4-19	9.86	20
5) What Should They Do (Problem Solving)	9.6	1-15	7.54	20
6) Attitude Scale	33.8	25-44	35.31	50

RECOMMENDATIONS

I. Curriculum Development

It is recommended that written documentation using the career education activity report from be obtained from teachers. Nine teachers have been involved in two inservice seminars desgined to develop and test career education activities. These teachers must document these activities and provide copies to the project director.

II. Occupational Exploration

This component of the project has received more effort than either of the other two. It is the occupational exploration phase which stands the best chance of continued operation in the future. To enhance the probability of this happening it is recommended that:

1) Each student evaluate each of their occupational work exploration experiences in writing using a one page feedback sheet developed by the project.
2) Obtain from parents, teachers, and especially employees letters of evaluation in terms of student behaviors and their reactions and attitudes toward the work exposure program.

III. Placement Component

The placement effort is well organized and operation in an excellent manner.

QUARTERLY EVALUATION REPORT No. 3

January 1, 1974 - March 31, 1974

for the

VERMONT SECONDARY CAREER EDUCATION MODEL

Research and Development Project in Career Education

in

Orleans Central Supervisory Union

Orleans, Vermont

Project No. VB361055L
Grant No. OEG-0-73-3008

Submitted by:

Dr. Richard A. Gustafson
Mr. A. Keith Ober
CEDAR Associates

Introduction

The Vermont Secondary Career Education Model is a 15 month effort to design and implement three components to deliver career education services to students in grades 9-12.

I. A Curriculum Development Component is addressed to at least ten teachers in grades 9-12. These teachers will develop career education activities and implement these on a regular basis in the classroom.

II. The Occupational Exploration Component is addressed to the 10th graders. With parental approval, 50% of the 10th graders will have three, one-week out-of-school work experiences in occupational clusters.

III. The Placement Component is addressed to all students leaving the high school either before graduation or upon graduation. The placement service will make every effort to place all exiting students either in a job, a post-secondary school, a baccalaureate program, or the military.

The third-party evaluation team has accomplished the following events during this quarter.

January 9, 1974 - on-site evaluation visit by Gustafson and Ober to review all aspects of the project.

February 28, 1974 - on-site evaluation visit by Mr. Ober to ascertain documentation and procedures for questionnaires and ranking of students.

March 28, 1974 - on-site evaluation visit to monitor major three components of the project.

In addition to the on-site visits, Mr. Ober is in frequent contact with Mr. St. Pierre.

Below we have documented our findings for the third quarter of operation.

I. Curriculum Development Phase

A. Areas of Success

Staff meetings have been held with the building principal offering strong encouragement for the development of in-class career education activities. Of all the departments, the science department is generally acknowledged to be most cooperative in relating science to the world of work.

The English department has fine members. Three are using career education activities, while two continue a strong emphasis on academics.

Teachers in agriculture and drafting are also relating their subject matter to the world of work, including work experiences.

The mathematics, science, and agriculture departments are planning to offer a cooperative course on surveying in the Spring of 1974.

B. Problem Areas

The staff members remain slow in their documentation of career education activity reports. Those which are available are generally sketchy in their content.

C. Future Plans

In English, 60% of the sophomores will have vocabulary taught through the medium of career related terms. Reading skills will also be taught using career related materials. The relationship of vocabulary to other occupational interests will be stressed.

The cooperative program in surveying was mentioned above.

II. Occupational Exploration Phase

A. Areas of Success

One hundred and ten work exposure experiences have been completed to date. This aspect of the project continues to move well, and some students in grades 9 and 11 are asking to participate. Some 9th grade students are already making plans for placement sites next year!

The problems anticipated with transportation costs failed to materialize. Thus the work experience program is continuing without interuption.

Some students were interviewed, and were able to articulate successes and problems with their work exposures. There was general agreement that the time was too long (1 week) and that some teachers did not recognize the worth of the experience. Students were pleased, however, that they had the opportunity to experience the world of work.

B. Problem Areas

Two problem areas continue as in the past. First, the one full week may be too long an experience for the student, and secondly, some teachers continue to require students to make-up all the assignments they missed while out on a work experience.

C. Future Plans

The school has made a commitment to continue the work exposure activities on a limited basis next year. Accordingly, the current coordinator has been granted some released time to continue the work experience program into 1974-75.

III. Placement Component

A. Areas of Success

Work continues to focus upon graduating seniors and an occasional graduate student. Of the 115 seniors, 32 have been accepted in higher education, 8 into the military and 30 have firm employment plans.

Students who indicate a desire to drop-out of school prior to graduation are referred to employment security, the Adult Learning Center in Newport and the military. Follow-up with the agency is carried out by the guidance director.

B. Problem Areas

The guidance director was most disturbed to discover that the Vermont Employment Security would no longer come to the high school to test and assist in placement. Job Bank data, microfiche printouts of available jobs in Vermont are not being made available to schools.

C. Future Plans

Continued work with the seniors will remain a top priority throughout the remainder of the school year. This will create a high demand upon the guidance staff with the absence of employment security assistance.

IV. Career Maturity Inventory and Career Education Survey

Plans are being made so that a sophisticated assessment of the 10th grade work exposure program can be conducted later this spring. The work exposure activities have been the central focus of the project, and measurement of their impact is most important.

The CMI was given to all sophomores in the fall of 1973. It will be administered again during May of 1974. Also, the guidance counselors will rank each sophomore on Knowledge about Jobs, Occupational Planning and Attitude toward Work. Finally, each sophomore will be asked to assess his or her experience in the work exposure component. Using cross tabulations and multiple regression techniques, various statistical analysis will be conducted to assess the impact of the work exposure experiences. Also the CMI scores will be compared with counselor judgements on essential career planning characteristics.

Recommendations

I. Curriculum Development

Documentation is still lacking for those activities which teachers have developed. It is recommended that this take place immediately.

II. Work Exposure

None

III. Placement

It is suggested that students seeking employment be assisted in placing an advertisement in the local newspapers. The guidance department may be of some help in this area.

IV. Overall Project

It is recommended that the project assess its progress and problems with the State Department of Education. This review of progress to date is recommended for two reasons:

1. The SDE may provide useful suggestions on ways to deal with problem areas.

2. The project can solicit SDE assistance and support in promoting the project activities for a second year.

APPENDIX C

EVALUATION INSTRUMENTS

CAREER EDUCATION QUESTIONNAIRE FOR TENTH GRADERS

NAME ______________________________________

1. Sex: Male ☐

   Female ☐

2. How many career education work exposure experiences have you had this year? (Circle the appropriate number)

   0 1 2 3 4 5 6 7

3. What is the highest level of schooling you are now planning to complete?

   ☐ (1) Graduate or professional school (medicine, law, dentistry)
   ☐ (2) A four-year college or university
   ☐ (3) Two years of college
   ☐ (4) A technical, trade, business or beautician school
   ☐ (5) High school, then to a job of my choice
   ☐ (6) Training in armed services
   ☐ (7) Less than high school

4. How many years have you lived here and gone to this school system?

   ☐ (1) One year or less
   ☐ (2) Between one and three years
   ☐ (3) Between three and six years
   ☐ (4) More than six years, but not since first grade
   ☐ (5) I have been in Orleans schools since first grade.

5. Does your family speak French at home?

   ☐ (1) No
   ☐ (2) Sometimes, but not always
   ☐ (3) We always speak French at home

6) If you had to rate your career education work exposure experiences on a ten point scale (with ten being the highest rating), how would you rate them? (circle your answer)

1 2 3 4 5 6 7 8 9 10

7) What do you think have been the good things about the work experience program?

8) What do you think have been the problems with the work exposure program?

PAGES 62 THROUGH 66 CONTAINING COUNSELOR EVALUATION SHEETS WHICH LIST THE NAMES OF TENTH GRADE STUDENTS BEING EVALUATED WAS REMOVED FROM THIS DOCUMENT PRIOR TO ITS BEING SUBMITTED TO THE ERIC DOCUMENT REPRODUCTION SERVICE.

(X7)

LETTER OF ASSURANCE

January 15, 1973

Dr. Robert M. Worthington
Associate Commissioner of Adult,
  Vocational and Technical Education
U.S. Office of Education
Washington, D. C. 20202

Dear Commissioner Worthington:

In response to your letter of August 29, 1972, regarding the supplemental $9 million allocation of vocational education research, we are submitting this letter of assurance. The letter has been prepared in accordance with the guidelines provided in the Office of Education's Policy Paper No. AVTE-V72-11.

a) We intend to establish this state's Part C demonstration, testing and development site in the local school district of Orleans Central Supervisory Union, Orleans, Vermont.

Orleans Central is a rural district (pop. 5541) servicing 1507 students from 6 small towns. With family income below the state average it receives above average state aid support Title I funding (It has the highest percentage of low income families of any supervisory union in the state of Vermont). It has been able to maintain a limited work study program and does support 40 students at a regional vocational school.

With the building of the Lake Region Union High School, all students of grades 9 through 12 are offered a diversified educational program at this central site. All of the students of grades 9 through 12 (496) will be directly served by the curriculum development component of the project. Ninth and/or tenth graders will be part of an intensive work-experience component and 12th graders will receive on-going assistance to secure placement in either a job, a post-secondary program, or a baccalaureate program.

Table I details the student enrollment and teacher/counseling staff of the union high school in which the project will operate.

CAREER EDUCATION PROJECT AS PER USOE POLICY PAPER NO. AVTE-V72-11

PROJECT TITLE: Vermont Secondary Career Education Model

PROJECT DIRECTOR: Mr. Paul Henry
Superintendent of Schools
Orleans Central Supervisory Union
Orleans, Vermont

PERSON RESPONSIBLE: Mr. Cola Hat[illegible]
State Director
Vocational and Technical Education
State Department of Education

BUDGET: $20,787

PROJECT DURATION: April 1, 1973 through June 30, 1974

Lake Region Union High School Student Population (1972-73)

Grade 12	108
Grade 11	138
Grade 10	128
Grade 9	122
Total	496

Staff	Teachers	Counselors
	35	2

c) FOCUS OF THE PROJECT

Introduction

To insure that these funds have sufficient impact and comprehensiveness, this career education effort takes the staff and students of grades 9 through 12 as its target group. In addition to restructuring its total guidance and counseling around a total career awareness, work-experience and placement program, the project will also involve all 9th through 12th grade teachers in developing learning activities which will tie together the student's academic experience and his growing career development. Also, as extensive programs of work-experience and placement require manpower and expertise in the work-study area, present work-study capacity will also be increased through this program.

The following section presents an outline of objectives and procedures for the 3 components of this project: curriculum development (9-12), work experience (grade 9 and/or 10), and placement (grade 12). In terms of the Bureau's FOCUS OF THE PROJECTS component outline, the curriculum component will center on number 1 - self-awareness, attitude improvement and decision-making skills; the work-experience component will implement number 4 - work-experience in a wide variety of occupational areas; and the placement component will restructure the guidance and counseling department's capacity regarding number 5 - the placement of all existing students.

The project can be divided into 2 phases. During phase 1, teachers will be introduced to career education and an in-service to begin curriculum development will be held (September, 1973). Also during phase 1, students will be pre-tested, and job site identification will begin. An advisory role for parents and job supervisors will also be developed during phase 1.

Phase 2 will involve the implementation of curriculum in the classroom, the extensive student occupational exposure program, and total placement of exiting students.

Curriculum Development Component

Need

Through implementation of 3 extensive career education projects within the state of Vermont and through extensive correspondence and travel throughout the New England region and the entire United States, personnel of the Vermont State Department of Vocational and Technical Education and personnel of the Orleans Central School District have seen career education curriculum efforts flourish at the elementary level. With the elementary teacher more concerned with the entire personal development of his or her students, a variety of career awareness and exploration activities are often quickly identified and introduced in the classroom. However, again and again, projects successful at the elementary level have found secondary teachers (particularly those in the academic areas of language arts, social studies, science and mathematics) less responsive articulating and implementing classroom activities which tie the student into the world of careers and help him or her to develop the skills necessary in making appropriate career choices. As a result of this phenomenon, this project sets the following curriculum objectives to be met through the procedures outlined.

Objective One

10 Teachers

Teachers in grades 9 through 12 will identify and implement on a regular basis career education activities which increase self-awareness, develop favorable attitudes and increase decision-making skills.

Objective Two

10 Teachers

Teachers in grades 9 through 12 will identify and implement activities that emphasize the relationship between academic subjects and careers. + existing

Objective Three

The school will increase participation in occupational preparation through the area vocational center.

11th + 12th [illegible]

Procedures

1) April 1, 1973 was chosen as the starting date for this project because a "Youth Day" - emphasizing on-site job exposure - is to be held on that date. Prior to the Youth Day, counselors and teachers will be involved in interviewing students regarding their vocational interests and in securing sites for visitation during Youth Day.

2) After the Youth Day, the counseling staff will summarize all vocational interest data and student evaluations of their Youth Day experiences. The counselors will then begin working with department chairmen in developing an implementation strategy for curriculum change. The specifics of the fall workshop will be developed. (Consultant assistance will be utilized to assist all parties in clarifying the definition of "Career Education".)

3) Staff will be maintained on a part-time basis during the summer to identify the occupational exposure sites needed, and to identify specific consultants for ~~the fall and school~~ year curriculum workshops.

4) During a pre-school workshop on writing performance objectives, the emphasis will be placed upon helping teachers identify lively education experiences and define the growth in student self-awareness, knowledge or deciding skills which will ensue. (Teachers will also develop "occupational exploration interview sheets" related to specific subject areas.) Also, all 9 through 12 grade teachers will be introduced to the wide variety of career education activities already identified and they will be invited to develop their own lists of activities which they can implement during the school year. To facilitate their involvement, the following activities format will be employed: field trips, resource people, hands-on experience, role-playing, and all-subject tie in.

In addition, teachers, counselors, work-study staff, administrators and prospective work-experience supervisors will work together to identify ways of integrating the student's work-experience with his academic subjects

5) Throughout the school year a curriculum development consultant(s) will work with all teachers through a series of at least 5 workshops to further ✓ develop and evaluate curriculum activities. This consultant will have a unique opportunity to work with the 9th and/or 10th grade teachers on a more prolonged basis as they will be periodically released from classroom responsibilities when their students are block scheduled for week-long on-site work-experiences. (These 9th and/or 10th grade teachers will also make on-site visitations with students and job supervisors during their released time.)

6) The project staff will involve the Area Vocational Director in better ✓ informing the teachers and students of the opportunities of the area vocational center.

Staffing

The project will rely on consultant services to provide necessary curriculum expertise during the first phase of the project. The larger portion budgeted for consultant services will be used for on-going consultant support during the year. A person(s) with ability to motivate classroom teachers and assist them with the practical problems of classroom implementation will be sought for this on-going role.

Occupational Exploration Component

Need

Counseling interviews of students reveal that 40% of juniors and 60-70% of 8th graders have developed no clear vocational interest. The 9th and/or 10th graders need a heavy dose of work experience now if they are to make the best use of their 11th and 12th years of academic and vocational opportunities. The following objectives and procedures outline the intensive occupational exploration program at the 9th and/or 10th grade levels.

Objective One

With parental approval, ~~9th and/~~or 10th graders will have 3 one-week work experience in clusters related to their interests and abilities. Participation of at least 50% is set as a success criteria. These students will range across all interest and ability areas.

Objective Two

Work-experience students will significantly increase:

a) their knowledge about careers

b) their self-awareness of their interests and abilities

c) their attitude toward the value of work

d) their ability to make more appropriate career choices

e) their use of academic and vocational opportunities as shown by better grades in career related classes, better school attendance, fewer disciplinary incidents, more realistic selection of their 11th and 12th grade academic and vocational courses, and the impact upon the grade dropout rate will also be inspected.

Procedures

1) Results of the present interviewing and/or testing of all 9th and/or 10th graders, and 12th graders regarding their present career interests and plans will be summarized by the guidance staff and recommendations based upon such summary will be used in restructuring the guidance staff around the career education theme.

2) Next year's 9th and/or 10th graders will be tested this spring regarding their knowledge, self-awareness, attitudes and decision-making skills. This data, along with school records on cognitive achievement and aptitude will be used by the guidance staff during late spring and summer to develop individual profiles of future 9th and/or 10th graders regarding appropriate work experiences for the 1973-74 school year.

3) The occupational exploration coordinator (retained during the summer with project funds) will use the above dat in identifying sufficient occupational exploration sites and job supervisor commitments.

4) The guidance department, 9th and/or 10th grade teachers, occupational exploration coordinator and selected job supervisors will develop a format of questions and tasks for all work-experiences which will tie together the classroom and site experiences of the student.

5) All of the above will make site contact and evaluate the extent to which questions were answered and tasks performed. Student involvement in this stage of evaluation will be emphasized.

Staffing

Project funds would allow a person to be a half-time occupational exposure coordinator from June, 1973 to June, 1974. Limited secretarial assistance would also be provided.

Placement Component

Need

While efforts are presently being made to assist all students, the personnel find that while assistance in application procedures is feasible for all college-bound students, the placement of their exiting students on jobs or in post-secondary occupational programs is more difficult. Along with identifying many more prospective employers in the area, the school must improve its coordination of the 40 students presently enrolled in the nearby vocational center.

Objective

To insure the placement of all exiting students in either:

a) a job

b) a post-secondary occupational program

c) a baccalaureate program

d) military service

Procedures

1) The guidance department will continue with its individual interviewing of all 11th and 12th graders.

2) College-bound students will be assisted with their college applications.

3) Students of appropriate interest and ability will be assisted on an individual and small group basis of investigating available post-secondary occupational opportunities. The guidance department will establish on-going personal contact with admissions personnel of these post-secondary centers, and introduce individual students to appropriate center personnel.

4) The guidance department will list the names and interests of all exiting students not moving toward further education. These students will be acquainted with present regional job opportunity information and will be assisted in securing interviews with at least 2 prospecitve employers. When possible, these students will also be placed in work-study sites which lead to full-time employment. (Although the counselors work through the State Employment Office, they will follow up on all referrals made to that agency and provide assistance when problems occur.)

Staffing

This component relies upon the present guidance staff. The on-going restructuring of the guidance department to meet this need is anticipated.

d) "R & D" COST/TRANSPORTABILITY AND COMPREHENSIVENESS

Careful measurement is assured through the assistance of a contracted third-party evaluator, the New England Resource Center for Occupational Education. Their technical assistance has been employed in articulating the above objectives. These objectives will be further refined with success criteria set and instruments identified or developed. As NERCOE stresses frequent on-site contact and feedback, necessary program revisions can be quickly developed.

The attached budget shows costs falling either into the curriculum development or work-experience/placement areas. Thus, per student program costs can be computed with the work-experience and placement coordinators additional salary proportioned between work-experience and placement in terms of his actual work schedule.

The above objectives interrelate guidance and counseling, curriculum development and occupational exploration. Through work experience the comprehensive nature of the project is best illustrated at grade 9 and/or 10 where block scheduling will allow on-going interaction between guidance staff, academic teachers, the work-study coordinator and job supervisors. This joint effort calls for the comprehensive set of objectives regarding 9th and/or 10th grade student improvement.

The comprehensiveness of this project is also shown in the close state/local cooperation. State Department of Education staff are daily involved in designing and implementing career education across Vermont. They are constantly involved as resource persons in in-service activities and establish frequent communication and dissemination activities within the state and at the national level. Further developmental assistance from the U.S. Bureau of Adult, Vocational, Technical Education is invited.

e) CONCENTRATION FOR SUFFICIENT IMPACT

The limiting of the curriculum effort to 9 through 12 academic teachers and the concentrated effort at grades 9 and/or 10 are meant to insure concentration of effort for impact.

f) DURATION OF PROJECT

The proposed starting date is April 1, 1973. The end date is June 30, 1974. The first 5 months will stress planning and initial preparation; most funds will be expended from September, 1973 to June, 1974.

g) THIRD-PARTY EVALUATION

As noted above, evaluation services will be contracted from the New England Resource Center for Occupational Education. Dr. Richard Gustafson, Director of Manpower and Management Services, and Mr. Peter Fellenz, Coordinator of Evaluation Services have been responsible for Title I, III, VII, and VIII evaluations and are presently contracted as third-party evaluators for 4 separate career education projects throughout New England. While utilizing tests and other performance instruments to measure student growth, they are also responsive to Dr. Sidney High's recommendation that the basic processes of each component be carefully documented to insure necessary revisions and to document for others the processes which best produce the desired products or outcomes.

h) UNIT AND PERSONS RESPONSIBLE

The state organizational unit and its individual responsible is:

Cola Watson
State Director
Vocational and Technical Education
State Department of Education

On-site the Project Director is Mr. Paul Henry, Superintendent. Mr. Howard Murphy, Chairman, Guidance and Counseling, will coordinate daily operations.

i) QUALIFICATIONS OF STAFF

Howard Murphy, M.A. (Guidance and Counseling), Florida Atlantic University, has 10 years of education experience as a teacher and counselor.

j) FISCAL CONTROL AND ACCOUNTING

Fiscal control will rest with the Orleans Central Supervisory Union. Mr. Hollis Rowell, Business Manager, will establish a separate accounting system to insure proper disbursement and accounting of federal funds allocated.

k) BUDGET

(See attachment.)

We trust that this Letter of Assurance covers the points specified in the Bureau's Policy Paper No. AVTE-V72-11, and we look forward to the negotiation and award of an appropriate grant document at an early date.

Sincerely,

Cole R. Watson
State Director of Vocational Education

TITLE: A FOLLOW-UP SURVEY OF THE GRADUATES OF THE HIGH SCHOOLS IN VOCATIONAL EDUCATION REGION NO. 8, NEW HAMPSHIRE. FINAL REPORT.

PERSONAL AUTHOR: CRIM, ROGER D.; ROSS, EUGENE W.

DESCRIPTOR: *GRADUATE SURVEYS; *VOCATIONAL EDUCATION; *VOCATIONAL FOLLOWUP; *HIGH SCHOOL GRADUATES; RESEARCH

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 32P.

ABSTRACT: A FOLLOWUP SURVEY OF THE GRADUATES OF THE PUBLIC HIGH SCHOOLS WITHIN VOCATIONAL REGION EIGHT, NEW HAMPSHIRE, WAS CONDUCTED TO OBTAIN BASE DATA AS A FIRST STEP IN ENABLING VOCATIONAL EDUCATORS TO PLAN FUTURE CURRICULUMS AND PROGRAMS. INFORMATION REGARDING EDUCATIONAL AND VOCATIONAL HISTORY WAS OBTAINED VIA TELEPHONE INTERVIEW FROM A LARGE RANDOM SAMPLE OF THE 1968, 1970, 1972, AND 1974 GRADUATES OF THE HIGH SCHOOLS IN REGION EIGHT. THE "DICTIONARY OF OCCUPATIONAL TITLES" WAS UTILIZED AS A GUIDE IN CATEGORIZING THE VOCATIONS OF THE GRADUATES. THE OVERALL RESPONSE RATE WAS 66.4 PERCENT (840). THE DATA WERE TABULATED IN FREQUENCIES AND PERCENT OF RESPONSES. A COMPOSITE TABULATION AND PROFILE WAS OBTAINED FOR THE REGION AND FOR EACH INSTITUTION. THE STATISTICAL FINDINGS INDICATED THAT ALL SIX MAJOR VOCATIONAL AREAS WERE REPRESENTED IN THE EMPLOYMENT PROFILE. EVEN THOUGH A LARGE PERCENT (26) OF THE GRADUATES INDICATED AN UNEMPLOYED STATUS, ONLY SEVEN PERCENT INDICATED THEY WERE LOOKING FOR EMPLOYMENT. THE INTERVIEW FORMS ARE APPENDED TO THE REPORT, ALONG WITH A LIST OF THE OCCUPATIONAL CATEGORIES, DIVISIONS, AND GROUPS USED IN THE DATA ANALYSIS. (NJ)

Plymouth State College

Eugene W. Ross
Vocational Education Director
Laconia Area Vocational Education Center #8

December, 1975

ABSTRACT

Purpose of the Study

A follow-up survey of the graduates of the public high schools within Vocational Region #8, New Hampshire, was conducted. The purpose of the study was to obtain a base with regard to the products of the region's public secondary institutions as the first step in the process enabling vocational educators at the local, regional, and state levels to plan future curriculum and programs. Curriculum, policy, and financial decisions based upon up-to-date data will ensure the relevancy, appropriateness, and the accountability of the Region #8 program and the expenditure of local, state, and federal funds in such a vocational education program.

The follow-up study was funded with monies obtained through a research grant as provided by the Vocational Education Amendments of 1968 (P.L. 90-576). The applicant organization was the Laconia School District, Laconia, NH.

Description of the Study

Information regarding the educational and vocational history of the high school graduates was obtained via the telephone interview. The telephone interview being more cost/effective than either the mailed questionnaire or the personal interview.

The population for the study consisted of the 1968, 1970, 1972, and 1974 graduates of the six public high schools within Region #8. The population for the study numbered 2509. For sampling purposes

the population was stratified via school and graduating class. A simple random sample was obtained from each of the twenty-four strata. To ensure adequate pieces of data for analysis, a large overall sample was selected (50.5 percent; N=1266)

A interview form was developed on which the telephone interviewers recorded the educational and vocational history of the graduates. The Dictionary of Occupational Titles was utilized as a guide in categorizing the vocations of the graduates. The overall rate of response was 66.4 percent (N=840).

Analysis and Results

The data was tabulated in frequencies and percent of responses. A composite tabulation and profile was obtained for the region (all six institutions and each graduating class) and for each institution (all graduating classes).

The profile of the occupational and educational history of the graduates was utilized as a data source for vocational education curriculum development at the regional level. A profile of the graduates of each high school was provided to the local school administrators and school counselors.

The statistical findings indicated that all six major vocational education areas were represented in the employment profile. Even though a large percentage (26) of the graduates indicated an

5

unemployed status, only seven percent indicated they were looking for employment. A need for a food service vocational education program was shown. This need was not indicated in two previous studies.

Recommendations

The researchers recommended that (1) the Laconia Area Vocational Center investigate all vocational areas within the curriculum planning and development process and that (2) the sending high schools within Region #8 institute a uniform system for follow-up of students leaving their respective schools.

Chapter 1

INTRODUCTION

It is vital that educational planners examine carefully the basic relationship of school programs to the needs of all individuals for occupational and life preparation and to the preparation which schools should and can provide. (7:3) The focus of most evaluative studies should be on the product or the outcomes of the educational system. Educational leaders need to look at the former students. The follow-up study is one important component of a larger design for evaluating the educational endeavor. (8:5)

Follow-up studies of graduates are vital components of program and institutional evaluation. The results of such activity, if accurately derived, translated, and applied, can provide a data base that is of great value in the program and policy making decisions of institutions and state systems of vocational education. (4:25; 7:34)

A follow-up study or "self-survey" can act as a motivating force for change. "At the very least, a follow-up study will probably indicate areas requiring change of some sort -- addition of new programs, deletion of others or revision of existing programs." (8:6)

9

The results of the follow-up can be very useful in curriculum modification or development. "Follow-up studies can produce valid and reliable findings useful in making sound educational decisions at the local, area, state, and national levels." (8:30; 5:936)

PURPOSE OF STUDY

A follow-up survey of the graduates of the public high schools within Vocational Education Region #8, New Hampshire, was conducted. The purpose of the study was to obtain information regarding the product of the region's public secondary institutions, as the first step in a process enabling the vocational educators at the local, regional, and state levels to plan future curriculum and programs. Curriculum, policy, and financial decisions based upon an up-to-date data base will ensure the relevancy, appropriateness, and the accountability of the Region #8 program and the expenditure of local, state, and federal funds.

FUNDING AND DIRECTION

The follow-up study was funded with monies obtained through a research grant as provided in the Vocational Education Amendments of 1968 (P.L. 90-576). The applicant organization was the Laconia School District, Laconia, New Hampshire. The study was initiated and directed by Dr. Eugene W. Ross, Vocational Director, Laconia Area Vocational Education Center #8, Laconia, New Hampshire. The principal researchers/consultants were Roger D. Crim, Assistant Professor, and Malcolm Bownes, Assistant Professor, of the Department of Education, Plymouth State College, Plymouth, New Hampshire.

Chapter 2

METHODOLOGY

Information regarding the post-graduation educational and vocational history of the high school graduates was obtained via the telephone interview. The telephone interview technique was determined more cost/effective than either the mailed questionnaire or the personal interview. (6:26)

Population for the Study

The population for the study consisted of the 1968, 1970, 1972, and 1974 graduates of the six public high schools within Region #8: Shaker Regional (Belmont), Newfound (Bristol), Franklin, Laconia, Inter-Lakes (Meredith), and Winnisquam (Tilton). See Table 1 for the sizes of the graduating classes of each school. The identified population for the study numbered 2509. (3)

The superintendents and building principals of the districts and schools included in the study were contacted and provided information with regard to the objective and design of the study. In each case full cooperation was provided. Each of the high schools provided the names of the students graduating in the graduation classes being surveyed. Information to assist in the contacting of the graduates was obtained from the counselors in the schools via a location information card completed by the counselors.

Sample for the Study

For sampling purposes the population was stratified via school and graduating class. Stratifying assured that each school and each graduating class was adequately represented in the sample utilized. A simple random sample (using a computer generated list of random numbers) was obtained from each of the twenty-four strata. To ensure adequate pieces of data for various statistical analysis, a large overall sample was selected. (1) See Table 2 for the sample sizes of the various strata. The overall sample size was 50.5 percent (N=1266).

Interviewers and Instrumentation

To contact the graduates and obtain the needed data, six persons were hired as interviewers. Each interviewer participated in a three-hour training and orientation session designed and directed by Mr. Robert Van Vliet, Assistant Professor, Department of Education, Plymouth State College, Plymouth, New Hampshire. The focus of the session was to explain the objective and the design of the study and to develop telephone interviewing techniques and strategies.

An interview form was developed on which the telephone interviewers recorded the educational and vocational history of the graduates (Appendix B). The Dictionary of Occupational Titles (2) was utilized as a guide in categorizing the vocations of the graduates.

TABLE 2

SAMPLE SIZES OF STRATA

High School	Graduating Class	Sample Size, Percent	Sample Size, Numeric
Belmont	1968	100	26
	1970	100	38
	1972	100	31
	1974	100	51

	1970	25	71
	1972	25	69
	1974	25	70
Merdith	1968	75	44
	1970	75	44
	1972	75	49
	1974	75	56
Tilton	1968	75	54
	1970	75	58
	1972	75	73
	1974	75	71

Interviewing Process

The telephone interviewing was conducted over a two-week period in the various communities. The interviewers attempted in all instances (except those out-of-state or out-of-country) to contact the high school graduates. In many instances, for various reasons, the high school graduate was not able to be contacted. However, the information needed was often supplied by a parent, grandparent, guardian, or spouse, knowledgeable of the graduate's educational and vocational history since graduation for high school.

Response Rate

The overall rate of response was 66.4 percent (N=840). See Table 3 for the response rate (percent and numeric) for each of the strata.

Analysis of Data

The data was tabulated in frequencies and percent of responses. A composite tabulation or profile was obtained for the region (all six institutions and each graduating class).

TABLE 3

RESPONSE RATE PER STRATA

High School	Graduating Class	Return Rate, Percent,	Return Rate, Numeric
Belmont	1968	61.5	16
	1970	86.8	33
	1972	90.3	28
	1974	82.4	42

Chapter 3

FINDINGS

Education/Training Beyond High School

1. Forty-eight percent (N=396) of the graduates received no additional education/training following high school graduation.
2. Of those obtaining additional education/training, ninety-four percent (N=412) attended full-time.
3. Forty-four percent (N=195) attended a four-year college/university.
4. Fourteen percent (N=63) attended a two-year college.
5. Twenty-six percent (N=115) attended a vocational technical or trade school.
6. Thirteen percent (N=56) participated in other education/training programs.

First Year Employment Status*

1. Eighty percent (N=674) of the graduates were employed immediately following graduation.
2. Sixty-two percent (N=522) of the total respondents were employed full-time.
3. Nineteen percent (N=161) of the total respondents were unemployed.
4. Three percent (N=29) of the total respondents were looking for work.
5. Nineteen percent (N=159) of the total respondents obtained additional education/training.
6. Eighteen percent (N=152) of the total respondents attended additional education/training programs full-time.
7. Seven percent of the sample indicating employment were employed in Professional, Technical, and Managerial Occupations.
8. Thirty-four percent of the sample indicating employment were employed in Clerical and Sales Occupations.
9. Twenty-eight percent of the sample indicating employment were employed in Service Occupations.

---

*A full description/breakdown of the occupation groups and categories of The Dictionary of Occupational Titles (2) appears in Appendix D.

10. One percent of the sample indicating employment were employed in Farming, Fishery, Forestry, and Related Occupations.

11. Three percent of the sample indicating employment were employed in Processing Occupations.

12. Eight percent of the sample indicating employment were employed in Machine Trades Occupations.

13. Seven percent of the sample indicating employment were employed in Bench Work Occupations.

14. Nine percent of the sample indicating employment were employed in Structural Work Occupations.

15. Three percent of the sample indicating employment were employed in Miscellaneous Occupations.

Current Employment Status

1. Seventy-three percent (N=612) of the total respondents are employed.

2. Sixty-three percent (N=465) of the total respondents are employed full-time.

3. Twenty-six percent (N=224) of the total respondents are unemployed.

4. Seven percent (N=59) of the total respondents are looking for work.

5. Sixteen percent (N=138) of the total respondents are receiving additional education/training.

6. Less than one percent (N=6) of the total respondents are receiving additional education/training part-time.

7. Seventeen percent of the sample indicating employment are employed in Professional, Technical, and Managerial Occupations.

8. Thirty percent of the sample indicating employment are employed in Clerical and Sales Occupations.

9. Twenty-one percent of the sample indicating employment are employed in Service Occupations.

10. Two percent of the sample indicating employment are employed in Farming, Fishery, Forestry, and Related Occupations.

11. Two percent of the sample indicating employment are employed in Processing Occupations.

12. Nine percent of the sample indicating employment are employed in Machine Trades Occupations.

13. Seven percent of the sample indicating employment are employed in Bench Work Occupations.

14. Eight percent of the sample indicating employment are employed in Structural Work Occupations.

15. Four percent of the sample indicating employment are employed in Miscellaneous Occupations.

CONCLUSIONS AND IMPLICATIONS

1. The statistical findings indicate that all six major vocational education areas are represented in the employment profile.

2. That although a large percentage (26) indicated they were unemployed only seven percent indicated a desire for employment.

Recommendations

1. The Laconia AREA Vocational Center investigate all vocational areas within the curriculum planning and development process.

2. It is recommended that the sending high schools within the AREA Center institute a uniform system for follow-up of students leaving their respective schools.

Chapter 4

SUMMARY

The purpose of this study was to investigate the employment patterns and the skills used in fulfilling the employment positions for the Vocational Education Center #8 in New Hampshire. Two basic findings were sought: (1) where did the graduate go immediately after graduation, and (2) where is the graduate now working and what skills are being utilized. The profile of the area comprises seven high schools in the central portion of the state and has a complete cross section of employment activities including agriculture, industrial, recreational, service, etc.

The sample for this study was selected from the graduation classes for the years 1968, 1970, 1972, and 1974. Six of the high schools were in the towns of Belmont, Bristol, Franklin, Laconia, Meredith, and Tilton. The seventh high school is in the town of Gilford, but is included in the data summary for Laconia. The Gilford High School will have its first graduation class in 1976.

The sample was selected and stratified to provide responses from each school and graduating class. The total population of these classes was 2509 from which a sample size of 1266 was selected. Each high school was given the list of names of those selected to complete the information needed so that the respondent could be contacted for a telephone interview. This process produced a 66.4 percent success in locating the requested information sought by telephone interviewers.

OCCUPATIONAL CATEGORIES, DIVISIONS, AND GROUPS

OCCUPATIONAL CATEGORIES, DIVISIONS, AND GROUPS

OCCUPATIONAL CATEGORIES

0 1	Professional, technical, and managerial occupations
2	Clerical and sales occupations
3	Service occupations
4	Farming, fishery, forestry, and related occupations
5	Processing occupations
6	Machines trades occupations
7	Bench work occupations
8	Structural work occupations
9	Miscellaneous occupations

TWO-DIGIT OCCUPATIONAL DIVISIONS

PROFESSIONAL, TECHNICAL, AND MANAGERIAL OCCUPATIONS

00 01	Occupations in architecture and engineering
02	Occupations in mathematics and physical sciences
04	Occupations in life sciences
05	Occupations in social sciences
07	Occupations in medicine and health
09	Occupations in education
10	Occupations in museum, library, and archival sciences
11	Occupations in law and jurisprudence
12	Occupations in religion and theology
13	Occupations in writing
14	Occupations in art
15	Occupations in entertainment and recreation
16	Occupations in administrative specializations
18	Managers and officials, n.e.c.
19	Miscellaneous professional, technical, and managerial occupations

CLERICAL AND SALES OCCUPATIONS

20	Stenography, typing, filing, and related occupations
21	Computing and account-recording occupations
22	Material and production recording occupations
23	Information and message distribution occupations
24	Miscellaneous clerical occupations
25	Salesmen, services
26 27 28	Salesmen and salespersons, commodities
29	Merchandising occupations, except salesmen

SERVICE OCCUPATIONS

30 Domestic service occupations
31 Food and beverage preparation and service occupations
32 Lodging and related service occupations
33 Barbering, cosmetology, and related service occupations
34 Amusement and recreation service occupations
35 Miscellaneous personal service occupations
36 Apparel and furnishings service occupations
37 Protective service occupations
38 Building and related service occupations

FARMING, FISHERY, FORESTRY, AND RELATED OCCUPATIONS

40 Plant farming occupations
41 Animal farming occupations
42 Miscellaneous farming and related occupations
43 Fishery and related occupations
44 Forestry occupations
45 Hunting, trapping, and related occupations
46 Agricutural service occupations

PROCESSING OCCUPATIONS

50 Occupations in processing of metal
51 Ore refining and foundry occupations
52 Occupations in processing of food, tobacco, and related products
53 Occupations in processing of paper and related materials
54 Occupations in processing of petroleum, coal, natural and manufacture gas, and related products
55 Occupations in processing of chemicals, plastics, synthetics, rubber, paint, and related products
56 Occupations in processing of wood and wood products
57 Occupations in processing of stone, clay, glass, and related products
58 Occupations in processing of leather, textiles, and related products
59 Processing occupations, n.e.c.

MACHINE TRADES OCCUPATIONS

60 Metal machining occupations
61 Metalworking occupations, n.e.c.
62 63 Mechanics and machinery repairmen
64 Paperworking occupations
65 Printing occupations
66 Wood machining occupations
67 Occupations in machining stone, clay, glass, and related materials
68 Textile occupations
69 Machine trades occupations, n.e.c.

BENCH WORK OCCUPATIONS

70 Occupations in fabrication, assembly, and repair of metal products, n.e.c.
71 Occupations in fabrication and repair of scientific and medical apparatus, photographic and optical goods, watches and clocks, and related products
72 Occupations in assembly and repair of electrical equipment
73 Occupations in fabrication and repair of products made from assorted materials
74 Painting, decorating, and related occupations
75 Occupations in fabrication and repair of plastics, synthetics, rubber, and related products
76 Occupations in fabrication and repair of wood products
77 Occupations in fabrication and repair of sand, stone, clay, and glass products
78 Occupations in fabrication and repair of textile, leather, and related products
79 Bench work occupations, n.e.c.

STRUCTURAL WORK OCCUPATIONS

80 Occupations in metal fabricating, n.e.c.
81 Welders, flame cutters, and related occupations
82 Electrical assembling, installing, and repairing occupations
84 Painting, plastering, waterproofing, cementing, and related occupations
85 Excavating, grading, paving, and related occupations
86 Construction occupations, n.e.c.
89 Structural work occupations, n.e.c.

MISCELLANEOUS OCCUPATIONS

90 Motor freight occupations
91 Transportation occupations, n.e.c.
92 Packaging and materials handling occupations
93 Occupations in extraction of minerals
94 Occupations in logging
95 Occupations in production and distribution of utilities
96 Amusement, recreation, and motion picture occupations, n.e.c.
97 Occupations in graphic art work

ABSTRACT: THIS QUARTERLY REPORT COVERS THE PERIOD OF OCTOBER TO DECEMBER 1975 OF A MOBILE RESOURCE CAREER EDUCATION UNIT PROJECT IN SOUTHERN INDIANA. THE MAJOR ACTIVITIES, ACCOMPLISHMENTS, AND EVENTS ARE BRIEFLY DESCRIBED. PUBLICITY, DISSEMINATION, AND STAFF DEVELOPMENT ACTIVITIES ARE PRESENTED, AND THE PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES IS REPORTED. INCLUDED IN THE REPORT ARE LISTINGS OF SCHOOLS THAT BORROWED MATERIALS FROM THE CAREERS RESOURCE PROJECT (CRP) AND OF SCHOOLS AND CONFERENCES THAT USED THE CRP MOBILE UNITS DURING THE REPORTING PERIOD. A SAMPLE ISSUE OF THE PROJECT NEWSLETTER IS APPENDED TO THE REPORT. (NJ)

December 1975

VT 102 968

PERIOD COVERED

October 1, 1975 to December 31, 1975

ACCOMPLISHMENTS DURING THIS PERIOD

(a) Conducted 61 in-service programs during this reporting period involving approximately 567 educators.

(b) Teachers in the project area are utilizing the services of the materials center. In excess of 986 educators have checked out on loan audio-visual kits, career education games, filmstrips, books, and other career-related materials. Approximately 15,042 students have benefited from the use of these aids.

(c) The following is a listing of those schools which have borrowed on loan CRP career education materials during this reporting period.

Boonville High School, Boonville, Indiana
Chrisney Elementary School, Chrisney, Indiana
Clay-Huff Elementary School, Evanston, Indiana
Cynthia Heights Elementary School, Evansville, Indiana
Forest Park High School, Ferdinand, Indiana
Lutheran Elementary School, Evansville, Indiana
Newburgh Elementary School, Newburgh, Indiana
Pike Central High School, Petersburg, Indiana
Princeton High School, Princeton, Indiana
Southridge High School, Huntingburg, Indiana
Bloomington High School North, Bloomington, Indiana
Clarksville Community School Corp., Clarksville, Indiana
David Turnham Educational Center, Dale, Indiana
Dollens Elementary School, Oolitic, Indiana
Eastern Junior High School, Pekin, Indiana
Evansville-Vanderburgh School Corporation Administrative Office, Evansville, Indiana
Ferdinand Consolidated School, Ferdinand, Indiana
Fifth Street Elementary School, Jasper, Indiana
French Lick Conference, French Lick, Indiana
Glenwood School, Evansville, Indiana
Haysville Elementary School, Haysville, Indiana
Hebron Elementary School, Evansville, Indiana
Helfrich Park School, Evansville, Indiana
Huntingburg Middle School, Huntingburg, Indiana
Ireland Junior High School, Ireland, Indiana
Lincoln School, Evansville, Indiana
Luce Elementary School, Richland, Indiana
Marengo School, Marengo, Indiana
McGary School, Evansville, Indiana
Mt. Vernon Senior High School, Mt. Vernon, Indiana
North Posey Junior High School, Poseyville, Indiana
Oolitic Elementary School, Oolitic Indiana
Oolitic Junior High School, Oolitic, Indiana
St. Anthony School, Evansville, Indiana
Shawswick Elementary School, Bedford, Indiana
Shoals Elementary School, Shoals, Indiana

Dubois Southside Elementary School, Dubois, Indiana
Springville Elementary School, Springville, Indiana
Vincennes Community School Corp., Vincennes, Indiana
West Washington Elementary School, Campbellsburg, Indiana
West Washington High School, Campbellsburg, Indiana

MAJOR ACTIVITIES AND EVENTS

(a) The Careers Resource Project Advisory Committee met on Nov. 6 for the first time during this school year. Leaders representing business, industry, government service, and education were in attendance.

(b) The Director met with the State Coordinator of Career Exploration and Guidance and Director of the Indiana Career Resource Center for the purpose of planning for fourth year funding, November 13.

(c) A tentative budget draft for fourth year funding (July 1, 1976 - June 30, 1977) was sent to state department officials for review and comments on December 5.

(d) During this quarter the CRP mobile units have been used by the following schools and/or conferences.

Mobile Unit I

October 1-2	West Washington High School, Campbellsburg
October 22	Tekoppel Elementary School, Evansville
October 23	*Memorial High School (ISTA), Evansville
October 24	*Holy Redeemer School (ISTA), Evansville
November 3-7	Dubois High School, Dubois
November 10	Clay-Huff Elementary School, Evanston
November 12-14	Southridge High School, Huntingburg
November 18	Dexter Elementary School, Evansville
November 19	Hebron Elementary School, Evansville
November 21	St. Anthony Elementary School, Evansville
November 25	Corpus Christi School, Evansville

*Indicates Conferences

Mobile Unit II

October 1	McGary School, Evansville
October 14	Harwood Elementary School, Evansville
October 15	St. Agnes Elementary School, Evansville
October 20-22	Chrisney Elementary School, Chrisney
October 23	*Tenth Street Elementary (ISTA), Jasper
October 29	Daniel Wertz Elementary School, Evansville
November 5	Helfrick Park Elementary School, Evansville
November 6-7	Lutheran School (6-8), Evansville
November 13-14	Lutheran School (K-5), Evansville
November 17-18	David Turnham Educational Center, Dale
November 19	*Southern Indiana Career Education Conference, French Lick

November 24-26	Oolitic Elementary School, Oolitic
December 1-5	West Washington High School, Campbellsburg
December 8-11	West Washington Elementary School, Campbellsburg
December 12	East Washington High School, Pekin
December 12-17	Chrisney Elementary School, Chrisney
December 18-19	English High School, English

*Indicates conferences

PROBLEMS

(a) One of the two mobile units experienced major mechanical difficulties on November 25. It is expected to be out of service for a period of three weeks. Those schools who were scheduled to have this unit have been contacted and the unit will be rescheduled for their use prior to January 15, 1976.

(b) While a substantial effort has been expended, the project continues to find it difficult to get high school level (9-12) teachers to totally "infuse" career education concepts into their traditional curriculum. Nevertheless, field trips, guest speakers, and the use of career education media materials are being utilized by teachers in grades 9-12.

PUBLICITY ACTIVITIES

(a) The CRP participated in the Southern Indiana Career Education Conference on November 19, 1975 at French Lick, Indiana. The project was responsible for providing a mobile unit and an interest session on The Use of Graphics in Career Education.

(b) The October and November-December issues of the CRP newsletter, Career Expressions, are documented in Appendix A. Because of the increase demand for this newsletter the mailing has increased from 600 to 750 copies per month.

(c) Representatives from the following organizations visited the project site during this report period:

- Barr-Reeve Community Schools, Inc.
- Crawford County Community School Corporation
- Greater Jasper Consolidated Schools
- Indiana Career Resource Center (South Bend)
- Indiana State Department of Public Instruction, (Division of Vocational Education)
- Members of CRP Advisory Committee
- South Spencer County School Corporation
- University of Evansville
- Warrick County School Corporation
- West Washington School Corporation

DISSEMINATION ACTIVITIES

(a) The Director attended the newly founded state-wide career education advisory committee. The Director presented a briefing on the role and function of the CRP. Newsletters and project brochures were distributed to committee in person on October 16.

(b) The CRP staff conducted in-service activities for Indiana State Teachers Association (ISTA - regional sites) at Indianapolis, Evansville, and Jasper on October 23-24. Approximately 75 educators from across the state requested a copy of our materials catalog and infusion manual. These materials were mailed on December 18.

(c) The project provided a "package" of relevent career education materials and references to the Career Education Televised Seminar Series (CETSS at the University of Evansville). These materials will further enhance the degree of career education awareness and increase the momentum of career education in Southwestern Indiana - potentially state and/or nationwide, December 18.

PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES

(a) During the fall of 1975 the Careers Orientation Battery (COB) was administered to 62 classes in the CRP service area. Students in 54 classes completed all scales of the battery, the results of these 1,591 students are summarized here.

General Results. It appears that all scales of all forms are usable. On many scales, average scores were near the guess rate, and average scores were below 80 percent in all cases. This indicates that further learning can be measured in the spring post-testing. Standard deviations are also quite low, especially on scales measuring the cognitive domain, thereby improving the chances of finding "significant" improvement. Correlations among scales are generally low, which is a desirable characteristic of a battery such as the COB in which various scales are intended to measure different attributes.

(b) State personnel from the Division of Vocational Education made six on-site visits during this report period: October 21, November 6, November 14, November 25-26, and December 23.

(c) The Director is continuing to submit to the third-party evaluator copies of all reports, memorandums, newly developed materials and other pertinent documents required for the purpose of objective evaluation. Significant reports are being sent to state officials.

OTHER ACTIVITIES

(a) The project staff is meeting on a periodic basis in an effort to develop a Rural School-Based Operational Manual (Model). A comprehensive placement model, a sub-part of this model will be completed in early January, 1976.

(b) The sound on slide presentation of the CRP has been updated. This 12 minute presentation reflects school and project activities.

STAFF EMPLOYMENT AND UTILIZATION

No changes during this report period.

STAFF DEVELOPMENT

(a) Staff members representing the Careers Resource Project and the Indiana Careers Resource Center convened on November 13-14, for the purpose of discussing issues relating to: (1) implementing strategies, (2) community involvement, (3) project products, (4) project role and function, and (5) project evaluation.

(b) The Carreers Resource Project staff visited the New Albany-Floyd County Consolidated School Corporation career education program for the purpose of "sharing ideas" and information, November 24.

"Career Education Makes Cents"

FROM OUR HOUSE TO YOUR HOUSE

FROM OUR HOUSE TO YOUR HOUSE,
TO FRIENDS WE LOVE SO DEAR;
MAY WE WISH YOU A MERRY CHRISTMAS,
AND A HAPPY NEW YEAR.

FROM OUR HOUSE TO YOUR HOUSE,
THAT YOU, OUR DEAR FRIENDS, WILL HEAR;
MAY THIS BE YOUR MERRIEST CHRISTMAS,
AND YOUR HAPPIEST NEW YEAR.

MAY YOUR HOUSE WITH LAUGHTER RING,
THIS MERRY CHRISTMAS DAY;
MAY YOUR HEART WITH RAPTURE SING,
AS THE OLD YEAR TICKS AWAY.

FROM OUR HOUSE TO YOUR HOUSE,
WE SEND OUR WISH SINCERE;
MAY YOU HAVE A MERRY CHRISTMAS;
AND A HAPPY NEW YEAR!

--A. Stilwell

--THE CAREERS RESOURCE PROJECT STAFF

NEWBURGH ELEMENTARY SCHOOL

The kindergarten and first graders are discovering themselves and their own uniqueness through a series of lessons on self-awareness.

Beth and Billy are pointing to the skills they have developed this fall. The bulletin board is entitled See What I Can Do. The charts show the teacher, child or parent exactly what skills the child has acquired.

WE ARE
FREE
TO
BE
YOU
AND
ME

The first graders are discovering their uniqueness through a Free To Be Me self-awareness program.

THE CAREERS RESOURCE PROJECT IS FUNDED BY:

State of Indiana, State Board of Vocational and Technical Education pursuant to Federal Grant Number OEG-0-73-5312 in cooperation with Division of Vocational Education, State Department of Public Instruction.

NEWBURGH ELEMENTARY SCHOOL

ASK BOOKIE WORM

After Mr. Ayer's fourth graders visited the "Pioneer Village" in Rockport, they built their own village from popsicle sticks. This project took six weeks to complete but as you can see, the students are proud of their accomplishment. They learned that building and planning a village takes time and care.

CRP PARTICIPATES IN CONFERENCE

The Careers Resource Project participated in the Southern Indiana Career Education Conference at French Lick on November 19. The conference was conducted by Jim Williams, Director, Careers Resource Project, New-Albany Floyd County Consolidated School Corporation.

Approximately 100 educators from Southwestern Indiana attended the conference which featured Sarah Laws, Principal, Bowling Green Junior High School, Bowling Green, Kentucky as keynote speaker.

The purpose was intended to create an awareness of career education and its development, motivate educators to implement their ideas, and to share career education experiences.

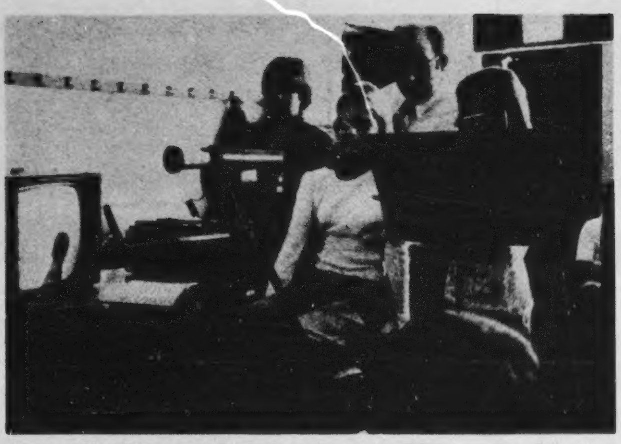
Interest sessions, field trips via video-taping, a film on the status of career education in Georgia, the utilization of materials and community resources, and displays from the Careers Resource Project (Huntingburg) and the Indiana Career Resource Center (South Bend) were components of the conference.

****

PLAYING SECOND FIDDLE is a great deal better than being left out of the orchestra.

****

MARENGO SCHOOL



Members of John Campbell's English class are in the process of producing the play Legend of Sleepy Hollow before T. V. cameras.

Students are not only learning how to operate television equipment, but are also overcoming minor cases of stage fright. In conjunction with the play, students read poems and short stories while being video-taped. The object of this experience is to increase reading ability and facial expressions and to improve voice inflections. After the filming, the students watched one another's performance and offered helpful comments.

Mr. Enlow of the high school business department is also involved with the use of T. V. equipment. He and his class are staging various business situations, such as job interviews, sales meetings, and sales transactions.

Members of the seventh grade English class pictured above with Mr. Campbell include: Dale Stroud, Lisa Ridenour, and Rhonda Stephenson.

WEST WASHINGTON SCHOOL CORPORATION

Copies of the "Resource Speaker Directory" for West Washington School Corporation have been made available to all participating teachers in the corporation. The directory, which lists field trip locations, guest speakers, and job observation sites, was compiled by the Career Education Team of West Washington.

They would like to thank the local businesses who have shown an interest in the career education program of West Washington School Corporation.

EASTERN JUNIOR HIGH SCHOOL

On November 25 while students met for an afternoon assembly, Eastern Junior High School teachers met for a Career Education workshop. Discussion topics included career education concepts and infusion, career-related video-tapes and materials, and planning for the "Career Day" on December 5. Participants in the workshop were Conley Marcum, Marcia Bricker, Brenda Hill, Dennis Maddox, James Thacker, Mary Hilton and Bradley Backherms. Through their team effort and hard work, these teachers are making career education a working reality at Eastern Junior High!

CRC, CRP, AND DPI MEET

Staff members representing the Career Resource Center (South Bend), Careers Resource Project (Huntingburg), and the Department of Public Instruction met on November 13-14 to discuss issues related to implementation strategies and the role of community involvement in career education. Also, project role and function, project evaluation, and the display of project products were topics of the two-day meeting.

ANOTHER VIDEO-TAPE READY FOR LOAN

One of the most interesting of our video-taped field trips has proved to be that of "Happy" Kellems. Fifty years in baggy pants and a putty nose seems a bit strange, but not to "Happy," hobo clown at Santa Claus Land--a children's world of fantasy--located in Southern Indiana.

Show business is a family tradition for "Happy," his brothers, and parents. He started out as a minstrel man but later changed his act to the vaudeville stage. His life as a clown and entertainer has taken him to all parts of the United States and Canada. "Happy," as he puts on his make-up, tells his story and discusses at length what it takes to become one of a "dying breed."

We wish to thank "Happy" for this excellent opportunity to see what it is like to be a "funny man for life" and also Mr. Bill Koch and Santa Claus Land for letting us use their facilities.

If you are interested in using this video-tape, please contact us.

TITLE: IMPLEMENTATION OF THE OCCUPATIONAL CLUSTER CONCEPT -- A CURRICULUM TOOL FOR IMPROVING CAREER DEVELOPMENT AND PREPARATION EDUCATION. QUARTERLY REPORT: OCTOBER 1, 1975-DECEMBER 31, 1975.

PERSONAL AUTHOR: MILLER, HARRY

DESCRIPTOR: *DEVELOPMENTAL PROGRAMS; *PROGRAM DESCRIPTIONS; *CAREER EDUCATION; *PROGRAM DEVELOPMENT; OCCUPATIONAL CLUSTERS; SECONDARY EDUCATION; DECISION MAKING; CAREER AWARENESS; CAREER EXPLORATION; CAREER PLANNING

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 86P.

ABSTRACT: THIS QUARTERLY REPORT DESCRIBES THE ACTIVITIES AND ACCOMPLISHMENTS OF THE SECOND QUARTER OF A CURRICULUM DEVELOPMENT PROJECT IN CAREER EDUCATION FOR THE SECONDARY LEVEL. THE LISTING OF ACCOMPLISHMENTS IS KEYED TO PROJECT GOALS AND OBJECTIVES. MAJOR ACTIVITIES AND EVENTS OF THE REPORTING PERIOD ARE LISTED WITH BRIEF DISCUSSIONS OF THE PROBLEMS, PUBLICITY ACTIVITIES, DISSEMINATION ACTIVITIES, PROGRESS ON DATA COLLECTION AND EVALUATION PROCEDURES AND PLANS, STAFF EMPLOYMENT AND UTILIZATION, AND STAFF DEVELOPMENT. A TABLE OUTLINES THE MAJOR OUTCOME AREAS WITH OBJECTIVES AND RELATED OUTCOME QUESTIONS FOR THE TARGET GROUPS OF JUNIOR HIGH, LOCAL DISTRICT, OR AREA CENTER STUDENTS. THE FIVE MAJOR OUTCOME AREAS ARE SELF-AWARENESS AND EXPLORATION, CAREER AWARENESS AND EXPLORATION, CAREER DECISIONMAKING AND PLANNING, PLACEMENT, AND VOCATIONAL-TECHNICAL AND RELATED ACADEMIC SKILLS. FLOW CHARTS SHOW THE PRODUCTS AND PHASES TRACKS OF THE PROJECT. ALSO APPEARING IS A COMPOSITE LISTING OF PROJECT GOALS WITH SPECIFIC RECOMMENDATIONS FOR EACH GOAL. VARIOUS PROJECT-RELATED MATERIALS ARE APPENDED, INCLUDING CORRESPONDENCE, PROJECT TASKS LIST WITH PRODUCT TEAMS RESPONSIBLE, AND INSERVICE PROGRAM AND WORKSHOP AGENDAS WITH LISTS OF TOPICS AND ACTIVITIES. ACCOMPLISHMENTS

The listing of accomplishments keyed to the Cluster Project objectives shall be progressive over the period of the project as noted by the letter preceding the statement of accomplishment.

GOAL #1 -- To implement and as a consequence demonstrate the application of the concept of "career clusters" as an organizational technique to facilitate the delivery of career development and occupational preparatory instruction at the high school level.

Objectives Cited	Accomplishments
1.1 A broadened curriculum offering which is more representative of the jobs existing in the labor force.	A. An initial listing of placement area potential employers has been prepared by occupational training program area and cluster.
	B. Projected local employment demand projections have been devised by occupational training program area. Also, Michigan and U. S. labor market projections have been surveyed by occupational training program area.
	C. Contractional training at business and industry sites has been provided for six (6) students in occupations in low market demand areas and for which cost effective programming cannot be provided at the Center.
1.3 A curriculum in which career options and hierarchies are more visible and which promote both the lateral and upward mobility of graduates whether they choose entry into a job or to pursue further education.	C. Local school and Area Center instructional staff conferences and group program orientation sessions have been accomplished as one means of dissemination of job training information to assist local schools in counseling students.
	D. Inservice training has been provided based upon a pilot application of the development and classroom use of job family hierarchies.

1.5 An improved ability to communicate vocational education and training outcomes to the employing community and the related units of business, industry, the professions and government.	D. First drafts of instruments to be used as a part of a needs assessment system to be applied to each program area in the Center have been accomplished in cooperation with the Michigan State University Management Information Project.

GOAL #2 -- To effect and implement refinements in existing delivery systems and demonstrate a comprehensive vocational education proficiency model; inclusive of an individualized learner process approach, as an initial step in translating local district, intermediate district, state, and national goals for occupational education (relative to its contribution towards optimizing employment) into reality.

Objectives Cited	Accomplishments
2.2 Curriculum clusters based on occupational information and societal demands as modified by the student attributes.	D. A pilot management information feedback system has been devised and is currently being tested for reporting individual student status relative to training commitment and delivery system (treatments) being applied.
	E. A program for prescribing individual student prescriptions for special needs students has been piloted. Forty-eight (48) prescriptions have been processed this quarter.
2.3 Curriculums reflect the occupational demand structure -- new curriculums developed, outmoded ones dropped.	A. Eliminated small engines program by transferring training components to other power mechanics programs within a transportation cluster.
	B. Added Central Supply and Geriatric Aide to the job training program in the health cluster.
2.4 Curriculum clusters reflect continuity from early and upper secondary to post secondary occupational education institutions.	D. A proposed systematic career decision-making model has been explored with sending local school districts which provides articulation with the Kellogg Community College serving the same sending secondary schools as the Calhoun and Branch Area Vocational Centers.

2.5 Delivery systems which allow easy access to the programs once a decision has been reached to leave school.	A. Area Center facility use contracts by program area have been devised in which adult programming is continued in the Area Centers inclusive of non high school completers under the auspices of the Kellogg Community College.
2.6 Curricular modules and materials which are effective in terms of attaining behavioral objectives and efficient in terms of cost.	C. A computerized inventory system has been devised and is currently being piloted which is a combination of learning resources being used by each of the two Area Vocational Centers and the Kellogg Community College and which may be exchanged between institutions.

GOAL #3 -- To demonstrate concepts and practices which contribute in substantial ways towards removing the current confusion as to the relationship between Career Education and Vocational Education and of each to all of Education.

Objectives Cited	Accomplishments
3.1 Establish area consensus and adoption of career education development and preparation models.	C. A community represented Area Vocational Education Needs Assessment Committee formulated recommendations for the continuing development of career development education at the Area Centers and local sending school districts.
	D. Formation of the Career Education Planning District (CEPD) Coordinating Council for purposes of approval of areawide career education plans.
3.3 Available "career cluster" information and proposed structures for use in Career Education's early secondary laboratory model for career exploration.	A. First drafts of prototype exploratory clustered curriculum outlines for use in junior high and early high school laboratory model for Career Education have been devised for Personal Services, Energy and Propulsion, Business and Communications Media, and Materials and Processes.

3.5 Provide assistance to the Instructional Media Services in the organization and correlation of occupational clusters information and structured to the educational goals of the district.	D. Area Vocational Center learning resources materials have been identified, organized, and displayed in the Learning Resources Center by occupational cluster.
3.6 Operationalize within the Vocational Centers a career development program thrust as an integral part of each cluster job preparatory program.	B. A career development decision-making model is being piloted to assist students relative to program placement decisions at the home school and/or the Area Centers. (See 2.4 for Community College articulation.)

MAJOR ACTIVITIES AND EVENTS

The major activities carried on during the second quarter of this first project year have been:

1. Administrative, support services and instructional staff inservice.
2. Occupational curriculum preparation by selected instructional staff members as per performance contracts.
3. Development of initial drafts of outcome areas, outcome treatments, outcome target groups and outcome treatment questions. (See Appendices.)
4. Refinement in descriptions of project products and subproducts and the related project management processes.
5. First on site review of the Project by Region V, Department of Health, Education, and Welfare, Program Specialist, Daryl E. Nichols, Vocational and Technical Education.
6. Reexamination of staff training requirements.
7. Continuing search and selection of other cluster project resource materials.

A brief discussion of each of these activities has been provided under the appropriate sections of this report. Sample documentation is offered in the Appendices.

PROBLEMS

Up to the close of this second quarter there have been no problems encountered which warrant departures from the proposed project plan. Nor have there been any reasons to depart from the proposed timing. Much of the activity during the first and second quarters has been devoted to preparations. During the third and fourth quarters where more implementation activities will be concentrated, the timing could become critical. Certainly it will become more of a factor and a potential problem area.

Defining and detailing the project products and the related management processes has been a more difficult task and has required more time and effort than first anticipated. The project products outlined in the Project Management Matrix #2 and as further described in the outlining of each product in terms of subproducts, task assignments and timelines, did not provide the kind of framework for easily organizing and communicating the major components representative of the overall scope of the Project. In effect, we ended up with a proliferation of little missions with an inadequate overview of the whole. In an effort to correct this, a schematic of Major Product Tracks and Activity Phases was developed into which each of the previously identified products and subproducts may be organized for ease of project management. A schematic overview of the seven (7) major product tracks and the four (4) activity phases is provided in the Appendices. Also, illustrations are given for two of the tracks, occupational curriculum and career development curriculum products and phases.

This further clarification of project goals and objectives and the refinements in the project product definitions has had some strong implications for the project evaluation design models and the scope of evaluation. Internal evaluation requirements are greater than those usually provided by a third party evaluator. The difference is currently a matter of study.

A third major area which is currently being viewed as a more formidable problem than anticipated is meeting the training requirements to bring about the needed changes in curriculum development implementation. This includes all levels of staffing. A brief discussion is offered under the staff development section of this report.

PUBLICITY ACTIVITIES

There has been no organized effort during the first and second quarters of this initial project year to generally publicize project activities either to the general public or the educational community outside the project area. Area school personnel including boards of education members and special advisory groups made up of both school and lay persons have benefited from prepared materials presented at meetings and disseminated through regular communications channels. These materials have been designed to communicate and establish in the minds of those affected, the basic concepts of vocational and career education and the occupational clustering concepts as an improved means of delivery. Presentations to project cooperators outside our service area have been made such as the Michigan State Vocational Education Management Information Systems Project Group and the Middle Cities Project Group.

Provisions shall be made during the implementation stages of programming to publicize project activities beyond the immediate school and lay person advisory groups.

Visitors to project site have been:

William Weisgerber, Supervisor, Career Education, Michigan Department of Education

Orville C. Haan, Curriculum Director, Averill Career Center, Saginaw, Michigan

Dr. William Martinson, Chairman, Guidance and Counseling Services, Western Michigan University

EDPA Group led by Dr. Peter Haines and Dr. Rex Ray, College of Education, Michigan State University

John S. Nidelcheff, Director, Vocational Education, Jackson Intermediate School District, Jackson, Michigan

Mary Brown, Consultant, Secondary Vocational Education Program, Michigan Department of Education

Henry Kuehl, CEPD Coordinator, Jackson Intermediate School District, Jackson, Michigan

Louella McKinney, Assistant Programming Specialist, The Center for Vocational Education, Ohio State University

Middle Cities Project Group led by Dr. Roger Hamlin, Prof. of Urban Planning and the Director of Vocational Education Management Information Systems Project and Michigan's Middle Cities Project. Also, associated with these same projects, Dr. Robert Muth, Assistant to the Dean of the College of Education, Michigan State University.

DISSEMINATION ACTIVITIES

Dissemination of materials has been limited to project staff, project participants, and project cooperators. Project staff includes twenty-three administrative and supervisory staff. Project participants include approximately seventy-five instructional staff at two Area Vocational Centers and some fifty counselors and administrative staff at sixteen local school districts in two intermediate districts and one community college. Target groups for dissemination of materials via inservice, orientation conferences, and special programs have included teachers, counselors, administrators, boards of education members, and lay representatives from business and industry.

The nature of the materials disseminated ranged from project goals and objectives, area needs assessment recommendations, and basic concept materials to specific how-to-do-it curriculum development, implementation, evaluation and improvement models.

PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES

Initial drafts of outcome areas, outcome target groups, and outcome treatment questions have been developed. (See Appendices.) Base data for assessing the current status of program delivery and student achievement for selected programs is underway. The third party evaluator is formulating the evaluation design models and procedures to be applied during the implementation phase of selected cluster curriculum components scheduled the last half of this project year.

In addition to the current effort to gather more detailed information specific to instructional delivery and student achievement by program areas, some general program assessment efforts have been made. Assessment information and recommendations relative to the general levels of programming achievements have been gathered from a school-community represented needs assessment study committee. A composite of recommendations submitted by six subcommittees is offered as part of the Appendices.

On site visitations by both the third party evaluator and a first project review by the Region V, Department of Health, Education, and Welfare has yielded information helpful to project management. Summary reports are appended as submitted by the visitation review persons.

STAFF EMPLOYMENT AND UTILIZATION

The status of staff employment and utilization remains unchanged from that reported in the first quarterly report of this 1975-76 project year. A summary list of project product teams is offered in the Appendices. This listing is compiled from the project product definitions in which subproducts, task assignments and timelines were drafted.

STAFF DEVELOPMENT

Based upon initial surveys of the project staff and Carkhuff Associates, Inc., the functioning levels of staff is largely at the conceptual development level in regard to curriculum development. This is particularly true in career development and placement. Personnel lack the larger repertoire of responses in program delivery skills, teaching methodology, teaching and learning strategies and classroom management. Current programs though geared to skill levels of usefulness, fail to demonstrate an adequate level of application and transfer of learning.

The implications are that the staff training requirements to accomplish an occupational cluster curriculum to deliver career development and occupational preparation outcomes are greater than first anticipated.

In response to this concern there has been a reexamination of staff training plans to include interpersonal skills and more in depth training in the educational achievement skills relative to curriculum development, diagnosing, goal setting, learning and instructional strategies, learning reinforcement and classroom management.

Apart from curriculum development and delivery, the staff management performance raises a concern for program planning, program implementation, supervision, monitoring and systematic development. Plans have been made to strengthen the training to improve these components.

Training will be conducted throughout the duration of the project with special blocks of training and follow-up sessions for assessment and reinforcement.

Staff development activities during this second quarter have been:

1. The ongoing consultations between the third party evaluation staff and project staff.

2. Specially designed large and small group inservice training sessions for curriculum development.

3. Periodic cluster instructional staff and individual staff member follow-up conferences with project staff.

4. Area Center and local school district instructional staff, cooperative education coordinators, and guidance staff inservice for job placement.

Agendas descriptive of components of inservice training are included in the Appendices.

COMPOSITE OF GOALS AND RECOMMENDATIONS

SUBCOMMITTEES I THROUGH V

GOAL #1 -- THE STUDENT WILL BENEFIT IN HIS GENERAL AND ACADEMIC SCHOOL WORK BY TAKING VOCATIONAL PREPARATORY AND/OR EXPLORATORY COURSES CONCURRENTLY.

1.1 Career Education as conceived by the Career Oriented Curriculum Project should be expanded in the Calhoun Intermediate School District.

1.2 Vocational programs offered during regular day should continue to be expanded and/or reduced according to projected job market and other data supplied by program advisory committees.

1.3 Greater emphasis should be placed on information supplied to students regarding considerations for making a career choice.

1.4 Extended day programs should continue to be offered providing:
   (a) There is a sufficient number of students to justify offering a given program.
   (b) That the program offered will be of the same quality as it would if offered during the regular day.
   (c) That sources of funds are available to supplement state reimbursement.

1.5 Career exploration programs should continue to be offered at the Calhoun Area Vocational Center for students during their junior and senior years. These exploration programs should be an integrated part of the regular vocational preparatory programs.

1.6 Greater emphasis should be placed on efforts to relate curriculum to specific tasks and subject content while at the same time better identifying the range of jobs for which the tasks and subject content are applicable and/or transferable.

1.7 A greater effort should be made to expand the use of the Cooperative Education technique to cover a wider range of student occupational interest. The current areas are predominantly office and retailing.

1.8 A wider range of occupationally oriented experiences should be reflected in the local K-12 school districts' curriculum which are directed towards assisting students to both examine their interests and aptitudes generally as well as provide basic skills and understandings in specific occupational clusters or job families. This appears to require attention to at least two approaches; one calling for infusion or integration into the total K-12 school curriculum information citing the relevance of the subject to what people need to know and be able to do outside of school; and secondly, specific laboratory type courses representing identifiable occupational families or broad occupational clusters should be implemented. They should be designed to provide the student with "hands-on" application and to effect a more acute awareness of personal achievement and self-worth.

1.9 The job related reading comprehension and computational skills should be included as an integral part of the curriculum for each job training program. Performance objectives should be identified and instruction developed as carefully as the identification and preparation of instruction for the job performance of selected tasks. In instances of

38

special education students, the home school and/or Special Education instructors from the Intermediate District Special Education Program should be assigned to assist the student reach a level of competency enabling success in the training program.

1.10 Though the job simulated laboratories which characterize vocational education contribute a good deal towards a relevant learning environment, much can be gained by students receiving specified experiences from actual job placement. Wherever it is possible, it should be understood that Cooperative Education and work experience and/or work exploration placement are to be considered exemplary delivery systems for vocational education purposes. Instructional managers, students, parents, school administrators and business and industry should understand and value these programs as part of a total program of career development and preparation.

1.11 School counselors should continue to strive to maintain the balance of students which now exists and which reflects a cross section of all students making up the local school district population.

GOAL #2 -- THE STUDENT WILL COMPREHEND THAT SOCIETAL CHANGES DICTATE HIS NEED TO DEVELOP HIS ABILITIES TO MAKE ADJUSTMENTS.

2.1 The continued use of advisory committees is encouraged as a source of occupational information.

2.2 Continued participation by students in the process of rule changes which affect them is recommended.

2.3 Continued efforts should be made to update instructional modules and to promote individualized instruction.

2.4 Instructional staff should be trained and formal units of instruction dealing with the student's preparation for change should be developed and integrated into the regular curriculum of each program area.

2.5 A more extensive utilization of resources within the business and industry community should be used to bring up-dated information to the learner to stimulate curiosity in the world of work.

2.6 The special advisory committee for Areawide Placement Services should be made up of knowledgeable representatives with respect to local and area manpower developments. An expressed purpose of the Committee should be to advise the Centers relative to new potentials for job training.

2.7 Information relative to worker trait requirements, labor supply and demand, expectant change information, etc. are equally as important as content for a training program as the specific job performance tasks and thus should be made an integral part of the instructional program.

GOAL #3 -- THE STUDENT WILL HAVE INVESTIGATED AN OCCUPATIONAL SPECTRUM WITH A CONSIDERATION OF HIS PERSONAL CHARACTERISTICS AND OCCUPATIONAL REQUIREMENTS.

3.1 Occupational information centers should be established and/or maintained in local junior and senior high schools.

3.2 Occupational information materials provided through the Intermediate School District Instructional Materials Center should be expanded.

3.3 An agency should be established for the purpose of updating, maintaining, and otherwise coordinating occupational information services.

3.4 Any delivery of occupational information should provide for individual differences in ability.

3.5 Occupational information centers in local schools should be included as part of career counseling services vs. integration with library.

3.6 That training sessions be conducted for area school administrators, counselors, and teachers which focus on career guidance and effective use of career information (i.e., printed material, community resources, audio-visual, etc.).

3.7 That greater usage of Calhoun Area Vocational Center specialty consultants be encouraged/improved/expanded, by providing inservice training for area school administrators, counselors, and teachers, designed to acquaint them with the service.

3.8 All career preparation programs should provide as an integral part of the program information relative to their job family, training required for job titles, current job market, wage information, and employability skills.

3.9 The extent to which students enter programs with considered purpose may vary depending on the extent to which a student has been involved in the career counseling service. It is recognized, however, that exposure to career counseling services and a career education mode of instruction will not guarantee that a student will enter a program with purpose. It is recommended that a continued emphasis be placed on Goal #3 and career guidance to assure as much as possible that students enter programs with purpose.

3.10 That a continued effort be maintained to communicate the goals, objectives, and expected outcomes of Career Education to the citizenry, boards of education, school administrators, and teachers.

3.11 Study should be directed towards a consideration of a common instrument of measurement such as the OVIS to be given to all students at the end of the 9th grade level.

3.12 Counselors should strive to improve on their skills in relating program information to students.

3.13 A continuing effort should be made to up-grade career development program placement printed materials and film presentations from the Area Centers.

GOAL #4 -- THE STUDENT WILL HAVE HAD APPLIED A RATIONAL DECISION-MAKING PROCESS IN HIS EFFORTS TOWARDS MAKING AN OCCUPATIONAL CHOICE.

4.1 Continued emphasis should be given to the development and implementation of a career development planning and decision-making model to be used with all students by local schools, the Area Vocational Centers, and the Kellogg Community College.

4.2 Comprehensive guidance and counseling services should be continued at the Area Center and a planned program to inform the students of these services should be instituted.

GOAL #5 -- THE STUDENT WILL BE ABLE TO ACT RESPONSIBLY WHEN CONFRONTED WITH PROBLEMS AND SITUATIONS NEW TO HIS EXPERIENCE.

5.1 It is recommended that a decision-making model be utilized at both the instructor and student level. Along with the decision-making model, students and instructors need to better reference their work to the program performance goals and objectives.

GOAL #6 -- THE STUDENT WILL BE ABLE TO MAKE APPLICATION OF SCIENCE CONCEPTS RELATED TO HIS AREA OF JOB PREPARATION.

6.1 The instructional managers should be encouraged to identify along with the job tasks those basic science concepts which are related. Further, that the concepts be made a visible part of the curriculum through statements of learner performance objectives and provisions made for instruction and evaluation of achievement.

GOAL #7 -- THE STUDENT WILL VALUE SAFE WORK HABITS AND RECOGNIZE CONDITIONS CONTRIBUTORY TO GOOD PHYSICAL AND MENTAL WELL-BEING.

7.1 Safety instruction should continue to be emphasized and OSHA standards enforced wherever applicable.

GOAL #8 -- THE STUDENT WILL POSSESS A POSITIVE SELF-IMAGE.

8.1 Instructors should be given a larger reference base to understand the importance of a positive self-concept and secondly how to assist the student with developing one.

GOAL #9 -- THE STUDENT WILL POSSESS SOCIAL INTERACTION SKILLS ENABLING ENTRY AND ADVANCEMENT ON A JOB.

9.1 In view of this being a societal problem and one that is of concern to many people and to assist the student in attaining the goal of being employable, it is recommended that this area should be a high priority for the Center staff and that goals and objectives and methods of implementation should be established to help students deal with attitudinal problems and reinforce positive attitudes.

GOAL #10 -- THE STUDENT WILL HAVE AN OPPORTUNITY TO ACQUIRE A JOB SKILL REGARDLESS OF HANDICAPPING CONDITION.

10.1 The present policy of incorporating mentally and physically impaired and otherwise disadvantaged students into regular occupational programs should be continued as long as adequate modifications can be made in the program to enable the individual to benefit from the instruction.

10.2 A greater coordinated effort should be made between special education and vocational education services to bring about the quality of supportive services and occupational instruction to impact upon the particular requirements of special needs students.

10.3 As the existing delivery of vocational education services for handicapped students at the Calhoun Area Vocational Center provides appropriate modification to meet their needs, it is recommended that such a delivery system be maintained and improved wherever possible.

10.4 As the current method/techniques for identifying handicapped youth are not considered adequate, it is recommended that an areawide system for identifying handicapped students be developed that assures identification at the earliest possible age.

10.5 Efforts should be made to develop an on-going needs assessment system for handicapped students that aids in the identification process and provides sufficient information for continued educational program planning.

10.6 A system for establishing and maintaining information on handicapped students should be developed that:

(a) Is coordinated with the Calhoun Area Vocational Center and area schools.

(b) Assures adequate information for continued educational program planning.

(c) Provides a means for communicating such information to personnel directly involved in planning and delivering educational services.

10.7 Efforts should be continued to provide work/study experiences for handicapped students commensurate with non-handicapped students.

10.8 Vocational programs should be assessible to all students who can benefit from the training including the mentally and physically handicapped. Special attention must be given to the mentally and physically handicapped with respect to enrollment in vocational programs and for this reason all mentally and physically handicapped student placements in vocational programs should be approved by an Educational Planning and Placement Committee as per the Special Education Act, State of Michigan.

10.9 A special needs programming policy which seeks to modify regular occupational programs and which provides the regular instructional program manager the needed special kinds of support services to enable the student to succeed, should be encouraged.

GOAL #11 -- THE STUDENT WILL HAVE AN ACQUIRED GENERAL AND/OR SPECIALIZED JOB SKILL REGARDLESS OF HIS ULTIMATE CAREER CHOICE.

11.1 The practice of validating specific worker tasks and generalized worker skills, understandings, and attitudes should be continued.

11.2 Consideration should be given to possible expansion of area center, satellite and business and industry training programs.

11.3 As all program areas do not include formalized training in work skills, understandings and attitudes which are applicable to work roles, it is recommended that:
All programs include as an integral part, objectives coupled with an appropriate delivery which assures the teachings of skills and attitudes mentioned in Goal #11. Special emphasis should be placed on the development of positive attitudes toward the work situation.

11.4 Program advisory committees should be formed and used to their fullest possible capacity. Validation of specific job training tasks by program advisory committees was considered of extreme importance by Subcommittee II. It is strongly recommended that a continuing review be made of program objectives with revisions based on advisory committee input to assure current and valid job training programs.

11.5 Program standards of quality should be established and maintained commensurate with area center programming (i.e., advisory committees, validation of objectives, skills gained, etc.).

11.6 Satellite programs should remain open to students from other school districts.

11.7 Satellite programs should be offered (expanded and/or reduced) on the same basis as regular Calhoun Area Vocational Center programs.

11.8 Requests for funding of satellite programs should be channeled through CEPD 36 administrative structure.

11.9 Greater emphasis should be placed on establishing satellite programs with area business, industry, and agriculture.

11.10 Since the Calhoun Area Vocational Center's system for delivering educational services is based on individualized instruction, it is in keeping with that philosophy that program structure be such that open entry/exit is possible. It is recognized that arrangements must be made with home high schools and other program areas within the Center. Nevertheless, it is highly recommended that training programs be scheduled to accommodate students relative to starting and ending time.

11.11 Staff and the students of the Center should be familiarized with the common goals and their relationship to all programs. Delivery systems need to be developed to assist the staff with incorporating the common goals into their curriculum.

11.12 The occupational advisory committee involvement in some vocational programs should be strengthened as a means of specifically improving the content in the occupational curriculum.

11.13 School boards, school administrators, counselors, teachers, and representative community members should work to establish curriculum development "reference" goals and objectives which in effect direct:

(a) the vocational educationist to reinforce the basic education skills and concepts as an integral part of teaching occupational preparation, and

(b) the general educationist to integrate into his curriculum content and activities which better relate the subject matter to what people do outside of school.

11.14 The "Occupational Cluster"* concept should be applied as an organizational technique in making available to students vocational programs which prepare the student for a broader range of job entry and/or advance training options.

11.15 A program of school/business and industry job training contracts should be pursued for training in those occupational areas where insufficient numbers of students and/or the provisions required such as type and cost of facilities prohibit "in-school" programming.

11.16 The Cooperative Education system wherein students are placed in area businesses and industries as part of their training program should be up-graded through more explicit statements of training outcomes sought from the placement and a greater acknowledgement and commitment on the part of business and industry towards student accomplishment of those outcomes.

---

* Occupational clusters are groupings of jobs or occupations which have enough in common that learned knowledge and skills have a notable degree of transfer from one to the other.

GOAL #12 -- THE STUDENT WILL UNDERSTAND WORK AND ITS IMPLICATIONS IN FAMILY LIFE.

12.1 The inclusion of work experience as an integral part of the job preparation program should be continued and expanded wherever practical.

12.2 More adequate information relative to the range of social and economic benefits relative to the jobs for which training is offered needs to be prepared and organized into learning units which are equal to the best skill training modules.

12.3 There is a need to approach job training through the cluster concept so that students are provided a broader base of skills to be able to do more jobs within their interest area. The narrower the instruction, the greater the chance that the student will not get the job he really wants.

GOAL #13 -- THE STUDENT WILL VALUE A CONCERN FOR THE QUALITY OF WORKER ENVIRONMENT.

13.1 Continued emphasis should be given towards simulating as near as practical in the training laboratory business and industry environments with regard to equipment, training tasks, and production projects.

13.2 In spite of the wide range of quality in general housekeeping found in business and industry, that of vocational training laboratories should be exemplary for the purpose of teaching by example.

13.3 As worker environmental qualities change, so must the Centers. Staff should keep informed of new requirements and be prepared to implement them.

GOAL #14 -- THE STUDENT WILL BE ABLE TO IDENTIFY POSSIBILITIES FOR CONTINUING SELF-IMPROVEMENT.

14.1 The current policy of viewing the Center as an extension of the local school and local school guidance counselors selecting the students to enroll in the Center should continue and should include efforts by the home school to expand career guidance functions and more programs of career awareness at grade levels below the high school level.

14.2 Provisions should be made in the Center's "career development" programming to include, as a part of student orientation to their "career ladder" or "job hierarchies", the educational requirements as part of the described worker traits and that the avenues for continuing education and training are explored (i.e., apprenticeships, 2 and 4-year colleges and universities, company training programs, etc.).

14.3 A more extensive utilization of available resources within the business and industry community would be most helpful in bringing valuable up-dated information to the learner. Having these types of exposures would most likely bring about a greater sense of reality and curiosity towards jobs and the future.

14.4 There should be a greater commitment and participation of guidance counselors in a career guidance system that makes he or she more aware of and knowledgeable of strategies that are effective in dealing with students regarding career planning.

14.5 Learning to learn is a science and art itself and among the most worthy of goals of the public schools; therefore, every effort should be made both from the standpoint of curriculum content and a wide variety of instructional strategies to demonstrate learning and thus make more visible the conditions under which learning takes place.

14.6 Both counselors and instructional managers should be charged with more specific roles to play in assisting students identify the ways in which they can continue to improve. Administratively the vocational centers should insist that amongst any grouping of learner goals to be sought would be at least one having to do with assisting students identify possibilities for continued improvement.

14.7 Efforts should be made to provide a counselor for each 250-350 students in the junior-senior high schools.

14.8 Adequate paid clerical assistance should be provided for every school counselor.

14.9 The entire school system K-12 should evaluate the program of self-awareness and occupational information systems and strive to make this a part of the curriculum for each student in the school.

GOAL #15 -- THE STUDENT WILL HAVE AVAILABLE ASSISTANCE IN POST HIGH SCHOOL TRAINING PLACEMENT.

15.1 Activities as outlined in the current plans for job and/or advanced training placement assistance should be continued with attention to expansion of articulation amongst local schools, area centers, and the community college; expansion of job information through the use of Employment Service Placement and Job Bank systems; and continuing student surveys to determine overall program effectiveness.

15.2 The Area Vocational Centers are extension of the local school system and, therefore, student selection for enrollment in programs at the Centers should continue as a local school responsibility. However, because of the specialized nature of the programming in the Centers, the vocational instructors and guidance and counseling directors of the Centers have a responsibility to continually improve upon the career development information relative to these programs and assist the local schools in becoming sufficiently well informed that they can in turn adequately assist their students in making choices.

15.3 Career development in terms of planning and decision-making is a highly individualized and personal process occurring on a continuing basis. Most decisions are tentative -- always subject to ongoing evaluation and change. The school's primary mission relative to this matter should be help youth improve upon their career development skills and understandings or in effect assist them to assume responsibility for their own career development and preparation. In order to fulfill this mission, local school districts, the Area Centers and the community college should implement a career development planning and decision-making model or approach to be used with all students.

15.4 Student performance objectives are viewed as a curriculum tool for improving instruction and learning. Instructional managers should receive continued encouragement and support from the administration to improve upon existing learner performance goals and objectives and develop additional ones for areas of their program where none exist.

15.5 Vocational programs should be designed to accommodate a range of abilities and interests -- job hierarchies or career ladders should be visible within the program. The sequencing of student performance objectives should reflect this hierarchy wherever appropriate.

15.6 A third shift or "extended day" cooperative Area Center/Kellogg Community College programming schedule should be provided which would accommodate grades eleven through twelve and post high school years to better accommodate secondary students contemplating going on to post high school education yet have scheduling conflicts with the regular school day and to further expand offerings to post high school students continuing at the Kellogg Community College.

15.7 Better records should be kept of survey information and attempts be made to continually improve job placement services at the Centers and local schools as outlined in the present placement plan.

15.8 Monthly areawide school counselor meetings should be continued at the Calhoun Area Vocational Center and instructional staff members should present counselors with an explanation of their programs.

15.9 Time should be scheduled by the local school districts to allow for counselors to be at the Vocational Center periodically on a regular basis.

GOAL #16 -- THE STUDENT WILL HAVE AVAILABLE ASSISTANCE IN JOB ENTRY PLACEMENT.

16.1 See Recommendation 15.1.

16.2 See Recommendation 15.7.

SUBCOMMITTEE VI

GOAL #2 -- SCHOOL MANAGEMENT PEOPLE WILL ESTABLISH EFFECTIVE USE OF A "PROCESS" OF COOPERATIVELY PLANNED INNOVATION.

2.1 Area Vocational Center communications to area schools and communities should be maintained at a high level.

GOAL #3 -- SCHOOL MANAGEMENT PEOPLE WILL ESTABLISH A DEMOCRATIC VOCATIONAL SERVICES SYSTEM WHICH PROVIDES EQUAL OPPORTUNITIES AND BENEFITS IN THE FORM OF EDUCATIONAL OPTIONS.

3.1 The instructional programs should be closely linked to labor market information and current student follow-up studies.

GOAL #4 -- SCHOOL MANAGEMENT PEOPLE WILL EFFECT PROGRAMS OF VOCATIONAL EDUCATION THAT ARE COST EFFECTIVE.

4.1 All programs should follow a cost effective model.

GOAL #6 -- SCHOOL MANAGEMENT PEOPLE WILL ESTABLISH AN INSTRUCTIONAL/ MANAGEMENT SYSTEM WHICH HAS FLEXIBILITY AND IS SENSITIVE TO THE NEEDS OF INDIVIDUAL LEARNERS AND STAFF.

6.1 Pre-vocational or exploratory programs be offered to aid students in making better vocational choices.

6.2 Flexibility should be provided in the structuring of the students' school day to better meet the interests and needs of vocational students.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
REGION V

CHICAGO, ILLINOIS 60606

OFFICE OF EDUCATION

December 8, 1975

Mr. Clifford Jump, Director
Calhoun Area Vocational Center
475 East Roosevelt Avenue
Battle Creek, Michigan 49016

Dear Mr. Jump:

Attached is a copy of the report I made to this office following the pleasant experience which I had in review of the Part D Project with your school, November 17-18, 1975.

Please express my appreciation to the many staff members who gave of their time to discuss the role in which they are serving students through this program. Hopefully, I have tried to capitalize on the comments as expressed by your staff and have made recommendations for your consideration as you continue your efforts through this project.

If you have any questions or need further clarification of any points made within this report, please do not hesitate to let me know of your concerns.

Sincerely yours,

Daryl E. Nichols

Daryl E. Nichols
Program Specialist
Vocational & Technical Education

cc: Addison Hobbs

56

Purpose of this activity was the first review of the Part D Project funded with discretionary funds effective the school year of 1975-1976.

Monday, November 17:

A tour was made to the following programs:

1) Health Occupations
2) Consumer and Homemaking
3) Business and Office
4) Commercial Art
5) Graphic Arts
6) Marketing and Distribution

Tuesday, November 18:

The following program facilities were toured:

1) Plumbing and Heating
2) Carpentry and floor covering
3) Electricity
4) Electronics and Television Repair
5) Air Conditioning and Refrigeration
6) Agricultural Mechanics
7) Manufacturing - Welding
8) Machine Tool
9) Horticulture

Other visits included the following:

Guidance and Special Needs Staff
Placement Services Staff
Administrative Staff (Jump, Miller, Harberts)

Following the tours, I met with staff persons representing the above programs. The attitude of the instructional personnel was most positive and wholesome. A number of concerns were expressed by the staff which they are hopeful that the project will help in affording some solution. Some of the concerns discussed are as follows:

(A) AWARENESS OF JOB OPPORTUNITIES

A greater effort needs to be made to inform students to become intelligently aware of the many types of jobs, personal requirements of individuals employed in such jobs, where are such jobs available, demands of the job, and other information which will enable the student to make wiser choices of occupations to be explored.

(B) STUDENTS NOT MAKING LONG TERM OCCUPATIONAL DECISIONS

The consensus of the staff is that most students are not planning any further than two years after graduation. Too little effort has been given to developing strategies which moves students through the decision making process in selection of possible occupations and to identify an educational program to support such choice. The staff feels that too many students are enrolled in programs at the Area Vocational Center for exploratory purposes or for immediate purposes.

(C) STUDENTS NEED MORE ASSISTANCE IN MAKING OCCUPATIONAL DECISIONS

Counselors need more information on programs offered at Center, types of jobs for which students are being prepared including job descriptions, educational requirements, physical demands, etc. which can be used in counseling with students.

(D) PLACEMENT SERVICES

Instructional staff suggests that assistance is needed in arranging for on the job experiences and full time employment as on the job experiences become important as an extension of the student's educational program.

(E) LACK OF POSITIVE ATTITUDES AND GOOD WORK HABITS

Many students have not developed attitudes that are conducive to good work habits either in the classroom or on the job. Too often a student is enrolled in an occuapational training program without a commitment to the occupation as a career.

(F) WORK EXPERIENCES FOR SPECIAL NEEDS STUDENTS

Students are being served to a minimal extent through Coop G and work study programs for only short periods of time. A concern is raised as to whether legal criteria are consistently used as to which program a student is placed in for on the job experiences.

Possible strategies to be employed in reaching some solution to cited concerns, the following were discussed with the staff:

(A) PROVIDE COUNSELORS A PROFILE FOR EACH OF THE OCCUPATIONS FOR WHICH TRAINING IS PROVIDED AT CENTER

For each occupational area, teacher could develop a brief and concise description of job requirements, personal traits important, educational and physical requirements of job, current job opportunities including pay, major geographic areas of employment, related job opportunities and a long range outlook for employment. The preparation of this type of information in a useable form could greatly assist counselors in their effort to aid students more in a meaningful decision making process.

(B) MORE REALISTIC INFORMATION AS TO MANPOWER NEEDS

The center needs to review the needs for employment and to make certain that sufficient placement opportunities are available to warrant training programs that are offered. Such information could be used to assure that curriculum and training programs are kept current to employment opportunities.

(C) PROGRAM ARTICULATION:

(a) Vertical Articulation

Occupational program instructors need to work with feeder school's staff persons (K-10) so that appropriate instruction is offered to better prepare students to enter and achieve in the occupational program offered at the Center.

(b) Horizontal Articulation

Center staff should carefully review modular instructional units in other occupational program areas in order to aid students to plan a total program which will enable the student to better perform on the job.

(D) INVOLVE LOCAL SCHOOLS MORE IN THE PLANNING OF PROGRAMS

More effort should be made to share problems with feeder schools and Kellogg Community College and solicit their advice and assistance in reaching solutions to problems. When possible, individual feeder schools and junior colleges should be encouraged to "pilot" strategies that may impact upon improving the outcome of the total program. Such an effort could help to develop a "team situation" among the feeder schools, Kellogg Community College, and the Area Center.

(E) FLEXIBLE SCHEDULING

An effort should be made so that students are afforded a greater opportunity to schedule in and out of courses that best fits into their educational plans. In too many instances the student is penalized if he/she wishes to change courses other than at beginning of semesters.

(F) ON THE JOB TRAINING COORDINATOR

The work of the Placement Services Unit as now organized needs to be reviewed to determine if services needed by students and instructional staff are presently provided. Instructors have suggested that assistance is needed to seek out and arrange for the job training opportunities (short periods of unpaid employment, part time paid employment, full time employment), as identified by specific instructors, to confer with students, employer and program instructor to assure that the on-the-job training phase is a successful experience. In some employment areas, such as in the construction trades, to arrange a student's schedule so as to be excused full time for a minimum of one week for an on-the-job experience as a part of the educational program.

(G) ON THE JOB TRAINING FOR SPECIAL NEEDS STUDENTS

Staff indicated that special needs students were limited to a maximum of 90 days of on-the-job experiences through Part G programs. It was indicated that criteria used for placement of students in Coop G programs was if the individual was capable of performing in a job with a private employer; for Part H (work study) if the student needed sheltered employment. Under Part G programs employers were reimbursed 100% for wages paid to students. It is recommended that this problem be discussed with appropriate state staff to arrange for extending the length of time that special needs students can be employed. Also, encouragement is given that future training agreement not be approved for 100% funding but with such reimbursement being reduced as it can be proven that student is contributing to the work of the employing firm -- hopefully, this action would cause a firm to more positively review its effort in the training of the student.

Every indication was given by all staff persons that a positive atmosphere exists in which a person can perform at a professional level. Each person impressed me as having a sincere interest to offering programs which are to the benefit of the students. Concerns and problems were openly identified and discussed but not without some concern as to strategies and suggestions as to how solutions could be reached that would result in an improvement of programs at Calhoun Area Vocational Center.

November 20, 1975

Mr. Cliff Jump, Director
Calhoun Area Vocational Center
478 East Roosevelt Avenue
Battle Creek, Michigan 49017

Dear Cliff:

I want to take this opportunity to thank you for making my trip to Battle Creek a pleasant one. Not only did you provide for my physical needs, but you afforded the freedom of movement and helpful set among your staff that enabled me to work efficiently and learn what I had to. And all this without the usual hassle of having to prove "who I am" and "how many degrees I have" - that I get in most places I enter. Please extend my warmest thanks and regards to your staff and in particular, to your administrative team who did more to make me welcome than any group I can recall. A special thanks to Harry Miller.

With regard to the survey itself, it would be appropriate for me to summarize a few of the major findings here.

A. Personnel Observations

The form of participatory management process utilized at the center has resulted in a thrusting openness and a continuous interchange of ideas, needs and information. Personnel at all levels are extremely comfortable with the extent to which they have been given an opportunity to input to the overall operation of their units as well as of the whole center.

Along with the pride of sharing comes the frustrations of having gone as far as your own skills and creativity can bring you. While continued growth will most certainly occur, it would do so geometrically with systematic external intervention. The following are of particular concern:

1. The level of interpersonal skills utilized by the staff during delivery;

2. The level of stamina or physical functionality of some staff members and the implications for skills delivery;

Robert R. Carkhuff, Ph.D.
President
Ted W. Friel, Ph.D.
Consulting Services
David H. Berenson, Ph.D.
Educational Achievement
Richard M. Pierce, Ph.D.
Human Achievement
John R. Cannon, Ph.D.
Research and Development
David H. Bland, D.Ed.
Contracting Services
Dan W. Kratochvil, Ph.D.
Career Achievement

3. The absense of a quantifiable and replicable decision-making process which enables policies and decisions to be formulated which are objectively operationalized by the value system of the people who will be affected by their implementation;

4. The apparent absence of systematic diagnostic, remediation and monitoring follow-up components for recent training efforts and current operations, and

5. The lack of an operations model which would enable personnel to develop or incorporate and implement programs which are personalized, systematically trained and monitored for effectiveness.

B. Program Observations

Extensive efforts in the area of operations and delivery programs are in evidence. Clearly, the products are the results of utilizing all available resources as well as a great deal of time and energy. To the extent that the rate of skill acquisition at CAVC is considered to be well above average, this effort must be considered a success. All the while, it should be made explicit that these comparative qualifiers are not fully accurate on absolute dimensions. Below are several concerns which address this issue as it relates to the programs at CAVC.

1. There is extensive evidence to suggest that, while the type of individualized programming currently in use enables students to work at their own pace, it does have a great many serious drawbacks. Among these deficits are the reported "2 - 3 minutes per student" attention given in a class period, the reduced probability of group interaction and multi-dimensional inputs being made and failure to acknowledge individual sensory preference, learning styles and reinforcement orientation.

2. Programs are generally geared to the skills acquisition level of usefulness but fail to demonstrate programmatic extensions in the application and transfer of learning area. These are considered vital in the delivery of skills to the level where they do not wash out.

3. Personnel need a larger repetoire of responses in program delivery. This includes delivery skills, teaching methodology, teaching and learning strategies and classroom management.

4. Support programs need to be developed which utilize administrative, teacher, parent, home, school and community populations.

5. A curriculum development effort should be initiated which would supplement the current programs with all the significant sources of learning. This is especially true in career development and placement which are currently treated at the lower levels of conceptual development.

While this is not intended to be a detailed report, it does comprehensively address the broad areas of our concern. I hope you find this helpful in your planning efforts. If you require any further detail or have specific questions, please feel free to call me anytime.

Sincerely,

Dave Berenson

Dave Berenson
Director of Educational Development

CLUSTER PROJECT
NOVEMBER, 1975

Calhoun Area Vocational Center Inservice
Thursday, November 6, 1975
8:15 a.m. -- 3:30 p.m.
Coffee and Rolls 8:00 a.m.

AGENDA

FORENOON

Participants: All CAVC Instructional and Administrative/Instructional Support Services Staff

Topics:

#1 CAVC Management Systems/Project Management Systems

#2 Accommodating Cluster Project Goals within existing Curriculum Development and Management Support Services

#3 Determining and Making Individual Commitments Towards Achievements of Project Goals and Objectives

Staff Performance Goal Targets:

		Can Do	Can't Do
1.6	School management people will value and be able to make application of procedures for resolving problems as close to the information sources as possible.		
1.7	-- will be able to evaluate management processes in terms of the goals and objectives established for Area Vocational Education.		
3.3	-- comprehends and values the educational philosophy of Area Vocational Education Services and the CAVC as a part thereof.		
4.7	-- will be able to make application of the "cluster concept" as a program improvement tool.		
6.1	-- knows the management roles and/or responsibilities assigned as a function of the instructional manager.		

	Can Do	Can't Do
6.2a -- comprehends Area Vocational Education Services as a "system" in which change in any one part is likely to affect other parts of the system.	________	________
6.2b -- is able to make application of the various services (systems) of the Center as resources for assistance in conducting his or her instructional program.	________	________
6.4 -- values and makes application of the process of establishing goals and objectives and identifying ways and means of achieving them as an effective program improvement procedure.	________	________
7.1 -- will be able to apply a "needs assessment" to his or her instructional program.	________	________
7.3 -- will know the administrative procedures for resolving problems.	________	________

Inservice Delivery Systems

Topic 1: Illustrated Presentation -- Cliff Jump

Topic 2: Illustrated Presentation -- Harry Miller

Topic 3: Illustrated Presentation -- Scope of Work Forms and Procedures

Small Group (Cluster) Work Exercise (HRD)

Individual Preliminary Commitment Exercise -- Each Staff Member

Report-Back Session

Follow-Up Plan -- Presentation
- Provisions for Individual Work
- Provisions for Group Program Level Work
- Provisions for Cluster Group Level Work

AFTERNOON

Participants: Instructional Staff

Topic #4: Job Family Behavioral Analysis and Career Ladders -- Horizontal and Vertical Expansion of Occupational Curriculums

Staff Performance Goal Targets

		Can Do	Can't Do
1.1	The instructional manager is able to analyze the worker trait requirements for the jobs in which his or her program is offering training and be able to make application of the relationship between occupational skills (work tasks) and basic education skills and understandings.		
3.1	-- will be able to respond to the student's need for occupational information relative to the jobs within the job family hierarchy of which his or her program is a part (i.e., job descriptions and worker traits, employment opportunities, salaries, etc.).		
8.6	-- is able to evaluate the worker requirements for entry into the jobs for which training is offered and to make application of learning situations enabling the learner to meet the requirements.		
14.1	-- is able to make application of worker trait requirements information in relationship to levels of training needed for entry and/or advancement in the job hierarchy to which his or her instructional program is related.		
15.1	-- will know the various job training opportunities for people relative to the occupations for which they are providing instruction (i.e., community college programs, 4-year universities, private schools, company training programs, apprenticeship, etc.).		
15.4	-- knows the areas of potential program articulation with the Kellogg Community College and the apprenticeship programs.		

Inservice Delivery Systems

Topic 4: Illustrated Presentation -- Nate Avani
1. Development of Data Processing Program Job Hierarchies Flowchart
2. Uses for Job Hierarchies

Small Group (Cluster) Work Session

Task #1 -- Clarify understanding of job hierarchy formulation and its uses.

Task #2 -- Draft preliminary graphic representation of own program area job training hierarchy.

Follow-Up Session -- Lanny Johnston
1. React to staff concerns
2. Provisions for continued development of job hierarchies.

Calhoun Area Vocational Center Inservice
Friday, November 7, 1975

Coffee and Rolls 8:00 a.m.

AGENDA

FORENOON

Participants: Selected Instructional Managers

Topic #5: Writing the Cluster/Sub-Cluster (Program) Plans -- Cluster Curriculum Development Formats and Procedures.

Staff Performance Goal Targets

		Can Do	Can't Do
3.4	The instructional manager is able to make application of a system for identifying student purposes (commitments) upon entry in his or her program.		
8.1	-- is able to make application of the "learner centered" rather than the "program centered" concept in dealing with students.		
11.4	-- will be able to apply CAVC guidelines and procedures for continuing progress towards the development of an individualized instructional program (i.e., modularized instruction, open entry & exit).		
14.5	-- will be able to make application of learner performance objectives to demonstrate to students that they can perform in a variety of jobs.		

Inservice Delivery System

Topic 5: Illustrated Presentation -- Cluster Curriculum Plan

Small Group (Cluster) Discussion/Work Session
Task #1: Clarify understandings
Task #2: Write preliminary sub-cluster (program) level curriculum plan.

AFTERNOON

Participants: Selected Instructional Managers

Topics:

#6 Performance Objectives and Career Ladders

#7 Inventories of Learning Tasks, Learner Activities, Resources and Evaluation Procedures

#8 Instructional Modules

Staff Performance Goal Targets

		Can Do	Can't Do
2.4	The instructional manager is able to make application of a variety of student learning techniques.	______	______
5.2	-- is able to evaluate learner performance objectives which emphasize "application behaviors".	______	______
8.5	-- is able to comprehend learning outcomes in terms of visible performances of work skills and understandings.	______	______
8.6	-- is able to evaluate the worker requirements for entry into the jobs for which training is offered and to make application of learning situations enabling the learner to meet the requirements.	______	______
11.1	-- is able to analyze his or her program's specified learner goals and evaluate them in relationship to their general or specific application to work roles.	______	______
11.3	-- is able to make application of home, school, and community resources as contributions towards developing programs to meet training needs of the individual and groups of students (i.e., LEA Cooperative Programs, direct contracts with business and industry, parent-CAVC goal achievement contracts).	______	______
12.1	-- is able to make application of work experience role as a part of his or her occupational program.	______	______
14.4	-- is able to make application of a variety of instructional options to achieve specified learning goals.	______	______

Instructional Delivery System

Topic 6: Illustrated Presentation -- Aligning Performance Objectives with Identified Specific Job Training

Topic 7: Illustrated Presentation -- Al Adler and Nate Avani

Small Group (Cluster) Work Session
Task #1: Clarify understanding of work inventory components
Task #2: Develop inventory for 10 tasks.

Report-Back -- Submit Inventories, Staff Reactions and Provisions for Continuing Development

Topic 8: Information Giving -- Lanny Johnston
Relationship of Inventories to Formulation of Learning Modules

CAVC/USOE CLUSTER PROJECT
November 1975

GUIDANCE COUNSELOR'S WORKSHOP
Friday, November 7, 1975
9:00 A.M. - 4:00 P.M.
Calhoun Area Vocational Center
Learning Resource Center

Participants:

Local School District and Area Center Guidance and Counseling Staff.

Project Cooperators and Staff:

Calhoun Intermediate School District.	Roger LaBonte, Director Career Education
Kellogg Community College	Dr. Gerry Inman, Director KCC/CAVC Articulation Project
Western Michigan University	Dr. William Martinson, Chairman Guidance and Counseling Services
Calhoun Area Vocational Center.	J. Patrick Egan, Director Special Needs
Branch Area Careers Center.	Kenneth Strong, Director Guidance and Counseling

AGENDA

I UPDATE: Background information relative to the workshop. Purposes of generating recommendations for improving local district and area center guidance systems.

9:00 A.M.

A. The Local School District Career Education Plan (Pub. Act 97) and Career Guidance Services.

B. Region 12 Career Guidance Inservice.

C. Kellogg Community College/Local School District Articulation Project Career Guidance System Model.

D. Proposed CAVC/USOE Cluster Project and Local School District Career Education Guidance Services--An identified need for a Student Applied Career Decision-Making and Planning Model.

II A. Exploration and Assessment of our Career Guidance Services Programs.

B. Career Guidance Program Goal Setting and Action Steps for accomplishing them.

   a. Illustrated Presentation

   b. Small group work session

   c. Report-back

III ACTION PROPOSALS--recommendations for use of cooperatively planned alternatives in helping ourselves effect improved student career decision-making and planning approaches.

   A. Alternatives identified and consensus sought.

   B. Follow-up Provisions.

JOB-GETTING SKILL WORKSHOP

Goals and Objectives

1. All participants will know what teaching aids are available for implementing the job-getting skills components into their curriculum.

1. a. Upon completion of the workshop activities you will list, without assistance, five of the teaching aids and support materials that are available for implementation of the job-getting skills components.

2. Participants will identify possible ways of classroom implemention of the jcb-getting skills components into their classrooms prior to May, 1976.

2. a. Upon completion of the workshop activities, you will outline or plan for implementing at least three job-getting skills components in your classroom and/or curriculum prior to May 1, 1976.

3. Participants will implement at least three job-getting skills components into their classrooms prior to May, 1976.

3. a. Prior to May 1, teachers who participated in the job-getting skills workshops, will implement three job-getting skills components of thei their choice so well that the students will achieve according to the student performance objectives for that component.

or

3. b. Prior to May 1, teachers who participated in the job-getting skills workshops, will implement a survey instrument developed by the Placement Staff, to assess student achievement in the three job-getting skills components taught by the teacher so well that 80% of the students surveyed would respond positively that they:

    1. will be able to apply the concepts and/or skills to themselves

    2. developed a skill that they didn't have prior to the instruction

    3. feel the information was of value to them

3. c. Prior to May 1, teachers who participated in the job-getting skills workshops, will request at least one person from the Placement Staff to randomly sample their students to assess the students achievement in the job-getting skills components taught by the teacher so well that the student will positively respond that they:

    1. will be able to apply the concepts and/or skills

    2. developed a skill that they didn't have prior to the instruction

    3. feel the information was of value to them

TITLE: RESEARCH AND DEVELOPMENT PROJECT IN CAREER EDUCATION. FINAL REPORT.

DESCRIPTOR: *TEACHER WORKSHOPS; *INSERVICE TEACHER EDUCATION; *CURRICULUM DEVELOPMENT; *CAREER EDUCATION; *PROGRAM DESCRIPTIONS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 12P.; RELATED DOCUMENTS VT 102 977 THROUGH VT 102 979 IN THIS ISSUE.

ABSTRACT: THIS PROGRAM DESCRIPTION OF A RESEARCH AND DEVELOPMENT PROJECT FOR THE PERIOD OF JULY 1973 TO JUNE 1974, DESCRIBES ACTIVITIES IN STAFF PREPARATION AND CURRICULUM DEVELOPMENT FOR THE PENN CAREER EDUCATION CENTER IN THE PUBLIC SCHOOL DISTRICT OF WASHINGTON, D.C. THE PROJECT ACTIVITIES REPORTED ARE FOUR WORKSHOPS IN STAFF AND CURRICULUM DEVELOPMENT. THE FIRST WORKSHOP WAS CONCERNED WITH DEVELOPING THE EDUCATIONAL PHILOSOPHY, IDENTIFYING COURSES, FORMULATING OBJECTIVES, REVIEWING FACILITIES, AND IDENTIFYING COMMUNITY RESOURCES. THE MAIN FOCUS OF THE SECOND WORKSHOP WAS THE DEVELOPMENT BY PARTICIPANTS OF SEVERAL LEARNING MODULES. DURING THE THIRD WORKSHOP, CURRICULUM SPECIALISTS WORKED WITH INDIVIDUAL TEACHERS AND WITH SMALL GROUPS, PROVIDING ASSISTANCE IN CURRICULUM WRITING, FEEDBACK, AND EVALUATION. AN OUTLINE OF THE FINAL WORKSHOP REPORTS THE MAJOR ACCOMPLISHMENTS, WHICH INCLUDED DERIVING LEARNING COMPETENCIES FROM TASK AND BEHAVIORAL ANALYSIS AND WRITING PERFORMANCE OBJECTIVES AND LEARNING MODULES. IN ADDITION, ALL PARTICIPANTS WERE REQUIRED TO DEVELOP TWO LEARNING PACKETS IN THEIR SPECIALIZED AREAS. A BRIEF DESCRIPTION OF THE EVALUATION PROCEDURES AND RESULTS IS INCLUDED FOR EACH WORKSHOP. The project reported herein was performed pursuant to a grant from the Bureau of Occupational and Adult Education, Office of Education, U.S. Department of Health, Education and Welfare. Grantees undertaking such projects under Government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent official Office of Education position or policy.

Mr. Junius H. George, Project Director
Public Schools of the District of Columbia
415 12th Street, N. W.
Washington, D. C. 20004

June 20, 1975

FINAL REPORT

Project Description

In September of 1974, the Public Schools of the District of Columbia will open a specialized career center named in honor of the late Lemuel A. Penn, a former Assistant Superintendent of Vocational Education, renowned educator, and citizen of the District of Columbia. The career center, to be known as Penn Center, is being established in a former National Geographic Building located at Third and R Streets, N.E., Washington, D.C.

Over the past three years, the Division of Career Development Programs, has coordinated the joint efforts of the school system in developing program design, specifications, and facility renovations.

Programs to be offered in the center will include two specialized career clusters, Fine Arts and Communications and Media. Extensive preparation has been made to expand current offerings related to these clusters by developing new program components, and consolidating all related activities into new patterns of services.

The center will open to eleventh and twelfth grade pupils during the regular school day and to out-of-school youth and adults during the evening hours. All eleventh and twelfth grade pupils will be registered in one of the twelve neighborhood high schools and/or vocational career centers and will attend the center part time. Varied patterns of scheduling shall be explored as the program is phased into a network of career centers currently in the planning stage.

The research and development project, supported by a Vocational Education Research and Development grant, has focused exclusively upon the preparation of a cadre of staff and the development of basic curriculum for the center. Effective dates of Project Period, July 1973-June 30, 1974.

Major Activities and Accomplishments

August 20-31, 1973, twenty teachers (20) and four (4) supervisors participated in a curriculum and staff development workshop under the direction of a team of staff and curriculum specialists provided under contract by the Education Services Division-Radio Corporation of America (RCA). The team of consultants included the following:

- Management Services Specialist
- Staff and Curriculum Specialist
- Communications and Media Specialist

During the workshop period the participants were assisted in the following areas of Staff and Program Development:

1. Developing an educational philosophy for the Career Development Center
2. Identifying cluster components and possible interaction of the two clusters, Communication and Media - Fine Arts
3. Identifying courses to be offered within the cluster components
4. Formulating course objectives
5. Reviewing facilities plans and recommending needed improvements
6. Identifying and utilizing community resources
7. Expanding the advisory committee to represent all components of the two career clusters and utilizing the committee in the total planning effort.

Lemuel A. Penn Staff Development Activity
(Summer, 1974)

The administrative staff of the Lemuel A. Penn Center, working in conjunction with Mr. Junius George, Division of Career Development, initiated a two week Curriculum Development Workshop on June 17 through 28, 1974.

This activity was designed to insure completion of adequate curriculum modules to be used during the first semester of the Penn Center's operation. This activity was a direct outgrowth of prior Staff Development sessions sponsored under the auspices of a grant awarded by the Bureau of Adult Vocational Education. This project provided the first opportunity for the newly established Penn Center Administrative staff to initiate, conduct and evaluate a curriculum development project.

Major Activities

Ten teachers, two administrators and three supervisory personnel participated in the two week curriculum workshop. All participants were required to prepare at least four learning packages. Participants were required in addition, to prepare pre and post tests and develop other evaluative instruments.

Supportive resource material was supplied as teachers utilized material selected from the Graphic Arts Technical Foundation and the State Department of New Jersey, North Carolina and South Carolina Vocational Education; Robert F. Magers - Preparing Instructional Objectives: W. James Popham - An Evaluation Guidebook; and Clark C. Abt - Serious Games.

Results and Accomplishments

Observable changes in participants ability to develop curriculum modules was in evidence as the quality and quanity of modules submitted exceeded anticipated projections. The use of Clark Abt's Game theory approach resulted in the submission of many innovative and imaginative curriculum modules. Most outstanding among the modules submitted was one that required students to develop, manage and evaluate a "Mini Business Operation in Graphic Arts".

Evaluation

Evaluation of this workshop included the use of both process and product methods in evaluation. Evaluation instruments used was developed by Gary Borich, working in conjunction with Mr. L. Scriven.

Qualitative analysis of modules submitted indicates a need to provide additional resource assistance in the area of creative writing.

Conclusions

It was concluded that the two week activities were successful and if followed through by additional curriculum development activities teachers could within this academic year develop a complete curriculum.

Project Description

A second curriculum development session was held on August 18 through August 30, 1974, sponsored by the RCA Educational Service staff working in conjunction with the Penn Center's Administrative Staff, 10 Instructors, one RCA project Director and two curriculum writing specialist directed all activities during the two week workshop.

The following areas represent major goals anticipated during the workshop:

1. Familiarize the Career Development Instructional Staff with innovative and relevant curricular materials and related research materials for possible use in the career center.

2. Continue to direct the writing of learning packages using the model established in phase 11.

3. Direct the Career Development Center Staff in the writing of learning packages for each program area which will be suitable for implementation in the Career Development Center.

4. Provide Curriculum Development Specialists and Curriculum writers to assist in the preparation of materials and to maintain a high quality level.

5. Direct and maintain quality control of all learning packages to assure that each package is written in the format which has been established in phase 11.

Major Accomplishments

Accomplishments of this two week workshop are as follows:

1. Teachers were provided individual assistance in form and style of curriculum writing.

2. Products were evaluated immediately and returned to teachers for final review and typing.

3. Teachers were able to access and evaluate modules developed by comparing their accomplishments in comparison to modules developed by "The Skyland Career Center" in Dallas, Texas. Through this comparison, an increase in teacher confidence was exhibited. An increased awareness of methodologist by which core curriculum materials might be infused into existing and future learning packages.

Evaluation

Conclusion of the final summer staff development activities leaves the Center's Administrators and Staff prepared to continue to develop and refine future curriculum modules. Form and style of modules developed are now representative of quality work needed in operations of newly emerging career development centers.

Project Design and Procedures

Members of the teaching staff met daily during the two week workshop from 9 a.m. to 3:30 p.m. Teachers were divided into groups representing their specialized areas. RCA team members worked individually with each small group and provided curriculum development material included in the appendix of this report.

As teachers completed the initial task of course outlines, cluster components and course description, these conclusions were shared with the total group in afternoon sessions.

Feedback indicating the group process was illicitated as members of the RCA team and the project supervisors met for daily debriefing sessions.

Results and Accomplishments

Group participation resulted in the completion of the following major program activities: Definition of School Philosphy, Objectives, Recommendation for Architectural Design Improvements, Delineation of the Centers Goals and Program Objective for pilot clusters.

In addition, teachers agreed upon a student teacher ratio of 1 to 18 in instructional areas. Projected student enrollment for the September 1974 opening was established at 450.

EVALUATION SECTION WILL BE SUBMITTED BY THE ALFRED J. MORRIS STAFF

Conclusions and Implications

In summary, both the RCA and staff supervisors concluded that the first RCA Staff Development session had been successful in accomplishing tasks as specified in the initial contract. Preceeding staff development activities would be needed in order to complete learning packets to be used during the school year 1974-75. Participants in the workshops were aware as a result of the information distributed to begin the process of organizing their daily classroom activities utilizing new skills and techniques. The implications of this workshop suggest that the immediate development of an exemplary curriculum package was at hand.

Interim Progress Activities

In January 1974, the Center's Director, George C. Gordon, was selected. The immediate responsibility of the Center's Director was to continue all staff development activities as initially designed by the Division of Career Development working in conjunction with Junius George, Project Manager. Succeeding staff development sessions were designed for the following dates, February 25 through March 1; March 25 through March 29. As a result of the furtherness of the career development concept, the clusters of humanities and fine arts under the direction of Peggy Cooper, elected to develop their program at Western Senior High School. This change in venve resulted in the Center focusing primarily on the clusters of Media and Communication. The effect of this program change resulted in the loss of five perspective staff members and 100 potential students.

MAJOR ACTIVITIES AND ACCOMPLISHMENTS

Project Description
(Second RCA Staff Development)

On Monday, March 25, 1974, the second one week workshop with the RCA team conmensed with four representatives form the RCA Educational Service staff, four supervisory participants and thirteen teachers.

The major thrust of the weeks activites included the following:

- I. Review of prior staff development activities in Deriving Learning Competencies
  - 1. Behavioral Analysis
  - 2. Using Task Analysis to Derive Competency Statements

- II. Writing Performance Objectives
  - 1. Pre-Assessment Package on Performance Objectives

- III. Writing Performance Objectives
  - A. Performance Objectives Defined
  - B. Components of Performance Objectives
  - C. Writing Acceptable Performance Objectives
  - D. Classifying Performance Objectives
  - E. Establishing guidelines for developing performance objectives

- IV. Writing Learning Modules
  - A. Introduction of learning modules
  - B. Develop a format for learning modules
  - C. Develop at least one example of a learning module in area of expertise

Participants were given materials which further identified skills needed in developing the compentency base in curriculum learning. This package included guidelines for developing the following:

- A. performance objectives
- B. the classification form for performance objectives
- C. four written exercises in developing performance objectives
- D. a list of action verbs and
- C. a sample learning package format (Refer to appendix A)

All teacher participants were required to develop at least two complete learning packets for their specialized area and were to include a thrust toward clearly identifying the interdisciplinary approach in skills development. The Dictionary of Occupations Titles and Outlook Handbook were utilized as additional resource materials.

Monday, February 25, 1974, through Friday, March 1, 1974, sessions were devoted to the instructional activities listed below. Participants included four RCA education staff, three staff supervisors and ten teachers.

- I. Review of Phase I Staff Development
- II. Management Plan for Program Development
- III. A model for Developing Instructional Materials
- IV. Competency-Based Learning Materials
- V. Deriving Learning Competencies
- VI. Derive Competency Statements for Pilot Programs
- VII. Writing Behavioral Objectives

Additional resource material included Preassessment for Writing Performance Objectives for Instruction; Behavioral Analysis leading to Competency Statements and three Exercises in developing competency statements.

Instructions in this area included an analysis of process module for curriculum identifying input, output and feedback systems. Individual assistance was given to participants by RCA staff members in assuring the attainment of goals identified under the head of this section of this report.

EVALUATION

Refer to the final report of Alfred J. Morris Associates

CONCLUSIONS AND IMPLICATIONS

Members of the RCA Team presented material in a thorough and meticulous matter presenting difficult behavioral and tasks concepts analysis commonly used in deriving competency status statement. Teachers exhibited through their written packets increased awareness and skill in utilizing sophiticated educational terms and materials.

Matery of materials covered in this section provided teachers a foundation upon which additional curriculum material could be developed.

TITLE: FOLLOW-UP OF AUTOMOTIVE AND METALS GRADUATES RESEARCH AND DEVELOPMENT PROJECT. FINAL REPORT.

PERSONAL AUTHOR: WILLETT, GEORGE

DESCRIPTOR: *VOCATIONAL FOLLOWUP; *VOCATIONAL EDUCATION; *PROGRAM DESCRIPTIONS; *FOLLOWUP STUDIES; *GRADUATE SURVEYS; PROGRAM EVALUATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 16P.

ABSTRACT: THIS REPORT DESCRIBES A PROJECT TO DEVELOP A WORKABLE MODEL OF A FOLLOWUP DEVICE AND SYSTEM BY DEVELOPING AND ADMINISTERING A MAILED QUESTIONNAIRE TO METALS' AND AUTOMOTIVES' GRADUATES OF THE LAST THREE YEARS OF THE FOSTER VOCATIONAL CENTER IN FARMINGTON, MAINE. THE GOAL OF THE PROJECT WAS TO DEVELOP A MODEL THAT WOULD BE TRANSPORTABLE TO OTHER VOCATIONAL CENTERS AS WELL AS COLLECT INFORMATION FROM THE SCHOOL'S GRADUATES. OF 186 FORMS MAILED, THE RETURN RATE WAS 47 PERCENT (79). THE REPORT LISTS THE SPECIFIC OBJECTIVES OF THE PROJECT, FOLLOWED BY BRIEF DESCRIPTIONS OF THE PROCEDURES FOLLOWED IN ATTEMPTING TO ACHIEVE THE OBJECTIVES. THE EVALUATOR'S REPORT ALSO LISTS THE OBJECTIVES WITH AN ANALYSIS OF THE RELATIVE SUCCESS IN OBJECTIVE ATTAINMENT. AS THE INSTRUMENT WAS THE MAJOR OUTCOME OF THE PROJECT, A BRIEF ANALYSIS OF EACH ITEM ON THE QUESTIONNAIRE IS PRESENTED. THE EVALUATOR'S GENERAL CONCLUSION IS THAT THE QUESTIONNAIRE, ALTHOUGH ADEQUATE FOR ITS PURPOSE, CAN BE IMPROVED. SEVERAL SUGGESTIONS ARE OFFERED SUCH AS FOCUSING MORE INTENTLY ON THE GRADUATE'S OPINION OF PRE-EMPLOYMENT EXPERIENCE, JOB DEVELOPMENT, AND JOB-SEEKING SKILLS. AN APPENDIX CONTAINS THE LETTERS OF THE FIRST AND SECOND MAILINGS, THE FOLLOWUP QUESTIONNAIRE, AND THE STATISTICAL ANALYSIS WORKSHEET. (NJ)

SUMMARY OF THE REPORT

The project originated in April of 1975 and concluded in September of 1975. Total working time in weeks, excluding the summer vacation, was about twelve weeks. The objectives of this project were to develop a follow-up device and system, that could be easily used and readily transferred to other regional vocational centers, while accurately reporting upon those graduates of immediate concern.

The follow-up instrument was mailed to all past graduates of two vocational areas, metals and automotives, as far back as three school years. As a control, and for ancillary data, we mailed the same form to all vocational graduates of June1975. 186 follow-up forms were mailed, with 169 students receiving; and 79 students returned their forms for a 47% return.

It is our opinion that the instrument was worthwhile, and that figures of return could be improved upon through group sessions. In group sessions the form would be given to the students, where they would be informed of the importance of returning the follow-up form.

The information gathered was extremely valuable and significant, in that many areas of information were requested, and significant data has been gained. As an example: all but five of the students inidcated that they are employed, half of the students reported that their vocational training was helpful on their present job. 88% of the students indicate that they enjoyed their vocational experience at the Foster Vocational Center. Of extreme significance: almost the same number, 88.5% indicate that training in getting a job, taking an interview, completing an application, would have helped them with their first job, and should be provided by the school.

While the rate of 47% return is good, it could have been improved upon had we more time to develop the project to its fullest. We could have used the phone to complete the follow-up on those students who did not respond to the second and final appeal for a completed return. This would have given us an accountability for all students rather than 47% of those who received the request for information. In any event, we are pleased with the results and shall expand upon the follow-up instrument and the significant implications revealed by its results.

BODY OF THE REPORT

The problem with this center was very common, in that we had no indicators of the success of our graduates in obtaining employment, or if their skills learned at this center were relevant to their needs as demanded by industry and business. Also we had little grasp of their appreciation for the center, its equipment, and the instructors. We were unaware of their feelings, concerning the efforts of the comprehensive aspect of their learning experience, both here at the vocational center, and their parent or sending school. Previously follow-up data was used only to report to the State Department of Education, the number of students working within an area for which they had been trained, and if they were employed. Follow-up prior to this project was word of mouth and accidental. Our efforts in this project were to develop a workable model that could be implemented with little effort and be transportable to other vocational centers, while revealing valid information. To do this we established the following objectives:

1. Develop a follow-up research instrument by involving the director, counselor, staff and a research associate.

2. Conduct a follow-up using personal contact, telephone and mailing and determine by results gathered, the most effective technique.

3. Design the project so that it will have transportability to other vocational centers, and disseminate this information through the Maine State Department of Vocational Education.

4. Place all follow-up data pertaining to each student within his individual microfiche records.

5. Summarize results of project upon its completion in June and make data techniques available to staff for consideration in curriculum change or improvement.

OBJECTIVES

1. Develop a follow-up research instrument by involving the director....

The follow-up instrument was developed by the director and the counselor, after meeting with the staff, concerning their interest areas. The design of the format was non-verbal so as not to impose seemingly difficult task to the typical vocational student. Many options were left to the student, as questions were asked concerning not only the vocational areas, but also the comprehensive experience of the student. In addition, we attempted to determine the student's needs for other areas of importance to us, such as: Job Development Skills, Job Placement Assistance, Higher Education, etc. In short, the format was designed to encourage the student to express his opinions in many areas, by checkmarks, in a relatively simple manner.

2. Conduct a follow-up using.......

The follow-up form was mailed to 186 students, in mid June, with 41% of those being returned by September 1975. In mid September a second appeal was mailed to all students from whom we had not received a return, with an additional 6% returning their forms to make a 47% response. We feel that this could improve if the project had more time to complete all phases of this objective. It would be our intention, in a similiar effort, to telephone all students who had not responded, to encourage a return. It has been our experience in the very limited exposure that we have made, through this project, that the telephone can be an excellent assist to a project of this nature. Personal contact with the students has been haphazard at best, as was to be expected, since the counselor met only those students employed in those areas where the counselor sought employment for vocational students. It is our opinion that the follow-up form used as we did, with the garnishment, in addition to a second mailing, plus the use of the phone, in the early evening would be the most beneficial method of conducting a follow-up which would account for almost every student.

3. Design the project that it will.......

At the inception of this project we believed that we could best serve the Department of Vocational Education by attempting to make a follow-up device that would help in a troublesome area, common to most vocational centers. Therefore, every consideration was given to making a thorough and complete format that could be easily and quickly completed by the typical vocational student. We attempted to anticipate all relevant concerns of vocational centers, by taking our own pulse, believing that we have a commonality with other vocational centers. We wanted supportive data to illustrate the need for job development and placement skills, by the students. In doing the above, we believe that we have developed a system which is inexpensive and highly transportable. At a recent meeting, we learned that our following system has been taken completely by another comprehensive secondary school in Maine, and is presently being used.

4. Place all follow-up data.......

All data gained through this project will be placed with each student's records, with appropriate updatings in personal data. One important item worth mentioning, is that we have always made it a policy to request the name and address of someone other than immediate family who will always know the whereabouts of each particular student. This has been extremely helpful with this follow-up or in other cases, where we have had to locate our students. We presently have all our records on microfiche and will add these data gained to the same.

5. Summarize results of project upon its completion.....

June was not a realistic month since we have found that to implement the project and have the information needed, returned by the students within two month's time, is unrealistic. It is my feeling now, that we are summarizing the project before its true completion, since an additional encouragement would bring in more completed follow-up forms.

Our project was unique in perhaps several ways. We resorted from gimmicks to chicanery to "assist" the typical "non-verbal" vocational student to complete and return our follow-up form. We believe that many of our students would simply not take the time to read, complete, and return a follow-up form that was excessively verbal, or one that required much writing or in general was time consuming. Realizing this, we evolved to a form, which was simple to answer, and yet gave us the information we desired. In additon, and to add further incentive, we included in each letter the ingredients for a cup of coffee, a pencil, and a gift item (a caricature vocational student, on an adhesive decal). In addition to a stamped and addressed return envelope. The letter requesting the information was simple instructure and written to the student at his level, asking him to "again help his center". The second appeal consisted of a similiar letter, saying that his classmates had responded in great number, and would he too, help those instructors and the center, which was getting an excellent rating through the follow-up. At this time, almost half of the students have returned their forms, and we believe that if we could follow-up additionally with personal telephone calls, we could increase this amount substantially.

Essentially our task was to research two vocational areas, which we did, (automotives and metal trades), for the past three years. Beyond this requirement, we felt we would have a control by also researching all vocational students from all technical and industrial areas. Of concern at this point, is the fact that more students who graduated in years 1972, 1973 and 1974 returned their follow-up forms that did graduates of 1975. In all cases, about half of the students who graduated prior to 1975 returned their forms, contrasted with a 37% return for 1975 graduates in automotives and metals. In other technical and industrial areas of 1975 graduates the range varied from 32% to 51%. Possibly the halo effect influenced those returning forms who graduated prior to 1975.

Of significance in this project, is the high rate of return, which we could assume resulted because of garnishment 47% of those students receiving the form returned it to this center. Almost all students reported that they liked very much their vocational experience. 80% of the students felt that their vocational instructor was interested in their progress. 88.5% of the students indicated that they would like to receive training in getting a job. Parents and friends were indicated to be more helpful in obtaining a job than teachers. The pre-employment experience program was sited as the most helpful in assisting them to form educational and vocational plans.

EVALUATORS REPORT

Introduction

This project was designed to collect data on graduates from the automotives and metals programs of the Kenneth A. Foster Regional Vocational Technical Center. This report will evaluate this effort. Each objective specified in the original proposal will be assessed independently and concluding statements will attempt to illustrate the interdependent relationship.

Objectives

1. Develop a follow-up research instrument by involving the director, counselor, staff and research associate.

This objective was not complete in its entirety. However, the outcome, in the form of a questionnaire is reasonably well done. Some operations could have facilitated its development and strengthened the product. The majority of the questions were derived from (1) already existing forms or (2) specific concerns for the Foster Center. Since the instrument was one of the major outcomes of the project each item will be evaluated.

Question 1: This item is really of little value to the center and may cause the recipient to not care to answer further because of its personal nature.

Question 2: Good sensible question allowing for cross referenced information. Easily answered.

Question 3: Appropriate question but the same information could be obtained in question 5.

7

Question 4: This question can be very valuable in evaluating the effectiveness of various components of the programs but very touchy to use in instigating change.

Question 5: A standard question which supplies a good deal of information if analyzed properly. It could be expanded to include the information from question 3.

Question 6: The first half of this question is appropriate. The second half is repetition of earlier information.

Question 7: An excellent question. Has broad implications for focusing center resources.

Question 8: Similar to question 4 in that the information is potentially valuable but will be difficult to use.

Question 9: Good question although the value of the information is questionable.

Question 10 and 11 : Both questions are program general and could be used in other areas. They will give the administration valuable information.

Question 12 and 13 : Good questions.

Question 14, 15, and 16: Good conclusion to the questionnaire. The recipients probably will not respond but it leaves them with a feeling that they have an opportunity if they want it.

The questionnaire was developed by the director and counselor with little imput from the staff. However, this is probably not a serious short coming as this imput would lengthen and complicate the instrument the staff was given the opportunity to react to the completed instrument.

The questionnaire as a whole is acceptable considering the above comments. The brevity of the required answers is a strong factor.

2. Conduct a follow-up using personal contact, telephone, mailing and determine by results gathered, the most effective technique.

An attempt at personal contact was found too time consuming, staff and hours were major road blocks to telephoning, so the most appropriate was mailing. A gimmick was employed which probably helped garner a return of over 50%. A second mailing would help. This objective cannot be evaluated because two methods were not employed. There is, however, rather large amounts of information to indicate that telephoning is most effective, (all factors being equal) however, mailing is the most widely employed.

3. Design the project so that it will have transportability to other vocational centers, and disseminate this information through the Maine State Department of Vocational Education.

This objective has been achieved in as far as what the center can do. The second part of the objective requires state department cooperation.

4. Place all follow-up data pertaining to each student within his individual microfiche folder.

This objective is in the process of being completed.

5. Summarize results of project upon its completion in (September) and make data and techniques available to staff for consideration in curriculum change or improvement.

This objective is still in the operation stage.

Conclusion

The first objective is the most critical for this program. It has resulted in an instrument which is appropriate for it's design. It certainly isn't the best instrument but it will serve the purpose and collect valuable information.

The second objective will not be achieved but it probably is not significant.

The third, fourth and fifth objectives are specific to the center and will be or are being achieved.

Two by-products of the project will help the center better serve the region. The first is a descriptive brochure of the center which will facilitate cooperation between schools. The second is a practical involvement of business leaders which will develop cooperation between the center and potential employers.

CONCLUSIONS

The follow-up form can be improved upon. While this obviously does not come to mind prior to the use of the form, areas for improvement arise with usage. On a similiar follow-up we could key-in on areas highlighted by the results of this follow-up, namely: the students opinion of the pre-employmnet experience in more detail, student's opinion of job development and job seeking skills. Group sessions with seniors about to graduate from the center, concerning the follow-up form, and the importance of returning it, would help to increase the rate of return. The second mailing is a good idea since this did bring in additional returns, however we should augment our efforts with the use of the phone. We must implement group sessions dealing with the finding, and keeping of jobs. More of our vocational instructors should be encouraged to place students in the pre-employment program.

RICHARD M. HARVEY
Vocational Director

GEORGE WILLETT
Vocational Counselor

Sept. 24, 1975

Dear Vocational Graduate:

Last June the Center decided to conduct a follow-up program of all its graduates from metals and automotives for the past three years. We chose those two classes because we felt that the students in those programs, left this Vocational Center exceptionally well prepared, by two outstanding instructors. It seems that we were correct, as the return forms indicated that both Mr. Brackett and Mr. McKenney received the highest evaluations from their former students.

Those comments help us to know what we are doing well, while also telling us where we can improve. In order for any of this information, that we get back from you to make sense, we have to hear from a good many of you. Most of your classmates have returned their forms, and we feel that you would like to return yours too! Perhaps you have lost the form or mislaid it. To save you time, we are sending you another form, and a stamped and addressed envelope so that you can get your return in the mail today! Thanks for helping make the Foster Vocational Center a place that wants to help kids learn a trade, and do well in industry!

Enclosed you will find another vocational sticker, which is our way of saying - "Thanks".

Sincerely yours,

George Willett
Vocational Counselor

Vocational Director

GEORGE WILLETT
Vocational Counselor

June, 1975

Dear Vocational Graduate:

This is just a quick and informal note to see how you are doing and to ask you to help the Foster Vocational Center again.

Enclosed you will find our new vocational sticker which we hope you will enjoy. It is our way of saying thank you. You will also find a follow-up form, pencil, and a cup of coffee....enjoy the coffee while you take a few minutes to complete the follow-up form, and return it in the self-addressed, stamped envelope.

Your cooperation in this will help us not only know your personal feelings about the Center, but will also help improve things that need attention. All of your answers will be kept in confidence and will be used only to improve the program.

Thanks, and we hope that all is going well and that you will not hesitate to call on us if we can help you in any way.

Sincerely,

George Willett

8. Please indicate by checking in the proper column how much this school helped you in regard to each of the following

	(1) A great deal	(2) Some	(3) Little or none	(4) Uncertain
(1) Using your spare time				
(2) Taking care of your health				
(3) Taking part in community and civic affairs				
(4) Marriage and family life				
(5) Securing a job				
(6) Getting along with other people				
(7) Preparing for further education				
(8) Understanding your abilities and interests				
(9) Ability to read well				
(10) Using good English				
(11) Using basic math skills				
(12) Using your money wisely				
(13) Conducting your own business affairs				
(14) Thinking through problems				

9. How do you feel about your vocational educational experience?

(1) ________ liked it very much
(2) ________ liked it pretty well
(3) ________ neither liked nor disliked it
(4) ________ disliked it more than I liked it
(5) ________ disliked it very much

10. (1) How would you rate the teaching quality of the instructor in your vocational training program?

(Please check one in each section)

________ The instructor taught very well
________ About the same as other instructors.
________ The instructor did not teach well

(2) How would you rate the knowledge your vocational instructor possessed about his field?

________ Instructor was very knowledgeable
________ About the same as other instructors.
________ Instructor was not knowledgeable

(3) How would you rate the interest shown by your instructor in your work progress in your vocational program?

________ Instructor was very interested in my progress
________ Instructor was somewhat interested in my progress
________ Instructor was not interested in my progress.

(4) How would you rate the extent to which your instructor in your vocational program was up-to-date in his field?

________ Instructor was up-to-date.
________ About the same as other instructors
________ Instructor was not up-to-date

11. (1) The equipment in my vocational-technical program was such that:

(Please check one in each section)

________ The vocational-technical equipment was superior to that on the job
________ The vocational-technical equipment was similar to that on the job
________ The vocational-technical equipment was inferior to that on the job

12. Do you think that training in getting a job, completing an application, taking an interview, would have helped you in finding a job?

________ Yes ________ No

13. Do you think that we should provide this training for our students before they graduate?

________ Yes ________ No

14. If you have further comments or suggestions for improving any part of this school's program, please state them here

Vocational Director

GEORGE WILLETT
Vocational Counselor

October 20, 1975

SUBJECT: Follow-up, Vocational Graduates
1975-1972, Automotives & Metals
& All T & I graduates 1975
TO: Mr. Harvey

FROM: Mr. Willett

In the recent follow-up the significant findings were indicated:

94% of those returning the follow-up forms were employed.

The two week job placement experience was reported as the most helpful in making educational and vocational plans.

67% of the students returning forms felt that their vocational training helped them with their present job.

44% are working in areas related to thieir training received at the Foster Vocational Center.

56% of the students felt that they got their job throught their own efforts.

Only 14% of the students felt that the school helped them with obtaining their first job.

56% of the students felt that they received little help with community and civic affairs.

79% of the students felt that the school helped them understand their abilities.

81% felt that the school helped them understand and use basic math.

37% felt they received little help in reading well.

90% of the students enjoyed their vocational education experience.

49% of the students felt that their equipment at the center was superior to that on the job.

89% of the students felt that training in getting a job, interviews, and completing an application should be given in school.

72% of the students indicate that this training, as mentioned above, would have helped them in getting their first job.

TITLE: CAREER EDUCATION PROJECT. FINAL REPORT.

DESCRIPTOR: *CAREER EDUCATION; *PROGRAM DESCRIPTIONS; *PROGRAM EVALUATION; *SUMMATIVE EVALUATION; ELEMENTARY EDUCATION; TABLES (DATA)

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 55P.; RELATED DOCUMENT VT 102 985 IN THIS ISSUE. COVER PAGE WAS RETYPED AT THE CENTER FOR VOCATIONAL EDUCATION, THE OHIO STATE UNIVERSITY DUE TO THE ILLEGIBILITY OF THE ORIGINAL.

ABSTRACT: THIS REPORT DESCRIBES AND EVALUATES A PROJECT TO DESIGN AND PILOT TEST CAREER EDUCATION CURRICULUM TO BE INFUSED INTO THE REGULAR ELEMENTARY CURRICULUM IN THE ST. LOUIS PUBLIC SCHOOLS. THE MAJOR PORTION OF THE REPORT (36 PAGES) CONSISTS OF THE THIRD PARTY EVALUATION WHICH EVALUATES EACH OF THE 19 OBJECTIVES GROUPED WITHIN THE FIVE CATEGORIES OF PROJECT ACTIVITY: PROGRAM DEVELOPMENT, STAFF DEVELOPMENT, CURRICULUM DEVELOPMENT, PROGRAM DELIVERY, AND STUDENT OUTCOMES. FOR EACH CATEGORY, A GENERAL STATEMENT OF THE OBJECTIVE IS PRESENTED, THE PROCEDURE FOR MEASURING THE OBJECTIVE IS DESCRIBED, THE EVALUATION DECISION RELATED TO THE OBJECTIVE IS GIVEN, AND THE EVALUATION FINDINGS ARE PRESENTED. THE PROJECT WAS FOUND TO HAVE BEEN GENERALLY SUCCESSFUL WITH 40 PERCENT OF THE OBJECTIVES BEING MET COMPLETELY AND 40 PERCENT MET PARTIALLY. PROJECT STAFF PERFORMANCE EXCEEDED THE CRITERION SET FOR THE CURRICULUM DEVELOPMENT COMPONENT. STAFF DEVELOPED APPROXIMATELY 14 TIMES MORE EXEMPLARY UNITS THAN WERE SPECIFIED IN THE OBJECTIVES. FORTY-FIVE PERCENT OF THE STUDENT OUTCOME OBJECTIVES WERE NOT MET. THESE RELATED TO STUDENTS DEVELOPING MORE POSITIVE ATTITUDES TOWARD SCHOOL, WORK, THEMSELVES, AND OTHERS. A SUBSTANTIAL AMOUNT OF SUCCESS WAS ATTAINED FOR THOSE OBJECTIVES DIRECTED TOWARD GAINS IN KNOWLEDGE OF CAREERS, OCCUPATIONS, AND THE WORLD OF WORK. IT WAS CONCLUDED THAT THE MODEL FOR THIS PROGRAM REPRESENTS A WORKABLE MODEL FOR BRINGING ABOUT CURRICULUM CHANGE. (NJ)

5. Summary of the Report

(a) Time period covered: This report covers the period from June, 1973 through December, 1974.

(b) Goals and objectives. The general goal for the project was to design and pilot-test career education/self awareness learnings, which could be infused into the curriculum subjects covered regularly in the elementary school. Toward this end, objectives were set for five categories of project activity.

Program Development. Objectives called for the development of career education units and topics, developed cooperatively by project curriculum writers, teacher-representatives, and other teachers, with inputs from the community.

Staff Development. Objectives called for a strong in-service training program for teachers.

Curriculum Development/Selection. Objectives called for the preparation by project staff of a Curriculum Resource Guide, for adoption throughout the school district.

Program Delivery. Specified the field-testing of project-developed career education curricula in three pilot schools.

Student Outcomes. Objectives specified that students in the three pilot schools would demonstrate gains on selected measures of affective and cognitive areas in career education.

(c) Procedures. Four professional staff were obtained for the project; three teacher-representatives (primary, intermediate, and upper elementary levels) were nominated at each pilot school, to facilitate the program. Ideas for curricula were developed mutually between project curriculum writers and teachers; career education/guidance curricula were modified, as necessary; a written curriculum guide was prepared; transportation of curricula of proven success was begun.

(d) Results; Accomplishments. The project was established in the district and implemented substantially along the lines intended. An Advisory Council was organized to assure relatedness and to secure community input and resources.

In-service teacher training, featuring a strong emphasis upon the guidance needs of target students, was carried forward. Teachers and project staff jointly developed curricula, with project staff taking responsibility for the actual write-ups. More than 160 separate curriculum pieces were developed around student outcome objectives, suitable for inclusion in math, science, social studies, and language arts.

Following the pilot-test phase of the program, activities designed to transport the career education/guidance curriculum into all elementary schools throughout the system were carried forward.

(e) Evaluation. The 19 major objectives set for the project were measured by an independent, third-party evaluator. The project was found to have been generally successful. Approximately 40 percent of the objectives were met completely, and approximately 40 percent were met partially. Both project staff and the evaluator were satisfied, that--for practical purposes--substantial progress was made. The objectives that the project failed to achieve centered mainly in the area of student change in attitude. It is recognized that attitudinal change is difficult to "make happen." The evaluator did note, however, that: while measured positive attitude did not increase significantly, negative attitudes held by students appeared to decrease.

(f) Conclusions and Recommendations. It was concluded that the model for the project, i.e., special project staff preparing curricula with teachers, providing teacher training, and teacher pilot-testing of those curricula, represents a workable model for bringing about curriculum change. It was concluded, also, that infusion of career education within subjects taught during the school day is a productive means for establishing career education in the schools.

Recommendations. It is recommended that more attention be given to (1) community involvement in career education, (2) the guidance function in elementary career education programs, and (3) teacher training sufficient to enable instructors to deliver career education curricula independently. It is recommended further that a major effort be made to transport the career education curricula developed through the project into the general curricula of the schools, system-wide.

6. Body of the Report.

(a) Problem Area. It was determined that there was a cogent need in the St. Louis Public Schools to enhance the ordinary school curriculum. Needed was a comprehensive program, infused within the subjects regularly taught in the elementary schools, that would provide all students with information and counseling in the world of work and careers. It was recognized that the making of ultimate wise career choices by today's students will be the result of a complex process, resulting from repeated exposures to educational experiences at succeeding stages of the school career.

Ultimately, students in the St. Louis Public Schools would benefit from the implementation of this type of curriculum, in that a wholesome attitude toward work would be developed in combination with student development of an honest, realistic self-analytic assessment which would move beyond merely matching a person's apparent interests and abilities with the requirements of specific jobs.

There was a need, in short, which would fulfill the career information, experience, and guidance needs of the children in the St. Louis Public Schools not met through the existing curriculum.

The needs assessment was conducted by two independent, mutually-cooperating groups: The Career Education Committee and the Superintendent's Task Force. The former was appointed by the superintendent to review specifically the meaning and purpose of career education, while the mandate for the latter was to study the needs of the school system. The two groups worked throughout the spring, 1972, and their findings led to the development of the Career Education Project and the submittal of the project proposal.

(b) Goals and Objectives for the Project. The major goal for the project was to develop career education curricula, featuring a strong emphasis on guidance, for infusion into the regular elementary school program studies in the St. Louis Public Schools. Through testing the curricula in classroom settings while these curricula were still in the developmental stage, the expected result was practical, useable curricula which could be transported into all elementary schools throughout the district.

The objectives for each component identified for the project are summarized briefly below.

Program Development Component: A representative Advisory Council will be established for the project, to assist in project planning, development, and operation. Community resources will be supplied to the project. Elementary school career curricula, featuring an emphasis on strengthening student self concept, will be developed for incorporation into the school subjects regularly taught in Kindergarten through Grade 8.

Staff Development Component: The project director will define the roles of project staff, establish performance citeria, and review the performance of those working in the project. A strong program of in-service teacher training for career guidance and career education curriculum development will be provided through the project.

Curriculum Development Component: Project staff will prepare a written Curriculum Resource Guide for an elementary school career education program, for adoption throughout the school district.

Program Delivery Component: The elementary career education curricula developed through the project will be taught, on a trial test basis, in the three pilot schools.

Student Outcome Component: Learners in Kindergarten through Grade 8 in the three pilot demonstration schools will display measurable growth in career awareness, career knowledge, and attitudes toward self, others, school, work, and achievement, appropriate for their grade levels.

The statement of objectives given above represents a brief summary of the project objectives. When stated in full, the objectives are given in measurable terms. The complete set of program component objectives, prepared in specific, behavioral form, is contained in Appendix 1.

(c) Description of the General Project Design and the Procedures.

Project Design. The project staff consisted of a project director, a secretary, and three curriculum writers. Responsibility for curriculum production, trial testing, and modification rested with the latter, with one writer assigned to each of the following levels: Primary grades, intermediate grades, and upper elementary grades. Major responsibility for the student self awareness/guidance aspect of elementary career education was assumed by the project director.

The project design called for staff to work closely with the faculties in three pilot schools to produce relevant curricula in which career education and student self awareness instruction could be infused into traditional curriculum areas, such as social studies, mathematics, language arts, and science. The unique curricula were to be tested within real school settings to assure the relevance, educational value, and practical utility of the final product: a career/self awareness elementary curriculum which could be diffused to all elementary schools in the District.

Built into the project design were inputs from several sources, aside from external funding. These inputs included:

- An Advisory Council--composed of educators, parents of children in the program, upper grade students, and community representatives, to provide advice, assistance, and to assure the relevancy of the project.

- School System Personnel--inputs from district administrators, such as Director of Federal Programs, Director of Curriculum, and similar staff, for advisory help, program monitoring, and assistance with transporting the program district-wide.

Procedures. For the program development component, the procedures were to organize an Advisory Council for the project. This was accomplished through determining the categories of professional and laypersons needed and issuing invitations for them to join the Council. Community resources were secured through direct contact with representatives of metropolitan area business and industry by the project director.

Elementary school curricula were developed as follows:

(1) Administrators and faculty at the three pilot schools nominated nine teacher representatives as school liaisons with project staff. Three teacher representatives from each of the three levels, primary, intermediate and upper elementary, were nominated from each of the three schools.

(2) Project staff provided teacher in-service training programs in career education and student self concept development throughout the term of the project.

(3) The project curriculum writers and teacher representatives developed cooperatively ideas for entry points into the school curriculum for career education and student self concept instruction.

(4) The project curriculum writers and the project director prepared initial drafts of career education and guidance curricula, organized around (a) behavioral domains, (b) major concepts, and (c) target behavioral objectives.

For the staff development component, the project director and staff reviewed the original project proposal, and they analyzed the tasks/missions to be performed. The project director assigned the curriculum writers to grade levels, and the entire staff defined mutually the roles of project staff. Furthermore, the project staff designed the in-service teacher training to be given to teachers and administrators in the three pilot schools. A regular schedule of teacher training events was developed, scheduled, and followed.

For the curriculum development component, the project staff, working through the teacher representatives, prepared curricula which could be infused into the school program. Classroom teachers taught the curricula on a pilot-test basis and provided feed-back to the teacher representatives and the curricula writers regarding the curricula's educational value and utility. The curricula were modified, based upon the feed-back from teachers.

Curricula which were used successfully in the pilot schools were prepared according to a format, which had been specified in advance. These were then placed within the Curriculum Resource Guide, for use throughout the district. The Curriculum Guide was reviewed and approved by the Curriculum Division of the St. Louis Public Schools.

For the program delivery component, classroom teachers trial taught the career education and student self knowledge curricula developed through the project. Although not all teachers all curricula, all prospective curricula were trial tested in a classroom situation before inclusion in the Curriculum Guide.

For the student outcome component, the procedure was essentially to teach program-developed curricula to the students at all grades in the three schools: Long, Farragut, and Mullanphy Elementary Schools. It was expected that exposure to the curricula would result in the measurable student growth specified in the several objectives set for this component.

- Student Population--All students in Kindergarten through grade 8 at Long, Farragut, and Mullanphy Elementary Schools comprised the student population for the curriculum development phase of the project. Following the production of the Curriculum Resource Guide, the transportation phase was entered. Selected for pre-and-post testing in this phase were 665 primary grade students and 1225 students in grades 4 - 8, selected at random from 35 elementary schools. This group of 1890 students were tested, pre and post, as one measure of program effects for schools beyond the pilot schools.

- Instructional Staff--During the curriculum development phase of the project the instructional staff were all elementary teachers in the three pilot schools. During the transportation phase, the instructional staff involved with the project included elementary teachers in four of the five sub-districts in the St. Louis Public School System.

- Methods, Materials, Instruments, Techniques--The methods used in the project included a great deal of direct contact with classroom teachers in order to gain teacher input into the development of appropriate curricula. Teacher in-service training was a major method for extending teacher skills and drawing upon teacher expertise for curriculum modification. The materials consisted of instructional materials available to support the general curriculum in the schools, as well as commercially-published materials for career education. The special curricula developed through this project were designed for infusion into the school curriculum, making use of materials available.

  Instrumentation consisted of devising a format in which to cast the curricula developed through this project so as to be compatable with district curriculum guides in other school areas. All project developed curricula followed this standard format. Instructional techniques utilized were those specified in the written curricula. These emphasized large group, small group, and individualized instruction.

(d) Results and Accomplishments of the Project. Listed below are the results and accomplishments of the project:

Program Development. A Community Advisory Council was established for the project. Including the Director there were 36 members. The council met regularly throughout the term of the project, and afterward. Although not all committees submitted reports, the Council members kept informed about the progress of the project, and they submitted individual requests for a time extension for the project when the period of funding expired.

Moreover, industrial and professional organizations in the community supplied instructional material, for use in the project.

Staff Development. The project was organized according to its planned design, with the roles of the four professional staff designed clearly. All project staff performed the activities required by their roles. Staff provided an almost-continuous program of teacher education while developing curriculum for use in the schools.

Curriculum Development. The Curriculum Resource Guide was prepared on schedule. It contained 163 exemplary lessons, suitable for infusion into the school program at all grade levels. Later, an additional 6 lessons were prepared, based upon the social studies curriculum guide.

The Guide was reviewed by the independent evaluator, and by the curriculum department of St. Louis Public Schools.

Program Delivery. A majority of the teachers at all three pilot schools trial-tested the career education curriculum lesson and units developed through the program. This varied between grades and among schools. Also, there was a variation in program delivery activity during different times of the year.

Some teachers taught as few as two of the lessons while others taught as many as 17 or 20. There was a minority of approximately 20 percent of the teachers who taught none of the career education units developed in the project.

Student Outcomes. Learners in the primary grades made gains in career awareness, which the evaluator found to be statistically significant. At the middle and upper grades, the results were more variable, but gains were registered in many important aspects of career education. With respect to gains in attitude toward one's self, others, school and work, there were either no measurably significant gains or slight gains, which were not statistically or practically significant. In the area of student attitude, the major contribution of the instructional program appeared to be reduction of negative feelings rather than fostering positive feelings.

Many teachers were able to work field trips to observe occupational role models into the instructional program. This was done by primary teachers to a greater extent than middle and upper grade teachers. In addition, most of the teachers in the three pilot schools had classroom visitors come to the room to discuss their occupations.

Taken all in all, the project managed to (1) attune teachers to career education, (2) secure some community input into the program, (3) involve classroom teachers in curriculum construction, (4) emphasize refinement of curriculum through classroom trial testing, and (5) provide for the district a curriculum guide for career education, suitable for adoption in elementary classrooms system-wide.

CAREER EDUCATION PROJECT

EVALUATIVE RESEARCH ASSOCIATES, INCORPORATED

8444 FLORISSANT ROAD
ST. LOUIS, MISSOURI 63121
(314) 521-0628

(e). Evaluation of the Project.

MEASUREMENT AND ANALYSIS OF COMPONENT OBJECTIVES

Third Party Evaluation

This portion of the Final Report was prepared by the independent, third-party evaluator. An on-going review and final, summative evaluation of the extent to which program objectives were met, conducted by an independent, researcher is a requirement for programs funded through Part C of the Vocational Education Act.

Evaluation Activities

The major activities delineated for the program evaluator included:

- Providing evaluation-based feed-back information to project staff for purposes of monitoring the program, to achieve intended project outcomes.
- Documenting the completion of significant products, presentation of significant programs, or other "milestones" specified in the project plan.
- Validating the attainment of specific objectives through scientific procedures and comparing of each program objective with the performance criterion set for that objective.

The initial evaluation activity was clarifying and refining the program objectives contained in the project proposal. Most of the original objectives were conceptual in nature and did not lend themselves readily to objective measurement. The final set of objectives generated for the Project reflected project staff intentions. Input from the evaluator was directed toward defining the program goals with sufficient precision to allow for measurement and assessment.

The next major activity performed by the evaluator was designing all instrumentation required for measurement of objectives. These included documentary record-keeping forms, surveys, and a set of instruments to measure student growth in the two main program thrusts:

- Career Awareness and Knowledge and
- Student Self-Concept and Attitude.

Picture tests were developed for the primary grades and for non-readers. A set of ten sub-tests were developed for upper-grade students. Also designed for the evaluation was a machine-scorable answer sheet. A related responsibility of the evaluator was arranging for the pre- and post-testing of students in the three pilot schools.

Format for the Report

In the process of developing objectives for the project, program staff stated the aims of the project in general terms. The evaluator supplied (a) an operational definition of the objective, (b) a statement of the measurement procedure, and (c) a statement of the performance criterion for each objective to be considered to have been met.

In the following section, (a) the general statement of the objective will be presented; (b) the procedure for measuring the objective will be described next; (c) third, the evaluation decision regarding that objective will be given; and (d) last, the actual evaluation findings, which led to the decision, will be presented.

In the process of re-framing the program objectives, a task analysis was performed wherein the objectives were grouped within five major activity components.

The report below will contain an evaluation of each objective, grouped within the components.

The five components identified for the program:

- Program Development
- Staff Development
- Curriculum Development
- Program Delivery
- Student Outcomes

SECTION 1: PROGRAM DEVELOPMENT

1.1

Statement of the Objective

An Advisory Council, with a membership representative of significant population groups in the community, will be established for the project; the group will engage in activities supportive of the project's goals.

Measurement Procedure

The Project Director maintained documentary records on the formation and composition of the Advisory Council. Moreover, a record of Council activities was maintained in the form of minutes prepared following each meeting. This documentation was reviewed and verified by the evaluator.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
5		3	2	1	0

Findings

Two elements were contained in the objective: "Representativeness" and "activities supportive of the project's goals."

Representatives

For the objective to be met, the Advisory Council had to contain representatives from each of the following population groups:

- Community industry, business, and/or professions
- Parents of students served by the program
- Upper-grade students
- District-level administrators, and
- Building-level administrators and teachers.

Given in Table 1.1 is a list of Community Advisory Members and their organizational affiliation. From the Table, it may be seen that there were 35 Council members and the Project Director. The membership of the group was representative of

- School district personnel
- Parents
- Teachers
- Students
- Business and industry
- Civic organizations.

Moreover, most of the members representing district-level administration were also members of the Superintendent's Study Committee on Career Education. The first criterion measure for Objective 1.1 was exceeded.

Council Activities

The second element (supportive activities) was operationalized to state that the Council would engage in at least the following activities:

- Monitoring the operation of the project
- Assist project staff to generate ideas for simulation experiences
- Develop a list of locations for observing workers out in the community and
- Develop a plan for continuation of successful project activities, following the termination of Federal funding.

The minutes of the Advisory Council meetings indicate that the group met nine times between October, 1973 and September, 1974. It would be most unusual for a group of 36 persons to attend each meeting. Therefore, it was not surprising to note that most meetings were attended by between 12 and 16 persons.

Four committees were established:

- Field Trips
- Instructional Materials Review
- Public Relations and
- Parent Liaison

The chairmanship of several committees and of the Council as a whole changed hands due to membership turnover. Recorded in the minutes were reports from two of the four committes, but the documentation maintained by the project lacked final written reports of committee work.

In Fall, 1974 an extension of the term for the project was requested of the funding agency. Members of the Community Advisory Council wrote letters attesting to the value of the project and supporting the extension request. This was granted.

The meeting minutes indicate that the major activity performed by the Council was receiving and reacting to reports on the project. Since this reactive role was inconsistent with the spirit and letter of the second half of the objective, it was determined that the performance criterion had not been met completely.

1.2

Statement of the Objective

Resources from the community will be supplied to the project, in furtherance of its goals.

Measurement Procedure

The Project Director maintained a list of curriculum materials or media aids supplied by community trades, industries, or professional groups. The evaluator reviewed the list periodically during the term of the project and verified that the materials had been received and were located in the project office or were on-loan to one of the schools.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
	4	3	2	1	0

Findings

The criterion set for this objective was that at least five trades, industries or professions would contribute instructional materials/

1.3

Statement of the Objective

Elementary career units or topics will be infused into the subject regularly taught in the three elementary schools serving as field test sites for this program.

Measurement Procedure

There are two elements to this objective:

- Specified units and topics must be produced and
- Classroom teachers in the three schools must infuse them within the school program.

Two instruments were designed specially to gather data for this objective:

- The Curriculum Production Log was designed to record the development of elementary career education and guidance units designed for infusion into school subjects.
- The Career Curriculum Trial Test and Adoption Record was designed for teachers to record the units they had tried in the classroom, the educational value they placed upon the units, and whether or not they had adopted the units into their teaching practice.

Separate forms were designed for Primary, Intermediate, and Upper elementary teachers.

Evaluation Decision

Status of Objective: Criterion

Met	Approached	Not Met
☐	4 3 2 1	0

Findings

Three criteria were set for this objective:

- One unit, topic, or lesson were to be produced for each school level (primary, intermediate, and upper elementary) in each major subject (arithmetic, language arts, social studies, and science) to the criterion that at least 12 exemplary units were developed.
- At least 50% of classroom teachers in these three schools were to field test the units or topics in their regular instructional program.
- Of those teachers who field test the units developed through the Career Education Program, at least 50% were to state their intention to adopt the unit into their regular teaching program.

CEP EVALUATION

Curriculum Production

Throughout the term of the project, staff recorded on the Curriculum Production Log the Career Education units as they were developed. Among the information recorded on the Log was the unit title, the school for which it was intended, and the completion date of the unit. Moreover, staff supplied information as to major responsibility for preparation of the unit (project curriculum writers or others).

Shown in Figure 1.1 is a graphic display of the rate at which elementary career education units and lessons were produced. The regularity of this production may be observed from the Figure.

By September, 1973 three primary units had been developed. By December, there were 21; and by May, 1974 there were 53 primary units available.

At the intermediate level, one unit had been developed by September, 1973. By December, there were 16; and by May, 1974 there was a total of 59 intermediate units.

The picture is similar for the upper elementary units. One was developed by September, 1973. By December, 21 were available; and by May, 1974 there were 57 upper elementary units. Overall, 169 elementary career units, or topics, had been produced. The criterion set for the production of career education units had been exceeded by a great margin.

Production Responsibility

It would be interesting to note the division of labor between project staff and others, such as classroom teachers, in the production of career education units. This information is displayed in Figure 1.2.

It may be seen from Figure 1.2 that the Project curriculum writers, themselves, produced 56% of the units or topics. Moreover, they did the major work on an additional 27% of the curricula. Thus, slightly more than 80% of all the curriculum units produced through the project were achieved, either entirely or for the most part, by the project curriculum writers.

Curriculum Field Test

Pilot testing the career education units under actual classroom conditions was built into the design of the project. Each teacher in the three pilot schools completed the form, Career Curriculum Trial Test and Adoption Record. On this form they supplied the following information:

- Specific units trial-tested in the classroom.
- Number of students receiving instruction.
- A rating of the educational value of the unit.
- A rating of the extent to which the unit was practical.
- The predominant student reaction.
- Whether the teacher intended to
  - (a) adopt the unit as is,
  - (b) adopt with modification, or
  - (c) not adopt the unit.

A summary of the data from all three schools is presented in Table 1.3. From the Table, the following may be noted:

- 97% of the units were pilot-tested.
- A majority of the teachers trial-tested units designed for their grade levels.
- The educational value of the units was endorsed generally by the classroom teachers.
- The majority of the ratings from teachers indicated that they believed the units to be practical.
- The ratings of student reaction to the units supplied by teachers indicated that students responded positively to the curricula.
- In more than 90% of the cases, those teachers who field-tested career education curricula indicated their intention to adopt it as is, or to adopt it with modification.
- Where career education curricula had been trial-tested by classroom teachers, no fewer than 50% of the teachers indicated their intention to adopt those curricula as is, or with modifications.

Based upon the data presented in this section, the objective calling for curriculum to be developed, trial-tested, and adopted was met. The criteria specified in advance for the successful attainment of this objective were exceeded by a healthy margin.

SECTION 2: STAFF DEVELOPMENT

2.1

Statement of the Objective

The Project Director will delineate the roles of all persons participating in the project.

Measurement Procedure

Documentary records maintained by the project were reviewed and verified to measure this objective.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
▨	4	3	2	1	0

Findings

To meet this objective, the Project Director must have prepared written position descriptions for all persons expected to play a role in the project. The first step was an anlysis of the work-tasks to be performed in the project. A schematic diagram indicating:

- Inputs into the program
- Transactions conducted within the program and
- Program outcomes

was prepared. A copy of this chart is given in Figure 2.1.

Next, a second chart was prepared to display the flow of communications among those having a part in the project. A copy of this chart is given in Figure 2.2.

Having analyzed the work-tasks and communications needed for the project, the Director prepared written position descriptions for:

- The Director
- The Curriculum Writers
- Administrators
- Evaluator
- Advisory Council (parent and student members)
- School representatives
- Classroom teachers
- Director of Federal Programs and
- Project Secretary

Upon the evaluator's review, he found the position descriptions and charts to represent accurately the differential responsibilities for persons connected with the project. Each position description contained the following elements: (a) Summary of responsibility; (b) Person to whom staff reports; (c) Persons with whom staff establishes working relations; and (d) Specific duties and responsibilities.

The evaluator observed project staff performance throughout the term of the project. It is his opinion that the position descriptions were accurate statements of the work expectations, and staff performed according to those job descriptions.

2.11

Statement of the Objective

Performance criteria will be established for each project staff position, and staff performance will be reviewed in terms of them.

Measurement Procedure

Documentary records maintained by the project were reviewed and verified to measure this objective.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
5	4	▨	2	1	0

Findings

The set of specified duties for project staff and performance criteria were prepared in writing on schedule. Staff performance was reviewed by the Project Director. However, the criteria for the objective specified project staff were to be rated four times, and the evaluator's records indicated that this was done only once. Therefore, the objective was met partially.

2.2

Statement of the Objective

Classroom teachers participating in the program will receive training in

- Methods of teaching and evaluating elementary career education lessons and units and
- In guidance and counseling, as it relates to elementary career education.

Measurement Procedure

This objective was evaluated through (a) direct observation, (b) workshop reaction surveys, and (c) documentary records maintained by project staff.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
▨	4	3	2	1	0

Findings

A master schedule of training events was prepared and maintained by project staff. The schedule was followed closely. The evaluator, or his representative, attended three of the large group training events.

At one session, the evaluator administered to the participants a post-workshop survey. The participant reaction was uniformly high, and staff were enthusiastic toward the program. At two other training sessions, the evaluator interviewed samples of participants briefly. Again, considerable enthusiasm toward the project and its thrust was

SECTION 3: CURRICULUM DEVELOPMENT

3.1

Statement of the Objective

Project staff will prepare a Curriculum Resource Guide for an elementary career education program, for adoption throughout the school district.

Measurement Procedure

The Curriculum Resource Guide was reviewed while in preparation. The Evaluator obtained the services of a consultant-specialist, recognized as an authority on career education, to conduct the review.

Also, the evaluator and project staff arrived at mutually-agreed upon criterion measures for the Guide. These criteria consisted of a set of elements that the final product must contain, for the objective to be considered to have been met.

Following the publication of the Curriculum Resource Guide, 50% of the units were selected at random for comparison against the established criteria.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
☐	4	3	2	1	0

Findings

The Curriculum Resource Guide was prepared on schedule. The initial draft was reviewed by the Evaluation Consultant. For the most part, the ideas underlying the units were basically sound and creative. The suggestions for improvement centered upon:

- Terminology used to denote various workers
- The need for assessment and
- Statement of objectives in terms of the learner.

In all cases, corrections were made in subsequent drafts.

The criteria set for the resource guide specified that it would contain, at a minimum, the following:

- Practical suggestions to teachers for infusing career education within other subjects taught regularly in the schools.
- A minimum of 12 exemplary units, one per level, in each of four subjects.
- Career education units keyed to instructional materials used regularly in the schools.

A review of half the units contained in the Guide, selected at random, revealed that each unit met the criteria above.

An additional criterion was that the Curriculum Resource Guide would be accepted for dissemination to all elementary schools in the district by the school system Director of Curriculum. This criterion was met, also.

A total of 159 units were produced, exceeding the criterion. The distribution of units produced for the Guide, according to grade level and type of unit is presented in Table 3.1.

TABLE 3.1:

SECTION 4: PROGRAM DELIVERY

4.1

Statement of the Objective

Classroom teachers in the three pilot schools will provide instruction to students in elementary career education.

Measurement Procedure

The criterion measure for assessing this bojective was the instrument, Career Curriculum Trial Test and Adoption Record, developed especially for this project. A separate form was developed for the Primary, Intermediate and Upper Elementary grades.

The project-developed units were printed on each form by grade levels. Space was provided for the classroom teachers in each building to note those units they had taught, and other data.

The forms were administered by project staff and maintained as documentary records. They were collected and analyzed by the evaluator. In addition to measuring this objective by teacher self-reports the evaluator obtained the services of three classroom observers to validate program delivery. These observers were in the employ of the evaluator, and were independent of the project or the school district.

An In Class Observation Schedule was devised upon which the observers could record each classroom observation made in the schools. The observers were sent into the three pilot schools after a sufficient amount of time had passed for the career education units to be used in the schools. In all, they made 186 observations, viewing all teachers in each school approximately three times, on a random-sample basis.

Evaluation Decision

Status of Objective:

Met	Criterion Approached			Not Met
5	4		2 | 1	0

Findings

The evaluation criterion was that all the elementary career education units developed through the project would be taught in the three schools, at the grade levels (and within the school subjects) for which they were designed. It was not required that each teacher trial-test each unit. Instead, the pre-specified acceptable performance level was that half of all the teachers, throughout all three schools, would--in combination--trial-test all units.

Teachers

From the Career Curriculum Trial Test and Adoption Record, it was evident that a healthy percentage of teachers did, in fact, teach the project-developed career education units. In one of the pilot schools, 85.8% of the 21 teachers taught the units. The number of units taught by the staff of this school ranged from a low of three units to a high of 13 units.

At another of the pilot schools, 84.7% of the 26 teachers taught career education units. The number of units taught ranged from a low of 2 to a high of 39. The latter was a liaison teacher for the project who wished to teach as many as possible of the units.

At the third school, 68.8% of the 16 teachers taught career education units in the classroom. The number of units taught ranged from a low of 9 to a high of 17.

Units

The percent of total teachers available to deliver instruction in the career education units who actually did so is presented in Table 4.1.

From the information displayed in Table 4.1, it may be noted that most units were taught in the classroom during the course of the project. The units appeared to have been used most widely at the Primary grades. At the Intermediate and Upper Elementary grades, there were a number of units taught by fewer than half the number of teachers available to use them.

Finally, it may be noted that some units designed for various grade levels were not taught at all. For example, 24% of the units designed for various grade levels were not taught at all. For example, 24% of the units designed for Grade 8, 21.4% of units designed for Primary II, and 16% of the units designed for Grade 7 were not tried in the classroom.

Classroom Observations

Summarized in Table 4.2 are the results of the classroom observations conducted during February and March, 1973. During February, the observers recorded career education activities being conducted in from 75% to nearly 83% of the classrooms. However, during March, the amount of career education program delivery was reduced substantially.

Taken together, the data indicate that teaching staff made a substantial effort to incorporate career education units developed through the project into their teaching programs. It was not surprising that some teachers made a more intensive effort than others. Furthermore, the amount of effort appeared to vary during the course of the school year.

Conclusion

The project staff developed a creditable number of exemplary units. Most of these units were taught to at least some extent at the grade levels for which they were intended. However, there were several units which were not taught in any of the classrooms. Since a substantial number of the units were taught by fewer than 50% of the teachers available to teach them, the objective is considered to have been met in part, but not to the specified criterion level of performance.

TABLE 4.1:
TEACHERS IN PILOT SCHOOLS WHO USED CAREER EDUCATION UNITS IN THE CLASSROOM, BY PERCENT OF TOTAL TEACHERS AT EACH GRADE

SECTION 5: STUDENT OUTCOMES

5.10 Grades Kindergarten Through 3

5.11

Statement of the Objective

Learners in grades Kindergarten through 3 will demonstrate an increased amount of career awareness.

Measurement Procedure

Career awareness at the primary level focuses upon generalized occupational characteristics. These would include similarities and differences among common occupations and the tools used by persons employed in these jobs.

Assessment of the objective was made using the Career Knowledge (CK) test (Fulton, 1973). The test contained three ten-item scales:

- Occupational Similarities,
- Occupational Differences, and
- Occupational Tools.

The test was administered using a pre-post, time series design. It was administered to students in grades Kindergarten through three in early October 1973 and late April 1974. The Kindergarten children were administered the CK individually and grade one through grade three students were administered it in their normal classroom group settings.

The tests were administered by ERA, with the cooperation of local school administrators and teachers.

Evaluation Decision

Status of Objective:

Met	Criterion Approached	Not Met
■	4 3 2 1	0

Findings

The tests were scored and data analyzed by ERA. The pre-post scores for each scale and for the composite were compared using t-tests for correlated means. The results are presented in Figures 5.1 and 5.2. As can be noted from the figures, significant differences at the .001 level were found on each pre-post analysis.

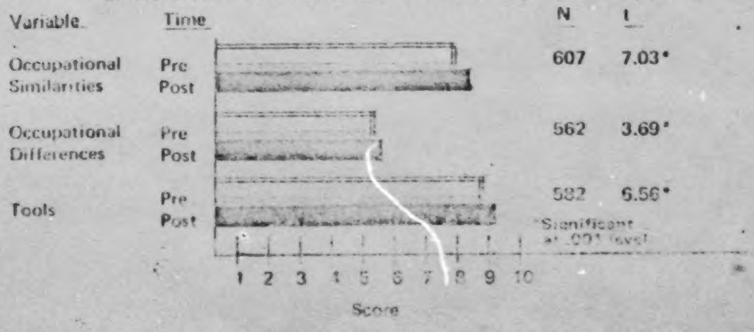

FIGURE 5.1. Career Knowledge subtest scores, primary level.

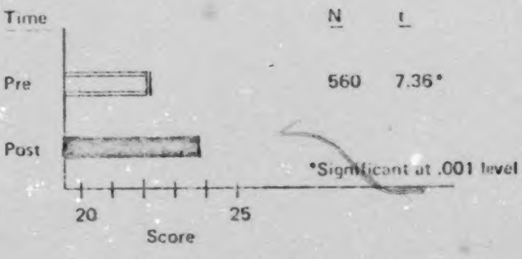

FIGURE 5.2. Career Knowledge total test scores, primary level.

5.12

Statement of the Objective

Learners in grades Kindergarten through 3 will demonstrate an attitude toward work which is measurably more positive.

Measurement Procedure

This objective was assessed using the Student Attitude Survey, Form C (ERA, 1973). This test was a non-verbal picture test. It was administered to Kindergarten through grade three students in early October 1973 and late April 1974. Kindergarten children were administered the test individually and others in classroom groups. Testing was done by ERA.

Evaluation Decision

Status of Objective:

Met	Criterion Approached	Not Met
5	4 3 2 1	■

Findings

The tests were scored and data analyzed by ERA using a pre-post test design. The results for the Attitude toward work scale are presented in Figure 5.3.

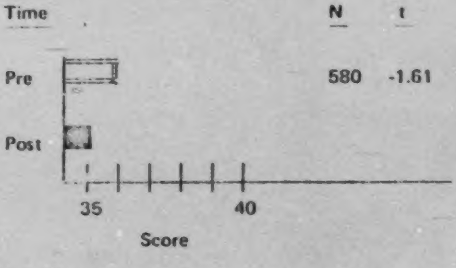

FIGURE 5.3. Attitude toward work scale scores, primary level.

As can be noted from the figure, there was not a positive change. Rather, a slight negative change was obtained.

5.13

Statement of the Objective

Learners in grades Kindergarten through three will demonstrate an increase in positive self-concept.

Measurement Procedure

The Student Attitude Survey, Form A (ERA, 1973) was used to assess this objective. This test is a non-verbal pictorial instrument designed to measure students' attitudes toward self and others. The test was administered to students in grades Kindergarten through three in early October and late April.

Evaluation Decision

Status of Objective:

	Criterion	
Met	Approached	Not Met
5	4 3 2 1	▨

Findings

A one-tailed dependent measures t-test was run on the data to determine whether or not there was a significant increase in the means from the pre- to post-test. The results are graphically presented in Figure 5.4.

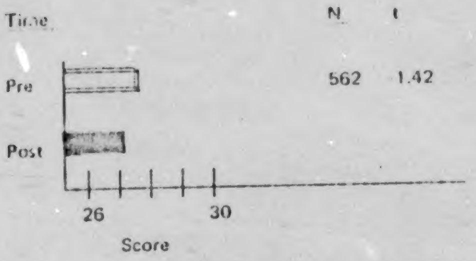

FIGURE 5.4. Attitude toward self, mean scores for primary level.

The mean scores showed a slight decrease between pre-post testing; no significant increase in self concept was found.

5.14

Statement of the Objective

Learners in grades Kindergarten through three will demonstrate an increase in attitude toward others.

Measurement Procedure

The Attitude Toward Others scale from the Student Attitude Survey, Form A was used to assess this objective. The survey was administered to primary level students in early October and late April. The testing was done by ERA, and the tests were scored and data analyzed by ERA staff.

Evaluation Decision

Status of Objective:

	Criterion	
Met	Approached	Not Met
▨	4 3 2 1	0

Findings

The pre- and post-test mean scores are presented in Figure 5.5. The increase in mean scores was 2.12, which was statistically significant at the .001 level of confidence.

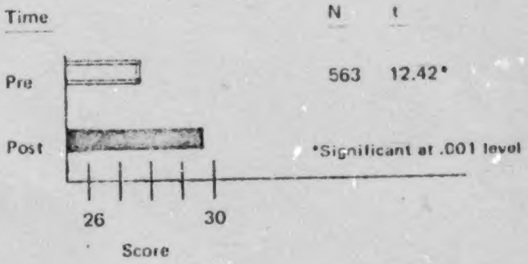

FIGURE 5.5. Attitude toward others, mean scores for primary level.

These results indicate that on the average over the seven month period the primary level students had a positive gain in the attitudes toward others as measured by the SAS, Form A.

5.15

Statement of the Objective

Learners in grades Kindergarten through three will demonstrate an increase in attitude toward school.

Measurement Procedure

This objective was assessed using the Attitude Toward School scale of the Student Attitude Survey, Form C. As previously noted, the survey was administered to Kindergarten through grade three children in early October and late April. The tests were administered, scored and data analyzed by ERA.

Evaluation Decision

Status of Objective:

	Criterion	
Met	Approached	Not Met
5	4 3 2 1	▨

Findings

A small decrease in mean score of .60 of a point from pre- to post-test was observed. This result is presented in Figure 5.6. This suggests that the current programs are not effective in increasing primary level students' attitudes toward school. This decrease may be related to many things ranging from chance fluctuations in test scores to actual decreases in attitudes toward school associated with the approaching end of the school term.

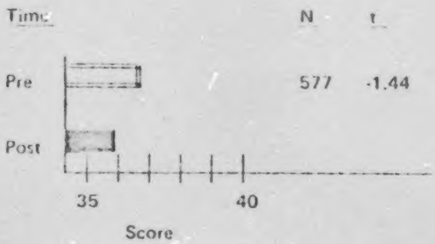

FIGURE 5.6. Attitude toward school, primary level.

5.20 Grades Four Through Six

5.21

Statement of the Objective

Learners in grades 4, 5 and 6 will demonstrate a measurably more positive attitude toward

- School
- Work
- Achievement Need
- Self
- Others

Measurement Procedure

The Student Attitude Survey, Forms B and D (ERA, 1973) were administered to all the students in grades 4, 5 and 6. These surveys contained 70 items making up 11 attitude scales:

- Positive School Index
- Negative School Index
- Positive Work Index
- Negative Work Index
- Positive Self Index
- Negative Self Index
- Positive Other Index
- Negative Other Index
- Positive Personal Index
- Negative Personal Index
- Achievement Need Index

For all scales, except Achievement Need, a high score indicates the more positive attitude. For positive scales, a high score indicates identification with positive traits; while, for negative scales, a high score indicates rejection of negative traits.

On the Achievement Need scale, the ideal score would be in the middle, or 9. An extremely low score would suggest little if any value for school related achievement. A high score would indicate a need to succeed at almost any cost. A middle score reflects a balance between these extremes.

The tests were administered using a pre-post-test design, with pretesting in early October 1973 and post testing in late April 1974. The tests were group administered by ERA to all students in grades 4 through 6 in the three pilot schools. An optical scan type answer sheet was used for students to record their responses. The answer sheets were computer scored and the resultant data analyzed by ERA.

Evaluation Decision

Status of Objective: Criterion

Met	Approached				Not Met
5	4	[illegible]	2	1	0

Findings

Dependent samples t-tests were used to determine whether or not the differences between pre- and post-test means for each scale were significantly different. Since the statement of the objective specified positive change and since this was the first project year, directional tests at the .20 of significance were run. The grade level results follow.

Grade 4

The results for grade four are presented in Figure 5.7. Significant positive chances occurred in seven of the eleven scales.

- Achievement Need
- Positive Work Index
- Negative School Index
- Negative Work Index
- Negative Self Index
- Negative Others Index
- Negative Personal Index

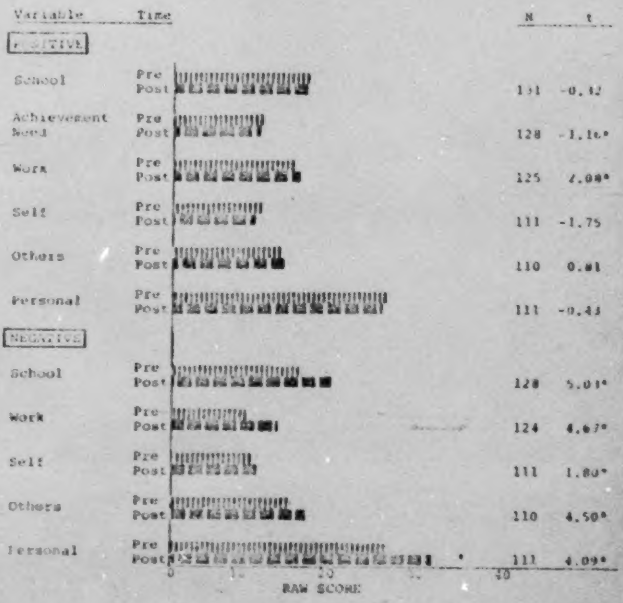

FIGURE 5.7. Significance of differences between pre and post test scores on selected measures of student attitude, Grade 4.

* Significant positive change on post-test score over pre-test score.

Of particular note is the fact that significant changes occurred on all negative scales but on only two of the six positive scales. It would seem, that perhaps, intervention during the school year tended to reduce some of the negative feelings but did little to increase positive ones.

Grade 5

The grade 5 results are presented in Figure 5.8. Positive changes were noted on all 11 scales, with 9 of the 11 being significant at the .20 level. The only two scales for which significant positive changes were not obtained were

- Positive School Index
- Negative Self Index

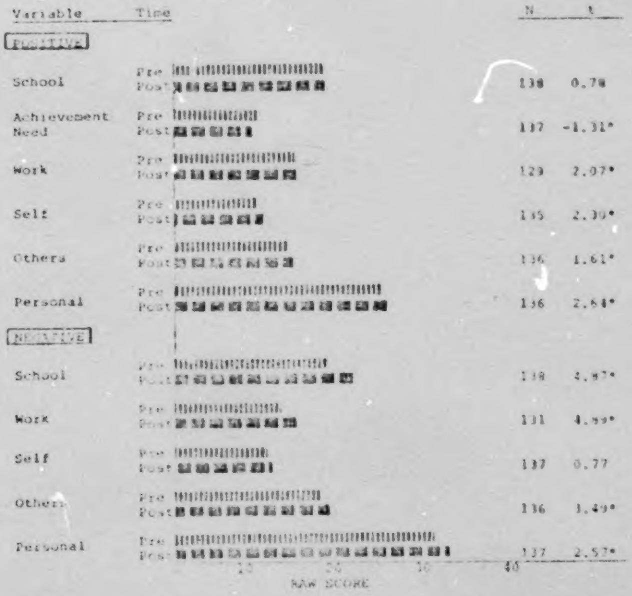

FIGURE 5.8. Significance of differences between pre and post test scores on selected measures of student attitude, Grade 5.

* Significant positive change on post-test score over pre-test score.

As with the fourth grade students, the larger changes seemed to be in the reduction of negative feelings. However, unlike the fourth graders these changes were accompanied by increases in positive feelings.

Grade 6

Significant positive changes were noted for sixth grade on 6 of the 11 scales (see Figure 5.9).

- Achievement Need
- Positive Work Index
- Negative School Index
- Negative Work Index
- Negative Other Index
- Negative Personal Index

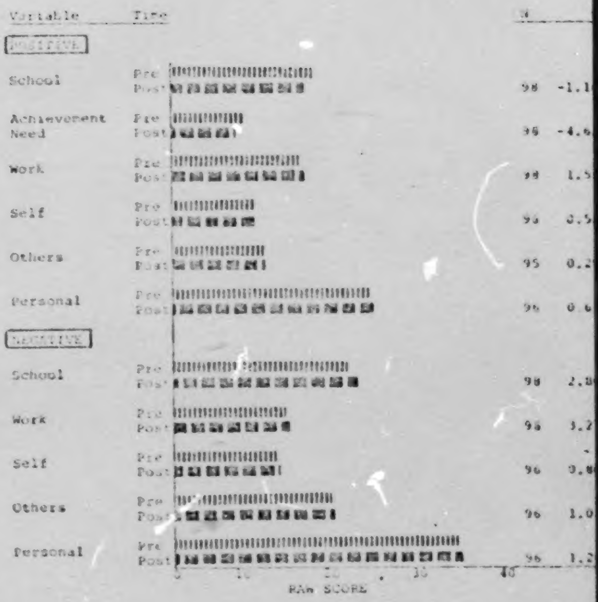

FIGURE 5.9. Significance of differences between pre and post test scores on selected measures of student attitude, Grade 6.

* Significant positive change on post-test score over pre-test sco

Even though these were the only significant positive changes, mean scores for all but one of the scales, Positive School Index, showed positive change. Two-thirds of the significant changes occurred on negative scales. Again, this may suggest that the program is more effective in helping to decrease negative feelings than in increasing positive ones.

In Summary

In grades 4 through 6, significant positive changes were found on 21 of 33 attitude scales, or about two-thirds of the scales. Eighty-seven percent of the negative scales showed a positive change (rejection of negative feelings) from pre- to post-testing. This compared to 50 percent of the positive scales reflecting positive change (acceptance of positive feelings). Where the desired changes did not occur were primarily on

- Positive School Index
- Positive Self Index
- Positive Other Index
- Positive Personal Index
- Negative Self Index

The only positive scale which systemmatically showed positive change was the Positive Work Index. Moreover, the only area in which neither the positive nor the negative scale showed positive change was self concept.

5.22

Statement of the Objective

Learners in grades 4,5 and 6 will demonstrate an increased amount of career knowledge.

Measurement Procedure

The Orientation to Career Concepts Series (OCC) test (ERA, 1973) was used to assess this objective. The test consisted of ten sub-tests measuring

- Work Awareness
- Work Activities
- Vocational Vocabulary
- Absurdities (Vocational)
- Occupational Similarities
- Occupational Tools
- Work Stories
- Working Conditions
- Occupational Training
- Workers' Earnings

The general method for collecting data was through the use of a pre-post-test design. Because of the large number of tests to be administered, the students were sampled by classrooms so that each child took either two or three of the tests.

The tests were administered by ERA in early October 1973 and late April 1974. Students responded to the test items using an Optical Scan type answer sheet. The student responses were computer scored and the data analyzed by ERA.

Evaluation Decision

Status of Objective:

Criterion

Met 5

Approached ☐ 3 2 1

Not Met 0

Findings

Dependent samples t-tests were used to analyze the data. Since the statement of the objective specified that the test scores would increase, directional tests were used. Moreover, since the Career Education Project was in its first developmental year, and, thus, only minimal student impact could be expected, the significance level was set at .20.

The grade level results follow.

Grade 4

Seven of the ten tests were administered to fourth grade students. These tests were:

- Work Awareness
- Worker Activities
- Occupational Tools
- Work Stories
- Working Conditions
- Occupational Training
- Workers' Earnings

The pre- and post-test results are presented in Figure 5.10. As can be noted from the figure, significant differences between pre- and post-test mean scores were found on six of the seven tests administered.

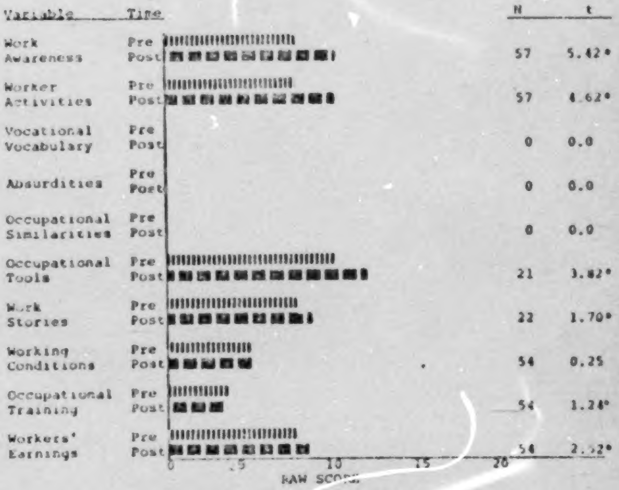

FIGURE 5.10. Significance of differences between pre and post test scores on selected measures of career knowledge, Grade 4.

* Significant positive change on post-test score over pre-test scores.

The largest differences were observed on the Work Stories, Worker Activities, and Occupational Tools tests. Smaller, but significant differences were noted on the Work Stories, Occupational Training, and Workers' Earnings tests.

This suggests that the curriculum and instructional processes were most effective in aiding students in relating occupations to common family-type activities and the general activities of and tools used by workers. The project seemed to be least effective at this grade level in the areas of Occupational Training and Working Conditions.

Grade 5

Seven of the 10 tests were administered to the fifth grade students. These seven tests were:

- Work Awareness
- Worker Activities
- Vocational Vocabulary
- Absurdities
- Occupational Similarities
- Occupational Tools
- Work Stories

Significant increases between the pre- and post-test means were found on all seven tests (see Figure 5.11). This would indicate that the project was significantly effective in the areas assessed.

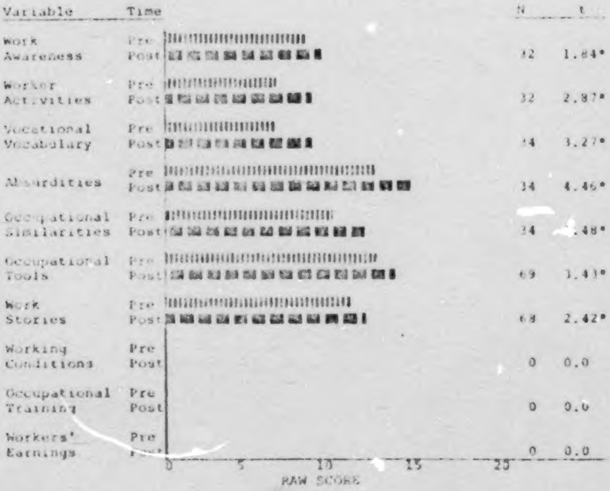

FIGURE 5.11. Significance of differences between pre and post test scores on selected measures of career knowledge, Grade 5.

* Significant positive change on post-test score over pre-test score.

Grade 6
All 10 of the OCC tests were administered to the sixth grade students. The results are presented in Figure 5.12.

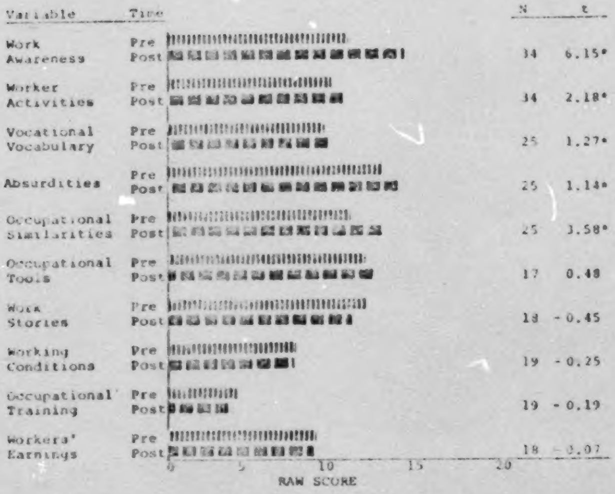

FIGURE 5.12. Significance of differences between pre and post test scores on selected measures of career knowledge, Grade 6.

* Significant positive change on post-test score over pre-test score.

Significant differences between means were found on 5 of the 10 tests. The largest increase was found in the Work Awareness area, where family-type activities are related to occupations. Significant increases were also found on tests

- Worker Activities
- Vocational Vocabulary
- Absurdities
- Occupational Similarities

No differences were found on

- Occupational Tools
- Work Stories
- Working Conditions
- Occupational Training
- Workers' Earnings

In Summary
Of the 24 tests administered to students in grades 4 through 6, significant gains in mean scores were found for 18 of them. Four tests were administered at all three grade levels.

- Work Awareness
- Worker Activities
- Occupational Tools
- Work Stories

The remaining six tests were administered at two grade levels, either fourth and sixth or fifth and sixth. Significant gains at each grade level observed were found for five tests.

- Work Awareness
- Worker Activities
- Vocational Vocabulary
- Absurdities
- Occupational Similarities

Mixed results were found on four of the tests.

- Occupational Tools
- Work Stories
- Occupational Training
- Workers' Earnings

No significant gains were recorded for the test Working Conditions.

These results suggest that the Career Education program at the 4 to 6 grade level tends to emphasize the general worker activities of occupational groups. Of lesser emphasis seems to be the more specific occupational characteristics such as expected earnings, training requirements and normal employment conditions.

Moreover, further examination of the test results suggest that, at this level, the Career Education program has been built upon the areas strengths in career knowledge of the general education program. That is, the areas of greatest gain tended to be those areas that the students scored highest in on the pre-test; and, the areas of least gain were generally those that the students scored lowest in on the pre-test.

The students in grades 4 through 6 did demonstrate significant gains in most of the Career Knowledge areas. This indicates that the general objective was met in the majority of areas assessed.

5.30 Grades Seven Through Eight

5.31

Statement of the Objective

Learners in grades 7 and 8 will demonstrate a measurably more positive attitude toward

- School
- Work
- Achievement Need
- Self
- Others

Measurement Procedure

Attitudinal data were analyzed using a time series design. The tests were administered to the students in grades 7 and 8 in early October, 1973 and late April, 1974. The administrations were coordinated by ERA personnel in all three of the pilot schools.

The tests used to collect these data were the Student Attitude Survey, Forms B and D (ERA, 1973). These tests are made up of 11 attitudinal scales.

- Positive School Index
- Negative School Index
- Positive Work Index
- Negative Work Index
- Achievement Need Index
- Positive Self Index
- Negative Self Index
- Positive Other Index
- Negative Other Index
- Positive Personal Index
- Negative Personal Index

Except for the Achievement Need Index, a high score indicates a more positive attitude. For Achievement Need, the ideal score is equal to 9 points, the middle score.

Evaluation Decision

Status of Objective: Criterion

Met	Approached			Not Met
5	4	2	1	0

Findings

Dependent sample t-tests were used to determine whether or not the differences in mean scores between pre- and post-tests demonstrated significantly positive change. Moreover, since the objective specifies positive change and since the CEP is a new, developing program, one-tailed t-tests were run, with the significance level set at .20. The seventh and eighth grade level results follow.

Grade 7

The results for grade seven are presented in Figure 5.13. Significant changes were found on 6 of the 11 scales.

■ Positive	■ Negative
● Achievement Need	● School
● Work	● Work
	● Others
	● Personal

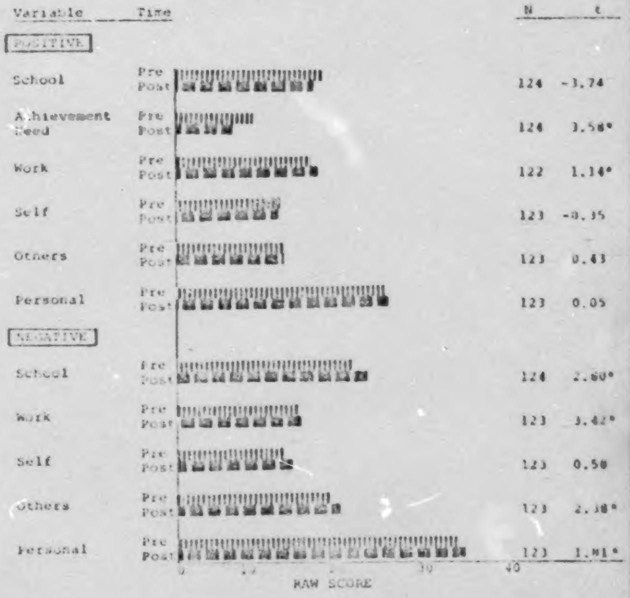

FIGURE 5.13. Significance of differences between pre and post test scores on selected measures of student attitude, Grade 7.

* Significant positive change on post-test score over pre-test score.

It is worth noting, that significant changes were not found on either of the self-concept scales. Moreover, most of the significant results reflect decreases in negative attitudes, with few increases in positive attitudes.

Grade 8

The results for grade 8 are presented in Figure 5.14. Significant increases in scores were found for 8 of the 11 scales.

■ Positive	■ Negative
● Work	● School
● Self	● Work
● Others	● Others
● Personal	● Personal

It can be observed that significant increases were obtained for both the positive and negative scales relating to

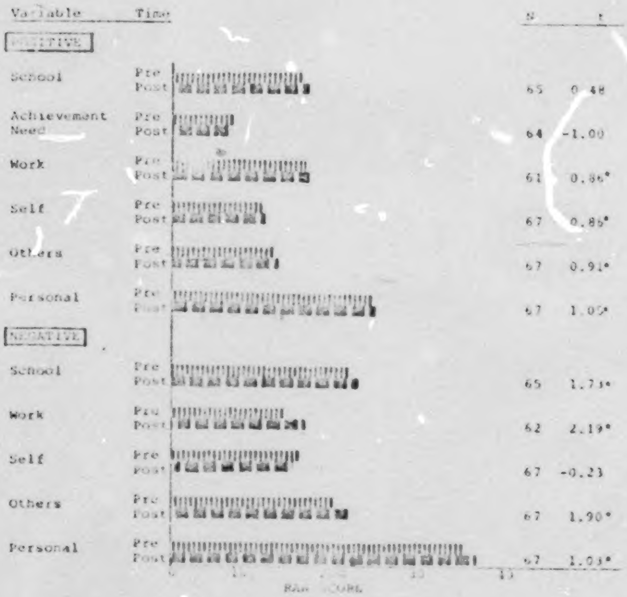

FIGURE 5.14. Significance of differences between pre and post test scores on selected measures of student attitude, Grade 8.

* Significant positive change on post-test score over pre-test score.

- Work
- Others
- Personal

In Summary

In grades 7 and 8, significant positive changes were found on 14 of the 22 attitude scales. The positive changes for these grade levels were primarily in the students' attitudes toward work. At the seventh grade level, the major changes were in the reductions of negative attitudes. The eighth grade level was somewhat different in that there was an equal number of positive scales showing positive changes as negative scales. This would suggest that the eighth grade program was the most effective as compared with other grade levels.

5.32

Statement of the Objective

Learners in grades 7 and 8 will demonstrate an increased amount of career knowledge.

Measurement Procedure

To assess this objective, the Orientation to Career Concepts Series test (ERA, 1973) was administered to the students in the pilot schools during early October and late April. The complete test series series yields ten sub-test scores:

- Work Awareness
- Worker Activities
- Vocational Vocabulary
- Absurdities (Vocational)
- Occupational Similarities
- Occupational Tools
- Work Stories
- Working Conditions
- Occupational Training
- Workers' Earnings

The total testing time for the OCC is about three hours. Therefore, only about one-third of the test was administered to each student.

The students responded to the test on an optical scan type answer sheet. The responses were computer scored and analyzed by ERA.

Evaluation Decision

Status of Objective:	Criterion			
	Met	Approached		Not Met
	5	3	2	1	0

Findings

The pre-post test results were analyzed using one-tailed, dependent samples t-tests, with the level of significance set at .20.

The grade level results follow.

Grade 7

All ten of the subtests were administered to seventh grade students. Matched pre-post test samples ranged from 14 to 41 students.

The test results are presented in Figure 5.15. As can be noted from the figure, significant positive changes were found on seven of the ten tests.

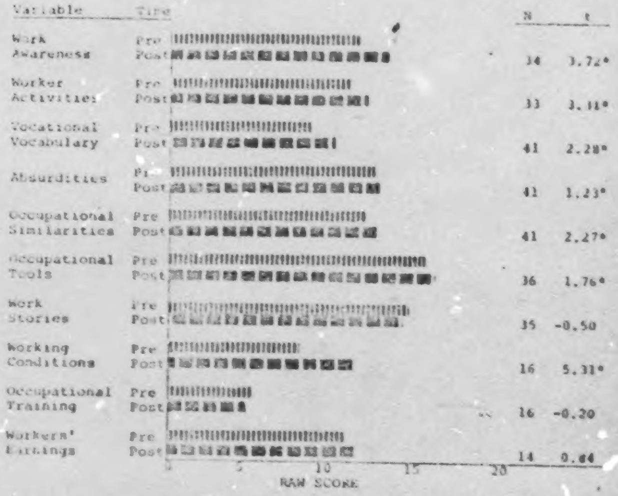

FIGURE 5.15. Significance of differences between pre and post test scores on selected measures of career knowledge, Grade 7.

* Significant positive change on post-test score over pre-test score.

The largest differences were obtained on the Working Conditions, Work Awareness and Worker Activities Tests. The non-significant differences were found on the Work Stories, Occupational Training, and Workers' Earnings Tests.

These results suggest that the seventh grade program is highly similar to the earlier elementary program in that the major strength is in relating occupations to family-type activities and communicating general occupational knowledge. The least effective aspects of the program seem to be in relating the more technical information. The major exception to this was the large increase in students' scores in the Working Conditions subtest.

Grade 8

The following seven tests were administered to the eighth grade students.

- Work Awareness
- Worker Activities
- Vocational Vocabulary
- Absurdities
- Occupational Similarities
- Occupational Tools
- Work Stories

The results from these tests are presented in Figure 5.16. The significance of the differences between the pre- and post-test means were determined using directional, dependent samples t-tests, with the significance level set at .20.

As noted in Figure 5.16, six of the seven pairs of means were significantly different. The major differences were in Vocational Vocabulary, Work Awareness, and Occupational Tools. The only non-significant result was found on the Work Stories tests.

These results were similar to those found at other grade levels.

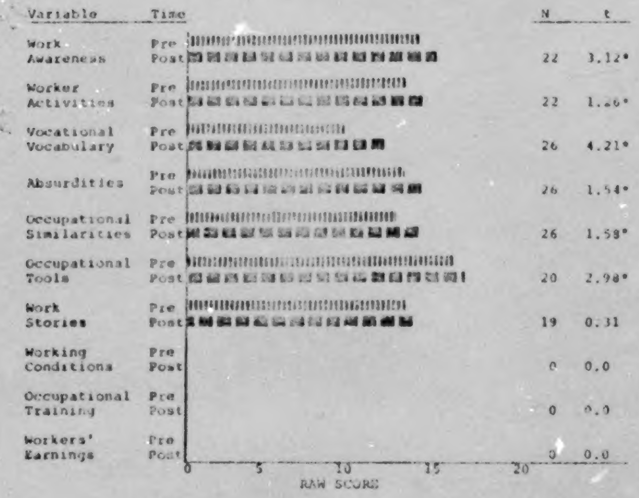

FIGURE 5.16. Significance of differences between pre and post test scores on selected measures of career knowledge, Grade 8.

* Significant positive change on post-test score over pre-test score.

In Summary

These results show that the CEP was generally successful in developing curriculum to aid students in learning career education concepts. The strengths of the program at the seventh and eighth grade levels seem to be in general knowledge, including vocabulary, similarities, tools, etc. and family related activities.

The least effective areas of the program seem to be in specific occupational knowledge and analyses, such as earnings, training, and Work Stories.

5.33

Statement of the Objective

Learners in grades 7 and 8 will demonstrate increased skill in analyzing the association between personal values and choice of occupation.

Measurement Procedure

To measure this objective, the sub-test **Work Stories** was used as the criterion since it is a direct measure of the goal statement. It was administered simultaneously with the other sub-tests in the OCC Series. The evaluation criterion was that the mean post-test score would be significantly greater than the mean pre-test score.

Evaluation Decision

Status of Objective: Criterion

Met ☐5 Approached ☐4 ☐3 ☐2 ☐1 Not Met ☐

Findings

From Figure 5.15 it may be seen that the mean on the pre-test exceeded that of the post-test for **Work Stories** at the seventh grade level.

Examination of Figure 5.16, displaying the pre- and post-test means for grade 8 on the test, **Work Stories**, shows that the gain was not significant.

5.4

Statement of the Objective

All learners in grades kindergarten through 8 will attend career-related field trips to observe role models of occupations and careers in the metropolitan area.

Measurement Procedure

This objective was measured through reviewing, tabulating, and summarizing the Guest Speaker and Career-Related Field Trip logs, which were completed by all teachers in each of the three pilot schools. The logs were maintained in the project files, and they were verified by project staff.

The evaluation criteria were that (a) 75% of the teachers would schedule career-related field trips, and (b) grades kindergarten through 3 would attend four trips, on the average; grades 4 through 6 would attend 6 trips, on the average; and grades 7 through 8 would attend 8 trips, on the average.

Evaluation Decision

Status of Objective: Criterion

	Met	Criterion Approached				Not Met
	5	4	3	2	1	☐

Findings

Displayed in Table 5.1 is the distribution of field trips taken by all grades in the three schools. It may be noted that students served by the program were taken to 29 field trip sites to observe workers in action. The field trip attended most frequently was the Botanical Garden. Next in frequency as a field trip site was Police Headquarters.

From the display it may be seen that not all grades at all schools attended field trips. Furthermore, it may be noted that a greater number of primary grade field trips were taken than intermediate or upper-grade trips.

Given in Table 5.2 is a summary of the average number of trips taken, by grade and by class.

With respect to the criterion that the grade levels attend 4, 6 and 8 trips, respectively, only the kindergarten met the criterion. It may be noted, also, that all seventh grade classes attended field trips, but they did not attend enough to meet the criterion.

The second evaluation criterion was that 75% of all teachers in the three schools take their classes on at least 3 trips, on the average.

The data related to this criterion is presented in Table 5.3.

It may be noted from the Table that the criterion of 75% of the teachers taking their class on trips was exceeded in two of the pilot schools but not the third. The criterion that the teachers conduct at least three trips, on the average, was approached in only one of the pilot schools.

SECTION 6: TRANSPORTATION – DISSEMINATION

An extension was granted to the Career Education Project for the purpose of transporting the career education units produced through the project to the rest of the schools in the system.

A schedule was developed to disseminate information about the project and the career education lessons in the Career Education Curriculum Guide throughout the 5 sub-districts in the St. Louis Public Schools. The schedule was:

- Cleveland-Southwest district, September 25 and 26
- Banneker-Central-Vashon district, October 2 and 3
- Beaumont-Sumner district, October 15 and 16
- Northwest-Soldan district, November 19 and 20
- McKinley-Roosevelt district, December 3 and 4

The two-day dissemination workshops included the following events:

- Instructional materials exhibits
- Film, Career Education
- Small group work: Goals, concepts, activities of career education lessons
- Open discussion
- Guidance approaches, by grade levels
- Slide presentation, Career Education in the St. Louis Public Schools
- Demonstration and discussion of lessons and activities
- Open discussion
- Evaluation

These dissemination activities were held as scheduled. Information on the reaction of the program participants was gathered through a brief, open-ended survey. The general reactions are summarized in Table 6.1.

From the results, the reactions of the classroom teachers to the program presentations appeared highly positive.

Furthermore, samples of students in grades kindergarten through 8 in 35 schools were pre-tested on career knowledge and attitudes, using the same instrumentation used to measure student outcomes in the project. After post-testing, in Spring, 1975, the third-party evaluator will analyze and interpret the results.

Conclusion

The project staff planned a format for dissemination workshops to teachers in all 5 sub-districts of the school system. A schedule for presentations was established, and that schedule was maintained.

The reactions of the classroom teachers to the programs was quite positive. Therefore, program staff can be said to have delivered substantially upon their commitment to transport the career education curricula developed in the project to schools throughout the system. Since St. Louis Public Schools is a large system, this effort will have to be continued for some time, until all available teachers are reached.

SECTION 7: THIRD--PARTY EVALUATOR CONCLUSIONS AND RECOMMENDATIONS

The evaluator presented the evaluation findings by components and objectives. This summary was based upon (a) on-site visits and discussions with project staff, (b) a review of all documentary records, (c) statistical analysis of quantitative data and (d) the evaluator's independent conclusions concerning the achievement of each of the 19 objectives set for the Career Education Project.

Given in Table 7.1 is a summary of the evaluation decision for each objective. An overall percentage was computed on the program objectives (a) Met, to the pre-specified performance criterion, (b) Partially met, at less than the specified criterion level of performance, and (c) Not met.

The data provide (a) an overall picture of the program performance with respect to its objectives and (b) input into the overall conclusions of the evaluator.

Below are the general conclusions reached by the evaluator regarding the achievement of project objectives. These conclusions were supported by the evaluation findings (see Table 7.1).

Goal Achievement

Program Development. The program development goals were met reasonably well during the term of the project. Two of the three objectives were met, per the criterion level of performance. The Community Advisory Council did not engage in the specified activities. It did, however, meet regularly to keep in touch with project events; and the membership did submit letters of endorsement to support the project application for extension.

Staff Development. The specified activities for this component were carried out, with respect to (a) staff role definition and (b) classroom teacher training. Project staff performance was reviewed and rated by the Project Director, but this was done fewer times than was specified in the objective.

Curriculum Development. Project staff performance exceeded the

KEY:
M = Objective Met
A = Objective Partially Met
N = Objective Not Met

criterion set for this component of the project. Staff developed approximately 14 times more exemplary units than were specified in the project's objectives. This was a most successful aspect of the entire project.

Program Delivery. Although there was a significant and substantial amount of instruction in career education during the project, variation by schools, grade levels, and time of year was observed and recorded.

That the objective was listed as having been met only partially was a function of the specification in advance that 100% of the career education units would be taught by at least half of the teachers available in each school.

As it turned out, a majority of the teachers did deliver instruction to their classes, using most of the curricula developed for their grade levels. The evaluator is satisfied that a substantial amount of field testing and program delivery did occur.

Student Outcomes. Forty-five percent of the Student Outcomes objectives were not met. These related to students developing significantly more positive attitudes toward school, work, themselves and others. Changes in attitude are most difficult to bring about. This is particularly true when one is working within a limited time-period, as was the case with the Career Education Project. Therefore, it was not surprising that objectives in this realm were not achieved. Within the time limit of the project, it appeared that the instructional program was more successful in reducing negative attitudes than in fostering positive ones.

For those objectives directed toward student gains in knowledge of careers, occupations, and the world of work, a substantial amount of success was attained in the program. This was true especially for the primary grades. However, at the intermediate and upper-elementary grades, the objectives were met only partially.

An examination of the program delivery data indicates that the instructional effort was weaker at these levels. The findings suggest that when fairly concentrated instruction is given, students will gain in the specified sets of knowledge. The findings suggest further than a substantially greater amount of time and effort than was available to this project are needed to bring about attitudinal changes in students.

General Observations and Recommendations

1. The program began with two major handicaps. First, the term of the project started two months before the program was staffed. Thus, when staff were secured for the project, they had to make up for the lost time. Second, the original goals for the program were vague and conceptual. Before staff could engage in goal-directed activity, the goals had to be clarified. This required program planning and staff effort while working in schools with teachers and students.

Despite these handicaps, events in the project were held on schedule. Moreover, the efforts of project staff and pilot school teachers and administrators were highly consistent with the specified intentions of the project.

2. The Career Education Curriculum Guide prepared through the project represents a valuable contribution to the school district. The units contained therein have been trial-tested by many teachers in the three pilot schools, in all grades, kindergarten through 8. Most teachers endorsed those units they tried as being educationally useful and practical. Moreover, they reported that the students' reactions were positive. Most of the teachers in the three pilot schools reported that they intended to adopt into their regular instructional program the career education units.

3. The evaluator endorses St. Louis Public Schools' current efforts to transport career education curricula developed through the program to all elementary schools in the system. This trend is considered healthy, and it is entirely consistent with the intentions of the Federal funding agency.

4. It is recommended that:

- The St. Louis Public Schools continue its commitment to career education.
- Teachers' experiences with the project-developed curricula should be recorded and analyzed regularly; modifications, additions, and deletions should be made as needed.
- In those elementary schools where elementary career education curricula have not yet been tried, administrators and teachers should develop a systematic plan for pilot-testing the material for possible adoption.
- Eventually, an effort should be made at the district-wide level to correlate the elementary career education programs with secondary "core-curriculum" programs, as well as work-study, and other career/occupation-related programs.
- The guidance portion of the career education program should be carefully re-thought. If change in student attitude is the desired outcome, careful consideration should be given as to the best way that this can be fostered within the school program.
- The nature of career education requires real, and realistic, experiences in and with the community; careful attnetion should be given to (a) involvement from the community in further development of the program and (b) providing meaningful community-based experiences to students in the program.
- Program delivery should be monitored; the data indicate that the program effect was strongest at those grades and in those schools where the most concentrated effort was made to provide career education instruction.

6. Body of the Report.

(f) Conclusions, Implications, and Recommendations for the Future.

Conclusions. On the basis of our experience with the Career Education Project, it was concluded that:

1. Productive curriculum change can be brought about through special staff working closely with classroom teachers to develop curricula and field-test those curricula in classrooms.

2. Career education learnings have been neglected. When given the opportunity to teach and learn about careers and the world of work, teachers and students are enthusiastic about this type of subject matter.

3. Career education learnings can be infused within the school subjects taught regularly in the elementary school.

4. Within career education, the relation between home, school, work, and society are drawn. Therefore, a more central role for the community needs to be developed for career education programs.

5. Gains in knowledge about career education and occupations are easier to achieve than gains in student self-awareness, decision-making, and achievement motivation.

6. When attempting to demonstrate positive change within three representative schools, Federally-funded projects need more time than the 18 months allowed the Career Education Project.

Implications. The implications drawn from the project experience were:

1. The task set for project staff called for them to write curriculum and provide teacher training simultaneously during the term of the project. Sufficient time should be allocated for these different sorts of tasks.

2. To infuse new curricula in the schools, it is necessary to go beyond merely preparing a written curriculum guide. Sufficient staff must be available to provide the necessary training and assistance, if the curriculum is to be used.

3. The commitment of top-level administrators in the district and in the school buildings is necessary, if new curricula are to be infused in the school.

4. For a curriculum guide to b [illegible] and utilized, the participation of actual cl [illegible] teachers at all grade levels in its preparation [illegible]sary.

5. District professional staff, working on special projects, operate more effectively when working toward goals, for which they are accountable, and in which they had a voice in determining.

Recommendations. The following recommendations for the future are put forward:

1. It is recommended that the school district support the dissemination/transportation of elementary career education curricula to all elementary schools in the system, based upon the generally successful performance of the project.

2. It is recommended that a permanent and Community Advisory Council be organized for the district career education program and that a meaningful role for this group be structured, to provide input into the program at the "grass-roots" level.

3. It is recommended that a task group be organized to re-frame and develop productive classroom approaches to the guidance component of an elementary career education program, building upon the start that was made in the project.

4. It is recommended that a study committee be activated to consider ways to correlate the elementary career education program and the existing secondary program which center around occupation education and the world of work.

5. It is recommended that this study committee, or a similar committee, direct attention to determining means for infusing career education into all subjects taught in the secondary schools, including the "core curriculum."

DESCRIPTOR: *CAREER EDUCATION; *PROGRAM DEVELOPMENT; *CURRICULUM; *INFORMATION DISSEMINATION; *PROGRAM EVALUATION; PROGRAM DESCRIPTIONS; ELEMENTARY EDUCATION

IDENTIFIER: SAINT LOUIS PUBLIC SCHOOLS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 19P.; RELATED DOCUMENT VT 102 984 IN THIS ISSUE. COVER PAGE WAS RETYPED AT THE CENTER FOR VOCATIONAL EDUCATION, THE OHIO STATE UNIVERSITY DUE TO THE ILLEGIBILITY OF THE ORIGINAL.

ABSTRACT: CONTAINED IN THIS REPORT ARE DOCUMENTATION AND DATA RELATED TO DISSEMINATION OF THE PROJECT-DEVELOPED CAREER EDUCATION CURRICULUM RESOURCE GUIDE AND TO IMPLEMENTATION OF CAREER EDUCATION IN THE ELEMENTARY SCHOOLS OF THE ST. LOUIS PUBLIC SYSTEM. THE THREE SECTIONS OF THE REPORT ARE DISSEMINATION, STUDENT OUTCOMES, AND SUMMARY AND CONCLUSIONS. DISSEMINATION ACTIVITIES REPORTED ARE MEDIA PRESENTATIONS, PILOT SCHOOL WORKSHOP, AND SYSTEM-WIDE INSERVICE WORKSHOP WITH WORKSHOP FORMAT AND PARTICIPANT EVALUATION. THE STUDENT OUTCOME SECTION PRESENTS THE RESULTS OF CAREER KNOWLEDGE ACHIEVEMENT ASSESSED BY PRETESTING AND POSTTESTING RANDOM SAMPLES OF STUDENTS IN THE VARIOUS ELEMENTARY SCHOOLS. THE TESTS ARE BRIEFLY DESCRIBED AND THE RESULTS ARE REPORTED BY GRADE LEVELS. POSITIVE ATTITUDE CHANGES AND INCREASES IN CAREER KNOWLEDGE WERE FOUND AT ALL GRADE LEVELS, WITH MEASURABLE CHANGES FOLLOWING AN OBSERVABLE PATTERN REFLECTING INITIAL CAREER AWARENESS AND IMPROVED SELF-CONCEPT. THE FINAL SECTION BRIEFLY SUMMARIZES THE DISSEMINATION AND EVALUATION PROCEDURES AND OFFERS RECOMMENDATIONS FOR FUTURE ACTIVITIES. (NJ)

CAREER EDUCATION PROJECT
ST. LOUIS PUBLIC SCHOOLS
TRANSPORTATION PHASE

INTRODUCTION

The activities and accomplishments of the Career Education Project were reported at the conclusion of the 18-month project period. It will be recalled that the Project Director and three elementary grade-level curriculum writers had produced a Curriculum Guide containing more than 120 exemplary Career Education units related to school subjects, suitable for use in grades Kindergarten through 8. Most of the learning activities contained in the Guide were trial tested under classroom conditions in three pilot schools.

The learning activities contained in the Guide had been prepared by project staff after substantial in-service and in-class interaction with the teachers in the pilot schools. One cooperating teacher at the primary, intermediate, and upper elementary grade levels in each of the three schools were identified to work closely with project staff. This organizational model seemed generally to be a workable one.

The project was scheduled to conclude at the end of December, 1974. Due primarily to the success experienced by the project in trial testing and producing for the District new curriculum in Career Education, the funding agency granted to the project an extension until June 30, 1975. The purpose for the extension was to transport Career Education concepts and the Curriculum Guide into the general program throughout all the elementary schools in the St. Louis Public School System.

Contained in this report are documentation and data related to the efforts of project staff to disseminate the Career Education Curriculum Resource Guide and to implement Career Education within the general education program of the elementary schools in the five districts comprising the St. Louis Public School System.

OVERVIEW

The three sections in this report are:

- Dissemination and other project activities
- Student outcomes
- Summary and conclusions

1.0 DISSEMINATION AND OTHER PROJECT ACTIVITIES

1.1 ADDITIONAL CURRICULUM DEVELOPED

Although a comprehensive Career Education Curriculu
Resource Guide was prepared by project staff and va
dated by the District Division of Curriculum, the Proje
Director, and the three project curriculum writers d
veloped additional material during July and Augus
1974. This material consisted of a half-dozen units co
relating Career Education with the Social Studies Cur
culum Guide, produced in the school district. Th
Career Education/Social Studies units were field test
in the schools and prepared for distribution by the en
of the first semester.

1.2 MEDIA PRESENTATION

Throughout the summer, 1974 project staff worked
develop a multi-media slide-tape presentation about e
mentary Career Education and the project. Featur
were scenes from the three pilot schools wherein exe
plary curricula were being field tested. The multi-me
presentation was completed prior to the opening
school for the 1974–75 year. This presentation w
used subsequently in workshops given by project sta

1.3 PILOT SCHOOLS WORKSHOP

Toward the end of August 1974 project staff presented a workshop to the combined staff of the three pilot schools to put the finishing touches on the project. During this workshop the Career Education units were reviewed comprehensively. Procedures for implementing the infusion of Career Education/Self-Awareness learnings in the school program were reviewed. Topics, such as communication skills; world of work field trips; guidance practices; and other resources for career education received treatment during the in-service.

1.4 SYSTEM–WIDE IN–SERVICE WORKSHOPS FOR PROGRAM IMPLEMENTATION

Project staff planned a series of five two-day workshops to transport the project to those schools not involved in the project during the pilot phase. One workshop was scheduled for each of the five sub-districts in the school system. The plan called for each elementary school to send three key teachers to the workshop. Of the three teachers, one was to represent the primary level, one the intermediate level, and one the upper elementary level.

The teachers selected were to serve as program facilitators in their respective buildings. Project staff intended to serve as resource persons to the facilitators, to assist with the successful implementation of the program. The intended outcome was that the Career Education Curriculum Resource Guide would be used in each elementary school for a basis for infusing Career Education and Student Self-Concept development throughout all curricula areas.

Project staff prepared a schedule which called for the five workshops to be presented between the end of September through the end of October, 1974. The first three workshops were held as scheduled.

However, the fourth workshop was held in November and the fifth in early December, 1974. The delay was caused by a city-wide tax levy election, toward which a substantial number of school personnel directed time and effort.

The specifics of the five district workshops are:

District/Site of Workshop	Workshop Date
Cleveland–Southwest Nottingham School	September 25–26
Banneker: Central–Vashon Carr Lane School	October 2–3
Beaumont–Sumner Beaumont Ninth Grade Center	October 15–16
Northwest–Soldan Hempstead Branch School	November 19–20
McKinley–Roosevelt L'Ouverture School	December 3–4

1.41 WORKSHOP FORMAT

The workshop program was similar for all teacher-representatives from the several sub-districts. Materials exhibits were program features during both days of the workshop. The thrust for the first day was:

- Arriving at a definition of Career Education and goals associated with it
- Large and small group lectures and discussions on the goals, concepts, and activities in the lessons contained in the Curriculum Resource Guide

The program for the second day focused upon:

- Guidance approaches in elementary Career Education, by grade levels
- Media presentation, Career Education in the St. Louis Public Schools
- Demonstration and discussions of Career Education lessons and activities by grade level

1.42 PARTICIPANT EVALUATION OF THE WORKSHOP

At the conclusion of each two-day workshop, the participants provided feedback to the workshop planners through completing the instrument, In–Service Evaluation. This instrument contained four items related to: (a) the physical setting for the workshop; (b) participant gaining information/materials to use in the classroom; (c) opportunities for participants to express ideas about the project; and (d) the planning and organization of the in-service.

The questions were phrased to allow the respondents to answer each question with a YES or NO. Ample space was provided for comments regarding each question.

The responses were summarized by the evaluator. Shown in Table 1 are the proportions of positive responses to each item, by sub-districts.

The overall reaction of the selected representatives who attended the workshop was positive.

With respect to the physical setting for the workshop, the negative reactions centered upon use of rooms (changes, separating and brining groups together).

With respect to participants' opportunity to express their ideas on the project, the majority of negative reactions centered upon "adequate time for discussion." The majority of these comments came from persons attending the fifth workshop. It was apparent that the workshop leaders ran short of time, in the view of some of the participants.

Similarly, the negative ratings on Workshop Planning and Organization by participants in the first workshop centered almost exclusively upon Time and Scheduling (inadequate time to follow-up on certain areas; too much time devoted to certain topics; etc.).

The rationales underlying the ratings assigned by workshop participants and can be illuminated through a review of their written comments. The comments for each of the four topics were organized according to the major themes expressed. The results of this thematic analysis are given in Table 2.

The majority of comments about the Workshop Physical Setting were positive. The largest percentage of negative comments centered on temperature, noise, and space for large and small group instruction. The displays, charts, and bulletin board set-ups, as well as the friendly atmosphere of warm hospitality established in the workshop, were singled out for positive comments.

The topic Information/Materials for Classroom Use elicited comments which were positive in a substantial num-

TABLE 1:
POSITIVE REACTION OF PARTICIPANTS TO DISTRICT CAREER EDUCATION DISSEMINATION WORKSHOPS, BY PERCENT

	DISTRICTS				
ITEM	Cleveland–Southwest	Banneker: Central–Vashon	Beaumont–Sumner	McKinley–Roosevelt	Northwest–Soldan
▪ Workshop Setting	88.6	100.0	80.0	97.3	100.0
▪ Gained Information/ Materials for Classroom Use	97.7	100.0	100.0	98.6	98.4
▪ Opportunity to Express Your Ideas on the Project	97.7	98.1	96.4	98.6	82.3
▪ Workshop Planning and Organization	59.1	98.2	100.0	93.2	98.2
	N = 44	N = 52	N = 55	N = 74	N = 62

ber of cases. The thrust of the negative comments centered around the extent to which information was exchanged and explanations were provided.

With respect to Participant Opportunity to Express Ideas, the facilitators expressed positive opinions regarding the large and small group format and the extent to which expression of ideas was encouraged. Negative comments pointed out the lack of sufficient discussion time. However, nearly all these comments were from the participants in the fifth workshop (Northwest—Soldan).

The participants endorsed strongly the overall workshop format. Negative comments related to Workshop Planning and Organization centered around timing and scheduling (promptness, amount of time used in organizational matters, and adequacy of time for various topics).

1.43 FURTHER ACTIVITIES

At mid-semester, the period of external funding for the project concluded. At nearly the same time, the voters of St. Louis rejected a tax levy increase, resulting in a financial crisis for the schools. The three staff who had served as grade-level curriculum writers during the project returned to the classroom as teachers. The Project Director carried forward the program from that point, assisting teachers to implement the Career Education curriculum.

Working through the teacher-facilitators who had attended the in-service workshops, the Director worked toward program implementation throughout all the schools through providing mini-workshops and demonstrating the program in the classroom. Also, the Director drew in community resource persons as consultants.

TABLE 2:
THEMES OF COMMENTS EXPRESSED BY PARTICIPANTS
IN FIVE DISTRICT WORKSHOPS, BY PERCENT

TOPIC	THEMES OF COMMENTS	NO. COMMENTS	PERCENT POSITIVE COMMENTS	PERCENT NEGATIVE COMMENTS
PHYSICAL SETTING	Atmosphere, hospitality	34	91.2	8.8
	Space, Room for large and small group instruction	199	54.8	45.2
	Displays, Charts, Bulletins	72	100.0	0.0
	Facilities; temperature; noise	51	52.9	47.1
INFORMATION/ MATERIALS FOR CLASSROOM USE	Displays, Charts, Games	25	96.0	4.0
	Exchange Information, Explanations	74	83.8	16.2
	Idea Interchange, Practical, Relevant	110	97.3	2.7
OPPORUNITY TO EXPRESS IDEAS	Varied Group Size	6	100.0	0.0
	Encouraged Expression of Ideas	62	91.9	8.1
	Adequate Discussion Time	41	32.6	63.4
WORKSHOP PLANNING AND ORGANIZATION	Overall Format	36	97.2	2.8
	Communication, including leaders' organization of ideas	27	85.2	14.8
	Time; Scheduling	49	34.7	65.3
	Materials, including amount and relevance	6	66.6	33.3

Taken together, the data indicate that the set of workshops was received well by those teachers who attended them. Since this in-service represented an initial step toward transporting the Career Education Project into elementary schools throughout the entire system, it appeared that the program was successful. The three grade-level representatives appeared to have received preparation during the workshop sufficient for their later participation in the program.

At the district-wide level, the Project Director worked toward correlating Career Education with existing programs operated by the art, music, special education, and physical education departments, as well as the librarians.

Superintendents' Task Force

During this time period, the Superintendent convened a special task force to study the effects and effectiveness of the Career Education program begun in the school system. The task force contained district and building-level school administrators, teachers from the project pilot schools, curriculum specialists, and personnel from existing work-study and vocational education programs. Secondary school teachers and principals were represented in the group, as well.

The group conducted surveys, made observations, and heard feed-back reports from teachers, students, and parents who had been involved in the program. Moreover, they heard reports from the Advisory Council which had worked with the project.

The evaluator monitored one meeting of this group and himself presented a report. It appeared to the evaluator that the group was proceeding very systemmatically in its task.

The recommendation which flowed from the deliberations of the Superintendents' Task Force was that (a) career education should be extended systemmatically throughout all elementary grades; (b) career education should be infused within the subjects taught regularly within the secondary schools; and (c) career education should be blended within existing high school work-study programs, to extend them beyond their relatively narrow confines. Produced by this group was a comprehensive analog model for infusing career education throughout the entire school system.

2.0 STUDENT OUTCOMES

2.1 INTRODUCTION

As noted in Section 1, the Career Education Project information was communicated to St. Louis City Public School teachers through Dissemination Workshops conducted by CEP personnel.

Five two-day workshops were conducted; one workshop for each of the following districts.

- Banneker: Central–Vashon
- Beaumont–Sumner
- Cleveland–Southwest
- McKinley–Roosevelt
- Northwest–Soldan

The basic dissemination model followed was that of training trainers who could/would transmit the information and techniques learned to other teachers within their schools. The success of this model in this case is based upon five major assumptions.

- The information to be disseminated is of sufficient quality to positively effect learners.
- The workshops are conducted in such a manner as to "turn-on" the participants to the procedures being transmitted.
- The participants receive sufficient skill training to communicate the information to others.
- The teachers/participants have sufficient time and opportunity within their home schools to transmit the learned information and skills.
- The classroom teachers have sufficient time and opportunity to implement Career Education during the 1974–1975 school year.

Violation of any one of these assumptions would be enough to negate any positive effects emerging in student outcomes during the past school year.

Examination of the model assumptions follows.

- Quality of Information. This is the second year of the Career Education Project. During its first year, materials were developed and tested in three schools. The quality level of the materials was documented during the pilot project year (see Final Project Evaluation Report, prepared by Evaluative Research Associates).
- Workshop Participants "Turned On" to Career Education. Participant evaluations of the workshops were generally positive (see Section 1). However, as generally anticipated some of the participants were not overly positive about the experience. Even though these persons represented the minority of teachers, these few teachers would be likely not to complete the communication chain.
- Workshop Participants Sufficiently Trained. No direct evidence was collected pertaining to this assumption. However, if it could be assumed that teacher ratings are directly related to the quality of instruction, the overall ratings presented in Section 1 would suggest that the teachers felt that they learned about Career Education from their participation in the Workshops.
- Sufficient Time and Opportunity to Pass-On Information. The timing of the workshops would suggest that only minimum time was available to many of the teachers to disseminate information within their own schools.
- Sufficient Time for Teachers to Implement Career Education. Because of the inherent slowness of the dissemination process throughout a district the size of St. Louis Public Schools, it could be expected that many teachers would have only minimal opportunity to implement Career Education Curricula during the 1974–1975 school year. Moreover, it could be anticipated that the degree of implementation for these materials would systemmatically increase during the next two to three years.

Because of these concerns, Evaluative Research Associates felt that the 1974–1975 Student Outcome Evaluation should be focused among general trends and indications of success of dissemination procedures.

Within this framework, measures of career knowledge achievement and attitudinal levels were administered to random samples of students during the early Fall 1974 and late Spring 1975. Pre and post test data were collected for samples of 376 students in Kindergarten through Grade 3 and 609 students in Grades 4 through 8 randomly selected from the following 35 schools.

- **Banneker: Central–Vashon**
  - **Ames**
  - **Banneker**
  - **Blair**
  - **Blewett Jr. High**
  - **Carver**
  - **Columbia**
  - **Eliot**
  - **Henry**
  - **Jefferson**
  - **Lowell**

- Beaumont–Sumner

Bates	Stevens
Cote Brilliante	Washington
Harrison	Williams
Hickey Elementary	Yeatman
Simmons	

- McKinley–Roosevelt

Clinton	Hodgen
Fanning	Waring

- Northwest–Soldan

Arlington	Herzog
Cook	Scullin
Ford	Stowe
Hamilton	Walbridge
Hempstead	

All data were collected by St. Louis City School District personnel. The sampling procedures were set up and test analyses were completed by Evaluative Research Associates. One-tailed t-tests, repeated measures design, were applied to the data to determine the signficance of positive changes. The .20 level of confidence was applied to the data.

2.2 PRIMARY LEVEL: K–3

Career knowledge achievement was assessed using the Career Knowledge Test (Fulton, 1974, Evaluative Research Associates). The CK is a picture test yielding three subtest scores and a total score..

- Similarities—–Measures students' abilities to match the pictured occupation which is most like the key named occupation.
- Differences—–Measures students' abilities to match the pictured occupation which is most different from the key named occupation.
- Tools—–Measures students' abilities to match the pictured tool which would most likely be used by an individual in the key named occupation.

The CK is individually administered to Kindergarten students and group administered to Grade 1 through 3 students. The examinees mark their responses in the consumable test booklets. These booklets are hand scored to obtain the four scale scores.

The student attitude levels were assessed using the Student Attitude Survey, Forms A and C (Evaluative Research Associates, 1974). Each of the forms contains two scales.

- SAS, Form A
  - ☐ Attitude Toward Self
  - ☐ Attitude Toward Others
- SAS, Form C
  - ☐ Attitude Toward School
  - ☐ Attitude Toward Work

Both of these instruments are picture tests, produced in hand-scored consumable test booklets. They are individually administered to students in Kindergarten and group administered to students in Grades 1 through 3.

2.21 OVERALL, GRADES K–3

Pre and post test results were obtained for 376 students on the SAS. The results are presented in Figure 1. As can be noted from the figure, significant positive change was found on one scale, Attitude Toward Self. No positive significant changes were found for the other three scales.

- Attitude Toward Others
- Attitude Toward School
- Attitude Toward Work

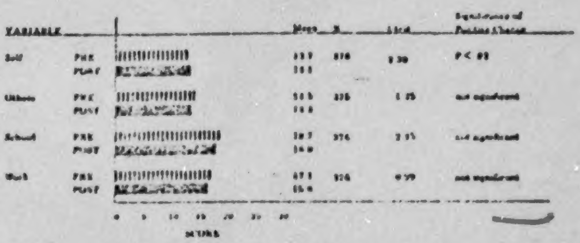

FIGURE 1: Attitude test results, K–3

Pre-post achievement test results were obtained for 373 students in Grades K–3. The results are presented in Figure 2. Significant positive changes were found on three of the four scales.

- Similarities
- Tools
- Total

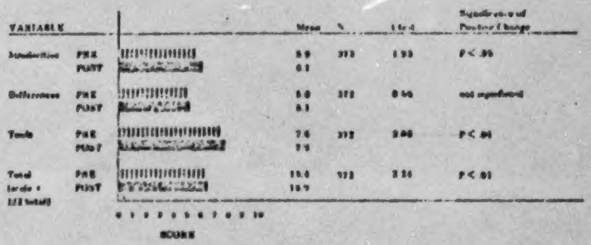

FIGURE 2: Career Knowledge test results, K–3

The only non-significant result was found on the Differences scale. This subtest is the most difficult one in that it requires divergent thinking. Therefore, it is not surprising that this would be the one scale not to show significance.

2.22 KINDERGARTEN

Test results were obtained for 79 students on the SAS and 78 students on the CK. The results are presented in Figure 3 for the SAS and Figure 4 for the CK.

As can be noted from Figure 3, significant positive change was obtained on one of the SAS scales.

- Attitude Toward Work

The slight increase in the Attitude Toward School scale needs to be pointed out since the scores on this scale most generally tend to drop off toward the end of the school year. This small increase may denote success in modifying the more normal decrease. No significant results in Attitudes Toward Self or Others were noted.

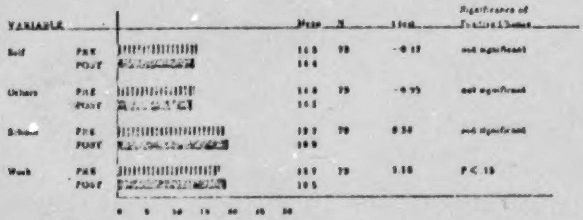

FIGURE 3: Attitude test results, Kindergarten

Significant positive change was found on one achievement scale, Tools (see Figure 4). This suggests positive impact at the Kindergarten level since in increasing difficulty, learning is usually first observed on the Tools subtest, then Similarities and then Differences.

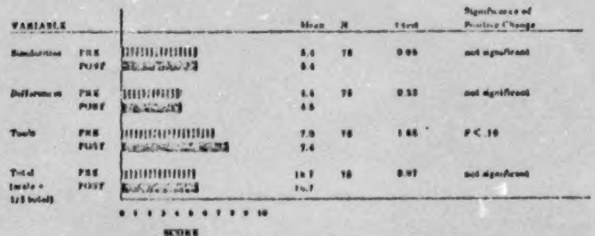

FIGURE 4: Career Knowledge test results, Kindergarten

These results would seem to indicate that beginning career awareness materials, including associated attitudinal curricula, are being positively implemented into some of the Kindergarten classes.

2.23 GRADE 1

SAS, Forms A and C attitudinal test results were obtained for 101 Grade 1 students. No significant results were obtained (see Figure 5).

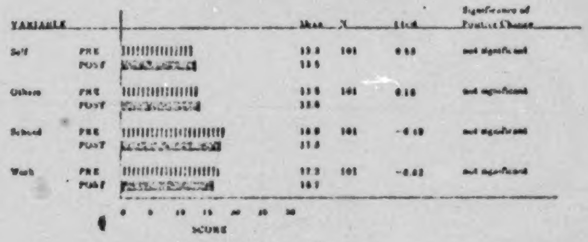

FIGURE 5: Attitude test results, grade 1

Career achievement data were obtained in the fall and spring for 100 first grade students. These results are presented in Figure 6. Significant positive changes were obtained on two scales.

- Tools
- Total

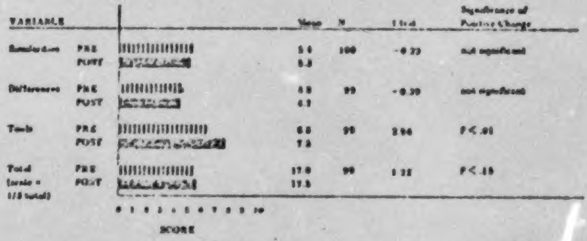

FIGURE 6: Career Knowledge test results, grade 1

However, as can be noted from Figure 6, the significant mean Total test score positive change is due to the relatively large mean change on the Tools subtest.

These results would suggest that there was some positive implementation of beginning awareness curricula, but that the attitudinal aspects of the curriculum had no observable impact.

2.24 GRADE 2

Pre-post test results on the SAS were obtained for 95 students. The results are presented in Figure 7. Significant positive change was obtained on one scale.

- Attitude Toward Self

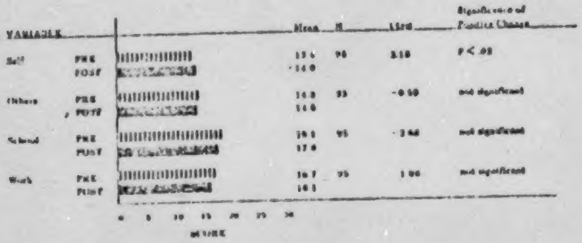

FIGURE 7. Attitude test results, grade 2

No other significant positive attitudinal changes were found.

Pre- and post-test career achievement data were obtained on the CK for 95 second grade students. Significant positive changes were obtained on two of the three scales (see Figure 8).

- Similarities
- Tools

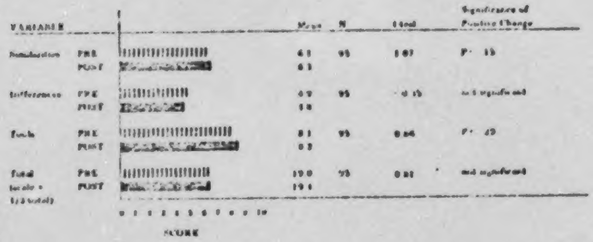

FIGURE 8. Career Knowledge test results, grade 2

As can be observed from Figure 8, neither of these changes showed strong progress. Nevertheless, they do represent change in the desired direction.

These results indicate that at Grade 2 only minimum progress was made in implementing Career Awareness curriculum. However, the progress made seems to have included both career knowledge and self-awareness.

2.25 GRADE 3

Student data were obtained for 100 third grade students. The results indicate that the Career Education program had its greatest impact, at the primary level, at the third grade.

Significant attitudinal change was obtained on one scale.

- Attitude Toward Self

No positive changes were noted on the other three attitudinal scales. These results are presented in Figure 9.

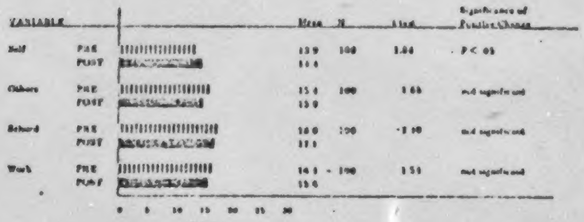

FIGURE 9. Attitude test results, grade 3

Significant positive changes were noted on three of the four Career Knowledge scales (see Figure 10).

- Similarities
- Differences
- Total

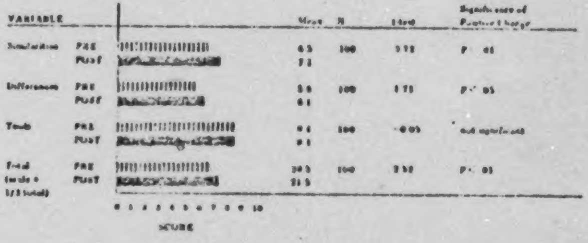

FIGURE 10. Career Knowledge test results, grade 3

Evidently, at the third grade level, the career education program enhances student abilities in both convergent and divergent thinking related to occupational groupings.

2.3 INTERMEDIATE LEVEL: GRADES 4–8

Career knowledge achievement was assessed using the Orientation of Career Concepts Test Series (Fulton and Tolsma, 1974, Evaluative Research Associates). The OCC assesses what an individual knows about ten aspects of the work world. The test is produced in ten separate reusable booklets. Students record their responses on a separate optical scan type answer sheet which is machine scored. Descriptions of the ten scales follow.

- **Work Awareness**
  This test is designed in story form to assess the student's ability to related children's daily activities to adult work.

- **Worker Activities**
  This test measures the student's knowledge of what different workers do in their various occupations.

- **Vocational Vocabulary**
  This test measures the student's knowledge of work-related words.

- **Absurdities**
  This test assesses, through the usage of simple line drawings, the student's awareness of occupational incongruities.

- **Occupational Similarities**
  The test measures the student's ability to identify occupations that have common aspects.

- **Occupational Tools**
  The test measures the student's knowledge of the tools, machines, or instruments used by workers.

- **Work Stories**
  The test is designed in story form to assess the student's ability to relate an individual's interests, abilities, and hobbies to possible occupations.

- **Working Conditions**
  This test measures the student's knowledge of the working conditions of various workers.

- **Occupational Training**
  The test measures the student's knowledge of the length of training required for entry into various occupations.

- **Worker's Earnings**
  The test assesses the student's knowledge of the relative amount of money a person may expect to earn in different occupations.

The student attitude levels were assessed using the Student Attitude Survey, Forms B and D (Evaluative Research Associates, 1974). Eleven scales are obtained from these two tests.

- SAS, Form B
  - Positive Self Index
  - Negative Self Index
  - Positive Other Index
  - Negative Other Index
  - Positive Personal Index
  - Negative Personal Index
- SAS, Form D
  - Positive School Index
  - Negative School Index
  - Achievement Need
  - Positive Work Index
  - Negative Work Index

These tests are produced in two separate reusable test booklets. Student responses are marked on an optical scan type answer sheet which is machine scored.

Except for Achievement Need, a high score on a scale indicates a positive attitude.

- Positive scales——a high score indicates acceptance of positive attitudes.
- Negative scales——a high score indicates rejection of negative attitudes.

On Achievement Need, an ideal score equals 9 points. An extreme score in either direction represents an undesirable need level.

- Low score——little concern for achievement.
- High score——high concern for achievement, at any cost.

2.31 OVERALL, GRADES 4–8

The Student Attitude Survey, Forms B and D were administered in the Fall 1974 and Spring 1975 to 609 Grade 4–8 students. The numbers of students with complete scale results ranged from 600 to 609. This difference is a function of students omitting answering some of the items.

The survey results are presented in Figure 11. It can be noted from the figure that there were both positive and negative changes. However, four of these changes showed significant positive growth.

- Negative School Index
- Achievement Need
- Negative Self Index
- Negative Personal Index

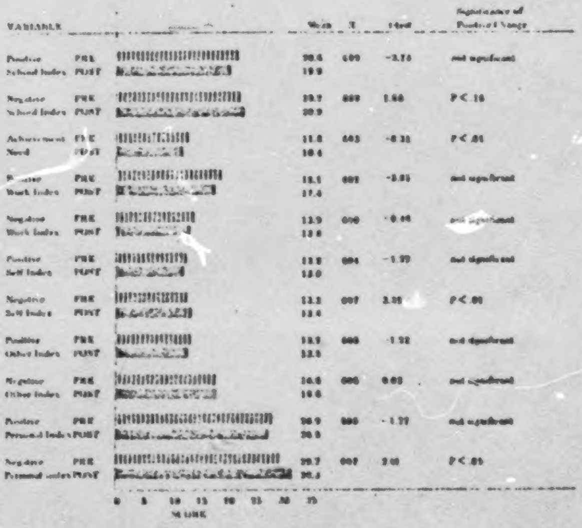

FIGURE 11: Attitude test results, grades 4–8

It is interesting that the major changes reflect a reduction in student identification with negative attitudes. There were no increases in identification with positive attitudes. Moreover, the major significant changes were associated with how students see themselves. This is in contrast to how students view school and/or work.

Pre-post career achievement test data were obtained on 614 Grade 4–8 students. All ten OCC tests were administered. The numbers of students completing each of these tests actually ranged from 606 to 614.

Significant positive growth was noted for five of the ten tests (see Figure 12).

- Work Awareness
- Worker Activities
- Absurdities
- Occupational Similarities
- Occupational Tools

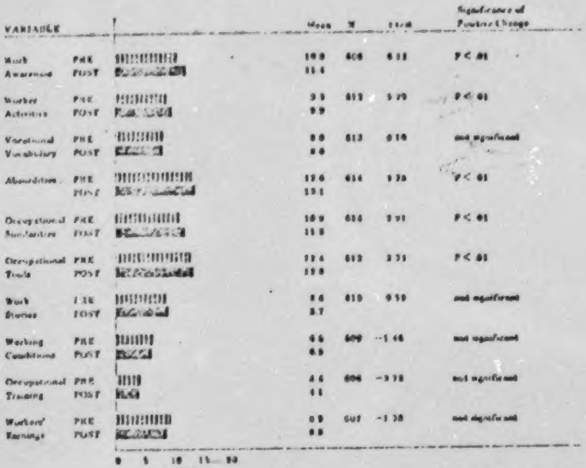

FIGURE 12: Career knowledge test results, grades 4–8

Except for the Vocational Vocabulary and Work Stories tests, these five tests represent the predominant focus of the Career Education Project developed curriculum (see Final Project Evaluation Report, prepared by Evaluative Research Associates).

These results would suggest that for the intermediate grades, as a whole, the dissemination/implementation process for Career Education has been reasonably successful. Nonetheless, the program impact seems to be greatest in cognitive development, with minor impact on affective characteristics.

Moreover, the generally low level knowledge demonstrated on the subtests

- Working Conditions,
- Occupational Training, and
- Workers' Earnings

is somewhat disconcerting. Particularly the results for the latter two tests, since these represent prerequisite knowledge for proactive occupational planning.

2.32 GRADE 4

Fall and Spring attitudinal assessments were obtained for 114 Grade 4 students. Of the 11 attitudinal constructs assessed, significant positive changes were obtained on four scales (see Figure 13).

- Achievement Need
- Negative Self Index
- Negative Other Index
- Negative Personal Index

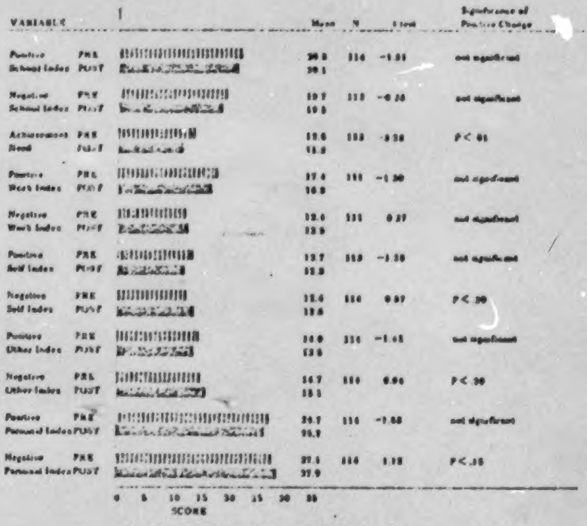

FIGURE 13: Attitude test results, grade 4

In the latter three instances, the changes represented an increased rejection of negative attitude traits. There were no corresponding changes in acceptance of positive traits. None of the work and school scales showed significant positive change.

Pre and post achievement test results were obtained for 117 students. The results are summarized in Figure 14. As can be noted from the figure, significant positive changes were obtained on three of the ten tests.

- Work Awareness
- Worker Activities
- Absurdities

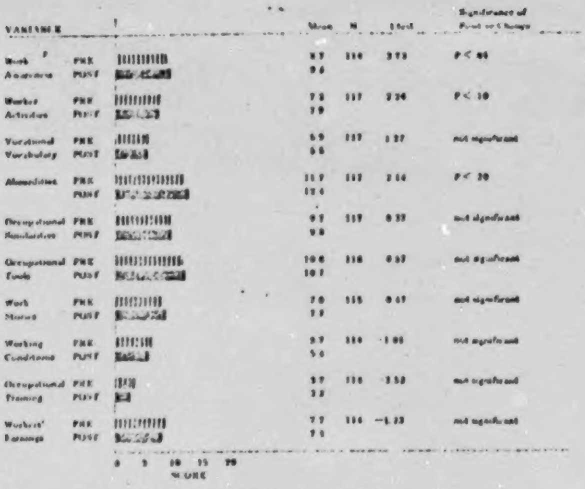

FIGURE 14 Career knowledge test results, grade 4

It should be noted that all three of these tests measure similar learnings from different vantage points.

- Work Awareness—–relations between home/family activities and occupations.
- Worker Activities—–types of activities related to occupations
- Absurdities—–incongruities between pictured activities/related characteristics and occupations denoted

These results would suggest that initial career awareness activities, including some self awareness, were implemented at the fourth grade level.

2.33 GRADE 5

Attitudinal data were collected on 112 Grade 5 students. Significant positive changes were obtained on three of the scales (see Figure 15).

- Negative School Index
- Achievement Need
- Negative Self Index

As with Grade 4, the significant positive changes reflect decreases in negative attitudes. None of the corresponding positive attitude scales showed significant increases.

Career knowledge achievement was pre- and post-tested on 112 students. Significant positive growth was obtained for five of the ten areas assessed (see Figure 16).

- Work Awareness
- Worker Activities
- Absurdities
- Occupational Similarities
- Occupational Tools

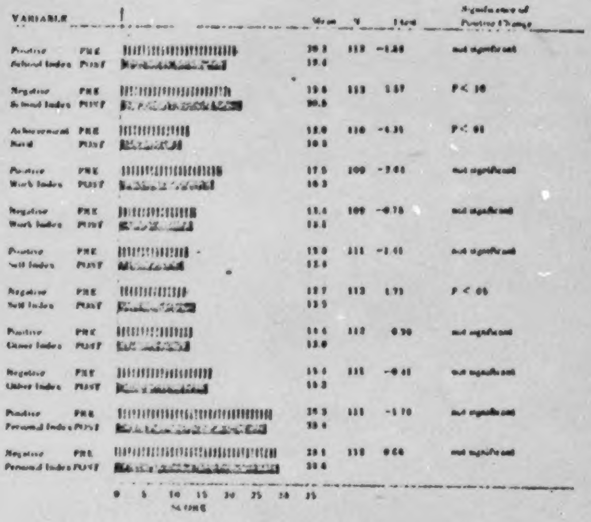

FIGURE 15 Attitude test results, grade 5

It was somewhat surprising that there was no significant increase in Vocational Vocabulary, particularly with changes apparent in these other five tests.

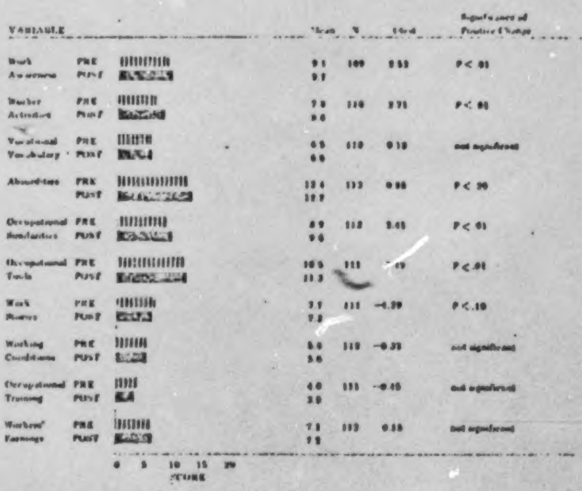

FIGURE 16: Career knowledge test results, grade 5

2.34 GRADE 6

Attitudinal and career knowledge achievement data were obtained for 120 and 121 sixth graders, respectively.

16

Summaries of the results are presented in Figures 17 and 18.

Only two significant positive changes were obtained on attitudinal variables (see Figure 17).

- Achievement Need
- Negative Self Index

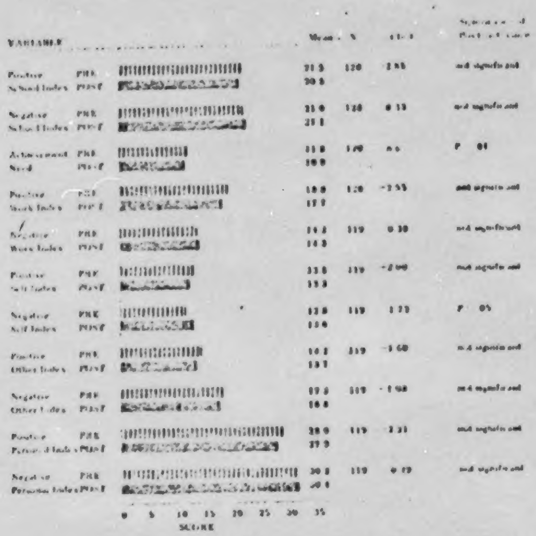

FIGURE 17. Attitude test results, grade 6

Similarly, only two significant positive changes were obtained on career knowledge (see Figure 18).

- Work Awareness
- Worker Activities

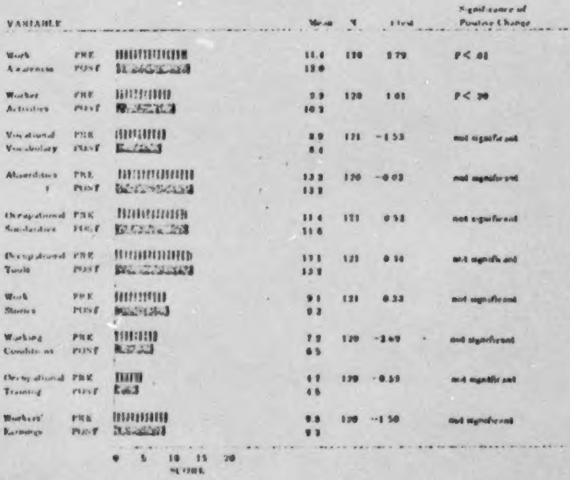

FIGURE 18. Career knowledge test results, grade 6

These results suggest that the dissemination of the Career Education Curricula made only minimum impact at the sixth grade level.

2.35 GRADE 7

Attitudinal and career knowledge measurements were obtained on a sample of 115 Grade 7 students. The results are summarized in Figures 19 and 20.

Significant positive changes were obtained on five of the 11 administered attitudinal scales during the 1974–1975 school year (see Figure 19).

- Achievement Need
- Positive Self Index
- Negative Self Index
- Positive Personal Index
- Negative Personal Index

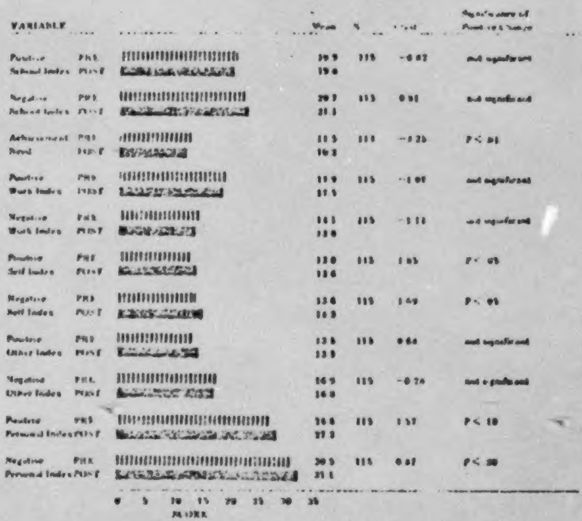

FIGURE 19. Attitude test results, grade 7

As can be noted from these results, the significant changes occurred in the self-concept area. Moreover, these changes represented increases in both the acceptance of positive attitudes and the rejection of negative attitudes.

The relative stability in mean scores for both the Positive and Negative School Index scales is worth noting. Neither of these scales reflected the normally found decrease between Fall and Spring testing. This lack of decrease may, in itself, represent further significant results.

All but three of the career knowledge tests showed significant positive change (see Figure 20). The seven tests showing positive change were:

- Work Awareness
- Worker Activities
- Vocational Vocabulary
- Absurdities
- Occupational Similarities
- Occupational Tools
- Work Stories

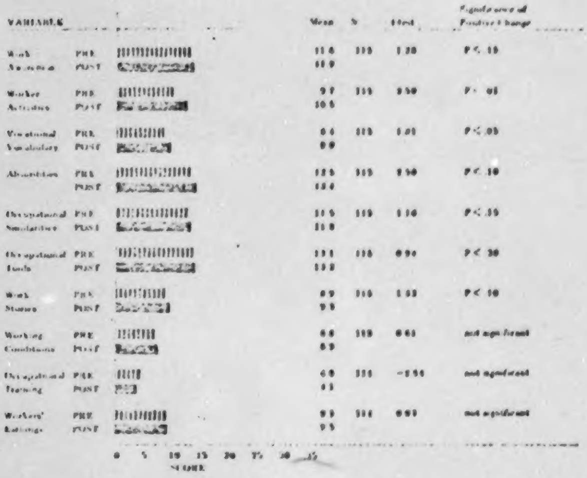

FIGURE 20 Career knowledge test results, grade 7

These results indicate that the implementation of Career Education Curricula had considerable student impact at the seventh grade level. Particular success was found in the areas of

- Initial Career Awareness,
- Self-Concept, and, perhaps,
- Attitudes Toward School.

2.36 GRADE 8

Pre and post test data were obtained for samples of

- 135 students on the attitudinal measures, and
- 137 students on the career knowledge achievement measures.

The attitudinal data are summarized in Figure 21. It can be noted from the figure, that there were significant positive changes on four of the 11 scales.

- Achievement Need
- Negative Self Index
- Negative Other Index
- Negative Personal Index

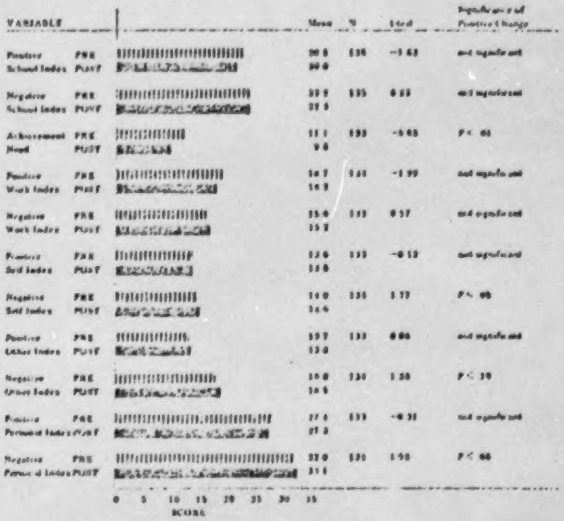

FIGURE 21 Attitude test results, grade 8

These significant changes reflect increases in the rejection of negative attitudes. Moreover, the significant scales directly related to self-concept.

Five of the ten career knowledge tests showed significant positive change (see Figure 22).

- Work Awareness
- Worker Activities
- Absurdities
- Occupational Similarities
- Occupational Tools

The eighth grade results were highly similar to those found at several other grade levels. Specifically, demonstrated growth related to initial Career Awareness, including changes in self-concept, particularly related to the rejection of negative attitudes.

2.4 IN SUMMARY

Student outcome data were collected for samples of stu-

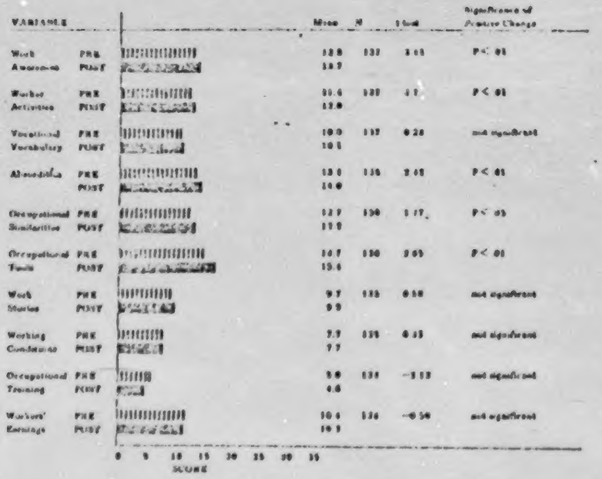

FIGURE 11 Career knowledge test results, grade 8

dents in grades Kindergarten through 8. The following tests were administered.

- PRIMARY LEVEL
  - Attitudes—Student Attitude Survey, Forms A and C
    - Kindergarten: 79 students sampled
    - Grade 1: 101 students sampled
    - Grade 2: 95 students sampled
    - Grade 3: 100 students sampled
  - Achievement—Career Knowledge Test
    - Kindergarten: 78 students sampled
    - Grade 1: 100 students sampled
    - Grade 2: 95 students sampled
    - Grade 3: 100 students sampled

- INTERMEDIATE LEVEL
  - Attitudes—Student Attitude Survey, Forms B and D
    - Grade 4: 114 students sampled
    - Grade 5: 112 students sampled
    - Grade 6: 120 students sampled
    - Grade 7: 115 students sampled
    - Grade 8: 135 students sampled
  - Achievement—Orientation to Career Concepts Series
    - Grade 4: 117 students sampled
    - Grade 5: 113 students sampled
    - Grade 6: 121 students sampled
    - Grade 7: 115 students sampled
    - Grade 8: 137 students sampled

The student outcome results suggest that the dissemination/implementation process successful at the beginning career awareness level. At most grade levels the cognitive aspects of the program reflected greater impact than the affective aspects of the program. It should be noted that this result is consistent with the first year project evaluation results.

More specifically, growth in achievement was noted most often in the initial awareness areas such as

- Occupational Tools and
- Work Awareness.

Changes in attitude were most often related to self-concept, including, at the intermediate levels, achievement need.

It needs to be noted that the specific results differed from grade level to grade level. However, the general trend tended to reflect the basic strengths previously noted.

Moreover, at most levels, the attitudinal data reflected minimal impact on attitudes toward school and work and maximum impact in reducing negative self-concept.

The achievement areas showing little or no gain were, at the intermediate level, • Working Conditions • Occupational Training • Workers' Earnings.

3.0 CONCLUSIONS AND RECOMMENDATIONS

3.1 CONCLUSIONS

The period covered by this report included the final phase of the Career Education Project, project termination, and transportation of the elementary career education program into schools throughout the district. From the information presented in the report, (a) a reasonable and achievable set of activities were arranged for the time period; (b) the several tasks were performed well and in a timely manner; and (c) a reasonably good beginning was made in transporting career education from a small pilot project to a school-wide program.

The preparation of additional career education lessons for infusion into the district social studies program appeared to the evaluator as a means to extend the program, demonstrating the effectiveness of infusing career education within regular school subjects.

The preparation of the multi-media presentation served a number of useful pruposes, all of which were related to program transportation and dissemination.

3.2 THE DISSEMINATION WORKSHOPS

The model of implementing a career education program, working through teacher-facilitators at the three major grade level divisions within each school was shown to be successful during the project. Therefore, this same model was used during the transportation phase.

The dissemination workshops, offered within the school system by sub-districts, were viewed positively by most of the participants. It is presumed that these persons helped to facilitate the use of the Curriculum Resource Guide and the infusion of career education in the respective elementary schools.

3.3 STUDENT OUTCOMES

Pre and post measurement of random samples of students in the various elementary schools revealed:

- Positive attitude changes and increases in career knowledge were found at all grade levels.

The measureable changes followed an observable pattern, reflecting • initial career awareness and • improved self-concept.

While the achievement and attitudinal student outcome data showed generally positive trends, it should be emphasized that these reflect initial level changes. The program was implemented in the schools following the district-wide workshops. Therefore, many teachers had little time or opportunity to implement career education during the 1974--75 school year. For measurably significant changes in student attitude and knowledge to be attained, an extensive instructional program must be delivered repeatedly to students.

Some of the teachers selected as grade-level facilitators expressed negative attitudes at the conclusion of their workshop. It is questionable whether these persons were enthusiastic and effective facilitators of the program, back in their home-base schools. For the program to become a viable, integrated program in a school system as large as the St. Louis Public Schools, intensive and extensive in-service and other system resources are needed.

The configuration of the data suggests that the transportation of career education into this school program is at an initial stage. The process seems to be well begun. The resources from the Federal project were used wisely, with the intention of adopting the successful aspects of the program into the schools. The work of the Superintendents' Task Force indicates both top-level and grass-roots support for the program.

3.4 RECOMMENDATIONS

It is recommended by Evaluative Research Associates that a comprehensive program be developed and implemented to reach all elementary teachers with the message of career education. Included in this program would be concepts, skills, attitudes, and curricula. This program should be a support system to assist teachers to extend and enhance current instructional activities.

The Superintendents' Task Force recommendations concerning extending career education upward into the high school program should be implemented when it becomes possible for the school district to do so.

TITLE: COMMON AFFECTIVE DOMAIN COMPETENCIES OF STUDENTS AMONG VOCATIONAL AREAS. FINAL REPORT. RESEARCH SERIES NO. 47.

PERSONAL AUTHOR: PORRECA, ANTHONY G.; STALLARD, JOHN J.

DESCRIPTOR: *AFFECTIVE OBJECTIVES; *SURVEYS; *VOCATIONAL EDUCATION; RESEARCH; TABLES (DATA)

IDENTIFIER: *DELPHI TECHNIQUE

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 71P.

ABSTRACT: THE PROBLEM OF THIS STUDY WAS TO IDENTIFY, VERIFY, AND VALIDATE COMMON AFFECTIVE DOMAIN COMPETENCIES OF STUDENTS IN THE VOCATIONAL AREAS OF AGRICULTURE, BUSINESS AND OFFICE, DISTRIBUTIVE, HOME ECONOMICS, AND INDUSTRIAL EDUCATION. PUBLICATIONS REPRESENTING THESE AREAS WERE REVIEWED TO ELICIT COMMON AFFECTIVE DOMAIN COMPETENCIES. THESE IDENTIFIED COMPETENCIES WERE VERIFIED BY SUBMITTING THEM TO A RANDOM SAMPLE OF EMPLOYEES, EMPLOYERS, AND TEACHERS IN THE TARGETED VOCATIONAL AREAS. STATE-LEVEL DIRECTORS OF VOCATIONAL EDUCATION VALIDATED THE COMPETENCIES VIA THE DELPHI TECHNIQUE USING TWO PROBES. CONCLUSIONS INDICATED A GENERAL AGREEMENT AMONG THE GROUPS SURVEYED AS TO THE COMMON AFFECTIVE DOMAIN COMPETENCIES AND THEIR IMPORTANCE IN LEARNING. THE VERIFICATION OF COMPETENCY STATEMENTS BY PERCENT OF YES RESPONSE IS SHOWN IN TABLE FORM. THREE ADDITIONAL TABLES DISPLAY THE AFFECTIVE COMPETENCIES STRONGLY RECOMMENDED, THOSE RECOMMENDED, AND THOSE RECOMMENDED AS A SECONDARY GOAL, WITH PROBE ITEM NUMBER, AFFECTIVE DOMAIN CLASSIFICATION, AND ITEM-ITEM CORRELATION ACROSS PROBES. A CONDENSED VERSION OF THE AFFECTIVE DOMAIN OF THE TAXONOMY OF EDUCATIONAL OBJECTIVES APPEARS IN THE APPENDIX. ALSO APPENDED IS A LIST OF THE COMPETENCY STATEMENTS WITH THE MODAL RESPONSE TO PROBE ONE. (NJ)

FOREWORD

This project report is another effort by the Tennessee Research Coordinating Unit for Vocational Education to support and disseminate results of relevant research in vocational education.

The study was undertaken by individuals within the Department of Vocational-Technical Education at the University of Tennessee who felt that a listing of common affective domain competencies could be utilized to meet various learner needs in vocational programs and provide a basis to establish common experiences among vocational education programs.

It is hoped that the procedures and findings summarized in this report will be helpful to both researchers and practitioners in planning and decision-making for vocational education. The RCU welcomes any questions or comments pertaining to the mini-grant project report.

Garry R. Bice
RCU Director

ACKNOWLEDGMENTS

The gracious cooperation and continued interest of the directors of vocational education who participated in this study are greatly appreciated. Their contribution to this research was essential. The input of the employees, employers, and vocational teachers who participated were also vital to the study. In addition, the cooperation received from the State of Tennessee and the Research Coordinating Unit at The University of Tennessee, Knoxville, under the direction of Dr. Garry Bice is also appreciated.

The continuous and tireless work, suggestions, and understanding of Alice Kolbe, business education student who provided the secretarial assistance for this study, are greatly appreciated.

ABSTRACT

COMMON AFFECTIVE DOMAIN COMPETENCIES OF STUDENTS AMONG VOCATIONAL AREAS

by

Anthony G. Porreca

and

John J. Stallard

The problem of this study was to verify common affective domain competencies of students among vocational-technical areas and to validate (through the Delphi technique) common affective domain competencies of students among the vocational areas of agriculture, business and office, distributive, home economics, and industrial education.

The relevancy of today's complex and interrelated world of work is more meaningful to youth and adults, as well as teachers of vocational education, if competencies within the affective domain are a major part of the learning sequence and not merely incidental learning. The affective domain competencies identified in this study as common to vocational education will serve to limit the haphazard teaching of affective domain competencies and provide direction for further inquiry. Common affective domain competencies of students among vocational areas of agriculture, business and office, distributive, home economics, and industrial education provide a basis to establish common experiences among vocational education programs. Vocational programs in various localities could utilize the listing of common affective domain competencies to meet various learner needs.

8

The following procedures were completed to identify the common affective domain competencies of students among vocational areas: (1) reviewed and elicited common affective domain competencies from publications representing agriculture, business and office, distributive, home economics, and industrial education; (2) verified the elicited common affective domain competencies by submitting the identified competencies to groups of employees, employers, and agriculture, business and office, distributive, home economics, and industrial education teachers (The preceding procedures were executed to verify the elicited common affective domain competencies, therefore synthesizing the common affective domain competencies.); and (3) validated the affective domain competencies by state-level directors of vocational education to determine the degree of commonality.

Two separate samples were used in the study. Sample One was used to verify the synthesized common affective domain competencies and consisted of 191 persons randomly selected from the East Tennessee and Southwest Virginia areas. The sample included 40 employees in vocational-technical occupations, 51 employers of vocational-technical graduates, and 100 secondary and area vocational teachers representing the five vocational service areas. Sample Two was used to validate the common affective domain competencies among vocational students and was composed of 48 state-level directors of vocational education. Validation was completed through the Delphi technique using two probes.

The primary source for statistical procedures was the Statistical Package for the Social Sciences. The SPSS statistical package was used to determine: (1) the Probe One and Probe Two modal responses to each competency statement, and (2) the nonparametric rank-order correlation coefficients between each Probe One competency statement to each corresponding Probe Two competency statement, which also included a test of statistical significance.

CONCLUSIONS

The conclusions of this study are as follows:

1. State-level directors of vocational education appear to agree that there are common affective domain competencies of students which exist among vocational areas of agriculture, business and office, distributive, home economics, and industrial education.

2. The perceptions among employees, employers, and secondary and area school vocational teachers appear to be similar to the perceptions of state level directors of vocational education as to what constitutes affective domain competencies.

3. Employees, employers, and secondary and area school vocational agriculture, business and office, distributive, home economics, and industrial teachers appear to have similar perceptions concerning what are important affective domain competencies for employment career success. Of the 111 statements, 95 percent were considered important by at least 80 percent of the respondents.

4. Affective domain competencies appear to provide a commonality of learning which link agriculture, business and office, distributive education, home economics, and industrial education.

5. Common affective domain competencies of students among vocational areas appear to be as important as cognitive domain and psychomotor domain competencies in vocational-technical education.

RECOMMENDATIONS

Common affective domain competencies of students among vocational areas could be utilized to:

1. supplement and complement cognitive domain and psychomotor domain vocational competencies;

2. assist the development of students' values clarification in vocational education;

3. develop competency-based instruction in vocational education;

4. recognize the existence of common goals among the multidimensional vocational goals of agriculture, business and office, distributive, home economics, and industrial education;

5. strengthen the homogeneity mission of vocational education;

6. encourage vocational teacher education programs to assist vocational teachers in the development of learning environments which foster students' affective domain vocational competencies; and

7. assist youth and adults in career education, special (needs) education, disadvantaged groups' programs, and in-house business and industry programs toward sustained-gainful employment.

INTRODUCTION

Common affective domain competencies are concerned with the emotional development of the student and are related to students' interests, attitudes, values, and goals. Although vocational skill training is essential for initial job entry and for upward mobility, merely offering cognitive and psychomotor educational experiences to any learner may not be sufficient. The vocational and career-oriented students who lack essential knowledge of common affective domain competencies may experience a loss of enthusiasm, confidence, or optimism for their work.

Employable competencies, both cognitive and psychomotor perhaps provide the learner with initial job-entry competencies for employment. Affective domain competencies, concerned with learners' interests, attitudes, values, and goals are equally as important as other competencies for sustained employment success.

Common affective domain vocational competencies serve as the common thread to agriculture, business and office, distributive, home economics, and industrial education and demonstrate the across-the-board mission of these vocational areas. Perhaps through the identification and implementation of common affective domain competencies, vocational education classroom teachers—middle through post-secondary levels—will recognize the common mission among vocational education areas. Common affective domain competencies in vocational-technical education demonstrate the commonality that exists among the vocational education areas.

Training for refinement of skills only may limit one's awareness of the world of work. The working individual, in an effort to achieve employment satisfaction, needs opportunities to develop interests, attitudes, values, and goals in understanding various roles related to a chosen vocation. Common affective domain vocational competencies would assist instruction for career education, disadvantaged groups' programs, and in-house business and industry training programs.

The purpose of this study was to verify and validate common affective domain competencies among vocational areas. There is a need for all vocational students to acquire specific preparation to gain employment. Perhaps some of these understandings, which are identified as common affective domain competencies among vocational areas, will serve as a foundation of employability in any occupational endeavor.

Contribution to Vocational Education

The vocational education coordination of agriculture, business and office, distributive, home economics, and industrial education has made a strong impact on our educational system, affecting the preparation of youth in pre-vocational middle schools, secondary schools, area vocational schools, junior high schools, and junior and senior colleges. The result of this coordination has also made a tremendous impact on teacher preparation for vocational education.

Implied in a comprehensive vocational program is an assumption that a common element exists in the preparation of youth and adults for a career. What are these common elements of learning or perhaps common affective domain competencies? Is there a basic, common relationship among all vocational areas that should be identified as common competencies?

Perhaps the identified common affective domain competencies will:

1. strengthen the efforts of agriculture, business and office, distributive, home economics, and industrial education in assisting youth and adults toward gainful employment,
2. assist each vocational area in reorganizing its individual contribution and relationship to broader goals for vocational competency through homogeneity, and
3. establish initially the commonalities which exist among vocational areas.

Perhaps this research will assist local school administrators, classroom teachers, state education consultants, and collegiate professors to understand and implement the meaning of a comprehensive program in vocational education. A relationship identified through common affective domain competencies does exist among several occupations and careers.

Summary

The relevancy of today's complex and interrelated world of work is more meaningful to youth and adults, as well as teachers of vocational education, if competencies within the affective domain are a major part of the learning sequence and not merely incidental learning. The affective domain competencies identified in this study as common to vocational education will serve to limit the haphazard teaching of affective domain competencies and provide direction for further inquiry.

The researchers believe that the affective domain competencies reported in this study can provide initial data for further research.

STATEMENT OF THE PROBLEM

The problem of this study was to verify and validate common affective domain competencies of students among vocational areas.

RATIONALE

Common affective domain competencies of students among vocational areas of agriculture, business and office, distributive, home economics, and industrial education provide a basis to establish common experiences among vocational education programs. Vocational programs in various localities could utilize the listing of common affective domain competencies to meet various learner needs.

OBJECTIVES

The two objectives of this study were:

1. to verify the common affective domain competencies of students among vocational-technical areas of agriculture, business and office, distributive, home economics, and industrial education, and
2. to validate (through the Delphi technique) the common affective domain competencies of students among vocational areas of agriculture, business and office, distributive, home economics, and industrial education.

SCOPE AND LIMITATIONS OF THE STUDY

The study encompassed the five vocational areas of (1) Agriculture, (2) Business and Office, (3) Distributive, (4) Home Economics, and (5) Industrial Education. Consumer and Health Education areas were not included as specific areas to verify and validate the common affective domain competencies.

The study, perhaps being the initial research to identify common affective domain competencies of students among vocational areas, is limited to the extent that the 111 common affective domain competencies among vocational areas provide a basic, initial listing of such competencies.

DEFINITION OF TERMS

Affective Domain--Objectives which emphasize a feeling, tone, an emotion, or a degree of acceptance or rejection. Affective objectives vary from simple attention to selected phenomena to complex but internally consistent qualities of character and conscience.[1] Values, attitudes, and interests are essential components of the affective domain.

Levels of Affective Domain—A reprint of a condensed version of the affective domain of the "Taxonomy of Educational Objectives," which is in The Classification of Educational Goals, Handbook II: Affective Domain,[2] is included in Appendix A. The inclusion of the shorter explanation of the affective domain categories and sub-division does not imply that these descriptors are full explanations of the categories. Rather, the researchers included in this final report Appendix A of the original work by Krathwohl and others to serve the reader of this report. One is encouraged to refer to the original work by Krathwohl, Bloom, and Masia.

[2] Ibid.

METHODOLOGY

The following procedures were completed to identify the common affective domain competencies of students among vocational areas:

1. Reviewed and elicited common affective domain competencies from publications representing agriculture, business and office, distributive, home economics, and industrial education.
2. Verified the elicited common affective domain competencies by submitting the identified competencies to groups of employees, employers, and agriculture, business and office, distributive, home economics, and industrial education teachers.
   The above procedures were executed to verify the elicited common affective domain competencies, therefore synthesizing the common affective domain competencies.
3. Validated the affective domain competencies by state-level directors of vocational education to determine the degree of commonality.

Validation was completed through the Delphi technique using two probes. Probe One was distributed to 56 directors of vocational education. Probe Two (Appendix B) was distributed to 49 directors of vocational education. Copies of the transmittal and follow-up letters are included

17

in Appendix B. The reported findings of this study are based on the responses of complete data received from 48 directors of vocational education.

Verification of Competencies

Total composite responses from employees, employers, agriculture teachers, business and office teachers, distributive education teachers, home economics teachers, and industrial education teachers were analyzed. Data relating to verification of the competency statements are included in the Findings, page 8.

Validation of Competencies

The primary source for statistical procedures was the Statistical Package for the Social Sciences.[3] The SPSS statistical package was used to determine: (1) the Probe One and Probe Two modal responses to each competency statement, and (2) the nonparametric rank-order correlation coefficients between each Probe One competency statement to each corresponding Probe Two competency statement, which also included a test of statistical significance.

SAMPLE

Two separate samples were used in this study. Sample One was used to verify the synthesized common affective domain competencies. The sample size included 191 persons who were randomly selected from the East Tennessee

18

and Southwest Virginia areas. The composition of Sample One was as follows:

40 Employees in Vocational-Technical Occupations,

51 Employers of Vocational-Technical Occupations, and

100 Secondary and Areas Vocational School Teachers composed of the following:

- 24 Agriculture Teachers
- 21 Business and Office Teachers
- 22 Distributive Education Teachers
- 16 Home Economics Teachers
- 17 Industrial Education Teachers

Sample Two was used to validate the common affective domain competencies among vocational students and was composed of 48 state-level directors of vocational education. The group of 48 directors was composed of the following participants:

44 State Directors of Vocational Education

1 State-Level Director from the District of Columbia,

1 State-Level Director from Guam,

1 State-Level Director from Trust Territory of the Pacific (Mariana Islands), and

1 State-Level Director from the Virgin Islands.

FINDINGS

The problem of this study was to verify and validate common affective domain competencies of students among vocational areas.

Verification of Competencies

The sample used to verify each statement of the researchers' constructed affective domain competencies was composed of employees, employers, secondary and area school vocational agriculture, business and office, distributive, home economics, and industrial education teachers. Employees were asked whether each competency was or was not important in relation to their present work situation. Employers were asked whether each competency was or was not important for their workers to possess. Vocational teachers of the five service areas were asked whether or not each competency should be taught to their vocational students. The respective groups were asked to state their perceptions either as "yes" or "no." One-hundred ninety one individuals responded to the verification process. Table I reflects the composite data indicating a percentage of the total respondents who perceived each statement as "yes" thereby indicating its importance as a competency. Also, the tables indicate a percentage of the responses of each respective group for each competency. The following findings relate to this aspect of the study:

1. When the 40 employees were asked whether each competency was important in relation to their work situation, the following data were reported: 73 of the 111 statements received a rating of 90 percent or above; 33 statements received a rating of 80 - 89 percent; 3 statements received a rating of 70 - 79 percent; and 2 statements received a rating of 60 - 69 percent.

2. When the 51 employers were asked whether each competency was important for their workers to possess, the following data were reported: 61 of the 111 statements received a rating of 90 percent or above; 35 statements received a rating of 80 - 89 percent; 6 statements received a rating of 70 - 79 percent; 4 statements received a rating of 60 - 69 percent; 4 statements received a rating of 50 - 59 percent; and 1 statement received a rating of 40 - 49 percent.

111	95	88	100	100	91	82	94	93

3. When the 24 vocational agriculture teachers were asked whether each statement should be taught to their vocational students, the following data were reported: 110 of the 111 statements received a rating of 90 percent or above; and 1 statement received a rating of 80 - 89 percent.

4. When the 21 business and office teachers were asked whether each statement should be taught to their vocational students, the following data were reported: 80 of the 111 statements received a rating of 90 percent or above; 16 statements received a rating of 80 - 89 percent; 7 statements received a rating of 70 - 79 percent; 7 statements received a rating of 60 - 69 percent; and 1 statement received a rating of 50 - 59 percent.

5. When the 22 distributive education teachers were asked whether each statement should be taught to their vocational students, the following data were reported: 86 of the 111 statements received a rating of 90 percent or above; 22 statements received a rating of 80 - 89 percent; 2 statements received a rating of 70 - 79 percent; and 1 statement received a rating of 60 - 69 percent.

6. When the 16 home economics teachers were asked whether each statement should be taught to their vocational students, the following data were reported: 43 of the 111 statements received a rating of 90 percent or above; 42 statements received a rating of 80 - 89 percent; 12 statements received a rating of 70 - 79 percent; 12 statements received a rating of 60 - 69 percent; and 2 statements received a rating of 50 - 59 percent.

7. When the 17 industrial education teachers were asked whether each statement should be taught to their vocational students, the following data were reported: 67 of the 111 statements received a rating of 90 percent or above; 28 statements received a rating of 80 - 89 percent; 13 statements received a rating of 70 - 79 percent; 1 statement received a

rating of 60 - 69 percent; and 2 statements received a rating of 50 - 59 percent.

When the total percentages of the 191 sampled respondents were compiled, the following data were reported: 75 of the 111 statements received a rating of 90 percent or above; 30 statements received a rating of 80 - 89 percent; 5 statements received a rating of 70 - 79 percent; and 1 statement received a rating of 60 - 69 percent.

Validation of Competencies

Tables II - IV include the common affective domain competencies among vocational areas as perceived by 48 state-level directors of vocational education. Each table represents one level of importance as perceived by state-level directors of vocational education. Respondents were provided six choice value levels: (1) strongly against; (2) do not recommend; (3) recommend as a minor goal; (4) recommend as a secondary goal; (5) recommend; and (6) strongly recommend.

The responses to Probe One were highly correlated with responses to Probe Two. The high correlation of competency statements on Probe One with competency statements on Probe Two resulted in statistically significant levels of correlation ($p < .001$) in almost all instances.

Tables II, III, and IV also report: (1) the competency statement number as listed on Probes One and Two (see Appendix B), (2) the affective domain classifications (see Appendix B), and (3) the nonparametric rank-order correlation coefficient and the statistical significance level between each Probe One competency statement to each corresponding Probe Two competency statement.

Strongly Recommend

Table II lists 29 competencies (or 26 percent of the 111 competencies) as strongly recommended common affective domain competencies of students among vocational areas. These competencies had a level six modal response on Probe Two.

Recommend

Table III lists 62 competencies (or 56 percent of the 111 competencies) as recommended common affective domain competencies of students among vocational areas. These competencies had a level five modal response on Probe Two.

Recommend as a Secondary Goal

Table IV lists 20 competencies (or 18 percent of the 111 competencies) as recommend as a secondary goal common affective domain competencies of students among vocational areas. These competencies had a level four modal response on Probe Two.

The data analyses reported no competencies with a modal response of level three, recommend as a minor goal, modal response of level two, do not recommend, or modal response of level one, strongly against on Probe One or Probe Two.

Probe One responses were correlated with Probe Two responses. The findings of this statistical analysis revealed that the Probe One responses were highly correlated with the Probe Two responses in almost all instances beyond the .001 confidence level. The high correlation of Probe One responses to the respective responses of Probe Two provides statistical evidence to suggest that a third probe would yield similar data.

CONCLUSIONS

The conclusions are as follows:

1. State level directors of vocational education appear to agree that there are common affective domain competencies of students which exist among vocational areas of agriculture, business and office, distributive, home economics, and industrial education.

2. The perceptions among employees, employers, and secondary and area school vocational teachers appear to be similar to the perceptions of state level directors of vocational education as to what constitutes affective domain competencies.

3. Employees, employers, and secondary and area school vocational agriculture, business and office, distributive, home economics, and industrial teachers appear to have similar perceptions concerning what are important affective domain competencies for employment career success. Of the 111 statements, 95 percent were considered important by at least 80 percent of the respondents.

4. Affective domain competencies appear to provide a commonality of learning which link agriculture, business and office, distributive education, home economics, and industrial education.

5. Common affective domain competencies of students among vocational areas appear to be as important as cognitive domain and psychomotor domain competencies in vocational-technical education.

RECOMMENDATIONS

Common affective domain competencies of students among vocational areas could be utilized to:

1. supplement and complement cognitive domain and psychomotive domain vocational competencies;

2. assist the development of students' values clarification in vocational education;

3. develop competency-based instruction in vocational education;

4. recognize the existence of common goals among the multi-dimensional vocational goals of agriculture, business and office, distributive, home economics, and industrial education;

5. strengthen the homogeneity mission of vocational education;

6. encourage vocational teacher education programs to assist vocational teachers in the development of learning environments which foster students' affective domain vocational competencies; and

7. assist youth and adults in career education, special (needs) education, disadvantaged groups' programs, and in-house business and industry programs toward sustained-gainful employment.

ANNOTATED BIBLIOGRAPHY

Banks, Jame M. "Measuring the Immeasurables" *American Vocational Journal* Vol. 48, No. 4, April, 1973, pp. 36-37.

Three examples of performance goals written in the affective domain and two rating scales used to help teachers use them.

Bloom, Benjamin S., Hastings, J. Thomas, Madaus, George F. *Handbook on Formative and Summative Evaluation of Student Learning*, New York: McGraw-Hill Book Company, 1971.

This is a book about the "state of the art" of evaluating student learning. PART 1 consists of four sections dealing with the evaluation problems all teachers are likely to encounter. The first section, Education and Evaluation (Chapters 1 to 3), presents a point of view about education and educational objectives and describes in detail the ways in which evaluation may be used to help bring students up to mastery levels of learning.

The second section, Using Evaluation for Instruction Decisions (Chapter 4 to 6), is intended to help teachers become aware of the different purposes of evaluation and the ways in which different types of evaluation instruments can be developed for use in the classroom.

The third section, Evaluation Techniques for Cognitive and Affective Objectives (Chapter 7 to 10), is organized around the Taxonomy of Educational Objectives (Bloom et al., 1956; Krathwohl et al., 1964); it presents models and techniques for constructing valid evaluation instruments for the different types of objectives found at all levels of education and to most subject fields.

The fourth section, Evaluation Systems (Chapter 11 and 12), suggests some of the ways in which cooperation by teachers and specialists can reduce the work involved in evaluation and improve the effectiveness of evaluation in the school situation.

PART 2 consists of chapters dealing with evaluation in each of the major subject fields and levels of education.

Borich, Gary D. "Accountability in Affective Domain" *Journal of Research and Development in Education*, Vol. 5, No. 1, Fall, 1971, pp. 87-96.

By measuring a network of variables related to cognitive outcomes, we may emphasize important behaviors that are adjuncts to learning and mitigate measurement problems of the performance contact.

Johnson, David W. "The Affective Side of the Schooling Experience" *Elementary School Journal*, Vol. 73, No. 6, March, 1973, pp. 306-313.

This article focuses on the importance of affective outcomes, the definition of the affective side of the schooling experience, and the measurement of the impact of instruction on the affective reactions of pupils.

Krathwohl, David R., Bloom, Benjamin S., Masia, Bertram B. *Taxonomy of Educational Objectives--The Classification of Educational Goals--Handbook II: Affective Domain*, New York: David McKay Company, Inc., 1964.

Part I describes the nature of the affective domain and the classification structure prepared for it. Part II gives the classification structure in detail and describes the evaluation of affective objectives at each level of the structure. In Part I, Chapters 1 and 2 give the background of the project and indicate how and why it came to be. Chapter 3 describes the basis of classification (internalization) and the nature of the classification structure, and relates internalization to terms common to the field. Chapter 4 analyzes the relation of the affective to the cognitive domain. Chapter 5 describes how the affective domain structure can be used to classify both objectives and test items, and it permits the reader to test himself on how well he can use the *Taxonomy*. Chapter 6 relates the affective domain to the contemporary views of curriculum, evaluation, and education research and suggests some points for further exploration.

Part II contains a complete and detailed description of the categories and subcategories of the affective domain and gives illustrative objectives and test items for each category.

Ridenour, Harlan E. "Cultivating the Affective Domain" *American Vocational Journal*, Vol. 44, No. 4, April, 1973, pp. 44, 82.

Reports on action initiated by the FFA to develop a program for agricultural students' personal development.

Schneider, Donald "The Time is Ripe for Affective Education" *Clearing House*, Vol. 47, No. 2, October, 1972, pp. 103-106.

Suggests exercises for developing emotional awareness in the classroom.

Stuelke, DuWayne H. "There's More To Learning Than The Accumulation of Knowledge" *Man/Society/Technology*, Vol. 33, No. 3, December, 1973, pp. 91-93.

The challenge facing industrial arts educators is to face a central role to the nonspecific transfer of principles, ideas, and attitudes.

Tuckman, Bruce W. "Getting At the Attitudes Problem" American Vocational Journal, Vol. 48, No. 1, January, 1973, pp. 47-48.

Charges that schools that provide career development programs are striking out in the wrong direction feeding information instead of appealing to students' emotions and feelings.

APPENDICES

APPENDIX A

A Condensed Version of the Affective Domain of the Taxonomy of Educational Objectives

APPENDIX A

A Condensed Version
of the Affective Domain of the
Taxonomy of Educational Objectives

1.0 RECEIVING (ATTENDING)

At this level we are concerned that the learner be sensitized to the existence of certain phenomena and stimuli; that is, that he be willing to receive or to attend to them. This is clearly the first and crucial step if the learner is to be properly oriented to learn what the teacher intends that he will. To indicate that this is the bottom rung of the ladder, however, is not at all to imply that the teacher is starting *de novo*. Because of previous experience (formal or informal), the student brings to each situation a point of view or set which may facilitate or hinder his recognition of the phenomena to which the teacher is trying to sensitize him.

The category of *Receiving* has been divided into three subcategories to indicate three different levels of attending to phenomena. While the division points between the subcategories are arbitrary, the subcategories do represent a continuum. From an extremely passive position or role on the part of the learner, where the sole responsibility for the evocation of the behavior rests with the teacher—that is, the responsibility rests with him for "capturing" the student's attention—the continuum extends to a point at which the learner directs his attention, at least at a semiconscious level, toward the preferred stimuli.

1.1 AWARENESS

Awareness is almost a cognitive behavior. But unlike *Knowledge*, the lowest level of the cognitive domain, we are not so much concerned with a memory of, or ability to recall, an item or fact as we are that, given appropriate opportunity, the learner will merely be conscious of something—that he take into account a situation, phenomenon, object, or stage of

48

affairs. Like *Knowledge* it does not imply an assessment of the qualities or nature of the stimulus, but unlike *Knowledge* it does not necessarily imply attention. There can be simple awareness without specific discrimination or recognition of the objective characteristics of the object, even though these characteristics must be deemed to have an effect. The individual may not be able to verbalize the aspects of the stimulus which cause the awareness.

Develops awareness of aesthetic factors in dress, furnishings, architecture, city design, good art, and the like.

Develops some consciousness of color, form, arrangement, and design in the objects and structures around him and in descriptive or symbolic representations of people, things, and situations.[1]

1.2 WILLINGNESS TO RECEIVE

In this category we have come a step up the ladder but are still dealing with what appears to be cognitive behavior. At a minimum level, we are here describing the behavior of being willing to tolerate a given stimulus, not to avoid it. Like *Awareness*, it involves a neutrality or suspended judgment toward the stimulus. At this level of the continuum the teacher is not concerned that the student seek it out, nor even, perhaps, that in an environment crowded with many other stimuli the learner will necessarily attend to the stimulus. Rather, at worst, given the opportunity to attend in a field with relatively few competing stimuli, the learner is not actively seeking to avoid it. At best, he is willing to take notice of the phenomenon and give it his attention.

Attends (carefully) when others speak—in direct conversation, on the telephone, in audiences.

Appreciation (tolerance) of cultural patterns exhibited by individuals from other groups—religious, social, political, economic, national, etc.

Increase in sensitivity to human need and pressing social problems.

1.3 CONTROLLED OR SELECTED ATTENTION

At a somewhat higher level we are concerned with a new phenomenon, the differentiation of a given stimulus into figure and ground at a conscious or perhaps semiconscious level—the differentiation of aspects of a stimulus which is perceived as clearly marked off from adjacent impressions. The perception is still without tension or assessment, and the student may not know the technical terms or symbols with which to describe it correctly or precisely to others. In some instances it may refer not so much to the selectivity of attention as to the control of attention, so that when certain stimuli are present they will be attended to. There is an element of the learner's controlling the attention here, so that the favored stimulus is selected and attended to despite competing and distracting stimuli.

---

[1] Illustrative objectives selected from the literature follow the description of each subcategory.

Listens to music with some discrimination as to its mood and meaning and with some recognition of the contributions of various musical elements and instruments to the total effect.

Alertness toward human values and judgments on life as they are recorded in literature.

2.0 RESPONDING

At this level we are concerned with responses which go beyond merely attending to the phenomenon. The student is sufficiently motivated that he is not just 1.2 *Willing to attend*, but perhaps it is correct to say that he is actively attending. As a first stage in a "learning by doing" process the student is committing himself in some small measure to the phenomena involved. This is a very low level of commitment, and we would not say at this level that this was "a value of his" or that he had "such and such an attitude." These terms belong to the next higher level that we describe. But we could say that he is doing something with or about the phenomenon besides merely perceiving it, as would be true at the next level below this of 1.3 *Controlled or selected attention.*

This is the category that many teachers will find best describes their "interest" objectives. Most commonly we use the term to indicate the desire that a child become sufficiently involved in or committed to a subject, phenomenon, or activity that he will seek it out and gain satisfaction from working with it or engaging in it.

2.1 ACQUIESCENCE IN RESPONDING

We might use the word "obedience" or "compliance" to describe this behavior. As both of these terms indicate, there is a passiveness so far as the initiation of the behavior is concerned, and the stimulus calling for this behavior is not subtle. Compliance is perhaps a better term than obedience, since there is more of the element of reaction to a suggestion and less of the implication of resistance or yielding unwillingly. The student makes the response, but he has not fully accepted the necessity for doing so.

Willingness to comply with health regulations.
Obeys the playground regulations.

2.2 WILLINGNESS TO RESPOND

The key to this level is in the term "willingness," with its implication of capacity for voluntary activity. There is the implication that the learner is sufficiently committed to exhibiting the behavior that he does so not just because of a fear of punishment, but "on his own" or voluntarily. It may help to note that the element of resistance or of yielding unwillingly, which is possibly present at the previous level, is here replaced with consent or proceeding from one's own choice.

Acquaints himself with significant current issues in international, political, social, and economic affairs through voluntary reading and discussion.

Acceptance of responsibility for his own health and for the protection of the health of others.

2.3 SATISFACTION IN RESPONSE

The additional element in the step beyond the *Willingness to respond* level, the consent, the assent to responding, or the voluntary response, is that the behavior is accompanied by a feeling of satisfaction, an emotional response, generally of pleasure, zest, or enjoyment. The location of this category in the hierarchy has given us a great deal of difficulty. Just where in the process of internalization the attachment of an emotional response, kick, or thrill to a behavior occurs has been hard to determine. For that matter there is some uncertainty as to whether the level of internalization at which it occurs may not depend on the particular behavior. We have even questioned whether it should be a category. If our structure is to be a hierarchy, then each category should include the behavior in the next level below it. The emotional component appears grad-

51

ually through the range of internalization categories. The attempt to specify a given position in the hierarchy as *the* one at which the emotional component is added is doomed to failure.

The category is arbitrarily placed at this point in the hierarchy where it seems to appear most frequently and where it is cited as or appears to be an important component of the objectives at this level on the continuum. The category's inclusion at this point serves the pragmatic purpose of reminding us of the presence of the emotional component and its value in the building of affective behaviors. But it should not be thought of as appearing and occurring at this one point in the continuum and thus destroying the hierarchy which we are attempting to build.

Enjoyment of self-expression in music and in arts and crafts as another means of personal enrichment.

Finds pleasure in reading for recreation.

Takes pleasure in conversing with many different kinds of people.

3.0 VALUING

This is the only category headed by a term which is in common use in the expression of objectives by teachers. Further, it is employed in its usual sense: that a thing, phenomenon, or behavior has worth. This abstract concept of worth is in part a result of the individual's own valuing or assessment, but it is much more a social product that has been slowly internalized or accepted and has come to be used by the student as his own criterion of worth.

Behavior categorized at this level is sufficiently consistent and stable to have taken on the characteristics of a belief or an attitude. The learner displays this behavior with sufficient consistency in appropriate situations that he comes to be perceived as holding a value. At this level, we are not concerned with the relationships among values but rather with the internalization of a set of specified, ideal, values. Viewed from another standpoint, the objectives classified here are the prime stuff from which the conscience of the individual is developed into active control of behavior.

This category will be found appropriate for many objectives that use the term "attitude" (as well as, of course, "value").

An important element of behavior characterized by *Valuing* is

52

that it is motivated, not by the desire to comply or obey, but by the individual's commitment to the underlying value guiding the behavior.

3.1 ACCEPTANCE OF A VALUE

At this level we are concerned with the ascribing of worth to a phenomenon, behavior, object, etc. The term "belief," which is defined as "the emotional acceptance of a proposition or doctrine upon what one implicitly considers adequate ground" (English and English, 1958, p. 64), describes quite well what may be thought of as the dominant characteristic here. Beliefs have varying degrees of certitude. At this lowest level of *Valuing* we are concerned with the lowest levels of certainty; that is, there is more of a readiness to re-evaluate one's position than at the higher levels. It is a position that is somewhat tentative.

One of the distinguishing characteristics of this behavior is consistency of response to the class of objects, phenomena, etc. with which the belief or attitude is identified. It is consistent enough so that the person is perceived by others as holding the belief or value. At the level we are describing here, he is both sufficiently consistent that others can identify the value, and sufficiently committed that he is willing to be so identified.

Continuing desire to develop the ability to speak and write effectively.
Grows in his sense of kinship with human beings of all nations.

3.2 PREFERENCE FOR A VALUE

The provision for this subdivision arose out of a feeling that there were objectives that expressed a level of internalization between the mere acceptance of a value and commitment or conviction in the usual connotation of deep involvement in an area. Behavior at this level implies not just the acceptance of a value to the point of being willing to be identified with it, but the individual is sufficiently committed to the value to pursue it, to seek it out, to want it.

Assumes responsibility for drawing reticent members of a group into conversation.

Deliberately examines a variety of viewpoints on controversial issues with a view to forming opinions about them.

Actively participates in arranging for the showing of contemporary artistic efforts.

3.3 COMMITMENT

Belief at this level involves a high degree of certainty. The ideas of "conviction" and "certainty beyond a shadow of a doubt" help to convey further the level of behavior intended. In some instances this may border on faith, in the sense of it being a firm emotional acceptance of a belief upon admittedly nonrational grounds. Loyalty to a position, group, or cause would also be classified here.

The person who displays behavior at this level is clearly perceived as holding the value. He acts to further the thing valued in some way, to extend the possibility of his developing it, to deepen his involvement with it and with the things representing it. He tries to convince others and seeks converts to his cause. There is a tension here which needs to be satisfied; action is the result of an aroused need or drive. There is a real motivation to act out the behavior.

Devotion to those ideas and ideals which are the foundations of democracy.

Faith in the power of reason and in methods of experiment and discussion.

4.0 ORGANIZATION

As the learner successively internalizes values, he encounters situations for which more than one value is relevant. Thus necessity arises for (*a*) the organization of the values into a system, (*b*) the determination of the interrelationships among them, and (*c*) the establishment of the dominant and pervasive ones. Such a system is built gradually, subject to change as new values are incorporated. This category is intended as the proper classification for objectives which describe the beginnings of the building of a value system. It is subdivided into two levels, since a prerequisite to interrelating is the conceptualization of the value in a form which permits organization. *Conceptualization* forms the first subdivision in the organization process, *Organization of a value system* the second.

While the order of the two subcategories seems appropriate enough with reference to one another, it is not so certain that 4.1 *Conceptualization of a value* is properly placed as the next level above 3.3 *Commitment*. Conceptualization undoubtedly begins at an earlier level for some objectives. Like 2.3 *Satisfaction in response*, it is doubtful that a single completely satisfactory location for this category can be found. Positioning it before 4.2 *Organization of a value system* appropriately indicates a prerequisite of such a system. It also calls attention to a component of affective growth that occurs at least by this point on the continuum but may begin earlier.

4.1 CONCEPTUALIZATION OF A VALUE

In the previous category, 3.0 *Valuing*, we noted that consistency and stability are integral characteristics of the particular value or belief. At this level (4.1) the quality of abstraction or conceptualization is added. This permits the individual to see how the value relates to those that he already holds or to new ones that he is coming to hold.

Conceptualization will be abstract, and in this sense it will be symbolic. But the symbols need not be verbal symbols. Whether conceptualization first appears at this point on the affective continuum is a moot point, as noted above.

Attempts to identify the characteristics of an art object which he admires.

Forms judgments as to the responsibility of society for conserving human and material resources.

4.2 ORGANIZATION OF A VALUE SYSTEM

Objectives properly classified here are those which require the learner to bring together a complex of values, possibly disparate values, and to bring these into an ordered relationship with one another. Ideally, the ordered relationship will be one which is harmonious and internally consistent. This is, of course, the goal of such objectives, which seek to have the student formulate a philosophy of life. In actuality, the integration may be something less than entirely harmonious. More likely the relationship is better described as a kind of dynamic equilibrium which is, in part, dependent upon those portions of the environment which are salient at any point in time. In many instances the organization of values may result in their synthesis into a new value or value complex of a higher order.

Weighs alternative social policies and practices against the standards of the public welfare rather than the advantage of specialized and narrow interest groups.

Develops a plan for regulating his rest in accordance with the demands of his activities.

5.0 CHARACTERIZATION BY A VALUE OR VALUE COMPLEX

At this level of internalization the values already have a place in the individual's value hierarchy, are organized into some kind of internally consistent system, have controlled the behavior of the individual for a sufficient time that he has adapted to behaving this way; and an evocation of the behavior no longer arouses emotion or affect except when the individual is threatened or challenged.

The individual acts consistently in accordance with the values he has internalized at this level, and our concern is to indicate two things: (*a*) the generalization of this control to so much of the individual's behavior that he is described and characterized as a person by these pervasive controlling tendencies, and (*b*) the integration of these beliefs, ideas, and attitudes into a total philosophy or world view. These two aspects constitute the subcategories.

5.1 GENERALIZED SET

The generalized set is that which gives an internal consistency to the system of attitudes and values at any particular moment. It is selective responding at a very high level. It is sometimes spoken of as a determining tendency, an orientation toward phenomena, or a predisposition to act in a certain way. The generalized set is a response to highly generalized phenomena. It is a persistent and consistent response to a family of related situations or objects. It may often be an unconscious set which guides action without conscious forethought. The generalized set may be thought of as closely related to the idea of an attitude cluster, where the commonality is based on behavioral characteristics rather than the subject or object of the attitude. A generalized set is a basic orientation which enables the individual to reduce and order the complex world about him and to act consistently and effectively in it.

Readiness to revise judgments and to change behavior in the light of evidence.

Judges problems and issues in terms of situations, issues, purposes, and consequences involved rather than in terms of fixed, dogmatic precepts or emotionally wishful thinking.

5.2 CHARACTERIZATION

This, the peak of the internalization process, includes those objectives which are broadest with respect both to the phenomena covered and to the range of behavior which they comprise. Thus, here are found those objectives which concern one's view of the universe, one's philosophy of life, one's *Weltanschauung*—a value system having as its object the whole of what is known or knowable.

Objectives categorized here are more than generalized sets in the sense that they involve a greater inclusiveness and, within the group of attitudes, behaviors, beliefs, or ideas, an emphasis on internal consistency. Though this internal consistency may not always be exhibited behaviorally by the students toward whom the objective is directed, since we are categorizing teachers' objectives, this consistency feature will always be a component of *Characterization* objectives.

As the title of the category implies, these objectives are so encompassing that they tend to characterize the individual almost completely.

Develops for regulation of one's personal and civic life a code of behavior based on ethical principles consistent with democratic ideals.

Develops a consistent philosophy of life.

Dear

One means of achieving excellence in training is through constant research. We are researching "Common Affective Domain Competencies Among Vocational Students." The affective domain concerns emotional development and is related to interests, attitudes, values and goals.

Your assistance is necessary to validate "Common Affective Domain Competencies Among Vocational Students" through the use of the Delphi Technique. These competencies will be validated by State Directors of Vocational-Technical Education throughout the nation, for we believe that State Directors would possess the necessary view of across-the-board common competencies among vocational students.

Perhaps you are aware that the Delphi Technique necessitates your responses to a series of probes. Your response to the enclosed Probe One will be summarized with the responses from the other 49 State Directors of Vocational-Technical Education. Probe Two will be sent to you soon after all of Probe One is returned. Probe Two will list your original response to Probe One, the summarized responses to Probe One, and a place for you to indicate a second response.

This research is funded through the Tennessee Research Coordinating Unit. A copy of the completed study will be available through ERIC as well as through the Tennessee Research Coordinating Unit.

Your cooperation, along with the cooperation of all State Directors of Vocational-Technical Education, is essential and valued. Please return the enclosed Probe One in the stamped, return-addressed envelope prior to December 15, 1974.

Sincerely,

Anthony G. Porreca
Associate Professor

John J. Stallard
Assistant Professor

Dear State Director:

Last month we wrote to you regarding a research study entitled "Common Affective Domain Competencies" which is being conducted at The University of Tennessee by John J. Stallard and Anthony G. Porreca. A questionnaire was sent to you along with a letter explaining the purpose of the study. All state directors of vocational education are participating in the research.

The Delphi technique is being used as the major research procedure. This procedure necessitates that all questionnaires must be included in order for the findings to be valid. Your input into the study as a representative of your state is vital.

A copy of the questionnaire is included. Won't you take a few minutes to complete the instrument and return it to us in the enclosed self-addressed envelope. Your contribution to the study will be greatly appreciated.

Sincerely yours,

John J. Stallard
Assistant Professor

The University of Tennessee
Knoxville, TN 37916

COMMON AFFECTIVE DOMAIN COMPETENCIES OF STUDENTS AMONG VOCATIONAL AREAS

Utilizing the Delphi Technique

Please respond to each competency by circling the level of importance you feel each statement should have as a common affective domain competency for vocational-technical students. Please remember that if you do not change your Probe #2 response to the group's mode, please state your reason for no change under the statement.

COMPETENCY STATEMENTS

Statement — Importance

1.0 RECEIVING (ATTENDING)

1.1 Awareness

1. Awareness of the economics of the world of work 6 5 4 3 2 1
Probe #1 Response 21

2. Gains a knowledge of the major occupational fields 6 5 4 3 2 1
19

3. Develops some awareness of evaluating interests and abilities with realistic occupational goals . . . . Probe #1 Response	6 25	5	4	3	2	1
4. Acquires an awareness of the role of industry and technology in a modern society	6	5 17	4	3	2	1
5. Acquires an awareness of the role of government regulations.	6	5	4 21	3	2	1
6. Awareness of the characteristics of production	6	5 20	4	3	2	1
7. Becomes aware of different types of marketing in the economy	6	5	4 18	3	2	1
8. Develops sensitivity to the importance of advertising.	6	5	4 20	3	2	1
9. Becomes aware of different types of operating budgets.	6	5	4 21	3	2	1
10. Develops awareness of the role of automation in business and industry. . .	6	5	4 24	3	2	1
1.2 Willingness to Receive						
11. Accepts need for accuracy in business, industry, and education	6 26	5	4	3	2	1
1.3 Controlled or Selected Attention						
12. Prefers a specific occupational aspiration and career development	6	5 18	4	3	2	1

13. Accepts need for inspecting and checking of work . . . . Probe #1 Response	6	5 20	4	3	2	1
14. Generates work independently without constant supervision	6 24	5	4	3	2	1
15. Provides assistance to people.	6	5 18	4	3	2	1
16. Listens with alertness to customer and co-workers' conversation.	6	5 17	4	3	2	1
17. Appreciates good efficient manual dexterity.	6	5 21	4	3	2	1
18. Perceives the interdependence of verbal and abstract reasoning	6	5 17	4	3	2	1

2.0 RESPONDING

2.1 Acquiescence in Responding

19. Practices care of occupational possessions (tools)	6 28	5	4	3	2	1
20. Follows directions	6 37	5	4	3	2	1
21. Displays promptness in work.	6 36	5	4	3	2	1

2.2 Willingness to Respond

22. Accepts responsibility to set his occupational goals . . . . Probe #1 Response	6	5 23	4	3	2	1
23. Practices a self-evaluation of interests for occupational opportunities. .	6	5 27	4	3	2	1
24. Practices safe work habits	6 35	5	4	3	2	1
25. Practices a safety-minded and knowledgeable approach to work at all times.	6 32	5	4	3	2	1
26. Practices good health habits	6 24	5	4	3	2	1
27. Practices care for good personal appearance, character traits, and attitudes.	6 25	5	4	3	2	1
28. Develops techniques to maintain cleanliness in work areas.	6	5 22	4	3	2	1
29. Assumes responsiblity for developing an appreciation for and an understanding of processes and products in business and industry	6	5 18	4	3	2	1
30. Develops the ability to plan and work in groups.	6	5 22	4	3	2	1
31. Volunteers extra work effort to complete rush jobs	6	5 22	4	3	2	1

32. Voluntarily seeks information for his/her work	6	5 19	4	3	2	1
Probe #1 Response						
33. Assumes responsibility for acquiring work supplies needed in the production of goods and services	6	5 29	4	3	2	1
34. Cooperates in requesting, giving, receiving, or discussing information in the work environment.	6	5 26	4	3	2	1
35. Asks pertinent questions related to the product and/or service to be performed.	6	5 23	4	3	2	1
36. Displays a willingness to gather information for reports and/or catalogs when appropriate.	6	5	4 20	3	2	1
37. Assumes responsibility for giving out or sending out information when needed.	6	5 21	4	3	2	1
38. Enjoys creating and developing information	6	5	4 22	3	2	1
39. Possesses a sense of responsibility for providing service.	6 23	5	4	3	2	1
40. Contributes to the promotion of product or service	6	5 20	4	3	2	1
41. Assumes responsibility for the property and safety of the customer	6 24	5	4	3	2	1

2.3 Satisfaction in Response

42.	Enjoys participation in varied human relations . . . . Probe #1 Response	6	5	4 22	3	2	1
43.	Enjoys participating in group activities	6	5	4 24	3	2	1
44.	Gains personal satisfaction from gainful employment.	6 22	5	4	3	2	1
45.	Works congenially with other people.	6	5 24	4	3	2	1
46.	Displays personal desire to get along with others.	6 24	5	4	3	2	1
47.	Derives satisfaction when working with others as a cooperative member of group.	6	5 17	4	3	2	1
48.	Enjoys cooperating with others in the work that needs to be performed. . .	6	5 22	4	3	2	1
49.	Plans along with other employees work that needs to be completed	6	5 29	4	3	2	1
50.	Voluntarily assists other workers in developing occupational procedure . .	6	5 19	4	3	2	1
51.	Takes pleasure explaining the requirements of a job to a new worker. . . .	6	5	4 17	3	2	1
52.	Takes pleasure in interchanging ideas for mutual professional benefit. . .	6	5	4 16	3	2	1

53. Derives personal satisfaction in accomplishment of quality of work . . . . Probe #1 Response	6 30	5	4	3	2	1
54. Enjoys work that involves consumer demands and services.	6	5	4 23	3	2	1
55. Enjoys demonstrating and selling goods and services.	6	5	4 16	3	2	1
56. Displays personal satisfaction in creating a favorable image with prospective customer	6 18	5	4	3	2	1

3.0 VALUING

3.1 Acceptance of a Value

57. Recognizes social and economic significance of work.	6	5 21	4	3	2	1
58. Accepts the place of management, supervision and decision making in the production of goods and services	6	5 20	4	3	2	1
59. Assumes responsibility for listening to the planning of work	6	5 26	4	3	2	1
60. Demonstrates an appreciation for quality of work	6 34	5	4	3	2	1
61. Accepts the need to verify work in business--accuracy.	6 25	5	4	3	2	1
62. Recognizes quality and/or good design in manufactured products and services	6	5 16	4	3	2	1

63. Understands the role of risks involved in business and industry. . . . . . . Probe #1 Response	6	5	4 19	3	2	1
64. Recognizes the importance of the profit incentive in business and industry	6	5 17	4	3	2	1
65. Recognizes the importance of expenses involved in business and industry	6	5 18	4	3	2	1
66. Recognizes the importance of selecting product lines or services	6	5	4 18	3	2	1

3.2 Preference for a Value

67. Prefers positive attitudes about work.	6 30	5	4	3	2	1
68. Participates actively in organizing constructive work activities	6	5 24	4	3	2	1
69. Assumes an active role in positive representation of business.	6	5 20	4	3	2	1
70. Attempts to learn about his role in the work environment	6	5 19	4	3	2	1
71. Provides leadership in the production of goods and services.	6	5	4 20	3	2	1

69

3.3 Commitment

72.	Accepts dignity of work. . . . . Probe #1 Response	6 30	5	4	3	2	1
73.	Demonstrates devotion to a democratic work environment	6	5 17	4	3	2	1
74.	Believes in the free enterprise system	6	5 19	4	3	2	1
75.	Accepts the capitalistic system in the production of goods and services. .	6	5 20	4	3	2	1
76.	Understands the importance of starting a business.	6	5	4 24	3	2	1
77.	Accepts and practices loyalty, honesty, and trustworthiness.	6 34	5	4	3	2	1
78.	Maintains sound professional conduct	6 25	5	4	3	2	1
79.	Holds information confidential in his work	6 24	5	4	3	2	1
80.	Pursues the development of a career.	6	5 24	4	3	2	1
81.	Accepts specialized training for job-entry competency.	6	5 26	4	3	2	1
82.	Appraises one's interests and aptitudes when pursuing a vocational occupation	6	5 28	4	3	2	1

4.0 ORGANIZATION

4.1 Conceptualization of a Value

83. Attempts to utilize effective decision-making processes. . . . . Probe #1 Response	6 26	5	4	3	2	1
84. Utilizes the ability to think through problems	6 27	5	4	3	2	1
85. Forms judgements as to the rights and responsibilities of employees. . . .	6	5 21	4	3	2	1
86. Forms judgements concerning one's work behavior in relation to other employees.	6	5 23	4	3	2	1
87. Attempts to identify an order or arrangement of work	6	5 18	4	3	2	1

4.2 Organization of a Value System

88. Develops a plan to utilize resources (money, labor, etc.) efficiently. . .	6	5 21	4	3	2	1
89. Displays realistic desire to work.	6 25	5	4	3	2	1
90. Accepts realistically the importance of background for a particular occupation	6	5 18	4	3	2	1
91. Accepts his work as part of the work of others who precede and follow him in the production process.	6	5 19	4	3	2	1

5.0 CHARACTERIZATION BY A VALUE OR VALUE COMPLEX

5.1 Generalized Set

92.	Displays systematic planning to determine a course of action . . . . Probe #1 Response	6	5 21	4	3	2	1
93.	Applies scientific principles to work when needed.	6	5 21	4	3	2	1
94.	Demonstrates willingness to experience work with a variety of new tools and materials.	6	5 22	4	3	2	1
95.	Relies on maintenance to keep the commonly used products of industry in efficient, safe working order.	6	5	4 18	3	2	1
96.	Appraises quality of work with objectivity	6	5 24	4	3	2	1
97.	Judges situations to determine similarities and differences.	6	5 19	4	3	2	1
98.	Makes recommendations for corrective measures based on feedback.	6	5 23	4	3	2	1
99.	Makes corrections when work needs revision	6	5 25	4	3	2	1
100.	Judges his employment on the basis of happiness in one's work.	6	5	4 17	3	2	1
101.	Demonstrates confidence in one's ability to succeed on the job	6	5 27	4	3	2	1
102.	Faces personal and social problems objectively	6	5 22	4	3	2	1

5.2 Characterization

103.	Develops desirable attitudes about personal traits, and social significance of work. . . . . Probe #1 Response	6	5 19	4	3	2	1
104.	Develops resourcefulness in the work environment.	6 23	5	4	3	2	1
105.	Understands the concept of work and the human satisfaction found in work.	6 20	5	4	3	2	1
106.	Develops emotional stability and even temperament	6	5 19	4	3	2	1
107.	Develops the mental stability to work "under pressure" as some jobs may mean meeting a deadline	6	5 23	4	3	2	1
108.	Demonstrates perseverance in accomplishing a job.	6 24	5	4	3	2	1
109.	Demonstrates self-direction in work responsibilities.	6	5 24	4	3	2	1

TITLE: VOCATIONAL TRAINING SERVICES FOR DISABLED PERSONS INCLUDING THE BLIND.

DESCRIPTOR: *PHYSICALLY HANDICAPPED; *BLIND; *VOCATIONAL REHABILITATION; *VOCATIONAL TRAINING CENTERS; PROGRAM DEVELOPMENT; SHELTERED WORKSHOPS; VISUALLY HANDICAPPED MOBILITY; EMPLOYMENT OPPORTUNITIES; TECHNICAL ASSISTANCE; DEVELOPING NATIONS

IDENTIFIER: *SYRIAN ARAB REPUBLIC

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 13P.

ABSTRACT: THE PLANNING, DEVELOPMENT, AND ESTABLISHMENT OF VOCATIONAL REHABILITATION SERVICES FOR THE DISABLED AND BLIND IN THE SYRIAN ARAB REPUBLIC ARE DESCRIBED IN THIS REPORT. SUGGESTIONS ARE MADE FOR ASSESSMENT AND EVALUATION OF THE BLIND AND FOR THEIR ORIENTATION AND MOBILITY TRAINING. VOCATIONAL TRAINING COURSES AT THE NEW BERZEH CENTRE FOR THE BLIND AND DISABLED AT DAMASCUS INCLUDE WEAVING, CANING, BRUSH MAKING, LEATHERWORK, BOOT AND SHOE MANUFACTURE, TYPING, TELEPHONIST TRAINING, WATCH AND CLOCK REPAIR, PHOTOGRAPHY, SEWING, WOODWORKING, AND MOSAIC AND JIGSAW PUZZLE MANUFACTURING. IN ADDITION, AN INTEGRATED PRODUCTION UNIT WAS SET UP TO PROVIDE FOR (1) ASSESSMENT OF TRAINEES BEFORE THEIR ADMITTANCE TO A COURSE, (2) LAYOUT OF MACHINES FOR FLOW OF PRODUCTION, AND (3) TRANSLATION OF COURSES AND OTHER MATERIALS INTO ARABIC. EMPLOYMENT OPPORTUNITIES AND SELECTIVE PLACEMENT FOR THE BLIND AND DISABLED ARE ALSO PLANNED. THE REPORT CONCLUDES WITH RECOMMENDATIONS FOR A NATIONAL REGISTRATION POLICY FOR DISABLED AND BLIND CHILDREN AND ADULTS, WITH CONSIDERATION OF WHETHER THEY WOULD BENEFIT FROM VOCATIONAL REHABILITATION SERVICES; GENERAL AND PREVOCATIONAL EDUCATION; EXTENSIONS OF VOCATIONAL COURSES; ESTABLISHMENT OF COOPERATIVE SHOPS WHERE THE GOODS PRODUCED AT THE BERZEH CENTRE COULD BE SOLD; AND FURTHER TECHNICAL ASSISTANCE NEEDED FOR ADDITIONAL PROGRAM DEVELOPMENT. I. INTRODUCTION

1. From 29 August 1967 to 8 February 1968, under the ILO's regular programme of technical assistance, the services of Mrs. Helena Larek, a vocational rehabilitation expert of the Ministry of Health and Social Welfare, Warsaw, Poland, were provided by the Director-General of the ILO to the Syrian Arab Republic to help plan a national vocational rehabilitation programme for the disabled.[1]

2. From November 1969 to December 1970 Mrs. Larek's services were again made available by the ILO to the Government and she assisted in the development of vocational rehabilitation programme activities.[2]

3. From 1971 to 1973 the then ILO Regional Vocational Rehabilitation Adviser for the Middle East, Mr. A.C. Sparshott (United Kingdom), carried out several short follow-up missions to the Syrian Arab Republic. His findings and recommendations resulted in the Government requesting the services of two ILO vocational rehabilitation experts whose main task was to help develop and co-ordinate vocational services for the disabled and the blind at the newly completed Berzeh Centre.

4. The two experts appointed by the Director-General of the ILO were Mr. W.J. Dolling (United Kingdom) and Mr. E. Turner (United Kingdom) both of whom started their six months' assignment on 7 July 1974. (Mr. Turner's assignment was subsequently extended for two months to 6 March 1975.) Mr. Dolling's main terms of reference were:

- to advise and assist the competent government authorities, the appropriate departments, voluntary organisations and especially the Ministry of Labour and Social Affairs in the development of a vocational training service for the disabled.

Mr. E. Turner's main terms of reference were:

- to help the Government develop and establish for the employable blind, including school-leavers, vocational assessment, training and resettlement services in Damascus with a view to regionalising some of the services on a national basis.

5. The Director-General of the ILO wishes to acknowledge with grateful thanks the help and assistance so readily provided to the two experts by the Minister and staff of the Ministry of Labour and Social Affairs and particularly those officials of the Social Affairs Department directly concerned with the Berzeh Centre project.

---

[1] See Report to the Government of the Syrian Arab Republic on the Vocational Rehabilitation of the Disabled, ILO/OTA/Syria/R.13, Geneva 1968.

[2] See Report to the Government of the Syrian Arab Republic on the Vocational Rehabilitation of the Disabled, ILO/OTA/Syria/R.17, Geneva 1971.

II. FINDINGS

A. Preliminary work

6. Early in the mission the experts visited rehabilitation institutions in the country to gain background information for the co-ordinated development of their projects. Among the institutions visited were the Homs and Damascus Institutes for the Blind, the Latakkia Centre for the Disabled and the Aleppo Institute for the Deaf. The Arab Union Textile Company in Damascus was also visited and several jobs identified there which could be undertaken by suitably trained disabled persons.

7. The Alghafari Institute which had been the focal point of activity for previous ILO vocational rehabilitation assistance prior to the opening of the Berzeh Centre, had been transformed into a centre for orphaned young people. The workshop facilities there were first class with training provided in welding and assembly of tubular steel furniture, the manufacture of parts for carpet looms, etc.

B. National registration policy in respect of the disabled and blind

8. As in most other countries, there have been many estimates of the numbers of disabled and blind in Syria but so far no reliable figures have been obtained. The experts examined the national policy of registration which is as follows. The Government appeals to disabled people by means of radio, television, cinema and newspaper advertisements to come forward for registration. So far, no substantial numbers have responded.

9. It is evident that only with complete and up-to-date information and statistics on the number, social characteristics and location of the disabled can the Government plan the necessary building, staffing, assessment and training programmes for disabled persons, including the blind (see recommendation in paragraph 45 below).

C. Berzeh Centre for the Blind and Disabled, Damascus

10. The experts made a thorough investigation of the services at the Centre and concluded that owing to the fact that the main workshop building was not scheduled to be started before July 1975 the immediate priority would be to plan an integrated training and production workshop. The matter was raised with the Head of the Department of Social Services; it was proposed that four dormitory rooms on the upper floor of the Centre building be converted into a workshop, and a concrete ramp be built at the entrance to facilitate entry of machines and supplies. Present dormitory occupants were to be transferred to newly completed dormitory facilities.

11. The Ministry expressed interest in this, and at a further meeting agreement was reached to make the alterations a priority task. A flow-line production unit manufacturing brushes, stools and chairs using cane and coloured plastic wire was to be set up. Some equipment was to be furnished in "kit form" for distribution to disabled and blind in homeworkers' schemes or co-operatives.

12. It was also agreed to resite electrical points, mark guideways and walkways, establish a supplies store and stock record system and to create an evaluation section near the intake section.

13. The project was agreed to by the Ministry, and by the end of the mission all the machines had been installed, tested and run and production started.

1. Case conference procedures

14. The experts devoted a good deal of time to the development of intake and case conference procedures at the Berzeh Centre, for it was found that there was a great disparity in the educational levels of the trainees. Some of the blind did not know braille, others had varying standards; very few had any idea of orientation and mobility. Some of the trainees had been to schools, some not. Knowledge of elementary mathematics and geometry was very limited, especially

among the blind. There was definitely a need for the reorganisation of the educational programme, under the direction of a qualified specialist. (See recommendation in paragraph 46 below.)

15. Discussions were held on the application forms submitted to the Centre by the authorities recommending admittance and it was agreed that the following information should be provided on all the trainees' records:

(i) whether the trainee was left-handed or right-handed;

(ii) whether he was colour blind;

(iii) in the case of visually handicapped persons with residual vision, what colour shade they were aware of. (This would help in marking out working areas in bench work and for marking tools, etc. for identification purposes in assembly work.)

16. A matter for concern was the great variety of home-made crutches, pieces of wood and metal which the trainees brought with them to assist in their personal mobility. It was felt that in some cases, these aids would adversely affect their mobility and result in bad walking habits, uncomfortable postures, strained muscles and ligaments. It was suggested that the physician at the Berzeh Centre should periodically examine the crutches, braces and other aids used by the trainees, advise on their suitability, and suggest necessary alterations.

17. The Ministry was contemplating the appointment of a physiotherapist to the Centre who would work closely with the physician. Such a specialist is urgently required, for once the trainees commence their training programme, using muscles and movements which they are not accustomed to, muscular or ligament problems may develop. In such circumstances a muscle strengthening course, or remedial exercises may be necessary.

18. In addition to a general meeting on case conference techniques and procedures in which the Director and all professional and instructional staff of the Centre participated, group training and practice sessions were held.

19. Assessment and evaluation techniques, including reporting procedures, were also examined and discussed at some length with the staff concerned. The need for careful assessment/evaluation of each trainee before allocation to a specific training trade, was repeatedly stressed.

2. Orientation and mobility

20. Although a female instructor from the Damascus Institute for the Blind attended the Centre two days a week to give lessons in braille and elementary mathematics, there was no systematic orientation and mobility training for the blind trainees. The roads around the Centre were difficult to negotiate during the present building programme and this created mobility problems for the blind. It is suggested therefore that a full-time orientation and mobility instructor should be appointed. The provision of a tactile map of the premises would also assist the blind to get around more easily. (See recommendation in paragraph 53 below.)

D. Assessment and evaluation of the blind

21. A new assessment and evaluation programme for the blind was started in the Centre. The necessary equipment had been manufactured and delivered; instruction manuals as well as an outline of the assessment procedure, job opportunity survey, and list of skills shown in pegboard and geometrical figure assessment exercises were prepared and translated into Arabic. The Chief Instructor was given some initial training in evaluation and assessment procedures, but it is suggested that the new Orientation and Mobility Instructor (see C 2 above) should eventually take over responsibility for evaluation and assessment of blind trainees.

E. Vocational training

1. Weaving

22. Both the disabled and blind were being trained in this programme, but some difficulty had been experienced in placing them in textile factories on completion of their course. The possibility of undertaking work on their own account in their homes might be considered, but the necessary looms and materials would have to be provided in most cases. It is further suggested that the weaving section could gradually be transformed into a sheltered workshop.

2. Caning

23. This was a two-year course for the blind but no formal syllabus of training in different weaves and material had been laid down. The present trainees in the course need to be evaluated as to their suitability for the integrated programme. A new course with a well defined syllabus incorporating different designs and materials would be more appropriate as a sheltered workshop programme, for placement prospects are limited. Income opportunities do exist, however, in towns where trainees could work on their own account. The development of new products for the integrated production workshop could extend the range of caning at present being carried out.

3. Brush making

24. This was a course which had tended to be incorporated with the caning section. With the start of the integrated workshop programme, many new types of brushes could be made. Moreover, it will no longer be necessary to have the wooden stocks drilled outside; the blind could drill them in the integrated workshop programme. In co-operation with the instructor a new modified brush suitable for road sweeping was designed. Here again, as prospects of placing the trainees in open employment are limited, the possibility of developing the section as a sheltered workshop might be considered.

4. Oriental leatherwork

24. The chief products in this two-year course for disabled persons were brief-cases and canvas holdalls. The section was well equipped with machines although a new type of edge stitcher was required. The experts felt that a wider range of products should be manufactured. The training time to produce them could be considerably shortened and the range of skills involved would enhance the trainees' capabilities. There are limited prospects for the trainees working as homeworkers and a co-operative would provide a better opportunity for income earning. Two items of equipment were in bond at the Port of Lattakia and needed to be delivered to the Centre. One was a leather-printing machine and the other a guillotine. These two machines would enable colour printing of motifs, etc., on the leather goods, as well as a well designed trade mark for the Centre. New products could be wallets, purses, leather key-ring tags, identity card and licence holders and decorative leather necklaces. (See recommendation in paragraph 48 below.)

5. Boot and shoe manufacture

25. No formal course had been laid down but the practical work of producing boots and shoes was carried out. It is suggested that the issue of tools to the trainees on completion of their course should be considered. This would facilitate employment. (N.B. There are many small boot and shoe manufacturers working in Syria mostly on a family basis.)

6. Typing

26. This one-year course for the disabled was found to be well presented and organised, and offered good placement prospects. The educational standard of the blind at present indicates that the time is not opportune to introduce short-hand typing training for blind persons. (See recommendation in paragraph 49 below.)

7. Telephonist training for the blind

27. This was a one-month full-time training course offering good placement prospects. Two instructor sets and two trainee sets were checked and installed at the Centre, and an outline of the evaluation procedure to be adopted was discussed with the instructor. The Siemens Company, through their Syrian Director, was most co-operative and agreed to replace, for the benefit of blind operators, the signalling lamps on the switchboard by tactile supervisories. This same problem may have to be faced when a trainee is placed with an employer.

8. Watch and clock repair

28. This two-year course for the disabled was facing some difficulties in that there was a scarcity of training material and equipment. Moreover, placing prospects for trainees who completed the course were said to be rather difficult and the most satisfactory form of resettlement of the trainees may be achieved through work on their own account. The expert prepared a complete course syllabus with drawings and also made suggestions for widening the course content. (See recommendation in paragraph 50 below.)

9. Photography

29. This two-year course for the disabled covered picture-taking, developing, enlarging and printing. It is considered that as outside and architectural photography presents difficulties from the mobility point of view, problems of placement will arise. Studio work and the development of X-ray films in hospitals and laboratories might offer the best prospects of placement. The possibility of training a few blind persons as dark-room assistants might also be considered. (See also recommendation in paragraph 51 below.)

10. New sewing course

30. A syllabus for this six-month course for the disabled was prepared and translated into Arabic. The housekeeper has tried out the exercises and made a good start. It is felt that this course will offer good prospects for home-workers, placements in hospital sewing departments or in a co-operative. (See recommendation in paragraph 52 below.)

11. Integrated production unit for disabled and blind

31. The setting up of this unit was a priority objective of the experts. During the time when the building modifications were awaiting approval and completion, the experts had several meetings with the Ministry, Director of the Centre and instructors who would be involved in varying aspects of the programme. The working arrangements for the unit were discussed in detail; attention was also called to the importance of the evaluation course to ensure that trainees were carefully assessed and selected before admittance to a specific course. The layout of machines was planned to enable the production to flow from one end of the workshop to the finishing sections at the other. The following training courses and other materials were prepared and translated into Arabic:

- the use of hand tools (metalwork);
- first fundamentals of method study;
- woodworking course (hand tools);
- communications;
- pegboard and geometrical evaluation exercises;
- placement officer training;
- job opportunity survey;
- job skills analysis;
- job skills profile.

32. A complete course in metalworking practice in English was prepared for translation into Arabic.

33. During the latter part of the mission all the machines were wired up, tested and run. Two machines which required repair were rewired and proved satisfactory. The following equipment was operating by the end of the mission:

- wood turning lathe;
- broom handle making machine;
- bench drilling machine;
- pedestal drilling machine;
- thickness planer machine;
- bandsaw machine;
- circular saw.

The following production plan was outlined and agreed:

- the production of 24 new type stools to be finished with a plastic covered wire woven seat;
- the production of small wooden bowls;
- the production of cupboards for tools;
- the production of wooden crutches;
- the production of broom handles for sale;
- the production of a new type road sweeping brush for the municipality.

34. The workshop was equipped with fire extinguishers and aid boxes were ordered. A fire prevention and safety programme was prepared and translated into Arabic. The Chief Instructor was nominated by the Director of the Centre to carry out these duties as a temporary measure. (See recommendation in paragraph 53 below.)

35. It was agreed that the sighted disabled working in the original woodworking programme would be transferred to the integrated production unit. The blind trainees in the existing caning and brushmaking sections were also to be given the opportunity of working in the integrated programme after assessment and evaluation.

36. Other action specifically affecting the blind was taken or agreed as follows:

- the blind would undertake all drilling operations (the method of training was outlined and translated into Arabic);
- drilling jigs were designed for the use of blind operators;
- the jigs were made and used by the first blind drilling machine operator;
- the blind would carry out the taking off operations on the broom handle-making machine;
- inspection of finished parts to be undertaken by the blind;
- gauges to be used by the blind for inspection were designed;
- the final papering, polishing and packing of products to be undertaken by the blind.

(See recommendation in paragraph 54 below.)

12. New woodworking course (hand tools)

37. This six to nine-month course for the disabled was prepared and translated into Arabic complete with exercises, tests, illustrated demonstrations and projects. The tools used in the old woodworking course have been added to by local purchases to complete six sets of equipment.

13. Mosaic and jigsaw puzzle manufacturing

38. The expert together with the instructor for the integrated unit investigated the possibility of setting up a mosaic course and this proved to be feasible. Mosaic inlaying is a very saleable product and the skills required could be well within the capabilities of selected disabled. It was considered that this would be a good occupation for the self-employed or for a group of disabled persons in a co-operative. All materials and tools were purchased and the course duration was to be from six to eight months. It was also decided to establish a jigsaw puzzle manufacturing section. There is a ready sale for jigsaw puzzles and posters to provide the jigsaw pictures will be supplied free by various airlines and the government tourist board. A method of manufacturing the puzzles was designed and tools were purchased locally. When the expert left a sample jigsaw puzzle was in production.

39. The organisational and operational layout of the new courses and the integrated production unit were discussed with the Director and instructional staff and responsibility for various aspects of the work were agreed and allocated.

F. Employment opportunities for the disabled and blind

1. Placement

40. The Centre Placement Officer has done well to effect placements in open industry. With the starting of new courses aimed at giving the trainees a new skill and ability level, the Placement Officer should begin to function with a new concept of what is meant by selective placement. The experts prepared an outline of selective placement covering job opportunity survey and job skill analysis profiles. The whole outline was translated into Arabic. As the Centre's services develop, there will be a greater need for placement services. It is suggested that consideration be given to appointing four additional placement officers; a technical training officer is also required who could develop training opportunities for the disabled and the blind in employers' establishments.

41. The placement officers would also be expected to co-operate closely with social workers, hospitals and clinics, to help identify potential rehabilitees.

2. Main new workshops

42. This building was not scheduled to open until July 1975. The experts are of the opinion that the workshop should have a comprehensive metalworking course in hand tools and machine operating. This workshop could then undertake subcontract work, the manufacture of metal crutches and braces and offer a full course of hand tool training and machining. The range of products and training from the combined integrated programme and the main workshop would be of great benefit to the disabled and blind. The manager in charge would have to be of the highest calibre. (See recommendation in paragraph 56 below.)

G. Conclusions

43. The experts regretted that the shortness of the mission period and the delay in equipment deliveries together with the difficulties of the building programme precluded them from carrying out some of the short-term objectives; nevertheless, they were of the opinion that the Centre at Berzeh now offers a framework for developing a fully comprehensive rehabilitation and training programme for all categories of disabled persons. The recommendations which follow have been made with this in mind. The long-term objective of creating a national centre in Damascus with training facilities for staff from other Arabic countries is realisable but additional international assistance is required.

44. The Government is keenly aware of the possibilities for the further development of the services at the Centre and providing there is a careful selection of cases a small pilot project concerned with the mentally retarded could be introduced with further assistance from the ILO. (See paragraph 57 below.)

III. RECOMMENDATIONS

A. National registration policy

45. The Government should instruct its social welfare officers to personally contact all hospitals and clinics throughout the country to:

(a) examine in co-operation with the authorities the past and present records of in-patients and out-patients and register them when it is considered that they would benefit from vocational rehabilitation services;

(b) visit the rural community centres and seek the co-operation of the leaders in locating disabled children and adults.

The Government should instruct the directors and teachers of all educational institutes to co-operate with the registration officials in helping to identify disabled children.

B. Education of the disabled and blind

46. The Government should appoint a director of education for the disabled and blind. The person appointed should be a qualified educationalist, preferably female, with experience of working with children. The duties of the director would be:

(a) to examine the effectiveness of the present syllabi carried out in the Damascus Institute for the Blind, the Institute for the Deaf and Dumb and the school for disabled children at Berzeh; to compare it with the syllabi carried out in normal schools with the same age groups;

(b) to examine the equipment and materials used and to recommend any additions or alterations necessary to bring it into line with normal schools;

(c) to introduce prevocational courses to include mathematics, geometry and use of hand tools;

(d) to determine the teaching standards necessary to carry out the programme.

47. If these objectives can be achieved, they can form the basis for a national teacher training programme for staff from schools and institutions throughout Syria.

C. Leatherwork

48. With a view to expanding training and employment possibilities in this section, subcontract work for leather braces and belts should be sought from the army prosthetic manufacturing unit.

D. Typing course

49. This course should be broadened to include audio typing and the use of electric typewriters.

E. Watch and clock repairing

50. Consideration should be given to widening the course content by including meter testing and repairing. In this connection, it is proposed that the Director of the Centre should contact the Electricity Board who might be in a position to provide the necessary expertise and material.

F. Photography

51. Consideration should be given to extending the photography section to include silk screen printing and photo-stencil work. (A complete course outline was left with the Director of the Centre.)

G. New sewing course

52. Consideration should be given to the appointment of the present housekeeper at the Centre to the post of instructor in this section. It will be necessary for the instructor to visit hospitals and arrange to obtain samples of sheets, gowns, aprons and bed linen and to investigate the possibility of these items being made in the new sewing section on a contract basis.

H. Fire prevention and safety policy

53. The policy statement on fire prevention and safety prepared by the experts (and translated into Arabic) should be implemented as soon as possible. For the policy to be fully effective, it is essential that the internal telephone service be extended to all workshops in case of fire or accident or emergency. There should be a table with a relief plan and models of all buildings and facilities, braille numbers on each building and an identification list in braille. This will help the blind to find their way around the Centre.

I. Production

54. The purchasing of a wood-routing machine with a large variety of bits would greatly increase the variety of products which could be made and would also provide valuable training.

J. Co-operative for the disabled and blind

55. The Government should consider allocating some of the empty premises in the cottage industries area for use by the disabled and blind. The premises could be converted into shops where the goods made at Berzeh could be displayed, orders taken and sold. The premises could also house a duplicating and photostat service operated by the disabled, and possibly a passport picture-taking service. The premises could also play an important part as a sales point for work produced by ex-trainees still unplaced. These trainees could be supplied with sets of parts from Berzeh to assemble, cane and polish, e.g. stools, brushes, table lamps and wooden bowls. The experience gained could facilitate the setting up of area co-operatives on more formal lines.

K. New main workshop

56. It is essential that a well qualified and experienced technical manager be appointed to the new main workshop as soon as possible.

L. Further international assistance

57. The Government should seek further external assistance for a period of at least one year to help develop the following programme:

- to determine the needs for additional courses, equipment and staffing for the new main workshop;
- to train the manager in the techniques of machine layout, training methods for the disabled and blind;
- undertake market research into products for manufacturing;
- to conduct a course on selective placement;
- to review the effectiveness of the present courses and training programmes;
- to extend vocational rehabilitation and training services to selected disabled women;
- to assist with the introduction of a small pilot vocational rehabilitation project at the Berzeh Centre for the Mentally Retarded;
- to extend services to the disabled and blind to other main centres in the country.

The ILO will be glad to co-operate in this further activity subject to the availability of funds from the UNDP Indicative Planning Figure or other donor sources.

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 49P.; RELATED DOCUMENT VT 102 837 IN THIS ISSUE. PAGES 46 THROUGH 49 CONTAINING AN ARTICLE FROM THE COPYRIGHTED JOURNAL, "SCHOOL HEALTH REVIEW" WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: THE FINAL REPORT OF THE HEALTH CAREERS EXPLORATION PROJECT AT ROOSEVELT HIGH SCHOOL, PORTLAND, OREGON, PRESENTS THE PROJECT ACTIVITIES FROM JULY 1972 THROUGH JUNE 1975, THREE PROGRAM EVALUATIONS BY OTHER OREGON EDUCATORS, AND SOME SAMPLE MATERIALS USED IN THE PROJECT. DESIGNED TO INTEGRATE CAREER EDUCATION MATERIALS INTO THE EXISTING HEALTH EDUCATION PROGRAM, THIS EXEMPLARY HEALTH CAREER EXPLORATION PROGRAM FOCUSED ON SELF-CONCEPT, DECISIONMAKING, AND EXPLORATION. AS HEALTH EDUCATION IS A STATE GRADUATION REQUIREMENT, ALL STUDENTS AT ROOSEVELT HIGH SCHOOL WILL EVENTUALLY RECEIVE EXPOSURE TO THIS ASPECT OF CAREER EDUCATION. THE PROJECT DEVELOPED RESOURCES FOR STUDENT EXPLORATORY EXPERIENCES IN THE AREA OF HEALTH EDUCATION/HEALTH CAREER EDUCATION, TESTED CURRICULUM ACTIVITIES, IDENTIFIED SOME STUDENT INTERESTS IN HEALTH CAREERS, AND INVOLVED 1,227 STUDENTS, 18 STAFF MEMBERS, AND 39 PARENTS AND COMMUNITY RESOURCE PERSONS. PROJECT ACTIVITIES IN STAFF DEVELOPMENT, INSTRUCTIONAL PROGRAM, AND MATERIALS AND CONTENT ARE CHARTED UNDER THESE HEADINGS: FIELD TRIP OPPORTUNITIES, EXPANSION OF CAREER-ORIENTED CURRICULUM, LOGISTICS (FOR FIELD TRIPS), DIALOGUE WITH OTHER EDUCATIONAL PERSONNEL, SUPPORT AREAS (SLIDE/TAPE PRESENTATION AND CHARTS), STUDENT NEEDS SURVEYS, AND HEALTH CAREER ORIENTATION. NUMBER OF STUDENTS AFFECTED: 1,227/3 yr.

NUMBER OF STAFF INVOLVED: 18/3 yr.

PROJECT DESCRIPTION:

Roosevelt is an urban high school situated in the St. Johns district of Portland, Oregon. The school population, between 1465 and 1215, is composed essentially of 'blue-collar' families. An increasing number of students come each year from a low-economic housing project within the school boundaries.

Many Roosevelt students fall into one, or both, characteristic groups --- disadvantaged basic skills, including reading, and terminal students. A portion of them have or are having low-level experiences in the world of work.

Purpose

The Health Career Exploration Project, an exemplary program, is designed to integrate career education materials (1) pertinent to student understanding of themselves and the decision-making process (applicable to all areas of career selection) and (2) those specific to the health area, into the existing health education program. The focus is on specific components --- self concept, decision-making and exploration.

Since health education is a state graduation requirement, all students at Roosevelt High School will eventually receive exposure to this aspect of career education.

Procedures and Outcomes

The project has utilized teaching staff to develop in-classroom activities and curriculum devices necessary to the development of positive self-concepts and decision-making skills --- both essential elements in the area of career decisions.

The project has developed sources and resources for student exploratory experiences. These sources run a wide range, from group experiences (30 or 11) to individual (1 to 1) experiences.

The project has refined, re-developed, field tested and finalized curriculum activities in the area of integrated health education/health career education. (The original collection of activities was developed in 1972-1973; it was expanded in 1973-1974 and finalized in 1974-1975.)

The project has developed a tape-slide-overhead presentation for public relations and orientation purposes for those inside and outside the Roosevelt community.

The project has identified through various means those numbers of students with purported interests in health careers.

The project has in its three year span 1972-1975 affected 1,227 students in skill development of self concept, decision making and in exploratory opportunities within the community.

The project has in its three year span 1972-1975 affected eighteen staff members. Those include professional/certified (administrative and teaching) and classified (including student and part time secretarial staff). Additionally thirty nine parents and community and resource persons have been involved.

A

BACKGROUND AND INSTRUCTION

Roosevelt High School is situated in a predominately blue-collar community between the Columbia and Willamette Rivers. The school boundaries include a city, low - economic housing project, the largest in metropolitan Portland. The geographical location makes Roosevelt somewhat isolated from the major portion of Portland proper. In the surrounding vicinity are industrial areas, terminals, docks and freeways. Many of Portland's large manufacturing companies lie within the school boundaries.

As one of Portland's thirteen high schools, Roosevelt enrolls approximately 1,465 to 1,215 students, 7.3% of the total high school population of School District No.1.

The curriculum is a traditional general high school one. Programs and curricula at Roosevelt tend to place their emphasis in basic skill development. Movement is currently underway for curricula to embrace career education aspects. In addition to the Health Career Exploration Project several other specialized areas are functioning. A Comprehensive Cluster Curriculum including automotive shop, building construction and metal shop. The work experience program at Roosevelt, an ongoing full year program, enrolled 166 students during 1974-1975. Additionally 17 students were involved in work-study programs and 173 students are enrolled in Manpower summer programs for 1975.

Alternative Education Through Cooperative Work Experience began functioning in 1974-1975. ICE (Interdisciplinary Career Education) integrates career education by experience time blocks in shop, business, home economics and social studies. A new Career Education Center began functioning during 1974-1975; it is directed by a Career Education Department Chairperson.

In the fall of 1971, according to an O.V.I.Survey, 25% of the Roosevelt student body indicated a desire to receive training in the Health Occupational Cluster. In July of 1972 a Health Career Exploration Project was funded jointly by Portland Public Schools and the Oregon State Department of Education to begin to meet student needs. Briefly, the project in its three year vision attempts to: integrate health career education into an existing state required health education program.

Since the initial Health Career Exploration Project began in July of 1972, 1,227 students, 18 professional/certified and classified personnel, 39 parents and numerous community and resource persons have been involved. Health Education is currently a full year required course taught by Health Education specialists. An integrated curriculum and a curriculum collection of health career activities has also been developed --- Health Careers Exploration II.

Since 1972, project statistics have shown that Health careers have mounted in student concern. The Explorer Scout Survey in the fall of 1973 indicated that, among sophomore students only, 37.5% had career interests in the area of health. The GATB in the spring of 1973 indicated that, among those sophomores tested, all of whom had been in the Health Education/Career Education program and project, 227 had aptitudes suited to the Health field; further that 44.5% chose a Health or Health-related career among their top three future career choices. Career surveys in 1974 indicated that among the 360 sophomores, 28.9% had career interests in the area of health. Although the 1974 figure is lower than 1973 this may be due to extensive career education occurring on many levels or due to clearer choices on the parts of students.

B

MAJOR ACCOMPLISHMENTS OR OUTCOMES

(by Project Components)

NOTE: Those resources and instruments developed which could be useful to others outside the Roosevelt Project have been appended where indicated.

8

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
I FIELD TRIP OPPORTUNITIES		
1. Development of large exposure career experience groups suited to student purported interests.	1. Large group exposure charts utilized throughout the classroom setting. Charts provide field trip opportunities, career enticement ads, general career information and opportunities. (Charts can be easily taken from magazines such as Career World)	1. Large exposure experiences were broken into the following groups: Biology, Community Worker, Cook, Dental, Ecology-Conservation, Medical Technician, Medicine, Nursing, Pharmacy, Psychology, Social Work, Special Education, Therapy, Veterinarian Medicine.
2. Development of field experience exposure plan.	2. Field experience exposures designed on a building block plan from Step 1 through Step 6. Such building blocks allow students to travel through exposure as far as their interest takes them.  Practical Experiences 1 to 1 Field Experiences Individualized Field Experiences Educational and Vocational Institutions Private Institutions and Corporations Community Agencies (Volunteer & Tax-supported) steps 6 5 4 3 2 1 NOTE: Field trip exposures move from generalized to specific action programs.	2. For a resource listing, pertinent to Multnomah County, Oregon see Health Career Exploration II.

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
	Field experience exposures--samples: Step 1: American Red Cross United Way (small groupings) Settlement Houses Step 2: Carolina Biological Don Hall Laboratory University of Oregon Medical School Kaiser Hospital Step 3: Portland Community College Mt. Hood Community College University of Portland Western Business University Step 4: Trojan Nuclear Plant Del's Care Center Emily School Step 5: Individualized day experiences with local health specialists (i.e. doctor, dentists, pharmacists.) Step 6: Multnomah County Well Child Clinic Loaves and Fishes Oregon Heart Association (i.e. assisting 'Nat'l. Health Blood Pressure Month')	

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
3. Field trip plan - utilized by total school. Original plan was developed by Title III ESEA and revised by Health Department.		3. Field trip plan as developed through Title III ESEA. Evaluation verbal. See sample field trip plan and evaluation Appendix A.1 and A.2.
4. Department field experience exposure evaluation tool developed. Tool is specific to health careers.		4. Department field trip evaluation tool. See Appendix A.3.
II CONTINUE EXPANSION OF CAREER ORIENTATED CURRICULUM		
1. Weekly department meetings utilized modification, retesting, rewriting. (Additional preliminary meetings with field testing schools were of value.)	1. Materials have been integrated into the program or have been eliminated when termed inappropriate.	1. See accompanying Health Career Exploration II.
2. Weekly department meetings and work sessions adapted materials into more usable formats. Particular consideration was made to adapting reading levels and selecting materials with lower reading levels.	2. See 1 (above) --- continued use of materials adapted from Career World Continued use of field experience exposure reporting system.	2. See accompanying Health Career Exploration II as developed along program components self concept, decision making, and exploration for the integration of health careers into an existing health education curriculum.
3. Subjectively discussed at department meetings. See Appendices A.2 and A.3 for evaluation tools developed.	3. Integrated into instructional program.	3. See Appendices A.2 and A.3.

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
4. Subjective staff evaluation during department meetings and workshop sessions. GATB test administered to 265 sophomore students --- 1973. Generalized listings were administered to 296 sophomore students - 1974. Year end evaluation instrument administered to 262 sophomores, in selective curriculum areas - 1973.	4. GATB test results indicate a relationship between the Explorer Scout survey utilized in the fall of 1973, and some field experience exposures selected by students as a part of the instructional program. Career surveys in 1974 were more generalized in nature. Appeared to be reasonably valid. Year end evaluation indicated that: 46.5% of students preferred field experience exposures as their first choice health learning activity. Comparison with other typical classroom activities can be seen below: Student Evaluation First Choice of Classroom Activities: 	

<table>
<tr><th>STAFF DEVELOPMENT</th><th>INSTRUCTIONAL PROGRAM</th><th>MATERIALS & CONTENT DEVE[illegible]PED</th></tr>
<tr><td>Administered to 265 sophomores --- 1974.</td><td>1974:

 </td><td></td></tr>
<tr><td>Field test form has been developed, for 1974-1975.</td><td>Materials developed were used in instructional programs during 1974-1975 at Cleveland High School, Jefferson High School and Marshall High School.</td><td>See Appendix B.1 for field test form.</td></tr>
</table>

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
5. Roosevelt High School health education goals are in alignment with program goals and graduation competencies developed by Portland Public Schools. (Note: Health Career Exploration Project Director was a member of Portland's Graduation Comptency Committees - Phase I and Phase II)	5. As a result of staff development (see left column) Roosevelt instructional program goals are in alignment with 'new' graduation competencies.	
Materials developed by Health Career Project will be utilized where appropriate, in the Oregon Department of Education Curriculum Guide to be completed 1975.		Health Career Exploration Curriculum Guide was submitted to Len Tritsch for appropriate inclusions in 1975 guide.
Staff developed materials to assist third party evaluations.	Instructional program was evaluated in currculum and project areas by: Anna Mae Tichy and Dr. Michael Tichy, January 19, 1974 Kelly Hood in March, 1974 and by Lucille Trucano in March, 1975	See evaluation section for third party evaluation reports.
III CONTINUE EXPANSION OF LOGISTICS 1. Cadre of Roosevelt parents developed to chaperone field experience exposures. (Organized through PTSA.)		

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
2. Form letters developed for both pre and post field experience exposures.		2. See Appendix C for sample pre field experience exposure letters. See Appendix C.2 for sample post field experience exposure letters.
3. Consultation with school adminstration regarding new school district policy regarding field trips.	3. Suggestions should be integrated into future instructional programs.	
4. Contacts previously established with professional organizations maintained.	4. Supplementary to existing instructional program.	
Development of an on-going personal and organization resource file.	Supplementary to existing instructional program.	
IV ESTABLISH DIALOGUE WITH HEALTH CLUSTER PERSONNEL (NON-ROOSEVELT)		
1. Project Director maintained dialogue as much as possible with Portland Health Cluster curriculum personnel through cluster advisor Bob Signer.		
2. Project Director participated as resource person for Washington County Career Education Exploratory Workshop on February 12, 1974.		

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
3. Project Director participated as resource person for Health Curriculum class at Portland State University spring quarter, 1974. Two sessions --- summer quarter 1974. One session --- winter quarter 1974.	3. Integration into existing health education curriculum discussed and explained.	3. Slide-tape presentation used.
4. Project Director participated as resource person for Health Curriculum class at Lewis and Clark College winter quarter, 1974.	4. Integration into existing health education curriculum discussed and explained.	
5. Project Director participated as resource guest speaker for North Portland Rotary twice during 1974-1975. One staff member also participated once.	5. Integration into existing health education curriculum discussed and explained. (one presentation)	5. Slide-tape presentation used.
6. Project Director held twelve individual orientation sessions on campus during 1974. Project Director held nineteen group orientation sessions on campus during 1974-1975.	6. Visitors observed instructional program on paper and in direct classroom observation.	6. Slide-tape presentation used for seven of the twelve.
7. Project Director participated as resource person June 10-14 on Oregon State University campus in "Health Education Through Values and Attitudes" - 1974.	7. Overview of Health Career Exploration Project shared (including slide-tape presentation)	7. Materials included in Health Career Exploration Curriculum and Health Career Exploration II shared.

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENTS DEVELOPED
Project Director participated as resource person June 16-20 on Oregon College of Education campus and Oregon State University - 1975.		
8. Project Director participated as a consultant for Health Education workshop at Castle Rock High School, Castle Rock, Washington.	8. Materials shared with workshop participants.	
9. Project Director served on an Area 1 Health Career Committee 1974-1975. (committee goal: delineate needs of all Area 1 students)		
10. Project Director published article "Health Career Education" in May/June School Health Review (national health education publication) --- 1974.	10. Article is an overview of Health Career Exploration Project.	10. Article published in May/June 1974 School Health Review. See Appendix D.1
V CONTINUE DIALOGUE WITH SUPPORTATIVE AREAS		
1. Development of a slide-tape presentation. Used as an orientation for Roosevelt faculty.	1. Slide-tape presentation used in instructional program in fall of 1973 as orientation for Roosevelt health education students. Used throughout the state 1974-1975.	1. Slide-tape presentation.

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
2. Development of a science course flow-chart related to career groupings being used in the Health Project with students.	2. Supplementary to instructional program.	2. See Appendix E.1 for Science Department flow-chart.
3. Development of a business course flow-chart related to career groupings being used in the Health Project with students.	3. Supplementary to instructional program.	3. See Appendix E.2 for Business Department flow-chart.
4. Project Director shared some curriculum materials with Social Studies Department in the area of sex and sexuality. A new course Man and Woman includes materials in career opportunities, sex-role stereotyping, etc.		
5. Health Education staff participated in School Talk Channel 10 produced by O.E.P.B.S. and the Public Information Department of Portland Public Schools.		5. Script of program included extensive dialogue in the area of health careers. Viewing audience ---???
VI SURVEY NEEDS AND DEVELOP OUTLINE FOR SPECIFIC STUDENT PARTICIPATION		
1. Explorer Scout Career Interest Survey utilized (1973) Explorer Scout Career Interest Survey compiled and compared to 1971.	1. Not surveyed in instructional program. (1973)	

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONT[illegible] DEVELOPED
 Note: Some career groupings were not included in the 1973 statistics. These groupings do have some relationships to Health Careers, either directly or indirectly: Fish management, Forestery, Home Economics, Mountain Climbing, Nuclear scientist, Oceanography, Optometry, Park and Recreation, Search and Research, Teaching.	Groupings from Explorer Scout Career Interest Survey used in instructional program for breakdown of career interest areas: Biology, Community Worker, Cook, Dental, Ecology/Conservation, Medical Technician, Medicine, Nursing, Pharmacy, Psychology, Social Work, Special Education, Therapy, Veterinarian medicine, Zoology.	
2. GATB test utilized --- 1973. Generalized tests utilized --- 1974.	2. GATB testing completed during instructional program --- 265 students tested. GATB test analyzed between aptitudes and career selections by an "inhouse tool". Generalized tests utilized in classrooms during 1974.	

STAFF DEVELOPMENT	INSTRUCTIONAL PROGRAM	MATERIALS & CONTENT DEVELOPED
3. Objective termed a total school project of top priority. Will be begun during 1974-1975-1976 under administrative direction of 'new' career center.		
VII DETERMINE TYPE OF HEALTH CAREER ORIENTATION AT ROOSEVELT		
1. Ongoing material and statistics presented to administration. This objective is an administrative objective.	1. Development of a 'new career center' and 'new' career orientated courses within the building has given impetus to new instructional career goals throughout Roosevelt.	
2. Decisions for future --- this objective is an administrative objective.

Evaluation of the Health Career Exploration Project #26-001-145 at Roosevelt High School. Dr. Michael W. Tichy - Anna Mae Tichy

Introduction:

This report is an evaluation of some of the principles that have guided the health education staff at Roosevelt High School in its developmental processes for Health Career Exploration Project #26-001-145. Essentially it presents the frame of reference in which the staff pursued its innovative approaches. It embraces statements concerning: (1) the problems faced by Roosevelt High School students and students in other schools in the State of Oregon; (2) the objectives of health careers exploration as they are integrated with health instruction; (3) the conceptualizing of health education experiences; (4) the kinds of related work experiences that carry on throughout life; and (5) assessing the status of the health education program at Roosevelt High School.

Goals:

Guidelines for Health Career Exploration Project #26-001-145:

In determining the goals of the comprehensive program of Health Career Exploration at Roosevelt High School, it is necessary to examine the most recent proposal for continuation of this project dated December 30, 1973. No better statement of needs and project goals and description of procedures has been found than those set forth in this document.

The statements of need for continuation of Health Career Exploration Project #36-001-145, with specific reference to any field, implies that it is imperative to continue the original intent of the three year plan. One major consideration is to evaluate the methods, materials and techniques developed in the first year; change or modify these materials as needed and progress toward the completion of the project. Additional factors such as funding will be necessary in order that original goals can be met and to support this project to its termination.

Instruction:

It is a very difficult task to measure precisely the effectiveness of the total Health Career Exploration Project. However, after a close examination of the curriculum pattern, the project goals and objectives, the methods, materials and resources used, it is possible to make evaluative comments regarding some aspects of the Project.

A major concern in evaluating health instruction is the degree to which instructional goals and objectives have been attained by the learner. The ultimate goals being to reinforce or bring about favorable changes in health behavior, attitudes and knowledge. In determining whether or not the project's objectives have been attained or if they are worthwhile several factors must be considered.

Awareness of professional points of view at various levels of education is vital in the development of an effective local instructional program. The examination of such points of view may necessitate changing project goals and instructional methods.

Evaluating Content:

In evaluating the Health Career Exploration Project, we found the areas of health instruction and material to be meaningful and realistic. To substantiate this, we found the content to be up-to-date and valid. We also found the curricular offerings to be based upon students needs and interests. Content areas are definitely inter-related. The project coordinators view every aspect of the individual's development - physical, social, emotional and intellectual as an important factor in the over-all needs of their students.

Evaluating Objectives:

In further examination of the goals and objectives of the Roosevelt program, we were satisfied that the objectives were practical, feasible and accurately stated; however, we felt that more specific statements might be helpful. The objectives did cover a range of health attitudes, practices, and cognitive skills.

Evaluating Learning Opportunities:

This discussion will attempt to describe the extent the learning opportunities relate to or meet instructional objectives. In particular, our evaluation will center around resource materials and services and on the number of learning opportunities incorporated in the health education experiences of the Roosevelt students.

The following are criteria used in assessing the value of the learning opportunities associated with this project:

1. Does the learning experience at Roosevelt High School provide the learner with an opportunity to acquire the behavior stipulated in the instructional objectives?

Evaluation-Discussion: In examining the opportunities provided in the Health Career Exploration Program, we were satisfied that each student in health education was provided with many learning opportunities for thbe development and use of his resources. The use of student resources are essential for health education activities now and for carry over purposes later in life. The concepts set forth in the above statement reflect a modern, informed viewpoint of health education.

2. Are the learning opportunities appropriate for the maturity of the learner?

Evaluation-Discussion: The majority of persons interviewed felt that the opportunities provided in the Health Career Project were consistent and commensurate with the developmental patterns of the students in the program. Since a significant number of students enter Roosevelt with learning difficulties, a special remedial program is available during the freshman year to rectify the situation. So that more students may benefit from the project the directors have geared their program primarily for the sophomore student. When the exploration of health careers are provided at the sophomore level, interested students are better able to direct their future academic work into the proper areas. However, should students of upper grades be interested in the program, the opportunity to explore these health areas is available.

The directors and staff have taken particular interest in the non-reading students. Special class materials, approaches and evaluations appropriate to these students' needs are available and utilized.

3. Are the learning opportunities motivating or rewarding?

Evaluation-Discussion: The program provides many opportunities to measure success and observe progress. The experiences, both in school and out, provide real situations upon which health motivation may be based. Certain rewards, such as excursions have a health education value in themselves, in addition to the enjoyment which they contribute to students.

Again, consideration of the non-reading student needs allows these students to achieve a sense of real satisfaction in learning through specially designed opportunities.

4. Do the learning opportunities allow for the integration of related experiences?

Evaluation-Discussion: Integration refers to the relationship of one subject matter to another or one content area or organizing element to another. Implementing this criterion brings about horizontal organization of the curriculum. Integration also provides the learner with a more unified view of health rather than a segmented one. Not only are the health education and career learning opportunities integrated with other subject matter but specific efforts are made to relate them to adult life experiences. However, better utilization of the many opportunities for coordination with other disciplines at Roosevelt High School could provide a more unified view of health.

5. Do the learning opportunities allow for individual differences and abilities of the learners?

Evaluation-Discussion: In assessing the health education program, we were reassured immediately of the faculty's concern and utilization of the nature of individuality as a vital factor in the educative process. There were several aspects which are worthy of note in the program. For one thing, it was observed that the individuality emphasized an intuitive quality of learning. Secondly, the philosophy of the faculty is that learning is privy to the individual who does the learning. Only he can do it; no one can do it for him. Constantly we were impressed with the concept that worthwhile healthful living can be neither "given" nor "received." It must be experienced. Thirdly, individuality points to the respects in which any particular student is different from other children. It is due to such unique variations as these that generally make difficult the application of any uniform educative procedures.

6. Does the environment contribute to health as well as provide an atmosphere for learning?

Evaluation-Discussion: In assessing the Roosevelt Program, the evaluators were satisfied with the sincere attempt to create a healthful environment for all health career students. They have attempted to show the importance of providing an environment where the individual has freedom, self-respect, and security and experiences satisfaction in his activities. However, despite emphasis upon preventitive measures, there will always be some individuals who will need professional help. We feel that professional counselors should be utilized to greater advantage, especially with the more serious problems. Specially trained to deal with such problems, they can render a great deal of personal help to the student as well as promote a more healthful environment for the school.

The following areas were examined and found to be satisfactory:

a. Organization of the school day: The length of time was reasonable and adapted to the needs of the pupils. Special activities are provided in accordance with pupil needs.

b. Scheduling: The amount of time devoted to a specific task is assigned with regard to readiness, reading ability and the needs of the student. The educational program is a flexible one, so that it is possible to schedule special activities without hindering the regular program.

c. Student Achievement: There is provision in the health program for individual differences in respect to readiness to learn, academic ability, and environmental background. Consideration is given to the physical and mental growth of each student. The abilities of each student are recognized and instruction adjusted to individual ability.

d. Grades: The program is planned so that each student can experience a satisfying educational success.

e. Discipline: Behavior is evaluated with the knowledge that misconduct is a sign of maladjustment and an attempt is made to find the cause. Also student abilities are recognized and an effort is made to maintain the self-respect of the student through the use of praise. There also seems to be evidence that by specialized classes, attendance and participation by students have been improved.

f. Student Grouping: Grouping in the health careers project is flexible so that administration and organization exist only to expedite the process of learning.

g. Teacher-Pupil Relationships: The evaluators were pleased to observe that there is cooperative thinking and effort between teachers and students rather than emphasis upon the sole direction of one person. The student is made to feel that he is part of the group and contributes to it. The atmosphere of the classes observed was relaxed and friendly. The administrator of the program has good relationships with her colleagues. All the staff appeared to be enthusiastic and confident.

7. Locating, selecting and producing learning resources.

Evaluation-Discussion: There is no question that a variety of teaching and learning resources are needed to carry on effective and efficient programs of instruction. However, if these tools are to be used they must be readily available and the teacher must have a ready reference in order to locate appropriate materials. A more effective placement and arrangement of materials used in the health career project were recommended by the evaluators.

At Roosevelt, every effort should be made to keep teachers and students informed of new materials and resources. There should be a system for cataloging and inventorying these materials. Each item should be listed on a card and the file made available to all students and teachers. Keeping such an inventory up-to-date is essential for effective use.

Summary: In the opinion of the evaluators, the directors and staff have made considerable progress in achieving many of the objectives and goals of the health careers project. This mid-year evaluation shows that their continuing efforts should ultimately achieve a realization of a majority of the goals and objectives as stated.

The curriculum offerings in the project have challenged some existing health instruction practices, confirmed the desirability of continuing others, and encouraged the adoption of new practices. The faculty of the project have attempted to clarify pertinent questions: What knowledges and skills are most useful in society? Can educational objectives be stated in observable terms to provide for subsequent evaluation of the curriculum? What subject matter should be chosen as the basis of instruction? How should subject matter be integrated? What types of learning experiences should be included in the curriculum? How can the project provide for a longitudinal sequence of learning experiences. What kind of daily and weekly schedule of activities should be adopted?

While attempting to meet these educational problems, the project staff have produced a feasible and working model of health career education. Of particular note are the individualized approaches of the project and the faculty's utilization of student motivation and direction. Throughout the project is seen a strong emphasis on the coordinated efforts of health professionals in the community to aid the student assess the actual duties and responsibilities of the health career he selects. The logical sequence of educational opportunities to follow this project would be a program of directed learning and work experiences for upper level students interested in purusing specific health careers.

Evaluation of the Roosevelt High School Health Education Program
Evaluated by: Kelly Hood, Chairman, Health Education, Rex Putnam
High School, Milwaukie, Oregon (Member, State Evaluating Team - 1974)

Overview

Health Education at Roosevelt is a year program, required of all sophomores. It is my understanding that this program is a state pilot project in preparation for the new graduation requirements that expand health to a year program. The Health Education staff consists of one male instructor and two female instructors. It should be noted that even though each of the instructor's college preparation was not in the area of the Health Specialist, their additional preparation in the area of health, plus their teaching experience, enthusiasm, and dedication would qualify them as Health Specialists at this time. The over-all approach to Health Education by the Roosevelt Health staff has given their school an outstanding program. This program has to rank as one of the best in the state and could be used as a model for other schools to follow. It was very gratigying as a Health educator to see the excitement that these teachers had for their subject matter and for the desire to make Health Education relative to the needs of Roosevelt students. This is supported by the course goals and course objectives that they have established for their Health program.

Commendations

1. The improvising and oganizing of the basement area into a very functional and pleasant Health Center. Despite the age of the building and the openness of the area, the Health staff has developed a very suitable instruction and learning area, creating an environment that appears very pleasing to the students.

2. The outstanding professional and working relationship of the three members of the Health staff.

3. The development of a Health Education curriculum that is designed to meet the needs of Roosevelt students.

4. The mode of instruction allowing for large groups for special speakers, movies, etc. This is made possible by the organization of the facility and the team teaching of the three staff members.

5. The teacher-student rapport that was very evident. Students were excited about Health.

6. The many innovations that the staff has devised to make the material interesting and the meeting of student needs by learning by doing.

7. The use of outside resources, field trips, etc.

8. The excellent collection of Health Education materials, books, pamphlets, etc., and their availability to the students.

9. The dedication of the staff to take it upon themselves to seek additional preparation and to keep current in the field by taking classes, workshops, etc.

10. The outstanding departmental organization which comes, I understand, with a lot of donated time on Saturdays by the Health staff.

11. Allowing students' input to help design each unit. This indicates what students want to know and don't know. A good hiden diagnostic tool.

12. The amount of meaningful student participation in each class.

13. The utilization of the one year program into a very comprehensive course giving students an opportunity to be exposed to many aspects of both physical and mental health.

14. The interrelationship of career education within the Health program.

15. The cooperation of the Health staff afforded the evaluator.

Recommendations

1. That the entire basement area, exclusive of the TV room and the adjacent room, be used for Health Education. Thus expanding the facility, giving students more room and eliminating distractions of the book room. Also moving the book room to another area would seem to aid their efficiency. Then they would not be distracted by the Health classes.

2. That curtains be placed on the windows so that movies, slides, TV., etc. can be shown more effectively. Even with the lights out, because of the large windows in the area, it was very difficult to see the slides on a slide presentation.

3. That if the book room remains in its present location, a rewiring of the lights take place in order for the Health Center to turn off the lights separately.

4. That uniform furniture be placed in the area in order to eliminate crowding. It was observed that with the larger tables in the area, a crowding of students occurred.

5. That the Health Center be installed with its own TV video tape hook up. With the amount of excellent Health Education material

being shown over the commercial networks, it would be (advantageous) for the Health Department to have access to and make better use of these excellent resources.

6. The development of a student evaluation in order to measure the Health program as to the needs it meets.

7. That Drivers' Education remain out of the Roosevelt Health Program. They are doing an outstanding job.

HEALTH EDUCATION AT ROOSEVELT HIGH SCHOOL
Portland, Oregon

AN EVALUATION

Curriculum

Roosevelt High School's Health Education Program is an educationally sound program from its philosophical foundation to its teaching strategies and evaluation activities. The program focuses on the developing individual as he explores new knowledges and ideas, begins to understand himself, and makes decisions. The interesting design of the curriculum is that while the focus is on the physical, emotional, and social components of the individual; the individual is interacting with his family and community environment.

This program reflects current health education philosophy and a professional committment by staff members. Portland has received full measure and more from the three Roosevelt teachers. They have taught well and planned an outstanding curriculum at the same time.

The careful curriculum planning for career exploration needs special mention. The Roosevelt High teachers have done what I believe many career programs lack. That is, the teachers begin by helping the individual see who he is and where he wants to go because part of any career choice is helping individuals see that work and self-fulfillment are closely allied.

The staff spends much time helping each young person to realistically assess his abilities, skills, and values; but they also put much responsibility for searching out information on the students. The use of field experiences is a big part of Health Careers Exploration and it should be noted that it takes a great deal of time to search out such opportunities and time to prepare students so they will benefit from the experience. In addition there is much value in the public relations aspect of such experiences.

Two other pluses for this program are the availability of a school bus for health career field experiences and the easy accessibility of the Career Center.

Commendations:
1. Careful program planning.
2. Innovative unit definition and development.
3. Marriage of health career and health education.
4. The time the staff gives in program planning and especially the time and care they give to planning the career education components.

Recommendations:
1. Continue the course for a full year -- anything less will dilute an outstanding program.
2. Resist incorporation of nonrelated studies such as driver education into health education.
3. Provide release time or summer employment to finalize the design of this program. Too heavy a work load will eventually diminish the enthusiasm and thus the quality of input to this program.

Instructional Process

Student health needs are met through utilizing student interests and student decision making. This insures that content selected for study is meaningful to this age group. It also mandates that teaching strategies vary to provide flexibility in meeting the learning styles and abilities of young people.

The health education staff indicated their concern for and the need to challenge the gifted student. They are aware, however, that designing and implementation of a basic program must be their first priority.

Provision is made for the slower students by providing smaller classes. The health education staff did express the need, however, for more appropriate learning materials for these students. Such material may need to be developed as little is available commercially.

The staff is to be commended for the use of wall space to make easily available referral information on personal health matters; i.e., venereal disease clinics.

The evaluation tests designed for classroom work go beyond the cognitive levels. Each test contains affective and action measurements. Of particular interest are the ungraded opinion-type items included on each test. The assessment tools prepared reflect the philosophy of this program in that they aid in helping students understand self in relationship to the decisions the students are making.

Evaluation by students of resources is an integral part of this program. Also administered at the end of the year is an evaluation by students of the learning opportunities and of the teaching strategies of Health Careers Exploration.

One problem which exists is that students come to this program with varied backgrounds. Possible solutions might be to:

1. Devise entry skill assessment instruments and schedule students according to the results of the assessment.
2. Increase space, materials, and teacher time so greater individualization can take place.
3. Devise elective courses which students can select after they have finished the basic course.

Commendations:

1. A program which meets student needs through addressing itself to student interests.
2. The professional concern of the staff for their students.
3. Individual contracts available to students.
4. The assessment instruments prepared by the staff.
5. Inclusion of questions concerning the affective and active domains in examinations.
6. Provision for establishment by students of their own learning objectives.
7. The appointment of a department head for health who can help to ensure that health education gets its share of budget and time allocations.

Recommendations:

The book containing learning strategies needs a different format to enable other schools to use it. This recommendation is made on the assumption that someone not involved in the planning of such a program and probably less sophisticated in approaching health education might find the less traditional organization difficult to use. I would suggest a format of more traditional health area; i.e. mental health, and on each upper right-hand corner, identification as to whether it is exploratory, self-concept, or decision-making.

Facilities

The health education complex has the advantage of being flexibile; that is, it can be used for large, small, or medium group instruction. However, the mechanism for dividing is cumberson. Light-weight, taller, and attractive dividers would improve the environment.

Office space for instructors and storage space for materials is provided. As the program develops and learning opportunities for the slow student and for the gifted student increase, some provision should be made for individualization. Two or three carrels with filmstrips and filmloop projectors, headsets, etc., could provide some flexibility.

Even without programming to meet gifted and slow students' needs, carrels or stations supplied with hardware (filmloop projector, overhead projector, etc.) would allow students to increase their choices of learning activities in which to be involved and/or increase their own responsibility for accomplishing the learning objectives they are allowed to establish.

Commendations:
1. Room flexibility.
2. Location near Career Education Center and its computer.

Recommendations:
1. Acoustical treatment of the room.
2. More easily maneuvered dividers.
3. Better lighting and brighter room colors.

Learning Materials

A variety of written materials are available. Some storage area exists.

There appears to be a need for more multi-media materials. To increase opportunities to reach the different learning abilities and styles of students, greater variety and amounts of materials need to be available. Equipment to use these materials should also be in the health education area if responsibility for one's own learning is an objective of health education. Stations or carrels could be set up so that use of the materials and equipment is possible by individuals and small groups. (See facilities.)

Recommendations:
1. Increase audio-visual materials such as charts, models, filmstrips, filmloops.
2. Increase equipment needed to use materials such as projectors, tape recorders, TV outlets.
3. Increase supplies so students can make visual aids such as transparency material, cassette tapes, and poster material.

General Recommendations

This program has had long hours of planning to bring it to its present day quality. I suggest some released time or summer employment to allow the teachers to finalize their plans. Development, implementation, and refinement is a full-time job; along with this, these three people have done a commendable job of teaching -- another full-time job. Too heavy a load will begin to take a toll in enthusiasm and in quality of work.

This program should be available to all students in Portland, not just Roosevelt High students. It is an exportable program.

There should be some planning for future efforts to develop materials and teaching strategies for the slower and the gifted students.

This program should be publicized because there are too few good health education programs available for observation.

D

Summary

The Health Career Exploration Project at Roosevelt High School, presently completing its third exemplary year, has been a valid and needed project.

The project goals were in fact sufficiently met. Initial ground work during 1972-1973 enabled the project staff and field testers during 1974-1975 to delineate and refine classroom activities of most benefit. Those activities appear in the attached supplement --- Health Career Exploration II.

E

CONCLUSIONS

Student, staff, administrative and third party evaluations of the Health Career Exploration Project have been positive in nature. Inquiries, visitations and guest speaker requests, both in and outside the building, have increased considerably. These factors, along with activities and materials developed, would tend to support the following conclusions:

1. Statistically Health Career interest is a mounting student concern.
2. Community support and involvement in off-campus exploratory field experiences is positive; it has been a significant factor in the exposure success.
3. A full year Health Education program increases potential for the integration of Health Career components into an existing Health Education curriculum.
4. Dialogues and interdisciplinary flow charts have increased student accessibility to career information as it interweaves through curricula outside of Health Education.
5. Financial limitations, imposed after proposal goals were submitted, limited the depth to which some goals were conclusively completed.
6. Outside inquiries, requests for curricula and visitation privileges indicate that the Roosevelt Health Project is gaining notoriety.
7. Roosevelt students have had an increased number of career opportunities and involvements, both inside and outside the school itself, as a result of the Health Career Exploration Project.
8. MOST SIGNIFICANT OF ALL, THE HEALTH CAREER EXPLORATION PROJECT AT ROOSEVELT HAS SHOWN THAT CAREER EDUCATION AND HEALTH EDUCATION CAN BE SUCCESSFULLY INTEGRATED INTO A FULL YEAR HEALTH EDUCATION PROGRAM.

It is the Directors' opinion that:

1. The success of the project is highly attributable to staff member involvement and administrative support.
2. The continuation of this project, as an integrated phase of curriculum, will necessitate administrative input, counseling assistance and continued staff orientation toward career education.
3. Interest throughout the state has shown that the integration of health education and career education is of mounting interest to both health educators and career educators.

4. The state department should find a means of sharing with health educators throughout the state the activities which are attached in the supplement Health Career Exploration II. These activities did field test positively.

5. Health career education is appropriate, imperative and a professional obligation of all health educators.

F

RECOMMENDATIONS

See third party evaluations - Section C.

In addition to third party evaluation recommendations, the following recommendations are made by the project staff:

1. Alternative methods of transportation need to be found if Roosevelt transportation alone cannot sustain student exploratory needs.
2. Additional methods need to be found in order to involve Health professional personnel in Health Career Education.
3. Roosevelt High School needs to develop processes whereby Health career interests by students are met beyond the exploratory level, other than work experience involvement. This might imply the development of a junior or senior course, or active recruitment to Health Cluster programs already existing in Area 1 (Jefferson and Lincoln High Schools).
4. One free period without other duties needs to be provided for an individual to coordinate student involvement if student interest levels remain stable.

B. FIELD TRIP APPRAISAL

	Obj.Yes/No		Comments and suggestions:
1. Arrangements were properly made	Y		1. good opportunity for students to compare prices and ask questions about nutritional quality
2. Information supplied by company was appropriate to objective	Y		2. trip would indicate health stores evasive in response to questions re FDA, rules and regulations, additives, etc.
3. Students were allowed to ask questions	Y		3. owners were very cooperative and informative, in their field
4. Company representative communicated well with students	Y		4. yes - allowed sufficient time for questions and answers
5. Field trip should be recommended to others	Y		5. yes - would recommend that trips of this nature follow a nutritional unit in the classroom

APPENDIX A.3

FIELD TRIP EVALUATION

NAME:____________________
SITE:____________________

1. Why did you choose this particular trip? (in other words, what was your goal?)

2. In at least five sentecnes, explain what you saw and heard:

JOB DESCRIPTIONS:

1. Approximately how many people does the site of your field trip employ?__________

2. What are five (5) kinds of employees that work there?
   1.
   2.
   3.
   4.
   5.

3. Of all the occupations you observed which requires the least amount of knowledge and/or skills?

   Why?

4. Of all the occupations you observed which requires the most amount of knowledge and/or skills?

   Why?

5. Are employees unionized or professional. (circle one or both)

6. Describe working conditions (inside, outside or both; extreme temperatures; noise and vibrations; hazards or risk of bodily injury; fumes, odors, dust, poor ventilation; hours -- day, swing, nights, weekends, holidays, etc.)

7. Is there an opportunity for service to humanity? Yes No (circle one or both)

8. Are there advancement possibilities? Yes No (circle one or both)

9. What is the starting salary for the job that interested you most?
   Job______________________________Salary________________________

10. What expectations does the employer have in terms of dress and appearance?

11. Is the site of your field trip government supported or private? (circle one or both)

EMPLOYMENT POSSIBILITIES:

1. Would they hire a high school graduate? Yes No (circle one or both)

2. How should an employee be prepared for the job? (a particular job you choose)

3. Do they offer on the job training? Yes No (circle one or both)

4. Do they offer incentive programs -- more pay with experience, etc? Yes No

5. Do they have summer employment opportunities for high school students? Yes No

6. Who would you talk with about obtaining a job at your field trip site?

7. Are demands for employess increasing or decreasing? Yes No (circle one)

BENEFITS:

1. What role does the place you visited play in relation to the total community?

2. Did you personally benefit by this experience? Why - or why not?

FIELD TRIP EVALUATION FORM

NAME: ____________________
DATE: ____________________
SITE: ____________________

Circle answer where choices are given

1. Do you feel that the field trip was informative? Yes No

2. Was the field trip interesting to you personally? Yes No

3. Would you suggest that others go on the same trip? Yes No

4. If you answered no to number 3, explain why:

5. Do you feel that the employees were eager to see you and to answer your questions? Yes No

6. Was your guide well informed about all aspects (parts) of the work involved? Yes No

7. Would you be interested in exploring this area of work more fully? Yes No

8. Was enough time spent on this field trip? (circle answer below)

January 7, 1974

American Ambulance Company
2007 Broadway
Vancouver, Washington

Gentlemen:

This is to confirm with you the arrangements made for a Health Careers exploratory field trip on January 17, at 1:30 p.m.

The students involved in this visit will be soohomores who are exploring future careers in all health fields. They are learning about job activities, ecucation and training required, related fields and future employment possibilities. These trips are made in very small groups and are chaperoned by a parent or teacher.

As you know, the students making this trip are particularly interested in the combination of medical/mechanical ability required for this career field. If, for example, a vehicle with air conditioning requires a heavy duty radiator, what types of equipment are contained in the body of an ambulance that would require corresponding "support" equipment under the hood? Following this, what types of medical/mechanical skills are required of properly trained drivers to assure that the vehicle is functioning correctly?

Thank you for your help in giving our students community support to further their education.

Sincerely,

Margaret Smith, Chairman
Health Department

Mr. Cleaver
Oregon School for the Blind
Salem, Oregon

Dear Mr. Cleaver and student hosts:

The Roosevelt High School Health Department and sophomore health students wish to express our sincere thanks for the tour of your campus. We are especially appreciative of the manner with which the student guides conducted the tour. It is not often that a large group, such as ours, is met with such enthusiasm, courtesy and friendly manner.

Our students left your campus with an enlightened attitude and satisfied curiosity, thanks to the complete and informative tour given by the student hosts.

Again, we are thankful for your hospitality on this visit and we look forward to visiting with you in the future.

Sincerely,

/s/ Margaret Smith

Margaret Smith, Chairman
Health Department

TITLE: RESEARCH AND DEVELOPMENT OF NEW APPROACHES TO VOCATIONAL EDUCATION IN ORAL COMMUNICATION SKILLS FOR BUSINESS STUDENTS. FINAL REPORT.

PERSONAL AUTHOR: DEMICHELE, LYNNE

DESCRIPTOR: *BUSINESS EDUCATION; *ORAL COMMUNICATION; *COMMUNICATION SKILLS; *CURRICULUM DEVELOPMENT; POST SECONDARY EDUCATION; ORAL EXPRESSION; SPEECH CURRICULUM; SPEECH IMPROVEMENT; *SPEECH INSTRUCTION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 139P.; PORTIONS OF THE ORIGINAL DOCUMENT ARE OF MARGINAL LEGIBILITY, BEST COPY AVAILABLE. PAGES 99 THROUGH 103 CONTAINING TWO COPYRIGHTED EXCERPTS FROM THE BOOK "PERSON TO PERSON: AN INTRODUCTION TO SPEECH COMMUNICATION" HAVE BEEN REMOVED.

ABSTRACT: THE PURPOSE OF THE PROJECT WAS TO RESEARCH THE DEMANDS OF BUSINESS AND INDUSTRY FOR SPECIFIC ORAL COMMUNICATION SKILLS IN ORDER TO PROVIDE A BASIS FOR DEVELOPING AN APPROPRIATE INSTRUCTIONAL PROGRAM IN A TECHNICAL COLLEGE CURRICULUM. THE FOCUS OF THE STUDY WAS ON THE NEEDS OF STUDENTS ENTERING THE JOB MARKET AT THE TECHNICIAN LEVEL IN SECRETARIAL, DATA PROCESSING, AND ACCOUNTING AREAS. PROJECT GOALS, RESEARCH STRATEGIES, AND RESULTS ARE SUMMARIZED IN THE EIGHT-PAGE REPORT AND DETAILED IN THE NINE APPENDIXES (124 PAGES). BASED UPON INFORMATION OBTAINED FROM A QUESTIONNAIRE SURVEY OF LOCAL BUSINESS PEOPLE AND AN EXAMINATION OF PUBLISHED DATA, SPECIFIC COMPETENCY AREAS WERE IDENTIFIED AND AN INSTRUCTIONAL DESIGN DEVELOPED. PROJECT OUTCOMES CONTAINED IN THE APPENDIXES ARE: AN INSTRUCTIONAL PACKAGE FOR A 12-HOUR MINICOURSE "MARKETING YOUR OCCUPATIONAL SKILLS" ALONG WITH A PROPOSAL FOR IMPLEMENTATION; PROPOSALS FOR CURRICULUM REVISION AND FOR A TEAM APPROACH TO COMMUNICATION SKILLS; A COURSE SYLLABUS ON ORAL COMMUNICATIONS WHICH INCLUDES INSTRUCTIONAL OBJECTIVES AND A BIBLIOGRAPHY OF INSTRUCTIONAL AND RESOURCE MATERIALS; DIAGNOSTIC TESTING PROCEDURES FOR STUDENTS; AND THREE PROJECT PACKAGES FOR STUDENTS ON TELEPHONE USE, TRAINING INTERVIEW, AND PERSUASION. III. Statement of the Problem:

Preliminary research indicated a discrepancy between the instructional objectives traditionally associated with an oral communication course and the practical demands of the business environment. Consequently, the purpose of this project was to research specific demands of business and industry for oral communication skills. The specific focus was on the areas of Accounting, Data Processing and Secretarial Science. The data collected was then to be utilized as a basis for designing a new more relevant approach to speech for technicians.

IV. Priority Area:

The priority area of the project was that of technical business students enrolled in the three specific programs mentioned above. This area represents the largest majority of technical students enrolled in Oral Communications courses. As research has verified, most current approaches to the course do not adequately prepare students for occupational demands for oral competency.

V. Strategies:

1. A cross section of businesses and industries in the Indianapolis area were surveyed to determine relative importance of a range of communicative skills. (See Appendix A)

2. Next, standard research sources were examined in order to find pertinent information and any current collected data on the subject.

3. Information extracted from this research was used as a basis for forming a specific discussion of the problem, a definition of educational needs indicated, an analysis of the system under study (Indiana Vocational Technical College), and a plan for implementing a teaching approach. (See Appendix B)

4. Current books in print falling in the general category of communication texts were reviewed. Speech Communication: A Career Education Approach by Ray E. Nadeau (Addison-Wesley, 1974) was determined to be most nearly aligned with the primary learning objectives indicated by our research.

5. To meet a pressing need for students to be able to apply communicative skills to marketing occupational skills, a supplementary mini-course was developed. (See Appendix C) In addition, a proposal was presented to the Administration of Indiana Vocational Technical College for the implementation of the course in the business curricula. (See Appendix D)

6. To improve the articulation of the Oral Communication Course with other elements of the business curricula, two proposals were developed: "Proposal for Curricular Revision Necessary to Facilitate Implementation of New Oral Communica-

tions Course: (See Appendix E) and "Proposal for Shared Responsibility of Communication Skills Instruction".

7. The need for supplementary course materials having been previously assessed, the following were planned and produced:

Video tape: "The Job Interview Attitude"

Video Tape: "The Message is You"

A list of other needed materials was prepared from commercial sources and was included in the course Syllabus.

8. An Oral Communications Course Syllabus was prepared including rationale, course description, instructional objectives, references, and supplementary materials list. (See Appendix G)

9. A diagnostic testing procedure was developed for the purpose of assessing entry level skills and defining individual needs relevant to the purpose of the course. (See Appendix H)

10. The described instructional approach was implemented in two Oral Communications sections for one quarter and an evaluation made.

VI. & VII. Analysis and Findings

For a description of methods of data collection and analysis and for research findings, see reports contained in Appendices A. and B.

VIII. Evaluation

The purpose of this project was essentially two-fold, that of research and development. The significance or impact of the effort can only be assessed through a careful follow-up study which would provide data for an evaluative judgment. Specifically, when the project's resultant proposals (curricular and instructional) are implemented, preferably in a control group situation, a study may be made of relative occupational successes and failures of students having taken Oral Communication. Since the project commitment was to research occupational demands for oral competency and to develop a teaching approach to meet those demands, achievement can only be measured by studying relative improvement of students' ability to function communicatively in the occupational environment.

IX. Conclusions and Recommendations

The major objectives of the proposal were met as a result of this project, and several aspects of the endeavor were expanded beyond initially established parameters. The demands of specified vocational areas of business for oral competency were more widely researched than originally planned. As advised by the institutional steering committee, research was expanded to include data pertinent to business throughout the country rather than being limited to the Indianapolis area alone.

In the course of research the need was discovered for a comprehensive instructional approach to the problem of marketing occupational skills. As the many facets of this problem could not be dealt with satisfactorily wedged among the many objectives of an Oral Communications course, it was apparent that special treatment was required. The result was the mini-course, "Marketing Your Occupational Skills" which is designed as a 12-contact hour instructional package which may be implemented as an addition to present curricula or as an adjunct to an existant course. The primary purpose of the mini-course is to guide students in applying a variety of key communicative skills to the task of studying a particular job market and presenting their particular profile to best advantage in that market.

The initial objective of the research was to provide a basis for the development of an instructional approach to an Oral Communication course for business students. The realization of this objective culminated in the formulation of a course syllabus including rationale, course description, learning objectives, suggested supplementary materials and text. An informal survey of college speech instructors clearly emphasized the importance of a good text to students' feeling of educational cohesiveness and direction, and also to a certain uniformity of instructional content. As a result, current relevant publications were searched for a potential text which was most closely aligned with objectives established through research. The Nadeau text was selected, utilized in five sections over a period of two quarters, and found to be appropriate with only minor reservations. The first section on fundamentals of the communication process seemed to confuse some students and necessitated much explanation and discussion. Subsequent chapters, however, were more widely well-received and served course objectives successfully. The unit dealing with job interviews was omitted in favor of the more comprehensive treatment in the mini-course mentioned above. In place of the unit, a practice was inserted for using the business telephone effectively.

After testing the course objectives and specified text, it was determined that certain supplementary materials would enhance the implementation. Consequently, a number of project packages were developed, a list of commercially prepared supplementary materials compiled, and two video tapes produced. The tapes were planned so as to present two specific concepts not dealt with in any previously produced medium. One video tape is concerned with the applicants' attitude as it is reflected during a job interview. ("The Job Interview Attitude") The second tape is designed to function as vital rationale and introduction for the Oral Communication Course. ("The Message Is You")

In order to facilitate the utilization of these concepts and materials, a series of proposals were written and directed to the institution's Central Administration. If approved, the proposals will provide for the statewide implementation within the Indiana Vocational Technical College system of the new oral communications instructional approach and the mini-course. They will also provide for improved cooperative effort among program and related studies instructors and for more consistent reinforcement of communicative skills throughout the students' educational experience.

The one project objective which necessarily requires further investigation was that of determining a diagnostic testing procedure which would allow instructors to assess individual strengths and weaknesses in Oral Communication and, consequently, individual educational needs. Mrs. Simone's study of existing test methods revealed a number of reputable approaches for diagnosing pathological speech problems and for diagnosing problems associated with voice production and articulation. It was agreed, however, that the scope of this project did not allow for a thorough referencing of available corrective procedures but that this might be the object of a future study. Consequently, to serve immediate needs a simplified diagnostic procedure was designed to be used to stimulate a student's self awareness and to help him focus more objectively on his own communicative image. Due to time limitations we have elected to use a mirror rather than a microscope.

One of the most persistent problems observed among vocational business students is that of the use of nonstandard dialect (i.e.: black ethic). As studies indicate that general effectiveness and upward mobility are enhanced by the use of standard non-dialectal English, it seems advisable to address ourselves to the objective of providing the necessary training in this area. The dialectal problem is certainly not difficult to observe. It is on the other hand, extremely difficult to deal with within the confines of a single communications course. Therefore, it is recommended that this specific concern be the object of continued research for the purpose of ultimate development of a specialized

7

training program to be offered optionally to those students who might benefit from such.

Finally, in viewing the project as a whole it is felt that in order to validate the results and to maintain relevance to occupational demands, an ongoing follow-up study of business students should be instituted. Specifically, an efficient evaluative instrument should be designed by which means we might receive feedback from employers of our students regarding observable applications of the communicative skills which we have sought to develop through the course. In addition, periodic dialogue between oral communication instructors and employers is essential if we are to keep up with changing trends and to maintain educational vitality.

FINANCIAL STATEMENT FOR FINAL REPORT ENDING August 29, 1975
(Date)

Project Number 40-74-02

ITEMS	Project Budget FY 1974		Total Expenditures on Project		End of Project Balance:

Director:

Project Monitor

LEA: Indiana Vocational 1Technical College

Explanation of Budget Reapportionments

Funds in excess of the originally budgeted amount for "Contractual Services" were expended in order to accomodate personnel necessary to the completion of the two video tape productions. However, because the College purchased new video equipment, anticipated expenditures for property rental or purchase were no longer necessary, freeing those monies for use in other categories.

In addition, the only software needed for the project consisted of a series of video cassettes which were charged to the "Product Dissemination" category rather than "Supplies and Materials" as they were used to distribute the video material to other regional campuses for trial implementation.

The overage in "Communications" costs was due to the necessity of an unforseen amount of follow-up in order to complete the survey portion of the research.

XII. Abstract

As a result of a need indicated by preliminary research, this project was directed toward the study and definition of the demands of business occupational environments for specific oral communicative skills. The focus of the study was on the needs of students entering the job market at technician level in secretarial, data processing, and accounting areas.

After a survey of Indianapolis business people and research of published data including some of the more exhaustive studies on the subject, it was possible to determine specific competency areas relevant to the problem defined. It was discovered that while certain types of presentational speaking situations are common in the business environment there is a more consistent demand for interpersonal kinds of communication. Research further indicated that true communicative competency is rooted in an understanding of the process, the elements of logic and reason, and an objective view of ones own communicative image.

Based on this information an instructional design was developed for an Oral Communication course for technical business students. Current publications were searched for an appropriate text; a syllabus was written; diagnostic procedure established, and supplementary materials collected or produced. In addition, a special mini-course was planned and an instructional package written ("Marketing Your Occupational Skills") so as to furnish an educational bridge between the academic experience and employment.

In order to provide for the implementation of these plans and materials within the Indiana Vocational Technical College curriculum, a series of proposals were prepared and submitted to the College Administration. At such time as full implementation is possible, it is suggested that an evaluative procedure be established to follow up performance of students having completed the courses. Specifically, the purpose should be to determine employers' assessment of technical graduates' oral proficiencies on the job. Eventually an evaluative instrument should be applied in order to ascertain how occupational advancement is affected by communicative competency.

REPORT

ON

SURVEY OF INDIANAPOLIS BUSINESS EMPLOYEES

APPENDIX A

Report

On

Survey of Indianapolis Business Employees

BACKGROUND STATEMENT

In our research of studies conducted in this area, it was discovered that volumes of data have been collected from educators and administrators but there is little evidence of effort to collect opinions of those employed in positions with which we are most concerned. Therefore, in order to add the needed dimension to our research, we determined to probe the job level resources -- those most closely in touch with the question.

PURPOSE OF THE STUDY

The purpose of this study was to solicit responses from individuals employed in given occupational areas in order to determine their assessment of necessary oral communication skills and to solicit their opinions as to relative importance of specific skill areas (established through preliminary research.)

HOW THE STUDY WAS CONDUCTED

Two hundred questionnaires were mailed during August and September of 1974 to individuals employed in the Indianapolis area. Names for the mailing list were selected from the roster of the Indianapolis Chapter of the National Association of Accountants, the roster of the Indianapolis (Tri-Harmony) Chapter of American Business Women's Association and the Directory of the Indianapolis Association for Systems Management. Chosen from each roster was a random sampling of names associated with technician level job titles to those of mid-management. In addition, members of the IVTC Region 08 Advisory Committee for each of the three business programs were included.

LIMITATIONS

During November an attempt was made to follow up by phone each mialing for which no reply had been received. By the end of the survey period (Dec. 13, 1974), 30 responses (15%) had been collected. Due to project schedule limitations there was insufficient time to resolicit. Of the respondents, seven were employed in secretarial positions; nine, accounting; six, data processing; eight, management.

The preponderance of the respondents were those with job titles which seemed to indicate a mid-management level position. Perhaps those with experience and success (as measured by job advancement) are more inclined to respond to such a survey than those more recently entering the field. The lack of many responses from individuals at technician or beginning job levels may be explained by the large amount of questionnaires marked undeliverable due to addressee's having left place of employment. The mobility or transience of the graduate newly entering the job market is supported to a noticeable degree by the 1974 Follow-up Study of Ivy-Tech Graduates.*

---

*Compiled by Austell O. Sherard, Dept. of Research Division of College Services, IVTC

In spite of a lack of sufficient responses from a "technician level", information gathered in this survey has significant validity for the fact that respondents were generally in a position to have experienced or observed the progression from technician to a level of greater responsibility and thus were qualified to comment on skills necessary to successful functioning.

QUESTIONNAIRE RESPONSES

Question #1 - "What percentage of your average working day do you estimate is spent in oral communication?"

Average response: 50%

Question #2 - "What is the degree of frequency with which you communicate orally to people in each of the following groups? Please rate as follows:

5 very frequently
4 frequently
3 on occasion
2 infrequently
1 rarely

Avg. Response: 3.9 - Office Peers - Example: The most frequently mentioned example was "conferences", specifically for the purposes of progress reporting and general problem/solution discussion. Other purposes mentioned were: explaining, planning, seeking information, and discussing responsibilities and professional matters.

Avg. Response: 4.2 - Office Subordinates - Example: The majority (19 respondents) listed "conferences" for the purpose of "instruction" and/or "explanation" also mentioned were "general discussion", conferences to "coordinate" and "review progress".

Avg. Response: 3.6 - Office Superiors - Example: Most frequently mentioned (15 respondents) were "progress reports". Next most common response was unspecified "consultation" or "conference". "Asking for information" and "receiving instruction" were also mentioned.

Avg. Response: 2.9 - Customers or Clients - Example: Most frequently mentioned by those respondents for whom this category applied were "explanation" and "giving information" particularly in regard to services. Also mentioned were: "solving problems", "instructing", "conferring" and "intercepting calls."

Avg. Response: 3.04 - Other businessmen - Example: Oddly enough, this was the only category with practically no noticeable commonalities in the responses. Examples given were quite divergent ranging from "community affairs" and "professional association meetings" to "coordinate projects" and "compare systems and problems." Most of the examples given were by respondents other than secretaries.

Question #3 - "Please rate each of the following basic oral language skills according to degree of influence your mastery of such skills has on personal effectiveness and job success. Please use the following scale."

5 extremely influential
4 influential
3 influences in some instances
2 influences only when there is a serious lack of mastery
1 does not influence noticeably at all

Avg. response:	4.6	Vocabulary
	4.3	Grammar
	4.1	Flexibility

Question #4 - "Describe your reaction to associates who use regional or ethnic phrasing idiom or slang. (ie: "Down home" Southern, black English jive). Please be specific."

Response: With two exceptions, respondents were in agreement on this question. The general attitude seemed to be tolerant of regional accent, but intolerant of excessive use of "non-standard" English and particularly bad grammar. Many respondents mentioned the value of individuality in language, but emphasized the importance of "acceptable English" in business situations.

Question #5 - "Explain which qualities and skills appear to be most influential on job success and rate of promotion or advancement. (Other than technical ability.) Please list in order of greatest importance.

The following characteristics were mentioned most often: (in order of frequency)

1. Ability to communicate orally
2. Ability to communicate in writing
3. Ability to influence and work with others
4. Pleasing, cooperative personality

An interesting amount of detail was given as regards personal characteristics. Conspicuous in the responses were the following phrases: "pleasant aggressiveness", "enthusiasm", "willingness", initiative", "adaptibility".

Question #6 - "What are some of the main reasons you feel would cause an individual to not succeed at your job level? (Other than a lack of technical skill)."

There was a noticeable degree of agreement in the responses to this question. Most frequently mentioned were: (in order)

1. Inability to communicate effectively (most who mentioned this specified "orally")
2. Inability to get along with others
3. Lack of dedication or interest
4. Undependable - lack of self-discipline

16

5. Lack of adaptibility, flexibility
6. Lack of consideration
7. Lack of confidence
8. Inability to make decisions

Questions #7 - "Please rate each of the following skills with respect to their relative degree of importance to your efficient functioning at your particular job level."

Avg. response:
3.8 - conducting meetings or conferences
3.8 - participation in conferences
4.3 - group discussion (ie: problem solving)
4.0 - oral reports
4.3 - interpersonal problem solving
4.3 - orientation of new employees
3.8 - interviewing prospective employees
3.6 - introducing people
3.9 - giving technical instructions
3.8 - giving non-technical instructions
3.3 - giving technical explanations to laymen
4.2 - business telephoning
3.9 - social conversation
4.3 - persuasive speaking (ie: "selling" superiors on a new procedure etc.) Give specific examples

Question #8 - "In your opinion, which oral communication skills will be most important five years from now at your particular job level?"

The following skill areas were mentioned by respondents:

Skill Area	# of Respondents listing
Group Discussion - leading/participating	8
Giving Instructions	7
Persuasive talks	5
Command of language (vocabulary grammar)	3
Oral reports	3
Skill listed in #7	3
Interpersonal Communications	2
Giving Explanations	2
Telephone Communication	2
Listening	1

APPENDIX B

REPORT:

Research and Development of New Approaches to Vocational Education in Oral Communication Skills for Business Students

I. Premise

II. Discussion of the Problem

III. Definition of the Needs

IV. Analysis of System Under Study

V. Plan for Implementing Teaching Approach

Appendices

I

PREMISE

The basic assumption which was the foundation of this project was that Oral Communication Skills are of primary importance in business-related job performance. The evidence in current research and commentary is overwhelmingly supportive of this premise.

Dr. Kathryn Clark in her analysis of current writings on the subject concluded that "the typical businessman, regardless of the organizational level he works in... spends so much of his time talking that he must be skillful if he is to succeed."[1] Clark further states that "the ability to communicate is one of the first, if not the first of the factors considered in selecting and promoting...staff specialists."[2]

Aside from the current established needs for oral competency, there are significant indications of increasing future demands in this area. Dr. A.G. Hergenroeder addressed herself to the subject in her research on businessmen's perceptions of necessary communications skills. She concludes that "...authorities in the field claim oral communications will increase and be substituted for the written form whenever a copy is not mandatory."[3] With the accelerated pace of modern business, an emerging "business humanism," and the development of sophisticated devices and techniques for expanding oral communications, it is evident that we must focus more and more on the process of speech in human interraction.

II

DISCUSSION OF THE PROBLEM

Concern over an apparent discrepancy between needed communication skills and the actual training provided in college courses, prompted a skeletal survey of current literature on the subject. A growing awareness among educators and businessmen of the lack of sufficient oral competency in graduates entering the business job market is evident by the recent number of publications addressed to the problem. Similar pleas are being voiced time and again: "Students need to Learn Interpersonal Communications"[4] "Business Needs Office Workers Trained In Oral Communications"[5] "On-the-Job Communication: Why Isn't It Easier?"[6]

---

[6] Sayles, Leonard, "On-the-Job Communication: Why Isn't It Easier?" Supervisory Management, 7:2-6, July, 1962.

In her dissertation on oral business communication needs, Kathryn B. Clark reviews extensive research of literature in communication and education for business, and a survey of educators and businessmen. She concludes: "Evidence from the study confirmed the tentative assumption that, in general, graduates of collegiate schools of business are not sufficiently well prepared for their roles in business that depend on oral skills; further, that courses of study of some business students include little if any work specifically aimed at so preparing them".[7]

The problem is also recognized by the graduates themselves as Robert Gordon and James Howell comment in their report: "One of the strongest complaints of business school graduates is that they had insufficient training in verbal communication".[8]

Angela Hergenroeder, after a thorough study of Business Communications in Ohio Community Colleges, concluded that the emphasis was in writing skills and that "Oral Communications were not considered to be very important or necessary: relatively little teaching emphasis was placed on oral communications." Dr. Hergenroeder's findings appear to be typical of college business departments as supported by several similar studies in other states which she cites in her dissertation. Moreover, the Enquist study of community colleges further underlines the pervasiveness of the problem of emphasis on the "business English approach" as opposed emphasis on communication.[10]

A probable explanation for the neglect of Oral Communications training in the past was the faulty assumption that because people could speak, they could communicate. Another factor was undoubtedly the popular emphasis on putting everything in writing.

Another apparent lack of training in this area has to do with a rather specialized oral communication akill--interviewing for a job. A common complaint among employers is the interviewees lack of understanding of the interview situation and lack of ability to "sell" himself and his potential value as an employee.

III

DEFINITION OF THE NEEDS

The surge of scholarly writings addressed to this issue lately provided us with a wealth of resource material to sort through. After examining various commentary of the past ten years and through part of 1974, we were led through our research to one particular study which has provided us with valuable documentation for the definition of specific oral communication skill needs.

In her doctoral dissertation in 1968, Kathryn Bullington Clark collected information from a national sample of executives in business and government (100 respondents) and from a select jury of ten business educators. Her purpose was to establish oral business communication needs as a basis for improving college courses.

---

[7] Clark, ap. cit, p. 420

[10] Enquist, M.A., "A New Direction for Community College Business Writing Courses." The ABCA Bulletin 33:22-24; April 1970, as cited by Hergenroeder, op. cit, p. 24

Although the focus of the study was on skills necessary for students aspiring to management levels, Clark does conclude:

> For the most part, the same types of oral ability are needed across a broad occupational range and at various levels of the organization from industrial foreman and beginning office worker to company president, circumstances alter the format and "mix" of the communicative tasks involved but apparently not the nature of the basic abilities.[11]

In Dr. Clarks's dissertation we are provided with the extensive scientific research into the specific nature of the instructional needs in question, which would not have been otherwise possible within the parameters of this project. Consequently we are grateful to her for providing the documentation necessary for us to establish a valid basis for our instructional approach. (See Addendum)

In addition, information gathered through our survey of local business personnel enabled us to see a significant correlation between our conclusions and those drawn from Clark's national sampling. In other words, the apparent damands for oral competency in local business areas is not appreciably different than those anywhere else.

Our survey also provided us with needed information in an area of concern not covered by the Clark study. As we have observed vocational technical students - specifically those attending I.V.T.C. - it has become evident that certain socio-economic factors play a part in their competitive job potential as compared to that of other college or university students. There appears to be a greater incidence of language problems in voc/tech students, specifically:

1. lack of sufficient vocabulary
2. non-standard grammar and phrasing
3. strong ethnic or regional speech patterns

We attempted to discover the degree to which this might handicap our graduates by including questions #3 and #4 on our survey. Responses confirmed our assumption that this was an area which warranted particular attention in preparing students for the business job market. (See Appendix A)

IV

ANALYSIS OF SYSTEM UNDER STUDY

Our research of the past quarter has not only enabled us to see the problem defined, but it has provided a basis for evaluating this area of the Ivy Tech curriculum in particular. As it is impractical within the time and budget allowed to make a thorough study of other Vocational Technical Colleges and their philosophy of business education, we will concentrate our efforts on establishing a pilot program within our own State Indiana Vocational Technical Colleges and for a preliminary implementation - specifically within the Indianapolis region institution. Characteristics of this institution's current business education program include the following:

Clark, op. cit, p. 421

21

1. Based on information gathered from high schools, our experiences at teaching High School speech and our experience with speech classes at IVTC, it is evident that only a small percent (Perhaps 10-12%) of IVTC students have ever had a speech course in high school. Moreover, the current emphasis in High School speech courses does not provide students training in interpersonal communication necessary for job success. (See Appendix C)

   Therefore, we may conclude that the design for an oral communication course in this particular area necessarily cannot be based upon students' previous high school experience.

2. All business curricula include a required Oral Communications course (four contact hours - 2 credit hours) in addition to a Business Communications course. This would seem to indicate a commitment to the improvement of the oral competency of graduates. (In a random survey of other vocational technical college curricula, Oral Communications was generally offered as an elective or was only mentioned as a part of a 3-4 credit Communications Skills II or Business Communications course.)

   The necessity for correlation between Oral Communication and other forms of communication is now widely recognized. Oral Communication can and should be a part of the whole study of Business Communication. After students learn the fundamentals of speaking, writing, reading, and listening they should be directed in special applications of each in a situational kind of approach -- one which allows them to employ freely all forms of communication integrally. It is quite feasible that this could be achieved within the limits of IVTC's present curriculum.

3. At IVTC, Accounting and Secretarial students are required to take Human Relations (36 contact hours, 3 credits); whereas, Data Processing students are required to take Psychology (36 contact hours, 3 credits). In most cases these students have had Oral Communications either prior to or during the same quarter as the designated behavioral science course.

   Clark suggests the importance of experiencing a behavioral science course such as Psychology -- preferably before an oral communications course, so that the principles might be integrated through practice. She further suggests that the characteristic superficial nature of most Human Relations courses does not foster the necessary depth of insight. This concern may or may not be applicable to the IVTC course. Lack of standardization or course outlines to review make it difficult to evaluate. This is an area where future research would be very valuable.

4. For the past three years there has been little standardization of course objectives or instructional approach to the oral communication course at IVTC. In 1973 at the Indianapolis region, a series of instructional packages were developed to meet objectives established cooperatively by communications instructors and business instructors. These packages replaced the former text which was essentially a platform speaking manual. The package series on the other hand, contains some situational exercises as well as more presentational tasks. Students have reacted favorably to the format of the materials but content is not entirely effective due to the lack of sufficient time for their research and preparation. As a result, the instructor is called upon to fill in the instructional gaps which is extremely difficult, and the situation results in a lack of consistency from one quarter and instructor to the next.

While the basic concept of the materials -- the objectives -- have been proven valid by this research, they are clearly incomplete and at times inadequate.

Clark suggests that "training courses and methods, however, and wherever organized, should combine declaratory text materials with extensive use of cases, incidents, problems, role-playing, simulation exercises, and other techniques that give students a kind of vicarious personal experience in situations approaching those of actual business life."[12]

A text should undoubtedly be adopted for the course, and in the light of this research the following criteria should be applied:

1. Should explain basic theory of the process of communication, its various aspects and modes.
2. Should discuss the various factors which improve, impede or otherwise affect communication.
3. Should include guidelines for effective listening.
4. Should instruct in formulas for group discussion.
5. Should suggest practice situations for analysis or role-playing or other exercises involving application of interpersonal communication skills.
6. Should function as a kind of reference for the basic principles of preparing for and making a presentation.

5. There is currently at IVTC no formalized procedure for familiarizing students with their area job market, or preparing them for the difficult step between training and employment. This need was recognized as a high priority in 1973, at which time an attempt was made to approach the problem through the Oral Communication course. A number of source materials were gathered as an "interim" reference core for students. There was, however, no single reference or text which could adequately meet the needs of Voc. Tech. students. It was this situation that led us to seek more means of developing an instructional approach for one of the most immediately important of communication skills - that of selling one's self to an employer. Consequently, the first quarter of this project was devoted to producing an instrument for teaching this specialized skill or combination of skills. The result was the draft "mini-course --B-106" submitted with our first report.

The material has been tested as a temporary part of the oral communications course for the past quarter and has proven quite effective. There are, however, a number of revisions which must be made for the sake of clarity and there is also some recent information to be added regarding special help agencies for those with hampered employability.

---

[12] Clark, op. cit., p. 432

V

PLAN FOR IMPLEMENTING TEACHING APPROACH

As a result of the efforts of these past three months, the following plan has been established for completion of this project in the final quarter:

1. A text book will be adopted which meets criteria established in Part III of this report. The adoption will be documented as to: critical reviews, list of other voc. tech. colleges adopting, professional stature - authority - of the writer(s).
2. Course objectives will be written based on skill needs established in the Clark study and local survey and in conjunction with IVTC business curriculum committees.
3. A proposal will be prepared for consideration by the curriculum committees, which will define the suggested correlation of communication courses.
4. The nature and number of any necessary supplementary materials will be determined and an outline or draft form of each developed.
5. Existing instructional packages will be evaluated and revised or eliminated, as indicated.
6. A procedure for testing students for diagnostic purposes will be written.
7. A proposal will be written describing ways in which business instructors and communication instructors might share the responsibilities for instruction in communication skills.
8. If time allows, a final draft of the job application-12 hour mini-course will be prepared along with a proposal for its implementation.

ADDENDUM

from

the doctoral dissertation:

Oral Business Communication Needs As A Basis For Improving College Courses

by

Kathryn Bullington Clark
University of Michigan, PhD
1968
(pages 429-430)

Characteristics of material and course experiences in business speech include the following specifics...:

1. Work should train in gathering and interpreting evidence, in analyzing ideas through critical thinking and listening, and in distinguishing between the nature and uses of facts and judgments. Logic as applied in presentations should be interpreted to mean presenting facts and arguments in the order in which they can be most easily received, not necessarily following abstract ideas of logical order without regard to listeners. Students should learn patterns for organizing material and some criteria for choosing, as well as patterns and tests of reasoning.
2. Speech training should aim for naturalness and individuality, avoiding teaching of stereotyped forms and procedures that - may result in rubber-stamp, mechanical performance. Students should be helped to develop ways that provide outlets for their own, singificantly different, personalities.
3. Courses should provide instruction and practice in analyzing situations requiring oral communicating, with particular regard to assessing the knowledge and competence of the involved listeners; in framing messages in concrete, interesting, familiar language.
4. Students should acquire an understanding of the communication process and of the importance of attitudes and roles in communicative events.
5. Course material and experiences should aid students to increase their confidence and improve general personal effectiveness in communicating, and should train in the preparation and use of speaking notes.
6. Special training, individualized on the basis of a diagnostic speech inventory, should provide help in improving such elements of vocal effectiveness as voice quality, enunciation, and voice, projection.

Performance Objectives

1. The student should demonstrate the ability to research a particular job market through use of interviews, classified ads and a placement agency; and will submit reports on his findings following given guidelines.

2. He should complete a specified application form correctly.

3. He should prepare a typed resume which effectively presents his qualifications and training, following given guidelines.

4. He should present himself appropriately in a simulated interview situation with well-prepared questions and answers.

Time: 12 hours lesson session
15 mins. interview session
20 mins. interview follow-up

Pre-Interview Personal Assessment 44
Job Interview Rating Scale [illegible]

INTRODUCTION

In the course of your recent training, you have developed a very marketable commodity--your own technical skills. These specialized skills are potentially very valuable in the current business area job market. However, as any marketing expert will tell you, a product must be more than saleable, it must be sold before its potential value can be realized. In the job market, you are the "product"; the prospective employer is the "buyer." This course proposes to guide you in the selling process necessary to gain the best position available to you.

First, you must gain sufficient insight into the current job market in your field in order to determine where you stand as a candidate. Next you will determine the various means by which you can discover specific job openings. At this point, you must tackle the difficult task of making a realistic appraisal of your personal and vocational assets and liabilities, and you will then, with guidance, try to determine how best to present yourself to the market you have defined and by the appropriate means you have determined. Finally, you will begin the process of applying for a specific job or jobs, including the preparation of a resume and planning for an interview.

30

PHASE I

KNOWING THE JOB MARKET

Project 1: "AD PASTE UP"

For a two week period, regularly check the major local newspapers for job ads. (If you are interested in working in another area, you can obtain classified ad sections by writing to the Chamber of Commerce of the city of your choice.) Clip all the ads for positions for which you might apply, date them, then mount them on a piece of paper in order of your preference. Your instructor may ask you to label blind ads, public ads, or agency ads.

Project 2: "AGENCY INTERVIEW"

Select a placement agency to contact (ie -- civil service, State Employment, or private agency). Make an appointment for an interview for the following week. (You will need to allow a week before the interview to prepare yourself.)

Take a notebook with you to the interview and be prepared to make notes on the following:

___ Name of agency and type (specialization)
___ Why you chose this particular agency.
___ Name of person who interviewed you and the kinds of questions he/she asked. Comment, also, on your handling of the questions, any difficulties encountered, and reactions of the interviewer to you.
___ Description of any tests you took.
___ Explanation of [illegible] special requirements or significant aspects involved in registering with the agency.
___ Agency procedures for matching jobs to people.
___ Explanation of how fees are paid.
___ Your personal impression of the experience.

After the interview, organize your notes into a well-ordered report including all pertinent information. Be prepared to present the report written or orally as specified by instructor.

Project 3: "EMPLOYEE INTERVIEW"

1. Obtain the names of two people employed in the kind of job you wish to seek. Call both people and explain that you are a __(program)__ student at IVTC, and would appreciate some help in your job market research. Arrange for an interview this week (either by phone or in person).

2. At the beginning of the interview, make sure the interviewee understands who you are and that you are from IVTC. Ask his permission if you plan on quoting him. Then at the close of the interview thank him for his time and help. If you handle the situation with poise and consideration, you will have made a valuable ally.

3. During the interview find out the following and take notes:

   ___ What are some difficulties you should expect in finding and getting a job in your field now?

   ___ Which particular kinds of jobs in your technology seem to be available at this point?

   ___ What seems to be the starting salary range for someone of your (the student's) training and background?

   ___ What is the usual rate of advancement in the field?

   ___ Would the interviewee suggest any local employers that might consider applications in your field?

   ___ How long has he been employed in the field?

   ___ What, in his opinion, are the good points and bad points about his type of job?

   ___ What suggestions would he make for people like you just entering the job market?

4. After the interview, organize your notes into a well ordered report including all pertinent information. Be prepared to present the report written or orally as specified by the instructor.

5. Write letters to the persons you interviewed thanking them again and commenting on aspects of the interview which were particularly helpful. Submit a copy of the letters to your instructor.

WHERE TO LOOK FOR A JOB

Before you begin the job hunting process, you should determine the kind of location in which you would like to work. You may wish to establish yourself in the city where you went to school, or perhaps you would prefer to locate in another part of the country (or world) entirely. Would you be happier in a small town atmosphere or in a large metropolitan area? To a large extent the kind of job you seek may limit your options.

There are a few large employment agencies advertizing in periodicals such as the Wall Street Journal, which are prepared to place people in almost any given area. If you have a specific region in mind, you can write to a given Chamber of Commerce or local state employment office requesting information about a particular market or even a recent copy of local classified ads. This should give you some company names to which you can send a letter and resume. Also, do not overlook any acquaintances or relatives living in the desired area as sources of information.

Job research in your own locale is somewhat easier because information is more accessible. You should begin utilizing some of the following approaches to your job market research weeks in advance of your availability date.

* INSTRUCTORS, ASSOCIATES, ACQUAINTANCES IN THE FIELD:

Your program instructors are in touch with personnel in your field and keep abreast of changes in your area of the local job market. If you are looking for a particular kind of work situation, make sure your instructors are aware of the fact, they may be able to help you.

Exchanging information with classmates may also be helpful. A position unsuited for one may be quite appropriate for another. In addition, you should contact anyone you know working in the field for suggestions of potential employers or for notice of upcoming job vacancies.

* PRIVATE EMPLOYMENT AGENCIES:

Employment agencies are in the business of matching jobs to people. Many of them specialize in a particular work area and there are also overseas agencies which specialize in placement in foreign countries. If you look carefully, you may find one which seems to fit your particular needs. In each city there are usually a few select personnel agencies which are affiliated with the Inter-City Personnel Association. This is a kind of national multiple listing system which enables affiliates to place people in any area of the country where there happen to be positions available in a given field.

Any of these employment services will require you to fill out an application and/or submit a resume. Many of them will also require an interview. Such agencies frequently are informed of job openings which are not publicly advertised and can give you a number of appropriate "leads" to investigate. In some cases you will have to pay the agency a fee for this service, payable upon your acceptance of a particular position found for you. The amount is usually determined by the kind of job you seek.

Some positions are designated "fee paid" which means the company seeking to hire will underwrite the cost of the agency service, or you may be reimbursed for all or part of the fee by the company you work for, after a given period. Regardless, make sure you read thoroughly any contract you sign with an agency so that you know exactly what your obligations will be.

Agencies can save you some time by screening out all but the jobs most suited to your qualifications. However it is best not to depend on an agency entirely. Your best interests will be served by using a combination of job hunting methods.

* STATE EMPLOYMENT SERVICE:

The local office of the state employment service (or Employment Security Division) is a good source of information on the job market in your particular area. Contrary to popular misconception, this state service provides testing, counselling and placement in a complete range of occupations from unskilled to professional. Also the Clearance Officer there can inform you of job listings in other parts of the state.

The testing service provided can be useful in determining aptitude for a particular kind of work and individual preference areas. As a student completing a period of technical training in a given field, you may find it helpful to take the preference test administered by the service. This will help you to get an idea of some of the special areas to which you might apply your education for the greatest degree of personal satisfaction.

Those who are handicapped, who have police records or other special difficulties hampering their marketability will find special help at the State Employment Office, which may not be available elsewhere. Many local business associations and industries cooperate with the state office in providing positions for such people.

Veterans should make it a point to contact their representative at the local state employment service as they will receive additional services and special consideration in applying for a job.

In summary, there are several advantages to utilizing the services of the State Employment office over those of a private concern: greater diversification of job listing, individualized testing and counselling, and no fee to pay.

* CIVIL SERVICE

Your area Civil Service Commission office tests, interviews and hires personnel for a wide variety of government jobs in work areas such as: offices, laboratories, hospitals, machine shops, national parks, electronics, meterology, research, etc. People are placed throughout the United States and in some foreign countries.

> Under the civil service merit system, appointments to jobs are made on the basis of ability to do the work -- ability demonstrated in competition with other applicants. All qualified applicants receive consideration for appointment without regard to race, religion, color, national origin, sex, politics, or any other nonmerit factor. This is not only a democratic way to fill jobs, but a way to make sure that only the most competent persons available are hired.[1]

Most types of jobs found in business and private industry are also found in Civil Service. However, each area office accepts applications for only those positions which need to be filled. You can find out about the Civil Service job market in your area by visiting the Indianapolis Federal Job Information Center: U.S. Civil Service Commission, Room 123, 46 East Ohio Street, Indianapolis, IN 46204, or by calling (317) 269-7161. In other Indiana locations dial 800-332-1930.

Information provided by these centers includes:

- Federal employment opportunities outlook
- Vacancies in shortage categories--occupations in high demand
- Job requirements and qualifications
- Applications and examination procedures
- Special employment counseling services

These centers are specially equipped to provide job seekers a full range of Federal employment information. The information specialist who answers your inquiry can send you such current printed materials as:

---

[1] U.S. Civil Service Commission, Pamphlet #4, "Working For The U.S.A." (BRE-37), 7 February 1973.

Job announcements
Application Forms
Pamphlets describing special employment programs.

The job announcement will explain specifically job duties and responsibilities and the required qualifications. Read these carefully before applying: if you don't meet given specifications, you cannot be considered. You may, however, receive credit for unpaid experience or volunteer work if you feel it represents "qualifying experience" for the position you seek.

When you apply at a Civil Service office for a position, you will go through an "examination in the form of a written test, performance test and/or interview. Then if your work experience, training and aptitude meet job requirements, your name along with those of the other qualified applicants will be forwarded to the Federal Agency seeking new employees. The final decision to hire is then made by the agency itself usually after another interview.

There are some advantages to considering applying your training in the Civil Service. Benefits are excellent: you do not pay social security (Civil Service has its own retirement fund); vets and the disabled received special consideration; and there tends to be greater job security than with private industry.

* NEWSPAPER ADS

Regardless of what other methods you choose to use in looking for work, you should get into the habit of regularly studying the Help Wanted sections of all the area newspapers. People and companies seeking to hire as well as employment agencies advertise in these sections. You may find an agency to contact which specializes in your general work area", or a number of specific positions for which you qualify.

Daily reading of the classifieds is important because new job openings appear constantly. If you find one that interests you, call or send a resume immediately as there are frequently many applicants, and a position can be filled in a short period of time.

Many ads are placed by an agency which has been contracted to screen and supply qualified applicants for a particular position. If you wish to respond to one of these ads, be sure to check for the "fee paid" notation which indicates that the hiring company will assume responsibility for your agency fee if you are hired.

BLIND ADS

Often ads appear which give no employer name--only a blind post office box number or phone number. Be cautious of these as there are a number of possible motives to be considered--many of them not in your best interests.

Occasionally, when a small business or a professional individual advertises a job opening, it's simply less disruptive of office activities to have applicants send resumes to a blind box number so they may be screened at a convenient time and only the best prospects contacted. This eliminates potential volumes of incoming calls and callers.

However, some other common reasons for utilizing an anonymous ad are perhaps less honest:

1. The ad may be only a device for obtaining data on a geographical job market, possibly for an industrial concern which is considering establishing an operation in the area.

2. Some companies conceal their identity in an attempt to quietly "steal" employees away from a competitor. This usually happens in cases where there has been some prior committment contrary to such a practice.

3. Occasionally the blind ad may be a ploy to determine whether or not any employees are dissatisfied. The ad is placed with the idea of discovering if any of the compan's own employees apply. It is also an effective technique for securing information regarding salaries paid by other employers.

There are other less common reasons for using a blind ad due to the need for a specific privacy, but as a job hunter, you should be wary of them.

* TRADE PUBLICATIONS

Every technical field is represented by a trade journal, newsletter or some other kind of publication. Check to see which ones are available at your college or local branch library. Most often such publications devote a section to job openings--usually for more advanced, upper level positions. However, this kind of research should be helpful to you in gaining a perspective on the range of your job market, upper level pay expectations, specializations in demand, etc.

* BULLETIN BOARDS

Many of the larger concerns employing people in your field will post descriptions of in-house job openings on bulletin boards in the personnel department and other places where employees congregate.

If you work in such a place, make it a point to check regularly for these notices. Often it is to your advantage to apply for such positions as some companies make a practice of trying to hire from within before advertising a position publicly. You might also ask friends or relatives to check for job openings where they work. This is one way of hearing of a position in your field before it appears in the classified ads, or of some positions which would not be advertised at all.

QUESTIONS FOR DISCUSSION ON CLASSIFIED ADS

---

1. Which of the requirements in a given advertisement could be met by any person willing to make the necessary effort?

2. Which of the requirements in a given ad could be met only by a person with previous training?

3. How does the newspaper assist you to find quickly the job wanted?

4. Why does an advertiser want the reply sent to a box number at the newspaper office instead of his own address?

5. What is a blind ad?

6. What are reasons for the use of a blind ad?

7. How should you respond to a blind ad?

8. What is the "Situations Wanted" column?

9. Can you find an example of an employment agency ad?

10. What are the advantages and disadvantages of answering an employment agency ad?

11. Should you respond to an ad requiring experience or specific education which you may not have?

PHASE II

THE APPLICATION FORM

Project 4: "FILLING OUT THE APPLICATION"

Fill out the application form on page 42 at the back of this booklet. Check the following before writing on the form:

___ accuracy of all information: employment dates, titles of supervisors, addresses, salary figures, etc.

___ permission from all individuals whose names you wish to list as references and verification of spelling.

All data should be completely factual. You may assume, however, that you have already graduated and can assume any new job duties immediately.

THE APPLICATION FORM

Practically all places of employment require you to fill out an application form. The format will vary from place to place but certain information is basic to all. Before applying for a position you should have collected all of your personal data including education, job record, references, and all pertinent dates. (See sample application, page 14. If you can get an application form from the company ahead of your interview date, you can type it. This is more convenient for you and usually looks better to the prospective employer.

For best results in completing an application form, follow these steps:

1. Be careful to read and follow all directions.
2. Read each question carefully before answering.
3. Print or type neatly unless otherwise directed.
4. Avoid leaving blanks. If your answer to a question is negative write "no" or "none". If the question is not applicable you may write "N/A".
5. Make sure you have dated the form correctly and have signed your name.
6. Secure permission ahead of time from those whose names you wish to use as references. Use the following as a guideline unless otherwise directed:

    a: One instructor who can attest to your technical competence,
    b: One work reference--someone who is familiar with your attitude and sense of responsibility as an employee,
    c: and one character reference--someone who is respected in the community who has known you for a long period. If the application calls for "personal references" you should assume that names requested are people other than those for whom you have worked.

NOTE: You are not bound to answer any questions regarding race, religion, politics, age, or disability not affecting your work competence.

SAMPLE APPLICATION BLANK COMPLETED

QUESTIONS FOR DISCUSSION ON JOB APPLICATIONS

1. Why are accuracy and neatness so important in the filling out of an application form?

2. Why do business and industry use application forms? (purpose - uses)

3. What might account for errors in the filling out of the forms?

4. What does "naturalized" mean?

5. Does the company have the right to ask about "physical defects"? For what kind of jobs could this question be relevant?

6. Of what use to the company could information regarding your "outside interests" be?

7. Which questions do you think are most important? Why?

8. Why does the company wish to know who your past employers were?

9. Why does the company wish to know your reasons for leaving past employers?

10. Why do many applications ask you to indicate wages you have earned and expect to earn?

45

PHASE III

YOUR RESUME

Project 5: "COMPILING A RESUME"

1. Make a list of the categories you feel should be included on your resume (use format outline given on page 20 as a guide.)

2. Under each category you have selected, make notes of your various qualifications, experiences, or any pertinent information. Think this through carefully so as not to leave out any information which might be valuable to your profile.

3. Go over your notes and edit out any data which does not seem to contribute to your professional profile. Put the data in reverse chronological sequence.

4. Verify all data for complete accuracy.

5. Write a rough draft resume from your edited notes. (See "How To Say It" p.p. 22-23)

6. Confer with instructor for suggestions and comment.

7. Type a second draft including any needed revisions and working out blocking, spacing, etc. for the best eye appeal.

8. Type final draft free from errors and Xerox as many copies as you feel you will need. (Make sure you save one to keep on file.)

9. Submit copy of final draft to instructor.

YOUR RESUME

What It Is:

The term "resume" is sometimes interchanged with "data sheet", "profile", or "vitae". In any case, it is a kind of personal summary which represents you to a prospective employer. It is an efficient way of presenting a concise professional profile of yourself. It can't "close the sale" but it can interest an employer in interviewing you. Then after the interview, it can serve as a reminder and as a means of distinguishing you from among a number of other applicants.

The resume is important in addition to an application in that it is specifically tailored to your background and abilities. It can emphasize certain aspects and provide significant detail for which a company application form is not designed. Therefore, you should prepare it as carefully as an advertising copy writer prepares sales copy.

How To Do It:

You should begin by making notes about your education and work experience. After you list all the relevant aspects of your background and experience, go back and decide which things you want to emphasize and which to subordinate. For example, if you lack work experience in the field, you will want to emphasize special training and work related experience.

There is some disagreement among authorities about the importance of personal data (age, marital status, etc.) on the resume. Some feel it is helpful and of interest to a prospective employer while others feel it is contrary to Affirmative Action philosophy. The same kind of controversy surrounds the question of including a photograph with the resume. It's entirely up to you. Do what you feel is appropriate.

There are, however, some generally accepted guidelines which you should follow in preparing your resume:

1. Choose the general areas or categories of information you wish to include in your resume. (These will be placed in the wide left hand margin) See the notes on "Format", pages 20-21. Then detail the specific positions or experience in reverse chronological order. In some instances where the list is quite long one might more effectively choose to list experience most relevent to the position applied for first. Dates for each notation are usually placed in the left hand margin but indented slightly from the heading.

2. Each experience or past employment notation should include a concise description of your function and responsibilities. Try to emphasize those which are relevant to the position for which you are applying. Don't go into much detail about work below your higher levels of employment.

3. The format should be visually clear and easy to read. Remember, employers file resumes as a reference to personnel and consequently the information contained in them should be easy to find or refer to at a glance. Use bold type, underlining, margins and spacing to help focus on headings, divisions, etc.

4. Language should be as concise as possible, omitting unnecessary words. The style of writing for resumes is unique: Sentences are choppy and abbreviated, transitions are eliminated, and punctuation is somewhat unconventional. Study the style in the example resumes on pages 24-28.

5. Do not use abbreviations (particularly,"etc.") or acronyms (e.g.: I.V.T.C. for Indiana Vocational Technical College). Write out all terms and proper nouns.

6. At this point in your career you should be able to fit the information of your resume on one or two pages. Number the bottom of the first page accordingly: "page 1of 1" (or 2 etc. depending on total number of pages to the resume). Number the following pages in the same manner.

7. Use standard size paper ($8\frac{1}{2}$" x 11") of good quality. Make sure the copy is perfect---free from any typographical errors, misspelling or noticeable corrections. Acceptable methods of duplication are off-set printing and Xeroxing. (Not carbons, dittoes, etc.)

48

FORMAT

The following is a basic outline to follow in organizing the information on your resume. This is only a guideline. You may wish to rearrange information or delete sections which are not applicable:

NAME
HOME ADDRESS
PHONE NUMBER

JOB OBJECTIVE:	(describe the position you seek)
WORK RECORD:	(in reverse chronological order)
dates (from-to)	Company name Job title Major work functions and responsibilities. Noteworthy accomplishments.
JOB RELATED EXPERIENCE:	(any non-paid work or experiences which may have contributed to the development of abilities relevant to your technical field)
EDUCATION:	(reverse chronological order) degree, certificate or diploma; date, name of institution and brief synopsis of course of study. Special courses or accomplishments.
RELATED ACTIVITIES:	(include hobbies which relate to your field in some way and any special accomplishments)
PERSONAL:	
Birthdate: Married, single? # of dependents Social Security #	Height: Weight: Health: Physical handicaps (if relevant to your work)
REFERENCES:	Include name, title, company or institution and phone number of the following: One work reference One school reference One personal reference

Depending upon the kind of information you wish to include in your resume, here are some other categories you may wish to use:

MILITARY RECORD:	Include year entered and year discharged, branch, specialized training, kinds of work and responsibilities involved. Special achievements (medals, etc.) exit rank, type of discharge, and reserve status.
LICENSES EARNED OR CERTIFICATION:	Include anything relevant to your work or indicative of your character.
OTHER ACCOMPLISHMENTS (HONORS OR AWARDS)	List work related competition, special recognitions, etc.
PORTFOLIO AVAILABLE:	For some fields (such as drafting, graphic arts, secretarial) it will be to your advantage to prepare a portfolio of samples of your work. If you have prepared a portfolio, it should be mentioned in the resume.
APPRENTICESHIP RECORD:	Include the following information if appropriate: 1. Local Union number. 2. Institution in which you took your apprenticeship training 3. Your apprenticeship status
AFFILIATIONS:	Mention membership in any professional or community organizations--unions--societies. If relevant to a particular position you are seeking, include religious or political affiliations.
AVAILABILITY:	When can you start work?
SALARY DESIRED:	If you are just entering your field it is best to write: "will negotiate"

HOW TO SAY IT

There are certain words and phrases which are helpful in writing resumes. You will notice that the examples on the following lists are concise and specific. Study them for ideas of how to phrase some of the parts of your own resume.

O EDUCATION BACKGROUND

Studied/received specialized training in ____.
Received ____ degree (with honors?) in ____ technology with special emphasis on ____.
A major part of my educational experience consisted of ____ weeks, field/clinic work in ____ (area).
Participated in ____ seminar on ____.
Received additional training in ____.
Curriculum consisted of four quarters of ____, two quarters of ____ etc., etc. with specialized study in ____/special applications in ____.

O WORK EXPERIENCE

Held supervisory position in ____.
Was associated with ____ (company, clinic, institution).
Worked as/acted as/served as/functioned as ____.
Responsibilities included/primary duties included/was required to ____.
Was responsible to ____ (chief technician, ____ supervisor, vice president).
Worked closely with department head/engineers/physicans/accountants/designers.
Assumed responsibility of ____/was able to develop ____/was given additional responsibilities in ____.
Successfully solved/planned/implemented/directed/fulfilled/initiated ____.

O SPECIAL SKILLS

Familiar with use of ____/applications of ____.
Have working knowledge of ____/experienced in the operation of ____.
Accustomed to dealing with/operating/directing/supervising/planning ____.

O SPECIAL INTERESTS AND RECOGNITIONS

Was awarded/granted/cited/elected/voted/named ____.
Received special recognition for ____.
Served as president/director/coordinator/treasurer/liaison ____.
Active in ____ (club or organization) whose major purpose is to ____.
Volunteered/donated services/aided/assisted/am affiliated with ____.

JOB OBJECTIVE

In formulating your Job Objective at the beginning of your resume, you may try various combinations of phrasing from the following lists. Choose a phrase from each list, combine them, supply missing words as appropriate and see if you can polish it into a final statement of your own job objective.

I. ______________________________

To be employed by _____
To be associated with _____
To work for _____
To serve as _____
To start as _____
To qualify for _____
To work in the _____ department
To function in a _____ capacity

II. ______________________________

For a leading manufacturer
  of _____
With a _____ company
In a small firm
In a _____ corporation
For a _____ clinic/hospital
As a member of a _____ group

III. ______________________________

For the purpose of obtaining
  _____ experience in _____ and
  specializing eventually in _____
Where training in _____ can be
  utilized to best advantage
Where my _____ abilities can
  serve most productively
With the prospect of obtaining
  experience in _____
With a view to acquiring a wide
  range of experience in _____
  so as to ultimately qualify
  for _____
To gain basic experience in
  _____ and eventually qualify
  for a supervisory position
Where special emphasis is
  placed on _____ and the ability
  to _____

EXAMPLE (Accounting)

Resume of

Daniel A. Cahney
905 Southeastern Avenue
Indianapolis, IN 46239
Telephone: 317/669-4674

PERSONAL

Birth date: 5/16/51
Age: 22
Weight: 182 lbs.
Health: Excellent
Marital Status: Single
Social Security: 444-32-4567

QUESTIONS FOR DISCUSSION
ON
RESUMES

1. Why should you prepare a resume?
2. Why should it be typed?
3. How do you know what to emphasize?
4. In what order do you put your work experience?
5. What things can you do to make your resume easier to read?
6. Why is it important to give details concerning your duties on your last job?
7. Is it permissible to send a xeroxed or carbon copy?
8. What are some considerations for the grammar of a resume?
9. Why is brevity so important?
10. Why should you never use "etc"?
11. What should you say about salary on the resume?
12. What kind of references should you list?
13. For what kinds of jobs should you prepare a portfolio?
14. What kind of personal data should you provide in certain cases? Why?
15. What sort of information should not be included in a resume?

59

PHASE IV

THE JOB INTERVIEW

Project 6: "COMPANY PROFILE"

1. Choose a business or company to which you might apply for a job.

2. Research it by visiting the personnel or public relations departments and by talking to employees working in your job area. Make sure your information is completely accurate in the following areas:

   ___ Company purpose, size and relation to the community.
   ___ Major divisions or departments
   ___ Special distinctions or achievements
   ___ Hiring procedure
   ___ Pay scale (in your area)
   ___ New job openings
   ___ Special benefits provided
   ___ Rate of advancement

Project 7: "PRE-INTERVIEW PERSONAL ASSESSMENT"

Study the questions given on the Personal Assessment form on page44 at the back of this booklet. Carefully answer and submit completed form to instructor.

Project 8: "PREPARING FOR THE JOB INTERVIEW"

1. Plan careful answers to interview questions given in this unit.

2. Decide what information you wish to get from the interview and plan for your own questions accordingly.

3. During class session or conference with instructor, practice answering questions. Request help in handling any special problems you may have to deal with in an interview due to past record, disabilities, etc.

Project 9: "THE INTERVIEW MODEL"

With your instructor, set an interview appointment with a prearranged interviewer.

On the day of your scheduled interview, dress appropriately, bring you portfolio (if you have one) and the "Job Interview Rating Scale" form on Page 45at the back of this booklet. Report in to the office five minutes ahead of your appointment.

You will be interviewed for approximately 10 to 15 minutes (video-taped if possible). Then a personal evaluation will follow using the guidelines given on the "Job Interview Rating Scale" form.

Project 10: "SELF APPRAISAL"

Following your model interview, make arrangements with your instructor for a conference during which you will view your tape and evaluate your self presentation.

PREPARING FOR
THE JOB INTERVIEW

0 Purpose of the Interview

The purpose of a job interview for both applicant and prospective employer is to exchange information and to provide a basis for judgment.

The interviewer usually has a preconceived idea of the type of person he wishes to hire. For him the interview is an opportunity to question the applicant in an effort to see how he responds: the quality of his replies, the attitude he demonstrates, and the personality he projects. The interviewer can figuratively match up his impression of the applicant with his impression of the demands of the position to be filled. Is this applicant really qualified? Will his past experience benefit our organization? Will he fit in with the rest of the team?

The applicant has a fairly clear view of himself as a technician but needs to know about the specific position for which he is applying. The interview provides him with an opportunity to find out more about what's involved in the job. What are its special demands? What is the nature of the work situation? What sort of people would he/she be working for and with?

At the end of a successful interview both individuals involved should be able to come to some conclusion about the suitability of the job to the person.

0 Doing your "Homework" before the Interview

Before applying for a particular position you will have prepared your resume and have collected all the necessary data for filling out the application. However these are only the first steps in preparing yourself for the interview. The brief job description you may have gotten from the classified ads or another source should not be your sole motivation for applying for work. A favorite question of interviewer's is; Why do you want to work for us? Do you know someone who works for the company? Are you familiar with its products or services? Have you read about it somewhere? Whatever the reason for your initial interest it is advisable to follow-up by doing some research.

In the cases of a small concern you can sometimes get information from others in the community who are familiar with its operation and reputation. In the case of a large company there will usually be some kind of public relations department (or director) you can contact for information. It is best to visit the place in person so you can follow up on questions and possibly obtain some literature or brochures prepared by the company about its services, products, and policies.

This kind of "homework" can help you prepare questions you will want to ask during the interview and will provide a basis on which you can plan your answers to anticipated questions from the interviewer. Consequently you will be more likely to make a positive impression as an applicant and your time will have been well spent.

O Your Approach to the Interview

Be a few minutes early. How you keep this appointment reflects directly on your punctuality. Allow extra time to get to the place of interview so that you aren't rushed. Hurrying unsettles your nerves and invariably affects your poise.

If for good reason you find you will be unable to keep the appointment, telephone this information to the interviewer as far in advance as possible and ask to be rescheduled.

Try to dress conservatively and as you feel the interviewer might expect an applicant to look. If you are applying for a medical position, a white uniform is often preferred, and your hair should be off the collar. (For women this means either cut short or pinned up). Many employers react negatively to male applicants with long hair. As you should be aware of this, you may want to compromise your hair style slightly for the sake of increasing your chances of being hired.

Avoid bringing anyone with you to the interview. You will want to appear self confident -- not dependent on someone else for moral support. When you enter the office carry yourself with assurance and when it seems convenient to those present, explain who you are and why you've come. (Use your first and last name -- it may sound pompous to use Mr. or Mrs.) Try to look pleasant and wait for the interviewer to extend his hand or offer you a seat. (Place hat, coat, etc. on your lap or on the floor, not on his desk.)

0 Face to Face

More often than not, a job opportunity is either clinched or lost on the basis of an interview. The interview provides you with the opportunity to sell yourself -- to reveal qualities which cannot be covered in a resume.

Keeping this in mind, let the interviewer lead the conversation. Listen carefully to his questions and keep to the point when you respond, answering carefully and completely.. Your attitude should be courteous and confident, and above all you should keep any negative reactions or contrary opinions to yourself. During the interview watch for opportunities to ask questions of your own, particularly those about the company or the job. Don't ask about minor matters such as coffee breaks. Save any unanswered questions about salary range and fringe benefits until other considerations of the position have been covered.

In general there are three main points which you should try to communicate to a prospective employer.

1. You are sincerely interested in the job and in the company.
2. Your training and experience are right for this particular position.
3. You have the kind of personality and intelligence which will fit in with the "team" and contribute positively to the company.

Most job interviews are of a directive nature. That is, the interviewer will direct the course of talk and will ask specific questions. In order to brief yourself for this type of interview you should be prepared to answer questions such as the following:

1. Why do you want to work here? This is a time for your company research to pay off.
2. Why did you leave your last position? Keep your response simple. Don't use your need for more money as your main reason. Perhaps there was no opportunity for advancement or challenge, or the position may have been

64

eliminated. Another reason for leaving might be that you wished to find a work situation more relevant to recent training. Whatever your reasons, emphasize the positive rather than the negative aspects. For example, instead of saying "I just didn't like my old job" you might say "I wanted to find a position in which I could apply my training to greater extent".

3. Why do you feel you are especially suited to this type of work? This is a very open question and could be intended to elicit a response about your technical qualifications and/or aspects of your personality. Your answer should include both kinds of reasons, and should be well thought out in advance.

4. What kind of salary do you feel you should have? (or more directly: what do you think you're worth?) Before going into the interview you should find out what the salary range is for this type of position. Then consider your present or most recent salary along with any projected increase justified by:

   a. recent training or experience.

   b. increased responsibility in the position for which you're applying.

   After analyzing your situation, set a salary range for what you feel you can justifiably expect. When the question of salary comes up ask for the higher end of your range and be able to justify it. If it is more than the company expects to pay you should be prepared to take less. Then the company can feel it is getting a bargain. If you should ask for less than the job pays, you may be discounted as not worth established salary minimum. Any company likes to feel it gets full value for its salary dollar.

5. Other interview Questions for which you should be prepared.

   Think through answers and explanations for each of the following. Rehearse them in your mind.

   a. What qualities or qualifications make you feel that you'll be successful in this field?

b. For what reasons did you choose the school where you received your training?

c. Do you think you could forget your training and learn a whole new system?

d. Are you looking for part-time or full-time work? Temporary or permanent?

e. What have you learned from the experience you've had? How does it relate to the position here?

f. How do you get along with other people? Any trouble with supervisors before?

g. What type of people do you find most difficult to get along with?

h. What personal characteristics do you feel are necessary to succeed in this field?

i. What do you feel is your major weakness? What do others feel is your major weakness?

j. What do you see as the disadvantages of working in this field?

k. Which jobs have you enjoyed the most? The least? Why?

l. What have you done which shows you have the initiative or willingness to work?

m. How do you feel about overtime work? Moving to another area?

n. What would your ambitions be if you worked for this company?

o. What do you plan to be doing 5 years from now? 10 years from now?

SOME OTHER CONSIDERATIONS ....

Some interviewers favor a non-directive approach in which the burden of the dialogue rests with the applicant. With this type of interview the prospective employer may open with a broad question such as "Tell me about yourself" expecting you to take the lead, supplying all the relevant information about yourself and asking questions about the job. If you should find yourself in this kind of situation it is always helpful to begin by explaining your interest in the company and in the position for which you are applying. Then after asking specific questions about the nature of the job and its responsibilities, you can proceed to show how your training and experience could benefit the company in such a position.

Occasionally you may encounter an employer who is unskilled at interviewing or who tends to wander off the point. If such is the case, you can steer the conversation back toward your objectives by saying something like "I'm really very interested in (company's name) Mr. Jones and the posibility of working here and if I may, I'd like to find out a little more about just what the job involves..." or "...to explain to you why I believe I'm qualified for this job..."

In any interview situation the manner in which you verbally present yourself is of great significance. The use of poor grammar or slang would be very detrimental to your effect. Use of language is particularly important for those entering any of the business fields. Reticence or shyness in answering questions may be interpreted as indifference. On the other hand too much aggressiveness and an "I can do anything" approach will also impress unfavorably. The brief encounter during the interview may be your only chance to prove that you as a person are more suited to the position than any other applicant.

This is probably the most competitive aspect of the whole job application process. If you keep this in mind; prepare carefully; and accomplish the three main points mentioned earlier, you should be able to consider your interview a successful one.

Goodbye and After

After talking to you, your interviewer may tell you that your qualifications are unsuitable for the position. Or he may indicate that you will be considered along with several other applicants and will notify you.

67

within a certain period of time of his decision. Then again you may be fortunate enough to be offered the job at the close of the interview. In any case you should thank him for his time and take your leave courteously and promptly. (Don't wear out your welcome)

Regardless of the outcome of the interview you should review it in your mind as objectively as possible in order to separate the strengths from the weaknesses in your self-presentation.

If you should be fortunate enough to receive more than one job offer as a result of your interviews, keep in mind your long range goals in making a decision. Salary should not be your sole motivation in accepting one position over another. Take into consideration the following:

1. Opportunity for advancement and challenge.
2. Opportunity for furthering your education while you work.
3. The effect this particular work experience may have on future occupational plans.
4. Specific working conditions
5. Fringe benefits.

You may realize after analyzing the various situations that the job offering the lowest beginning pay would be the best choice for this first stage of your long range plan.

Whatever decisions are made, be sure to keep the door open: If you are informed that you have not been hired you may politely inquire as to the reason. Was it a matter of experience? Training? In any case thank the interviewer for his consideration and ask him to keep your application on file in case a position appropriate for you might become available in the future.

By following up on an interview you may realize that the interview was a success but that the job was not offered to you for other reasons. On the other hand you might be able to determine that you were not as effective as you could have been and why. Such information will help you to improve on succeeding interviews. As with most things "practice makes proficient".

Should you decide to accept a particular job offer after several interviews, you should inform the other employers of your decision as soon as possible. If you know you were being seriously considered for another position, you may want to explain your decision. Regardless, your thanks for the interviewer's time and consideration will be appreciated.

Why some people "Lose the Sale"

A survey of local placement offices indicates that a prospective employee's failure to sell himself is most often due to shortcomings in one or more of the following problem areas:

1. Ineffective Personality: Lack of self confidence; uncertainty regarding wants and goals.
2. Lack of Poise: Poor self expression; dependence on slang or jive talk; annoying mannerisms; general awkardness.
3. Lack of Preparation: Failure to investigate the company and its products or services. Lack of knowledge of the nature of the available position.
4. Poor Attitude: Lack of enthusiasm or interest; or too demanding, expecting too much, too fast; or too concerned with security rather than opportunity.
5. Lack of Practicability: Too theory minded; Failure to grasp "nuts and bolts" of the situation.

APPENDIX D

PROPOSAL FOR

THE IMPLEMENTATION OF MINI COURSE 1050

"MARKETING YOUR OCCUPATIONAL SKILLS"

APPENDIX D

PROPOSAL FOR

THE IMPLEMENTATION OF MINI COURSE 1050

"MARKETING YOUR OCCUPATIONAL SKILLS"

The Rationale: Vocational technical students' need for orientation to and preparation for entering the job market is recognized by prospective employers, educators and the students themselves. The need is especially pronounced in business markets due to the necessity for verbal competence. Specifically, the greatest demand is for business technicians who are poised, articulate, and who are able to present an image of confidence and competence - technicians who know what is expected of them in an interview situation. Consequently, as educators we must necessarily be concerned with training our business students how to market their newly developed technical skills.

The Course: As part of a research and development project funded by a federal grant through our State Board of Vocational Technical education, a special mini-course was developed to serve this need for training. In twelve hours of class session the course consists of the following sequence of activities:

1. Job market study
2. Exploration of available placement services and job finding aids
3. Interview with individuals employed in the student's field
4. Filling out an application form
5. Preparation of a mailable resume
6. Company profile: Study of an area business with regard to hiring procedure, benefits, wage scale, etc.
7. Preinterview assessment and individualized counseling and guidance for students with special needs or limited marketability (e.g. due to handicaps, criminal records, health limitations, age, etc.)
8. Interview question and answer practice.
9. Job interview simulation exercises (interviewers are volunteers from local business community)
10. Interview follow up with self critique
11. Actual job application and interview appointment (where feasible)

The instructional package written for the course contains general information on the subject and also comments and data specifically relevant to Indiana. Examples are given of applications and resumes for business technicians in each of the major programs taught at IVTC - Indianapolis.

The instructional approach includes the following:

class discussion
individual conferences
employer interview simulations (video taped)
student conducted interviews

The Implementation: Implementation would be most effective just prior to the student's field project. Since this is a kind of internship, approximating on a limited scale the process of being hired and going to work, the student would undoubtedly be at an advantage having had the mini-course first. For those who are not involved in a field project, the course should logically be placed during one of the last two quarters before graduation.

Ideally, this subject should be inserted into the curriculum of all business programs as a one-credit, 12-contact hour course. If this is not presently feasible, an alternative would be to plan one regularly scheduled hour per week to allow for this training as part of one of the regularly scheduled business courses. If the host course requirements are such that an hour a week cannot be spared, perhaps that hour might be scheduled additionally to the regularly required contact hours, at least until some curricular adjustment can be made. Or, another alternative would be to include this mini-course within the framework of business communications.

APPENDIX E

PROPOSAL FOR
CURRICULAR REVISIONS NECESSARY TO FACILITATE IMPLEMENTATION OF NEW ORAL COMMUNICATIONS COURSE

APPENDIX E

PROPOSAL FOR

CURRICULAR REVISIONS NECESSARY TO FACILITATE IMPLEMENTATION OF NEW ORAL COMMUNICATIONS COURSE

As a result of the research sponsored by federal grant funds through our State Board of Vocational Technical Education, the following has been determined: Specific students' needs must be met for acquiring verbal skills so as to more effectively function within a business environment, to be prepared to meet demands for oral competency on the job, and to enhance one's employability and ultimately - promotability. In order to accomplish these ends and to meet the instructional objectives described in the grant study, the following curricular adjustments are proposed:

1. The Oral Communications course required for business division students should consist of a minimum of 48 contact hours for 3 credits. (Currently - 36 contact hours for 3 credits) In addition, for those students needing special help with verbal development, a minimum of 1/2 hour per week should be arranged for each.

   Rationale· Due to the nature of the learning objectives, in-class activities such as: class interaction, practices, role playing and presentations are of primary importance. The application of principles taught must necessarily take place during contact hours rather than in homework. In testing a 1st draft of these objectives Spring Quarter, we discovered that 1 1/2 hour sessions were simply not adequate.

2. Enrollment per section should be limited to 15 whenever feasible. (We have attempted this at Region 08 this past year and it has facilitated the kind of instructor/pupil interaction so necessary to the objectives, and has encouraged increased individual involvement and growth through practice)

   Rationale: The demonstration and practice of the various concepts of communication require much group interaction - the development of individual confidence through group trust. This is possible only for groups of limited size. In addition, the mathematics of the situation must be considered. At a bare minimum allowance of 15 minutes per student presentation, with (if allowed) four contact hours per week and 15 students, one entire week must be devoted to the first presentation of one single assignment. One must also consider the time needed for lecture, questions, and re-presentation when necessary. (Our new grading system dictates that students may not be failed; consequently, if a student fails to meet a presentational objective, he should be allowed to try again after further instruction or practice.)

3. A Technical Communication course should be pre-requisite. (Currently, most students following the curricular order have taken the course before they enter Oral Communication but it is not listed as a pre-requisite.)

Rationale: The course administrative procedure for Technical Communications includes diagnostic testing to determine students with below minimum reading or writing efficiency levels. Those needing remedial work are scheduled into a developmental course first, then back into Technical Communications. If all students enrolling in Oral Communications will have had Technical Communications first, then all should bring sufficient basic language skills to the course so that they all have the chance to succeed. A student entering the course with less than minimum basic skills is severly handicapped, and preliminary failure in a class where individual vulnerability is so prominent will make futura attempts doubly difficult.

4. Psychology or Human Relations should be taken before Oral Communication whenever feasible. (At present, Human Relations is scheduled either the same quarter as Oral Communications or for a subsequent quarter for all business curricula.)

Rationale: All communication is influenced by individual perception of human nature. Basic concepts of communication are rooted in psychology; therefore, in order to comprehend the former, students should have an understanding of the latter. As Dr. Kathryn Clark comments in her doctoral thesis on Oral Communication: A course in some aspect of social science is desirable preliminary to one in communications so that "content in the communications course could reinforce and amplify these understandings and direct students in putting theory into practical business use."[1]

5. Principles taught in Oral Communications should also be applied in Business Communication. (Currently there is little reinforcement of these principles in Business Communications, undoubtedly because students take the course before they take Oral Communications) In order to accomplish this, Business Communication should be placed in the curriculum subsequent to Oral Communication or at least concurrent with it. After students have mastered the application of basic writing skills (learned in Technical Communications) to business situations, their attention should be turned to the application of basic oral skills (learned in Oral Communications) to similar business situations for a more balanced and realistic practice in business communication.

Rationale: Oral Communications is probably the most important of the many modes of business communication. As such, students should be able to apply the oral communicative techniques they have learned in conjunction with other modes, and should have situational practice in determining relative appropriateness of each mode.

APPENDIX F

PROPOSAL FOR

SHARED RESPONSIBILITY OF COMMUNICATION SKILLS INSTRUCTION

PREPARED BY BEVERLY SIMONE

APPENDIX F

PROPOSAL FOR SHARED RESPONSIBILITY OF COMMUNICATION SKILLS INSTRUCTION

PREPARED BY BEVERLY SIMONE

The development and refinement of oral communication skills--needed by a business student to be successful in employment--can not be the sole responsibility of speech instructors. Nor can these skills be adequately developed and nutured through the activities of only one course--Oral Communications.. Rather a team of instructors--coming from the areas of Business, Communications, and Social Sciences--must work together to formulate and implement the training activities in which students will engage throughout their college training.

Since oral communication skills are developed and nutured by repeated practice and re-inforced by constructive feedback, it is necessary to have follow up activities thoughout the student's course work. In order to best facillitate this process, it is proposed that the following be implemented:

1. The communications staff meet with the business instructors (one representative per program--ideally the program chairperson) and identify activities in other courses which require oral skills. Once these activities are identified, for example--an oral report, then an evaluation tool will be selected. (The interpersonal and presentational skills assessed in the oral communication class should be evaluated the same as the technical content.) Arrangements will then be made so that both the business instructor and a communications instructor can evaluate the activity. (Video taping could be used.) The student will then receive feedback from both instrutors. The communications instructor will add the evaluative information to the student's file. (In Oral Communications a file will be started on each student. It will contain the diagnostic report as well as the student's progress throughout the course. As additional activities are evaluated outside the oral communications course, these evaluations will be filed. These records will then aid both the instructor and the students, by providing a clearer description of each student's progress. By this evaluative system, a student should be assisted in achieving more consistent success in oral endeavors.)

2. Business Communications will be restructured so that it is not merely a writing course but rather a problem solving environment. Students will be dealing with communication problems that occur in the business world. After studying the necessary input, the student will have to select the most appropriate method for dealing with the problem. Many of the problems will require putting into practice the skills learned in the Oral Communications class. The student will then receive feedback not only from his audience (other party(ies) involved in the problem) but also from his instructor.

3. The mini course, "Marketing Your Occupational Skills" will be scheduled either as a separate course or as part of the expanded Business Communications. In either case the mini course will be given to the student prior to his field study. This will facilitate training the student to conduct himself successfully in his first interview--placement into field study. The business department will co-operate with the communication instructors

by providing professional interviewers, personnel managers, for the Final project of the mini course. The feedback from this outside interviewer plus an analysis of the interview (which will have been video taped) will be used to determine the student's readiness for his first "for real" interview--placement in the field study position. (We realize of course that many IVTC students apply for work throughout their course of studies. Some students will want help in this area prior to 5th quarter. Those students will be served individually by the communications staff. We have elected to place the mini course, however, in the 5th quarter because past experiences have born out that it is, overall, the best quarter for the student to receive this information)

4. During the field study (6th quarter) the business department will arrange for each student to be interviewed by the personnel department of the company in which the student is working. This interviewer will send an evaluation form back to the communications department. After reviewing the evaluation, a communications instructor will hold a conference with each student and dicuss the results of the interview. If additional work in the area of interviewing is indicated, the student will be assigned appropriate materials and rescheduled for another interview.

Although the above lists the shared responsibilities of the business and communication instructors, focus must also be directed upon the area of social science. Since the interpersonal approach to Oral Communications is based on a fundamental understanding of human nature, it is important for students to have exposure to this knowledge prior to entrance into Oral Communications. (Note proposal on Curricular Revisions) It is not enough, however, for only the students to share in interaction with the social science instructors; a working relationship must be established between the instructors in both disciplines (social science and communications) In order to promote this interaction it is proposed that the following be implemented:

1. Oral Communication instructors meet with social science instructors to discuss objectives of the following courses: Human Relations, Applied Psychology, and Oral Communications.

2. After studying objectives of above listed courses, the instructors from both disciplines identify which Social Science objectives need to be re-inforced in the Oral Communications Course.

3. Instructors from both disciplines investigate the feasibility of team teaching some oral activities such as role playing and interviews--on the carpet, probing and performance appraisal. An interdisciplinary approach might be explored.

APPENDIX G

COURSE SYLLABUS

FOR

ORAL COMMUNICATION

SYLLABUS

ORAL COMMUNICATIONS

Course Numbers: 0131 0533 0943 1252
0342 0750 1131 1340

Credits: 3

Contact Hours: 36 (Recommended: 48)

Course Description: Oral Communications is a business oriented course consisting of a study of the basic elements of the communication process. Then based on this fundamental understanding, variations of two types of interpersonal communication are examined: occupational interviews and small group conferences. Finally, the course will focus on types of presentational speaking situations common to the business world: informative briefings and persuasive proposals. In addition, some specialized projects may be assigned to accommodate individual student needs.

Rationale: Man as a social being has an inevitable need to communicate and, further, to be understood. As a technician entering a business field, it will be necessary to understand the nature of the communication process and to possess the skill to utilize that process effectively. With the accelerated pace of business today, the modern trend toward increased emphasis on language skills, and the need for highly efficient human interaction, communicative skills are more necessary and highly prized than ever. As a result, the technician must be trained in these skills in order to function occupationally, and his upward mobility is acutely affected by his relative mastery of these skills.

Instructional Objectives: (Affective and Behavioral)

1. The student should assess his own communicative image and will note strengths and weaknesses. He and the instructor should arrive at an agreement of any specific individual communication needs to be met by the course.

2. The student through a series of practice exercises will improve his speech in prescribed areas.

3. The student should demonstrate his understanding of the concept of language as a dynamic symbolic system. He should, specifically, be able to explain how particular aspects of his self-hood affect his perception and communication.

4. The student should demonstrate his understanding of the communication process and factors which affect it.

5. The student should demonstrate his understanding of encoding and decoding by both definition and practice.

6. The student should demonstrate his ability to comprehend both verbal and non-verbal communication and also his ability to exercise a suitable degree of control over his own utilization both.

7. The student should be able to improve actual message content utilizing the eight techniques described by Nadeau. This improvement should be clearly and increasingly evident in the student's interpersonal communications as well as presentational messages.

8. The student should be able to sharpen the reason in his messages by applying each of the four methods described by Nadeau.

9. The student should demonstrate understanding of the practice of active listening.

10. The student should demonstrate comprehension of the principles and guidelines given for the following, through tests and role-playing exercises:

    --training interview
    --corrective interview
    --performance appraisal interview

11. The student should participate in at least one small group conference, either information-sharing or problem-solving. He should thereby demonstrate his ability to follow the guidelines given for a group leader or group member - as assigned.

12. The student should research and prepare one 4-6 minute informative briefing following given guidelines and utilizing an outline and at least one visual aid.

    Criteria - 2/3 of listeners will be able to reconstruct main points of presentation.

13. The student should research and prepare one 6-8 minute persuasive proposal following given directions and guidelines, utilizing an outline and at least one visual aid.

    Criteria - 2/3 of listener group will concur with definition of problem or will agree with proposed solutions.

14. The student will satisfactorily complete any individually assigned exercises and projects.

Instructional Strategy

The following strategies and their proportionate use are to be employed in this course:

Lecture	15%
Discussion	45%
Student presentational activities	40%
	100%

Audio Visual Aids and Supplementary Materials:

1. Videotape: "The Message Is You" (Indiana Vocational Technical College)

2. Films: *Anatomy of a Presentation* - (Roundtable Films, Inc.)
   Conflict - Parts I and II - (Roundtable Films, Inc.)
   Listen, Please - (B N A Films, Inc.)
   Meanings Are in People - (B N A Films. Inc.)
   Meeting In Progress - (Roundtable Films, Inc.)

3. Indiana Bell materials on Telephoning:

   -- Multi-media Unit: "Thank You, Please Call Again"
   -- Business Phone Trainer

4. "Non-verbal Communication" resources package for Instructors (National Textbook Company)

5. Oral Communication Project Packages:

   -- "Telephone Field Project"
   -- "Training Interview Project"
   -- "Persuasive Proposal Project"

Textbook

Nadeau, Ray E., Speech Communication: *A Career Education Approach*, Addison-Wesley, 1974.

References:

The following publications should provide valuable resource material for lectures and supplemtary course activities:

General Reference

Wiseman, Gordon and Larry Barker
Speech - Interpersonal Communication. New York: Chandler Publishing Co., 1974.

A good section on guidelines for communication evaluation. A series of helpful appendices including lists of suggested topics for various presentational situations.

Non-Verbal Communication

Eisenberg, Abne M., and Ralph R. Smith, Jr. *Non-Verbal Communication* Indianapolis: Bobbs-Merrill Co., Inc., 1971.

One of the first general treatments of the literature of non-verbal communication. The book describes a series of exercises which should provide useful ideas for classroom activities designed to heighten awareness of and control over elements of non-verbal communication.

Interpersonal Communication

Anastasi, Jr., Thomas E. Communicating for Results. Menlo Park, California: Cummings Publishing Co.

Chapter II gives some interesting insights into the effects of communication on people. Chapter VIII gives some general guidelines for improving listening skills.

Group Communication

Hasling, John. Group Discussion and Decision Making. New York: Thomas Y. Crowell Co., 1975.

The book focuses on the "task group": the dynamics of interaction how to prepare for and conduct a meeting and how to reach conclusions. Chapter X discusses specifically how to evaluate a group discussion.

Listening

Myers, Gail E. and Michele Tolela Myers. The Dynamics of Human Communication, A Laboratory Approach. New York: McGraw-Hill Book Co., 1973.

Contains a thoughtful collection of case problems for role playing and some excellent activities and projects for intra- and inter-personal communication. Deals rather thoroughly with problems of poor listening and approaches to more effective listening.

Mills, Ernest Parker. Listening: Key to Communication. New York: Petrocelli Books, 1974.

Aimed at those engaged in professional and managerial jobs, the book "explains the complexities of listening so that they may be easily understood and provides a method of adequately dealing with them". (Mills, p. IX)

Speech Mechanics

Peacher, Georgiana, P.H.D. How to Improve Your Speaking Voice. New York: Harper & Row, 1960. 2nd Ed.

A collection of practice materials for the improvement of voice and articulation organized around the phonetic and acoustic features of speech. It also contains a diagnostic inventory for adults.

Presentational Speaking

Price, Stephen S. Business Ideas; How to Create and Present Them. New York: Harper & Row, 1967.

"A training program for businessmen on how to think creatively, develop ideas, and express themselves with confidence in speeches and informal talks." Twenty-five Ways to Improve Thinking Results. Barriers to Straight Thinking. Thirty Ways to Think and Speak on Your Feet.

Uris, Dorothy. *Everybody's Book of Better Speaking*. New York: David McKay Co., 1960.

A comprehensive stimulating book that not only explains the whys of speech but also a personal speech manual which pinpoints individual faults and prescribes specific prescriptions for improvement. One unique feature is a chapter "For Women Only".

Wilcox, Roger P. *Oral Reporting in Business and Industry*. Englewood Cliffs, N.J.: Prentice-Hall, 1967.

Emphasis is on the critical factor of listener understanding as the basis for successful oral reporting. It also presents methods for achieving this understanding.

Dickens, Milton and James H. McBath. *Guidebook for Speech Communication*. New York: Harcourt Brace Jovanovich, Inc., 1973.

A clear concise treatment of basic types of presentational speaking including examples, critique forms. The book also discusses some specialized types of public communication and techniques for organizing and developing ideas.

Communication in Organizations

Sathre , Freda S., Ray W. Olson and Clarissa I. Whitney. *Let's Talk*. Glenview, Illinois: Scott Foresman and Co., 1973.

The primary concern of this text is how communication affects people's relationships. The final chapter is a particularly interesting examination of communication flow and characteristics within organizational structure.

DIAGNOSTIC TESTING

PART ONE

INTRODUCTION TO
DIAGNOSTIC TESTING
FOR
ORAL COMMUNICATION STUDENTS

I. Rationale: In order for students enrolled in an oral communications course to receive the maximum results from this course of study, it is necessary for each student to become familiar with his own vocal and physical delivery. After overcoming the initial shock of first listening to his voice and viewing his physical performance, the student can begin to assess his own unique skills. Through a series of test exercises, self-appraisal forms, and an interview with the instructor, each student will determine whether or not his skills should be improved and in which areas. With consultation from the instructor the student will be able to determine a course of improvement.

II. Purpose: The purpose of the diagnostic testing is to:

1. Determine general impression of speaking manner.
2. Determine voice quality, pitch, volume, and speed.
3. Determine enunciation skills.
4. Determine articulation skills.
5. Determine language flexibility.
6. Determine general physical appearance and attitude during interview.

III. Methodology: During the second week of the quarter each student enrolled in an oral communications course will audio tape a series of 5 exercises. The student will then critique his own performance prior to submitting his audio recording to the instructor. The instructor will then appraise the student's work and meet with him in an interview session. This session will be video taped and viewed by both the instructor and student prior to final assessment. (See Procedure for Diagnostic Testing)

PROCEDURE
FOR DIAGNOSTIC TESTING
OF
ORAL COMMUNICATION STUDENTS

I. General Directive: This procedure will be followed by all students enrolled in an Oral Communications class and all instructors teaching oral communications.

II. Itemized statement of duties for instructors.

1.0 Each instructor teaching a course in Oral Communications (O.C.) is responsible for seeing that all his O.C. students have taken the diagnostic test, their recordings have been evaluated and an interview has been held.

1.1 Instructor acquaints all students with purpose of diagnostic test and procedure for testing.

1.2 Instructor demonstrates how students are to use audio taping studio.

1.3 Instructor sees to it that all students are scheduled for testing during 2nd week of quarter.

1.4 Instructor evaluates students' audio tapes and self evaluation forms.

1.5 Instructor schedules each student for an interview.

1.6 Instructor interviews each student. Questions are addressed to the following topics:

a. What student hopes to achieve thru O.C. class -- goal identification.
b. How student evaluates his verbal self appraisal -- skill self-assessment.
c. What previous speech training student has had -- previous experience.
d. What concerns student has regarding oral communications class -- hang-up areas.

1.7 Instructor views video tape with student and makes assessment of student's performance.

1.8 Instructor helps student in selection of self-improvement program, if necessary.

1.9 Instructor writes report on each student's behavior and skill as indicated through diagnostic test and places information in student's file.

III. Itemized statement of duties for students.

2.0 Each student taking a course in Oral Communications is responsible for participating in all components of the diagnostic procedure -- exercises, critiques, interviews, conference.

2.1 Student takes part in orientation session. This session will cover the "why's" of diagnostic testing, the "how's", and the "where's".

2.2 Student learns how to operate basic equipment in audio studio.

2.3 Student schedules time for diagnostic testing.

2.4 Student performs exercises 1-5 of Diagnostic Testing.

2.5 Student listens to self-audio tape on exercises 1-5 and fills out appropriate self-appraisal forms.

2.6 Student submits audio tape and self-appraisal forms to instructor.

2.7 Student schedules time for interview with instructor.

2.8 Student prepares for interview by studying and thinking about topics to be discussed.

2.9 Student meets with instructor at scheduled time for interview.

2.10 Student cooperates with instructor during interview.

2.11 Student views video tape with instructor and makes self appraisal.

2.12 Student decides, with guidance of instructor, whether or not a program of self improvement should be initiated.

(If program is recommended, student will select areas of concentration and begin program of exercises.)

2.13 Student does final self assessment and records in personal log for reference purposes throughout quarter.

2.14 Student begins Program of Self-Improvement, if required or desired.

Diagnostic Exercises

Objectives:

You will perform a series of five vocal exercises. You will do a self-analysis of your own voice by using the critique sheets provided in your Student Package.

Directions:

1. Read carefully the directions given with each exercise.
2. Perform each exercise as well as possible. (Tape each performance.)
3. Listen to the tape of your recorded exercises. (If you have never heard a tape of your own voice, play the tape several times before filling out the critique sheets.)
4. Fill out the appropriate critique sheet for each exercise.
5. Turn in your audio tape and your critique sheets to your instructor.
6. Set an appointment for a conference with your instructor.
7. Appear for your scheduled conference at appointed time and place.

Exercise 1

GENERAL IMPRESSION OF YOUR SPEAKING MANNER

Objective:

You will record yourself talking about any one of the following topics for 3 - 5 minutes.

Directions:

Choose any one of the following topics.
Think about the topic for a few minutes and jot down any notes.
Turn on the tape recorder.
Talk about your chosen topic for 3 to 5 minutes.
Turn off the tape recorder.
Do Exercise #2.

Topics for Talk:

Why I Chose IVTC For My College Training
If I Had My One Wish...
_______________ Can Be Fun
My Favorite _____________ Is...
My Goal In Life
What I Want To Learn From Oral Communications

Critique Sheet

Exercise #1

Directions:

Listen carefully to your recording of Exercise #1. Then rate yourself by checking the appropriate adjectives that best describe your speaking manner.

After listening to my recording of Exercise #1, I would describe my general manner of speaking as:

___ Relaxed	___ Nervous
___ Self-assured	___ Self-conscious
___ Natural	___ Phony
___ Warm, friendly	___ Cold, indifferent
___ Pleasant	___ Irritating
___ Fluent	___ Hesitant
___ Interesting	___ Monotonous
___ Clear, easy to understand	___ Garbled, hard to understand

Exercise 2

VOICE QUALITY, PITCH, VOLUME, SPEED

Objective:

You will record your reading of any one of the following selections.

Directions:

Pick any one selection to record.
Read the selection silently prior to recording.
Record your reading of the selection.
Do Exercise #3.

Selections To Read:

1. You Can't Tell A Rock Fan By Their Cover
2. Suicide

PAGES 99 THROUGH 103 CONTAINING TWO EXCERPTS,
"YOU CAN'T TELL A ROCK FAN BY THEIR COVER" AND "SUICIDE,"
FROM THE BOOK *PERSON TO PERSON: AN INTRODUCTION TO SPEECH COMMUNICATION*
ARE COPYRIGHTED AND WERE REMOVED FROM THIS DOCUMENT PRIOR TO ITS
BEING SUBMITTED TO THE ERIC DOCUMENT REPRODUCTION SERVICE.

Critique Sheet

Exercise #2

Directions:

Listen carefully to your recordings in Exercise #2. Then appraise your reading voice by checking the adjectives that best describe your voice as reflected in this exercise.

After listening to my recording of Exercise #2, I recognize the following faults in my vocal delivery:

Quality

___ Breathy
___ Gaspy
___ Pushy
___ Unsupported
___ Nasal
___ Metallic
___ Thin
___ Jerky
___ Husky
___ Hoarse
___ Flat
___ Unresonant

Pitch

___ Too Low
___ Too High
___ Monotonous
___ Uncertain
___ Strident

Volume

___ Too Soft
___ Too Loud
___ Muffled
___ Weak
___ Fading
___ Forced

Speed

___ Too Slow
___ Erratic
___ Too Fast
___ No Variance
___ Dragging

Exercise 3

CLEAR ENUNCIATION

Objective: You will record a series of sentences in order to assess your enunciation of sixteen vowel tones.

Directions: Turn on the tape recorder.
Read each of the following sentences as clearly as you can and with your best voice production.
Turn off recorder.
Do Exercise #4.

Vowel Sound	Phonetic Symbol	Vowel Sentences
ee as in "eat"	[i]	1. Tom will eat green beans for dinner. After eating, he will read to me.
ay as in "say"	[eɪ]	2. Mamie stayed and played ball in a way that Lanie never could.
a as in "mat"	[æ]	3. Dad will catch cold if he does not wear his tan hat. The black cat hid in the ashes.
aw as in "walk"	[ɔ]	4. The audience applauded the author. I always take long walks in the autumn.
ah as in "want"	[ɑ]	5. Tom wants to be a farmer like his father. Are you taking art?
oh as in "so"	[oʊ]	6. Joe will go home to ride his pony. Don't throw snow at Moe as he has a cold.
oo as in "do"	[u]	7. Is it true that the school was closed because of flu? Soon I will undo my boots and wade in the pool.

Vowel Sound	Phonetic Symbol	Vowel Sentences
yoo as in "use"	[ju]	8. Although the church was huge there were few pews left when we arrived. Sally was cute in her youth; as an adult she is a beauty.
eye as in "line"	[aɪ]	9. I will sky dive at five. The guide will find the island in time.
ow as in "down"	[aʊ]	10. The cleaners will have Sue's brown outfit cleaned within the hour The flowers at our house are the envy of the town.
oy as in "toy"	[ɔɪ]	11. Roy and the other boys enjoy playing with toy soldiers. The coin made a noise as it dropped to the floor.
e as in "egg"	[ɛ]	12. Mr. Smith told them that the engine was in excellent condition. Get Pen to help you enter the race.
i as in "big"	[ɪ]	13. If it is in the index, you should be able to give him the information.
oo as in "foot"	[ʊ]	14. Mrs. Smith keeps her cook books in a nook in her kitchen. Would you walk to the brook with me?
uh as in "bun"	[ʌ]	15. My uncle has a puppy who loves to run.
uh as in "her"	[ɝ]	16. Ernest urged the girl to leave the burning church.

Critique Sheet

Exercise #3

Directions:

Listen carefully to your reading of the sentences in Exercise #3. Place a check in the appropriate column for each series of vowel sounds.

	1 ee	2 ay	3 a	4 aw	5 ah	6 oh	7 oo	8 yoo	9 eye	10 ow	11 oy	12 e	13 i	14 oo'	15 uh
1. Clear, Distinct		^													
2. Distorted, Indistinct															
3. Accurate															
4. Over Emphasized															
5. Produced with Ease															
6. Pressured from Throat															
7. Full, Rich															
8. Abrupt, Nasal															
9. Level, Stable															
10. Wavering															
11. Drawled															
12. Long Enough (Vowels 1-11)															
13. Too Short (Vowels 1-11)															
14. Short Enough (Vowels 12-15)															
15. Too Long (Vowels 12-15)															

Exercise 4

DISTINCT ARTICULATION

Objective:

You will read a series of sentences in order to assess your production of consonants.

Directions:

Turn on the tape recorder.

Read the following sentences (Do not read questions in parentheses.)

Turn off tape recorder.

Do Exercise #5.

Sentence Exercises:

The Final "T's" and "D's":

1. Did David hide under the bed?
2. He cut his food with his left hand.
3. It was great to be first in line instead of last.
4. Dad put Sally to bed.

The Liquid "L":

5. Small children fall often.
6. Lee makes a living coaching football.
7. The doll has yellow hair.
8. The village is quite small and still.

The Good "S":

9. Sam saw Sally working at the store.
10. Why do you look so serious?
11. Is Susan going to science class today?
12. The show was so good that Sonny saw it twice.

The Good "R":

13. It is perfect weather for a picnic.

14. The pouring rain made a strange sound on the trailer.

15. Robert and Terry are going to find wood for the fire.

CRITIQUE SHEET
EXERCISE #4

Directions: Listen to your recording of the following groups of sentences. After each grouping turn off the tape recorder and answer the corresponding question(s) on this sheet. If you are unsure of how you produced certain sounds, read the sentences aloud.

1. The Final T's and D's

Listen carefully to your recording of each of the following sentences: Circle any T's or D's that you omitted.

Did David hide under the bed?

He cut his food with his left hand.

It was great to be first in line instead of last.

Dad put Sally to bed.

2. The Liquid L

Listen carefully to your pronunciation of the "L" sound in the following two sentences. Is your tongue lazy? __yes__no Does your tongue tip make contact with the bump behind your teeth every time an "L" is produced? __yes__no (Say these sentences again if you're unsure.)

Small children fall often.

Lee makes a living coaching football.

The doll has yellow hair.

The village is quite small and still.

3. The Good "S"

As you listen to sentence 11, circle any "S's" that are omitted. Do you lisp even a little? __yes__no Circle any sounds you "unvoiced." You should be able to feel vibration against your teeth as you produce these sounds.

Sam saw Sally working at the store.

Why do you look so serious?

Is Susan going to science class today?

The show was so good that Sonny saw it twice.

4. The Good "R"

While listening to sentences 13-15 circle any "R's" that are garbled. Place a W over any R where you've substituted the W sound for the R sound. To produce a good "R" you should bring your lips forward a little and feel a slight vibration up front in your mouth.

It is perfect weather for a picnic.

The pouring rain made a strange sound on the trailer.

Robert and Terry are going to find wood for the fire.

Exercise 5

FLEXIBILITY OF LANGUAGE

Objective:

You will record yourself talking about one of the following topics for 2-4 minutes to two different audiences.

Directions for Presentation I:

In the following presentation you will be addressing a small group of junior high school students.

___ Select a topic from the list below.
___ Think about the topic for a few minutes and write down notes.
___ Record you presentation (2-4 minutes.)
REMEMBER YOUR AUDIENCE'S AGE, INTERESTS, LANGUAGE, ETC.
___ Turn off the tape recorder and follow the directions for Presentation II.

Topics for Talk:

Life Can Be Fun
Americans Need to Become Physically Fit
Ways to Spend Your Leisure Time
Marriage in Society Today
How to Lose Weight and Remain Sane
Sports

Directions for Presentation II:

In the following presentation you will be talking to a group of businessmen ages 23-65.

___ Using the same topic selected for Presentation I, prepare a 2-4 minute speech for your new audience.
___ Think about your topic and jot down notes as needed.
___ Tape your presentation.
___ Turn off the recorder and read Information on Self Appraisal.

CRITIQUE SHEET

Exercise 5

Directions:

Listen carefully to your two presentations on a selected topic. Then answer the following questions regarding your performance.

1. Did your approach to your topic change according to your audience? ___yes ___no
2. Did the language you used change from Presentation I to Presentation II? ___yes ___no
3. Were the examples and illustrations cited in both presentations the same? ___yes ___no
   If "yes" were they appropriate for both audiences? ___yes __no
   If "no" why did you use other examples or illustrations.

4. Were you more afraid to talk to one audience than the other? ___yes ___no
   If "yes" which audience did you least want to talk to and why?

INFORMATION
ON
SELF APPRAISAL

At this point you should have just completed five vocal exercises. Perhaps it seems that your job is done. Well . . . it's just beginning. As explained earlier these exercises were not designed to:

1. see how frustrated you could get.
2. keep you busy.
3. look impressive or be oppressive.

Rather, they were designed to give you and your instructor a chance to appraise where you are now in your verbal skills development.

In order to asses your skills you will need to listen very carefully to each recorded exercise and fill out the corresponding critique sheet. Don't become distressed at how you sound. *REMEMBER:* YOU ARE HERE TO IMPROVE YOURSELF. Be fair in your criticism of yourself. Answer all questions or check the phrases as honestly and completly as possible. If you have additional information or questions regarding your performances--not covered on the critique sheets--feel free to write on the back of the appropriate critique form. *REMEMBER:* THIS IS NOT A TEST BUT A BEGINNING IN SELF-ASSESSMENT.

After finishing all five critique sheets, please turn them and your audio tape in to the instructor. Sign up for a conference and

HAVE A HAPPY DAY!!!

DIAGNOSTIC TESTING

PART TWO

Introduction to Simplified Diagnostic Testing for Oral Communication Students

It was stated in Clark's study on Oral Business Communication Needs that "Special training, individualized on the basis of a diagnostic speech inventory, should provide help in improving such elements of vocal effectiveness as voice quality, enunciation, and voice projection."[1] With this premise in mind, we set out to locate, adapt or construct a diagnostic speech inventory. After researching what a diagnostic inventory should be able to identify and examining several, a series of audio and video exercises were developed. (See Part I for the description, procedure and exercises.) Although this appears to be a valid tool for our needs, it was noted that realistically this inventory was too exhaustive for the time presently scheduled for Oral Communications. Therefore, a simplified procedure was constructed. (See Part II for procedure and exercises.

The success of either procedure ultimately hinges upon the skill of the instructor in diagnosing problem areas, the availability and quality of resource materials used to correct deficiencies, and the committment of the student to his self=improvement program. Since the time frame of this grant did not provide for the location or development of resource materials keyed to the diagnostic inventory, this phase of development will become an on-going objective of the communications department.

I. Rationale:

In order for a student enrolled in an oral communications course to become a more effective communicator, he must become familiar with his own vocal and physical delivery.

II. Purpose:

The purpose of this test is:

To provide an initial assessment tool by which a student and his instructor may evaluate the student's skill and plan a program for self-improvement.

III. Methodology:

During the second or third week of the quarter, the instructor will arrange for each student to give a 3-5 minute speech. This speech will be video taped.

---

[1] Clark, K.B. Oral Business Communication Needs As A Basis For Improving College Courses, University of Michigan, 1968,

The instructor will critique the student's performance but save comments until the scheduled conference. The student will -- outside of class -- make arrangements to view his tape three times. First, listening only to the sound. Second, viewing the physical delivery without sound. Third, reviewing the tape with both video and audio. During and/or after viewing, the student will fill out a self-appraisal form. This form will be submitted to the instructor during the scheduled conference. (See Simplified Procedure For Diagnostic Testing for additional clarification.)

Simplified Procedure
for
Diagnostic Testing
of
Oral Communication Students

I. General Directive: This procedure will be followed by all students enrolled in an Oral Communications class and all instructors teaching Oral Communications.

II. Itemized statement of duties for instructors:

1.0 Each instructor teaching a course in Oral Communications (O.C.) is responsible for seeing that all his O.C. students have taken diagnostic testing, their recordings have been evaluated and an interview has been held.

1.1 Instructor acquaints all students with purpose of diagnostic test and procedures for testing.

1.2 Instructor arranges class time during 2nd or 3rd week of quarter for diagnostic exercises. (Unless the class is large this could be achieved in a two hour session.)

1.3 Instructor provides students with list of suggested topics for diagnostic exercise--preferably one class session prior to taping of exercise.

1.4 Instructor video tapes each student's exercise and fills out critique form.

1.5 Instructor arranges conference with each student. During conference, instructor discusses with student the following topics:

a. goal identification -- what student hopes to achieve thru O.C. class.

b. previous experience -- course work and/or activities engaged in in area of oral communications.

c. self-appraisal -- student's appraisal of diagnostic exercise.

1.6 Instructor helps student select appropriate program of self-improvement, if needed.

1.7 Instructor writes report on each conference indicating student's skill level and goals. This report is maintained in student's file in O.C. office.

III. Itemized statement of duties for students.

2.0 Each student taking a course in oral communications is responsible for participating in all components of the diagnostic procedure -- exercise, critique, and conference.

2.1 Student takes part in orientation session. This session will cover the "why's" of diagnostic testing, the "how's", and the "where's".

2.2 Student selects a topic for video exercise and prepares prior to video taping.

2.3 Student performs oral exercise in class on date appointed by instructor.

2.4 Student views video tape of his diagnostic exercise and completes critique form.

2.5 Student meets with instructor for scheduled conference.

2.6 Student decides, with guidance of instructor, wether or not a program of self-improvement should be initiated.

(If program is recommended, student will select areas of concentration and begin program of exercises.)

2.7 Student does final self assessment and records in personal log for reference purposes throughout quarter.

2.8 Student begins Program of Self-Improvement, if required or desired.

Exercise

GENERAL IMPRESSION OF VOCAL AND PHYSICAL DELIVERY

Objective:

You will speak extemporaneously on a chosen topic in class for 3-5 minutes.

Directions:

Choose any one of the following topics.
Jot down notes and/or an outline on the topic.
DO NOT WRITE OUT A SPEECH.
Rehearse what you will say prior to video taping.
Report to class for your scheduled taping.
View the Video tape three times.
Complete self-appraisal form.

Topics for Talk:

My Most Embarrassing Moment
Why I Chose IVTC For My College Training
If I Had One Wish...
__________ Can Be Fun
My Favorite _______ Is...
My Goal(s) In Life
What I Want To Learn From Oral Communications

Self-Appraisal
of Vocal and Physical Delivery

After viewing your video tape at least three times, rate yourself by checking all adjectives that apply.

1. Describe the way you sound:

____ relaxed
____ self-assured
____ natural
____ warm, friendly
____ pleasant
____ interesting
____ clear, easy to understand

____ nervous
____ self-conscious
____ phony
____ cold, indifferent
____ irritating
____ monotonous
____ garbled, hard to understand

2. Describe your vocal speed:

____ slow, hesitating
____ comfortable, easy for listeners to follow
____ too fast

3. Describe the way you move:

____ smoothly
____ too casually
____ nervously

____ awkwardly
____ too stiffly
____ no movement

4. Describe the way you look:

____ interested in subject
____ enthusiastic
____ poised, self confident

____ bored with subject
____ scared
____ awkward, nervous

Having completed the above general check list, further analyze your speech by completing the following:

1. List any gestures or movements that were distracting:

________________________ ________________________

________________________ ________________________

2. List any words or phrases used too frequently:

________________________ ________________________

________________________ ________________________

________________________ ________________________

3. What is your strongest asset in speech?

4. What do you most want to change about you speech delivery?

ORAL
COMMUNICATION

ADVANCED TELEPHONING PROJECT PACKAGE

Directions: (Check each step as you complete it)

___ 1. Read Bell pamphlet on Telephone Techniques, provided by instructor.

___ 2. Participate in class role-playing exercises with Teletrainer.

___ 3. Obtain office assignments from instructor.

___ 4. Report to assigned office project supervisor to arrange schedule.

___ 5. Obtain information for "Orientation Information" form, fill out, and submit to course instructor.

___ 6. Report to office each day at scheduled times; keep complete log.

___ 7. Tape record minumum of six calls during project. Audio cassette and recorder can be checked out at AV room in library.

___ 8. Have project supervisor write comments in space provided.

___ 9. At end of project period submit the following to course instructor:
-- cassette tape of recorded calls
-- completed log and supervisor's comments sheet

PROJECT SPECIFICATIONS:

1. Student must be at assigned office and responsible for screening all incoming calls for a minumum of 5 hours.
2. Student will maintain a log recording all calls.
3. Student will Tape record at random a minumum of 6 phone calls.

August 1975

ORAL COMMUNICATION

TRAINING INTERVIEW PROJECT

DIRECTIONS:

___ 1. Choose some operation or process with which you are familiar. (see pp. 125-126 of text for suggestions.) It should be one you can communicate in 3 - 5 minutes.

___ 2. Decide on the type of situation in which you visualize your training interview taking place:
a) One to One - you would be training a new employee.
b) One to One - you would be training an established employee who has been promoted or transferred to your department from another.
c) One to One - you would be instructing a client (ie: on some company procedure which applies to him)
d) One to a Group - you would be conducting a training session for a group of 5 to 15 new employees.

___ 3. Formulate an objective for the training interview. (The intended result).

Example Objectives:
a) "The trainee should be able to operate the Xerox duplicating machine 2400 on his own, making both regular and special document copies."
b) "The trainee should be able to follow company billing procedure for a test case which I will give him."

___ 4. Make notes on the main points you will need to communicate.

___ 5. Plan what models, instruments, charts, papers or any other visual aids which you could or should utilize to clarify points or reinforce your listener's comprehension.

___ 6. Determine how you will solicit the necessary feedback from your listeners in order to gauge their grasp of your message. (e.g.: By asking questions, giving sample problems to be worked out, having individual go through the operation himself, etc.)

___ 7. Fill out the attached form and outline.

___ 8. Practice your training presentation on someone as many times as necessary until you are satisfied with the results. (Remember your 3-5 minute time limit.)

___ 9. Give your presentation in class.

___ 10. On the attached form, write a paragraph describing kinds of trainee feedback you observed and comment on the strengths and weaknesses of the training interview as a whole. Why do you feel you were or were not successful? What could you have done to improve the training interview?

COMMUNICATION

PERSUASIVE PROPOSAL PROJECT PACKAGE

OBJECTIVE: The student will research and prepare one, 6-8 minute persuasive proposal following given directions and guidelines utilizing an outline and at least one visual aid.

DIRECTIONS FOR PROJECT PREPARATION:
Check each step as you complete it.

___ 1. Read Chapter 12 of text.
___ 2. Choose a topic for your proposal, for ideas, check list of suggested topics given on p.p. 3 and 4 of this project package.
___ 3. Discuss your topic approach with instructor.
___ 4. Complete "Preparatory Notes and Outline" on form given p.p. 5-7 of this project package and submit to instructor for approval.
___ 5. Prepare at least one visual aid according to guidelines in Chapter 11.
___ 6. Have visual aids approved by instructor.
___ 7. Practice, using audio or video tape if possible, until you are perfectly confident of your presentation.
___ 8. Follow specific directions for presentation day, (given on the following page of this project package.)

PROJECT SPECIFICATIONS:

* Presentation must be within 6-8 minute time period, not including questions/discussion.

* At least one visual aid must be utilized.

* Notes must be limited to one 3x5 card.

* Speaker may not use a lectern or podium.

* Speaker will arrange room as appropriate to presentation.

* Speaker should dress appropriately for intended presentation situation.

Note: Presentations must be given a scheduled. Should the student cause presentation to be rescheduled, grade will be lowered one point for each day of delay.

August 1975

DIRECTIONS FOR PRESENTATION:

___ 1. Set up room including visuals and appropriate seating arrangement -- ahead of presentation time.

___ 2. Submit preparatory notes and outline form to instructor.

___ 3. Give listener description orally:

   - age range
   - identifiable characteristics (ie: occupation, interests, background, common beliefs, prejudices, needs, etc.
   - predisposition toward proposal
   - your relation to listeners (do they know you? If so, how?)

___ 4. Give presentation.

___ 5. Conduct question/discussion session. (Have some questions of your own to draw out reactions.)

___ 6. Write a thorough analysis of your presentation and listener reception/feedback. Did they all listen attentively? If you "lost" listeners, at what point and why? Did you achieve your specific objective? Explain. What were the strong points of your presentation? The weak points? Specifically, how could it have been improved?

___ 7. Submit analysis to instructor by the end of the day.

___ 8. Make an appointment to view video tape.

___ 9. View video tape and fill out critique, then compare with instructor's critique, and discuss any serious discrepancies.

___ 10. If required by instructor, arrange for a re-presentation.

LIST OF SUGGESTED TOPICS FOR PERSUASIVE PROPOSALS

REAL TOPICS

Getting and developing your idea is probably the most difficult part of this project. Be careful to select a topic area of which you are knowledgeable -- one for which you know you can find necessary information. Then develop it into a proposal you really believe in and can prove or support with sufficient data. Have an objective in mind when you decide on a specific proposal: What's the planned result of your presentation? What specific action on the part of the listeners?
(may be presented for extra credit before listener groups for whom proposal has actual relevance)

___ New Cafeteria System For IVTC Students
___ How Students Can Help IVTC Receive Full Accreditation From North Central
___ D.P. Program Must Be Re-Organized
___ Quarter Vacations Must Be Longer
___ The Student Senate Should Be Re-Organized
___ Student Senate Funds Should Be Spent To ______________
___ Students Should Not Eat Or Drink In The Classrooms
___ A ____________ Club Should Be Formed At Ivy Tech
___ Student Spirit Should Be Improved
___ Oral Communications Should Be Required Of ALL Business Students
___ Oral Communications Should Be An Elective
___ IVTC's Image Needs Improvement
___ The Field Study Program Should Be Changed
___ The IVTC Basketball Team Should Be Supported By Student Funds (Attendance at games, etc.)

TOPICS FOR MANUFACTURED SITUATIONS

(Presented to a predetermined type of listener group in a manufactured situation)

Data Processing

___ Advantages of conversion to Key Disk Storage (to program analysis)
___ Subscription to Computer World or any trade journal (to D.P. personnel)
___ Advantages of a time sharing plan or leasing service (to representatives from local business and industry)
___ Hiring of an extra programmer (to D.P. manager and supervisors)

Accounting

___ Services of a public accountant (to a group of small business owners)
___ Professional income tax service (to some business men's club)
___ Need for a new budgeting system (to bookkeeping department of a local business)
___ Advantages of particular calculator model (to a general business group of mixed interests)
___ A new group medical plan, profit sharing plan, or payroll savings plan (to fellow employees)

___ Joining the credit union (to new employees)

Secretarial Science

___ Advantages of conversion to word processing system (to a group of businessmen)
___ Importance of certification of secretaries (to members of a Secretarial Assn.)
___ Need for institution of new job level: "Administrative Assistant" (to your boss and members of management)
___ Need for new procedure for billing, hiring, vacation rotation, etc., (to managers and accounting department.)

AVAILABLE EQUIPMENT AND MATERIALS FOR VISUALS

In the library AV room you may reserve any of the following to be checked out the day of your presentation:

___ 16mm projector
___ 35mm slide projector
___ overhead projector (for transparencies)
___ opaque projector (for opaque sheets)
___ tape recorder
___ record player

The following library services may be of help to you:

___ Xerox machine
___ ditto machine
___ transparency preparation
___ plastic lamination

The Communications Department can provide you with the following:

___ portable blackboard
___ flip chart easel and paper
___ audio or video tape cassettes
___ table for materials or models

The Ivy Tech Bookstore sells some graphic supplies for making charts and diagrams, etc.

TITLE: IMPLEMENTING A K-12 CAREER DEVELOPMENT PROGRAM IN THE DISTRICT OF COLUMBIA. INTERIM REPORT (JULY 1, 1974-JUNE 30, 1975).

PERSONAL AUTHOR: ETHERIDGE, BESSIE D.

DESCRIPTOR: *CAREER EDUCATION; *PROGRAM DEVELOPMENT; *ELEMENTARY SECONDARY EDUCATION; *URBAN EDUCATION; *INNER CITY; WORKSHOPS; INSERVICE TEACHER EDUCATION

IDENTIFIER: *DISTRICT OF COLUMBIA PUBLIC SCHOOLS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 9, NO. 6.

DESCRIPTIVE NOTE: 108P.; PORTIONS OF THE ORIGINAL DOCUMENT ARE OF MARGINAL REPRODUCIBILITY, BEST COPY AVAILABLE.

ABSTRACT: SUMMARIZED IN THIS PROGRESS REPORT OF A CAREER EDUCATION PROJECT IN THE INNER CITY ARE THE ACCOMPLISHMENTS AND MAJOR ACTIVITIES AND EVENTS FOR EACH QUARTER OF THE ACADEMIC YEAR. ALSO NOTED ARE SPECIFIC ACTIVITIES RELATING TO PUBLICITY, DISSEMINATION, DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES, AND STAFF DEVELOPMENT. A MAJOR EFFORT WAS DIRECTED TOWARD STAFF DEVELOPMENT IN THE FORM OF WORKSHOPS, SEMINARS, AND CONFERENCE PARTICIPATION. A MINICOURSE, "ORIENTATION TO CAREER EDUCATION," WAS HELD FOR ADMINISTRATORS FROM OTHER DISTRICTS IN ORDER TO DISSEMINATE THE CAREER EDUCATION CONCEPT FOR FURTHER IMPLEMENTATION. COMMUNITY INVOLVEMENT WAS SOUGHT THROUGH THE FORMATION OF A PARENT ADVISORY COUNCIL; THE FORMATION OF A PROJECT ADVISORY COUNCIL RECRUITED FROM COMMUNITY LEADERS; AND A PRESENTATION OF CAREER EDUCATION THROUGH SPEAKERS, DEMONSTRATIONS, AND EXHIBITS CALLED CAREER EXPO '75. A STATEMENT OF PROJECT GOALS AND THE STEPS TAKEN TOWARD THEIR IMPLEMENTATION IS ALSO INCLUDED. CONTAINED IN THIS REPORT ARE COPIES OF WORKSHOP AND MEETING AGENDAS, LETTERS, FORMS, ANNOUNCEMENTS, MEMOS, PUBLICITY RELEASES, AND ISSUES OF THE CAREER EDUCATION NEWSLETTER. (RG)

7. ACCOMPLISHMENTS:

First Quarter

Meetings with faculties of schools in Phase II who will enter the Project during the school year 1974-75 were held early in September.

Interim report and evaluation for fiscal 1974 completed and submitted in August, 1974.

Instructional materials distributed to all schools during the month of September.

On-site assistance to all schools with in-depth help to new schools.

Activities of the Parent Advisory Council have begun. This group has been augmented by elected students from the project high school.

Planning at the project high school - Dunbar - has proceeded with dispatch. In two workshops in September, the planning team completed its plans for initiating the program during National Career Guidance Week.

The principal of the project high school, an assistant principal from one elementary school, and an assistant principal from one junior high school participated full-time in the summer workshop. Principals from most schools visited the workshop and participated in certain activities.

Teachers, counselors and selected parents, formerly trained by project staff, served successfully as consultants for the workshop. Project staff continues to find this

7. ACCOMPLISHMENTS: (cont'd)

group highly satisfactory as trainers of teachers.

The waiting list for Education 670F, fall session, stands at eighty.

Interest in career education from schools outside the project continues to grow.

Project staff responded to the request from Special Education to admit thirty-five (35) Special Education teachers to the summer workshop.

Requests for information and instructional materials have accelerated. Among persons requesting help are local colleges, college students, lay members of the community and practitioners in the states.

Second Quarter

On site assistance to teachers continued with special assistance as needed.

A great deal of enthusiasm was evinced by participants in the mini-course. This effort may prove to be the catalyst to produce speedier dissemination of the career education concept followed by implementation.

Implementation in some of the new schools has exceeded the expectations of project staff, but much remains to be done.

The fall session of Education 670F, Orientation to Career Education, necessarily delayed because of the mini-course, will be offered beginning on January 25 on fourteen (14) Saturdays. Early registration is encouraging.

Third Quarter

102 persons registered for Education 670F, D. C. Teachers College, a bumper crop.

Ninth grade curriculum, first draft, is now ready for reproduction.

Third Quarter

102 persons registered for Education 670F, D. C. Teachers College, a bumper crop.

Ninth grade curriculum, first draft, is now ready for reproduction.

7. ACCOMPLISHMENTS: (cont'd)

Funds have been identified for reprint of Curriculum Guides for grades 7 and 8 - Emergency School Assistance Act.

All six (6) regional teams are involved in planning and implementation of initial activities designed to establish career education as a part of the regular curriculum in non-project schools in the six (6) regions with the help of project staff.

A student from one of the project junior high schools - Jefferson - created winning poster in the junior high school division - in the national career education contest sponsored by the American Personnel and Guidance Association.

Population of the project as of January 1, 1975, has grown to 165 teachers and counselors and 5,507 students, K-12, in twenty-two (22) schools - fifteen (15) elementary, six (6) junior high and one (1) senior high school.

The need for an Advisory Council composed of community leaders from the business, professional and the organizational community has been identified. Staff will address this problem in the fourth quarter.

Fourth Quarter

First draft of ninth grade curriculum edited and prepared for distribution, June 1975.

Curriculum 1-6 revised. A curriculum team composed of eight (8) teachers completed an extensive revision of the elementary curriculum. Target date for distribution - September 1, 1975.

Project Advisory Council recruited from community leadership to survey the project program and advise project staff as to revisions and expansion. Membership on the council to date reflects: institutions of higher education, government, business, labor, vocational education:

Mrs. Doris [illegible]-Early	Walter Reed Army Medical Center

7. ACCOMPLISHMENTS: (cont'd)

Mr. Norman C. Neverson	Xerox Corporation
Mr. Santo P. Marzullo	Washington Technical Institute
Mrs. Barbara Luchs	D. C. Vocational Education Advisory Council - College
Mr. Albert Long	D. C. Vocational Education Advisory Council
Ms. Mary A. Jackson	National Institute of Education
Mrs. Olive Covington	Advisory & Learning Exchange
Mr. Charles D. Redding	C & P Telephone Company - Public Relations Manager
Mr. Edgar Lowry	Office of Program Development - United Planning Organization

Evaluation of the tenth grade communications program at Dunbar on May 30, 1975.

Revision of the Tour Guide has begun.

Planning for Career Expo '75 completed.

Staff representative participated in ESAA Career Education presentation.

103 teachers/counselors completed Education 670F, Orientation to Career Development, on May 10, 1975.

Pre-orientation and recruitment completed in the final three (3) elementary schools which will begin implementation in September, 1975: John F. Cook, Simmons and Walker-Jones.

7. ACCOMPLISHMENTS: (cont'd)

Revised textbook list for Career Education prepared and submitted to the Board.

8. MAJOR ACTIVITIES AND EVENTS:

First Quarter

Four (4) week training workshop for teachers, counselors and administrators, Education 670F, with D. C. Teachers College, 170 participants, July 8 - August 2, 1974 and January 25 - May 10, 1975.

Early fall - Mini-Course, Orientation to Career Education, for administrators responsible for instruction in the six (6) newly-created regions of the District; six (6) consecutive Thursdays - 36 hours of instruction. This course was offered to increase speed of dissemination of the career education concept throughout the city by developing a corps of personnel in each region to plan and manage career education infusion with project staff serving as consultants and facilitators.

Second Quarter

A Mini-Course, Orientation to Career Education, was successfully completed on November 7, 1974. Thirty (30) administrators from the six (6) newly created regional and supervising directors subject fields, participated in this activity on six (6) Thursdays beginning on October 3, 1974. Project staff offered the course in order to assist regional superintendents in developing teams to organize the dissemination of the career education concept throughout the regions, thereby speeding the process of city-wide implementation.

Topics covered in the workshop included:

Career Education, U. S. A.

Career Education in the District of Columbia.

The Scope of the Program: Awareness; Survey; Exploration; Preparation.

Implementation: K-6; 7-9; 10-12.

Establishing the Prototype

8. MAJOR ACTIVITIES AND EVENTS: (cont'd)

Project staff is currently involved in conferences with the regional teams as they begin to plan their programs.

The 10-12 model was launched at Dunbar High School during National Vocational Guidance Week, November 11-15, 1974, with a series of daily activities keynoted by Dr. Kenneth B. Hoyt, Associate Commissioner for Career Education. Several other schools celebrated this week with Career Days and other observances.

Sixth grade pupils from Lenox Elementary School participated in a career education film produced by the Department of Labor.

The following staff development activities were conducted by project staff in response to special needs.

Workshop for Counselors - 10/21/74

Workshop for Educational Aides - 10/29/74

Workshop for Secondary Teachers - Team
Strategies - 11/9/74

Workshop for Elementary Teachers - Mass
Production Activities - 12/7/74

In response to requests from the Regions, project staff participated in team seminars at the following regional offices:

Region III. - 11/11/74; 11/20/74

The team from Region III planned and presented a workshop for the faculty at Kelly Miller Junior High School with help from project staff.

Region I - 12/10/74

Region III - 12/12/74

The Parent Advisory Council has conducted monthly meetings of the Steering Committee and the Council - October 8;

8. MAJOR ACTIVITIES AND EVENTS: (cont'd)

November 4, 12, 26 and December 10.

The Council of Principals requested by the principals was activated at a stimulating meeting on November 14, 1974. Plans of the Council include a meeting on the second Thursday of each month.

Third Quarter

Title I Programs - Presentation by staff member.

Staff member participated in Task Force on research and evaluation of D. C. Schools.

Mini-course participants plan dissemination of career education programs in all six (6) newly created regions following the Mini-course offered by the Project in the Fall of 1974. Staff members serve as consultants to the regional teams as they plan implementation. Staff members participated in at least two (2) conferences per month with regional teams and conducted several presentations for regional personnel.

Revision of D. C. textbook listing for Career Education preceded by evaluation of new instructional materials.

Staff member made a presentation for the Science Department, D. C. Schools at a meeting of science teachers on February 14.

Fourth Quarter

Parent Council trip to Baltimore, Maryland, April 11, to experience an open space high school - Dunbar; a mass production site - The Carling Brewery; careers in marketing - The Lexington Market.

Workshop for educational aides on April 14. This is a part of the on-going staff development effort.

Career education kickoff for Region IV, a three (3) day activity for the schools in the region; orientation, visits to project schools in the region, follow-up and planning day, beginning on April 15, 1975.

8. MAJOR ACTIVITIES AND EVENTS: (cont'd)

Counselor Update - Progress report for counselors in District of Columbia Schools on April 24 at a special meeting for counselors from Regions I and III.

Staff orientation to career opportunities at Walter Reed Army Medical Center, Research Division.

Monthly meeting of the Parent Advisory Council - May.

Orientation to Career Education and Workshops in the regions, facilitated by project staff:

5/8 - Region III at Carver

5/21 - Region I at Sousa

5/29 - Career Day Recognition Program - Region III

Education 670F, Orientation to Career Development, Winter session, concluded on May 10. 103 participants completed the course.

Career Expo '75, May 17, 1975, A Chronicle of five (5) years of progress of the Career Education Program in the public schools of the District of Columbia. Sponsored by the Committee on Adult Education and Career Development of the Board of Education, and directed by the staffs of the Career Development Exemplary Project and the Department of Career Development Programs.

> This program offered the community through speakers, demonstrations, exhibits and handouts, a comprehensive report on the progress of the effort spearheaded by the Project. Dr. Kenneth B. Hoyt, Associate Commissioner for Career Education, U. S. Office of Education, delivered the keynote address. Other guests included: Dr. Barbara A. Sizemore, Dr. Otho Jones, Mr. James Spicer, Ms. Susie Morgan, Mr. Albert Long and Col. William Rumsey.

16

8. MAJOR ACTIVITIES AND EVENTS: (cont'd)

Art Exhibit at Howard University - Health Careers prepared and implemented by students and their teacher at Dunbar High School and facilitated by staff member.

Orientation for the faculty of Sousa Junior High School.

Bicentennial Festival at Tyler Elementary School, May 29. This event was sponsored by the Career Education Team.

Second Annual Banquet of the Parent Advisory Council, June 5, 1975. This event features a progress report to Project parents, teachers, principals, counselors and friends and good fellowship at year's end. Nearly 200 well wishers participated.

Special workshop for junior high school teachers, June 16 - 27, to explore additional teaching strategies. Sixty (60) teachers considered the use of learning systems, gaming and simulation and educational media as teaching tools.

Special Seminar for personnel from Laurel Children's Center at Browne Junior High School, June 18.

9. PROBLEMS:

First Quarter

Funds for printing are elusive.

Transportation facilities of the schools remain limited.

The clerical vacancy has not yet been filled. This has limited our clerical efficiency.

Second Quarter

As the Project expands, we find that our clerical support is inadequate to need. Restructuring priorities may be indicated.

9. PROBLEMS: (cont'd)

Rising costs in every area will limit the volume of instructional materials reaching classrooms.

Third Quarter

Third-party evaluation. Due to problems in central office, the contract for evaluation has been delayed, therefore voiding our time schedule for evaluation activities. Thus, the evaluators will not be able to begin activities in the schools until late April or early May.

There is a threat that the Title I Component of the Project will not be funded for Fiscal 1976. Final determination will be made early in the fourth quarter.

Adequate space for our center remains a problem.

Commitment on the part of the central administration as to status of career education as an integral part of the educational program of D. C. Schools remains vague. Plans for the fourth quarter include an activity for the entire city and including members of the Board of Education, the Superintendent of Schools and all members of the administrative staff of the schools.

Fourth Quarter

Fiscal. Printouts of expenditures and balances remain **unavailable**, thus it is impossible to compare office records with the official record maintained by the Accounting and Finance Department of D. C. Schools. As a result, it is difficult to project carryover information with accuracy.

Regulations require that listed items - supply - be purchased from the school warehouse exclusively. Since the warehouse has not been allowed to restock for more than a year, its shelves are practically empty.

10. PUBLICITY ACTIVITIES:

Publications:

10. PUBLICITY ACTIVITIES: (cont'd)

Newsletter for schools 1974-75 distributed to all schools.

Fall Bulletin distributed to all schools.

Proposal and letter for Mini-Course, Orientation to Career Education, distributed to all regional superintendents and officials in September.

Presentations by Project Staff for:

The D. C. Inter-agency Council, 10/2/74.

National Science Teachers Association Area Convention, Washington, D. C., 11/23/74.

Two W Workshop, 12/3/74.

Seminar in elementary education, Catholic University, 12/11/74.

Publications in local school newspapers, organizational newsletters featuring project activities.

12. PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES:

Though the preliminary steps for the selection of a third-party evaluator were begun early in the first quarter, the request for proposals was not advertised until November, 1974.

An evaluation panel composed of two principals, a representative from the Department of Career Development Programs, the co-chairman of the Parent Council

12. PROGRESS ON DATA COLLECTION, etc.: (cont'd)

and Project Staff was selected to review proposals received.

The proposal of IBEX, Inc., Arlington, Virginia, was selected but contract procedures were not completed until May, 1975, at which time data collection began in the schools and community. All data is now completed and the report of the evaluator is submitted with this narrative report.

13. OTHER ACTIVITIES:

First Quarter

Project headquarters was moved, pursuant to need of the school system, from Carver School to Browne Junior High School in mid August. Project activities were necessarily affected during the readjustment period.

Project Director coordinated a workshop in Career Education for senior high school teachers sponsored by D. C. Schools, Department of Staff Development.

Project Director coordinated the participation of a group of administrators (20) in the summer NASE Seminar in Career Education at Toronto. One Assistant Director participated.

Members of project staff participated in the following staff development activities:

Workshop in Community Involvement at Catholic University

Seminar in Curriculum, University of Colorado

Seminar, Women in Management

Second Quarter

Staff members participated in the following activities:

Workshop-Career Education in the Elementary School, Catholic University

13. OTHER ACTIVITIES: (cont'd)

Committee for development of an auxiliary RFP for ESSA

Conference for State Directors of Career Education at Columbus, Ohio, 10/30 - 11/3/74.

Federal Programs Workshop, D. C. Schools, 11/6/74

Career Education Seminar, National Council of Teachers of English, 11/27 - 12/1/74

Conference, Curriculum Specialists, Atlanta, Georgia, 12/4 - 6/74

Third Quarter

Seminar on Career Education, ASCD, March, 1975

Seminar on Career Education, Association of Chief State College Office

Committee for development of a delivery system for career information

Committee for development of a Biomedical program for selected eleventh and twelfth grade students

Fourth Quarter

Annual Conference American Personnel and Guidance Association

Annual Conference National Education Association

Evaluation, Part D Project, Bedford, Virginia

Conferences with regional personnel to facilitate

13. OTHER ACTIVITIES: (cont'd)

the planning for implementation of the career education program city-wide continue on a demand basis. To date, every region is in the process of planning and five (5) have begun their orientation programs for instructional personnel.

14. STAFF EMPLOYMENT AND UTILIZATION:

First Quarter

Vacancy, GS-4, Clerk-typist, full-time.

Second Quarter

Vacancy continues.

One Assistant Director, Jury Duty, 11/1/74 - 12/6/74.

Third Quarter

Vacancy, GS-4, Clerk-typist, was filled effective February 10, 1975. This is a full-time position.

Fourth Quarter

All positions filled.

15. STAFF DEVELOPMENT:

The following in-service training was provided by the Project for teachers, counselors and administrators:

First Quarter

Seminar for staff of Dunbar High School on the 10-12 model.

Education 670F, 7/8 - 8/2/74, Orientation to Career Development, 170 participants.

Mini-Course for regional staff personnel and supervisory personnel, 10/3 - 11/7/74.

15. STAFF DEVELOPMENT: (cont'd)

Second Quarter

Workshop for Counselors

Workshop for Educational Aides

Administrative Seminar 2

Workshop for secondary personnel - Strategies

Workshop for elementary personnel - Mass Production

Third Quarter

Joint Workshops - all personnel - 2

Workshop - Dunbar Teams, Communications Program - 3

Education 670F, 1/25 - 5/10/75 - 103 participants

Administrative Seminars - 3

Fourth Quarter

Administrative Semi[illegible]s - 2

Joint Workshop - 1

Workshop for Counselors

Workshop for Educational Aides

Two week seminar for junior high school teachers - Instructional Strategies

Two week workshop for ninth grade teachers in preparation for implementing the new ninth grade curriculum

15. STAFF DEVELOPMENT: (cont'd)

Two week workshop for senior high school teachers/counselors to complete development of the design for grade ten, Career Exploration.

Activities for Project Staff:

Seminar - Urban Studies of Man at Catholic University. Two staff members participated.

Annual Conference of the American Personnel and Guidance Association. One staff member participated in conference activities and the presentation for the District of Columbia.

Annual Conference of the American Association of School Administrators. Two staff members participated.

Annual Conference of the Association for Supervision and Curriculum Development. One staff member participated.

Career Education National Forum, Ohio State University. One staff member participated.

American Education Research Association. One staff member participated.

CAREER EDUCATION IN THE INNER CITY

A PROGRESS REPORT

PROJECT STAFF

Bessie D. Etheridge, Director

Ellen F. Datcher
Martha J. Roache
Jarugula S. Rao
Assistant Directors

CAREER EDUCATION IN THE INNER CITY:
A PROGRESS REPORT

GOAL 1

To establish a career foundations program at elementary level to focus upon the economic realities underlying our society and the expanding role of technology in modern life, in addition to meeting the learning needs of individual children.

The Project Staff has -

. adopted the following concepts as a basis for the elementary curriculum model:

There is dignity in all work.
The life of a culture depends on its workers who produce goods and services.
There are many different kinds of work.
Mankind uses tools for work.
Work has rewards.

. embraced a hands-on approach to learning which includes tool technology.

. developed an implementation model with the help of teachers, counselors and administrators from two (2) schools.

. tested the models in eight (8) schools using Title I funds.

. expanded the elementary career awareness program to eight (8) inner city schools with a new exemplary project grant.

Total Teacher Participation: 47

Total Students Involved: 807

We shall add three (3) additional elementary schools in FY 1976.

GOAL 2

To adopt a career cluster concept based upon an analysis of career opportunities available in the Washington Metropolitan Area.

We have adopted the following clusters as a framework for the secondary curriculum and implementation efforts:

- Consumer and Homemaking
- Communications and Media
- Fine Arts and Humanities
- Construction and Environment
- Agri-Business, Natural Resources, Marine Science
- Public Service Occupations
- Health Occupations
- Manufacturing, Marketing and Distribution, Business and Office Occupations
- Transportation
- Hospitality, Recreation and Personal Service Occupations

We shall modify this cluster organization as the need arises.

GOAL 3

To provide for a comprehensive survey of careers in our society in grades seven (7) and eight (8), students to move through a survey of all clusters integrated with all curriculum areas and correlated with expanded guidance and counselling services.

The Project Staff has -

- developed an implementation model with the help of teachers, counselors and administrators from two (2) schools.
- prepared ten (10) modules of curriculum materials and a teacher's manual with the help of consultants from the Metropolitan Education Council for Staff Development.

GOAL 3 (Cont'd)

- arranged for a second printing of the survey curriculum.
- tested the implementation model at two (2) junior high schools using Title I funds.
- expanded the survey experience to students in four (4) additional junior high schools with funds from a new exemplary project grant.

Total Teacher Participants: 38

Total Students Involved: 1,858

GOAL 4

To provide for exploratory work in cluster areas in grades nine (9) and ten (10), the program to offer a variety of elected experiences either solely in the junior high school or comprehensive high school setting or in conjunction with a career development center.

The Project Staff has -

- adopted a ninth (9th) grade exploratory experience based upon the following three (3) emphases:

  Self-awareness, communication skills, and in-depth exploration.

- prepared a draft of curriculum materials to provide this experience.
- organized a team of high school teachers who will begin to plan and implement a second-phase exploratory experience using an expanded, in-depth communications program as the basis for this interdisciplinary effort.

Total Teacher Participants: 32

Total Students Involved: 850

We shall complete the model for the second phase of the exploratory experience by June 30, 1976.

GOAL 5

To provide opportunities for in-depth preparation in grades eleven (11) and twelve (12), to be characterized by cooperative programs with business, industry and government, intensive job entry skill training and occupational guidance, counselling and placement.

The model being developed will include the following:

Coordination with the programs of the newly developing Career Centers for part-time study for all pupils in the comprehensive high schools. Areas presently available include health occupations, graphics, office occupations, and auto mechanics.

Coordination with other existing programs, including WOW; ICEP; Career Counselling; DE; COE; and Prep Club.

Coordination with opportunities offered by such local businesses as PEPCO and C&P Telephone Company.

Leadership from the guidance teams in the project high school.

GOAL 6

To develop a faculty training model.

The Project Staff has developed the following:

- A pre-orientation workshop format.
- An orientation workshop for project school faculties from which participants receive four (4) semester hours of in-service credits through D. C. Teachers College.
- A follow-up workshop format for teachers, counselors and administrators.
- A training program for educational aides.

GOAL 7

To develop a model for parent/community involvement.

The Project Staff has established a Career Education Parent Advisory Council consisting of parents, students, counselors, teachers, administrators, and community leaders. At its monthly meetings the Council focuses upon the following:

- An update on Project activities.
- Tapping resource persons in our community including parents.
- Introduction to such strategies for infusion of career education as tour experiences and the use of gaming and simulation techniques.
- Planning such an annual culminating activity as a banquet.

GOAL 8

To facilitate the infusion of career education in all D. C. Public Schools.

Consistent with the recommendations contained in the Superintendent's 120 Day Report, the Project Staff provided a mini-orientation course for staff development and curriculum development personnel from each of the six (6) regional offices during November and December, 1974. This course was also designed to help the participants understand their roles as change agents and support personnel, in addition to demonstrating for them strategies for the infusion of career education into the curriculum at every level.

OFFICE OF EDUCATION

MAILING ADDRESS:
P.O. BOX 13716
PHILADELPHIA,
PENNSYLVANIA 19101

Dr. James T. Guines
Associate Superintendent
Division of Instructional Services
District of Columbia Public Schools
415 12th Street, N.W.
Washington, D.C. 20004

Dear Dr. Guines:

I am pleased to advise you that the Regional Office of Education, Division of Occupational and Adult Education, has determined the "Career Education in the Inner City Project" funded under Part D of the Vocational Education Act of 1963 as amended has progressed satisfactorily and I am therefore recommending approval for third year funding. Final approval action will be the responsibility of the OE Grants and Contracts Division.

The determination of the Division of Occupational and Adult Education to recommend third year funding is based upon very specific and deliberate activities of the regional office including (a) observations of project progress through regular Regional Office of Education monitoring visits, (b) review of quarterly progress reports, (c) review of the third party evaluators reports, (d) observations and recommendations of the District of Columbia State Department of Vocational Education, and (e) observations and recommendations of the Performance Review Team.

All indicators have clearly established that the project is definitely on target and moving decisively toward the accomplishment of the overall goals as stipulated in the project application. The District of Columbia Board of Education and everyone who has worked so diligently this year to move the project forward are to be heartedly commended. Continuation of the success of your efforts will certainly help to establish career education as a viable educational thrust for the State and nation.

The project third year funding guideline is $108,571.00. We would appreciate the preparation and submission of a third year project operating budget based on the above funding guideline.

Sincerely yours,

Robert A. Smallwood

A Proposal

Orientation to Career Development

Mini Course

"Career Education in the Inner City"
A Career Development Exemplary Project

Ellen F. Datcher Jarugula S. Rao Martha J. Roache	Assistant Directors
Bessie D. Etheridge	Project Director

Rationale

In response to the recommendations of the Task Force Report of the Department of Vocational Education, 1969, D.C. Public Schools, and puisuant to the national thrust for the infusion of economic awareness into the ongoing program of the public schools, K-12, a grant was secured from the U. S. Office of Education for purposes of developing a K-12 model for the District of Columbia. The ultimate goal of this endeavor was city-wide implementation of a career education program for all students.

Accepting the challenge, the Career Development Exemplary Project, beginning in 1970, has developed and implemented a model K-9 and is currently developing a 10-12 model in conjunction with the faculty and administration of an academic high school. This model will go into trial implementation during the fall of 1974.

Mission

The Project therefore, in order to speed dissemination of the career educatio concept city-wide and at all levels, offers to provide the following services for persons on the regional staffs concerned with instruction; supervising directors subject fields; and members of the Title I staff:

Phase I

- A six-day workshop - one day each week, preferably on six consecutive Thursdays. This workshop will offer an orientation to career development.

- This workshop will include the following components:

  1. Career Education U.S.A.
  2. Career Education in D.C.
  3. The Scope of the Program;
     Awareness, Survey, Exploration, Preparation
  4. Implementation K-6
  5. An Introduction to the Cluster Concept; 7-9
  6. A look at the 10-12 model

Phase II

Following the workshop, project staff is prepared to serve as consultant - facilitator to regional staff in its program of dissemination of the career education program to the non-project schools of the regions. This service includes:

- Help with planning the in-service program

- Recommendation of personnel to staff the in-service program

- Recommendation of materials and resources to be used
- Some assistance with instruction
- Assistance in planning for implementation

Cost

Costs for instructional materials, consultants and other services for the six-day workshop will be the responsibility of the Project.

Costs for Phase II will be the responsibility of D.C. Schools.

CURRICULUM/STAFF DEVELOPMENT
PLANS FOR PROFESSIONAL DEVELOPMENT DAY
March 21, 1975
1:15 p.m.

Group I - Career Education
Penn Center

Information about the Career Development Exemplary Project
-Mrs. Martha Roache
Consultant

Group II - Library Science
Hamilton Junior High
Topics:
- Open Scheduling
- Use of the School Media Center
- In-service Workshops for Teachers
- Media Centers and Individualization

Group III - Science
Rabaut Junior High
- Setting guidelines for communication between levels
- Planning for workshops to share ideas and techniques

Group IV - Special Education, Counseling and Student Development
Emery School
- Discussion of areas of concern identified at previous meeting.
- A look at guidelines and possible solutions to problems
- Exchange of strategies

Summer Staff Development for Counselors

Nathaniel Hill, Supervising Director, Guidance

Group V - Foreign Language
Rabaut Junior High
-Bring a technique to share
-Bring list of resources available in the Washington Metropolitan Area
-Discuss means of individualizing for language instruction on all levels
-Discuss basic curriculum for each level
-Discuss means for assuring transition between levels

A SPECIAL: Video-tape of Spanish in the first grade.

Group VI- Home Economics
Taft Junior High
Sharing ideas, units, and techniques used to attain educational goals of Region VI.
Establish a resource bank of ideas.

Group VII- Art
Slowe Elementary School
A. General art tips
B. Workshops
Four (4) of the following will be scheduled based on requests:

Painting	Stitchery	Cut Paper
Puppets	Weaving	Print Making

(Each participant must list choice of 4 on response form. Also, bring an idea to share. Groups to be limited to 20.)

Group VIII- English
Backus Junior High
Multi-Dimensional Approaches to Instruction
Opportunity to share ideas and techniques that are effective in the following approaches:
- Multi-level
- Multi-lingual
- Multi-disciplinary
- Multi-age
- Multi-cultural

(Bring an idea to get an idea)

A SPECIAL! Video-tape: Multi-level Instruction at Burroughs

Group IX - Mathematics
Shaed School

A. What Works for Me!
Bring one or two ideas which you have found to work in developing a mathematical concept or skill.
Ex. Card Games
Tangram Puzzles
Drill Activities
(Copies to share with others)

B. One Way to Go
Video taped lessons developed by two junior high teachers after studying results of Criterion referenced test.

C. Planning for task force to
- modify K-12 mathematics program for Region VI
- coordinate use of materials
- assess needs for change

Since some mathematics teachers may be attending the NCTM convention on this date, the number responding for this group by March 14 will determine whether this session will be held.

If you are unable to attend this meeting but are interested in participating in the task force referred to in item C, please notify your building chairman.

March 27, 1975

Memorandum to: Mrs. Audrey Gray, Principal
Goding Elementary School

From : Rosalie R. Kennedy Rosalie R. Kennedy
Director of Planning, Region IV

This is to confirm our telephone conversation of this morning relative to Region IV workshops in Career Education for local school teams.

Workshops will be scheduled on the mornings of April 15, 22nd and 29th.

The first day's theme will be "Foundations of Career Education". We deeply appreciate your gracious acceptance of our invitation to participate in this introductory session. Your theme will be "A Developing Career Education Program Grades Pre-K-6".

The second day will be devoted to visiting Region IV Career Ed Programs. We appreciate your willingness to accept our visit even though Title I evaluators may be also present. We understand that if the evaluators are present, we will visit and confer with upper level program personnel only. We will contact you as soon as possible to confirm time and place for April 15, and time for April 22.

Again, thanks to you and the Goding Team for assisting in the effort to develop a sensitivity in Region IV for the new thrust of Career Education in elementary programs.

Ms. Ellen Datcher
Assistant Director
Career Development Exemplary Program
Browne Junior High School
24th and Benning Road, N.E.
Washington, D.C. 20002

Dear Ms. Datcher:

Your presentation at the meeting of the counselors from Regions I and III on Thursday, April 24 at the Orr Elementary School was laudable.

The involvement of the counselors in your plan, the informality of the discussion, and the exchange of ideas had great value and really made the meeting concern itself with the informational needs of the counselors.

We always are delighted to have you share your expertise and enthusiasm in career development with us.

Again, thank you so very much.

Sincerely,

Nathaniel E. Hill

Dear Mrs. Etheridge:

This is to thank you for making it possible for the Senior Student Teachers in the Elementary Education Seminar to attend a Workshop in Career Education led by Mrs. Martha Roache on Friday afternoon, April 25, 1975. In behalf of my students and myself I want to express our appreciation to Mrs. Roache for a very lively, interesting, and stimulating afternoon. We were able to become aware of the philosophy, objectives, and concepts of Career Education, to participate in activities related to these ideas, and to become familiar with some of the materials used in the program. I feel sure that these new beginning teachers in the elementary schools will be able to use to good advantage the many exciting ideas we gained from the Workshop.

Sincerely yours,

Elizabeth B. Goldstein

Dear Bessie,

I wish to thank you, most heartily, for the time and expertise you gave to the validation of my color slide/tape presentation, "Career Education .... A Place For Me." Your responses to the questionnaire, valuable suggestions and constructive criticisms were extremely beneficial to me in the final revision of the slide/tape presentation. As many of the suggestions as feasibly practicable, within the time frame set and to the extent possible, were incorporated into the project.

I am profoundly grateful to you for your assistance in this important phase of my work. My thesis, "A Prototype Conceptual Framework For Career Education In The Elementary School (English and Spanish)," was certified and accepted by the Graduate School of the University of Maryland.

With best wishes to you for continued success in your work and a very restful, relaxing summer, I am

R. Jordan,
Principal

G.H. Calhoun
E.R. Rousseau,
Counselors

Directions Acquaint Students With Innumerable Careers

Deborah Tillman

Listening to guest speakers and watching films about various careers highlighted Career Education Week, Nov. 11-15.

The week kicked-off with an address by Dr. Kenneth Hoyt, associate commissioner, U.S. Office of Career Education. Dr. Hoyt stated three questions that students must ask themselves: 1. What is important to me? 2. Why should I work and what will work mean to me? 3. What is possible for me?

In the next day's assembly, School Superintendent, Mrs. Barbara Sizemore's address made students aware of what to expect and how to prepare themselves for the twenty-first century.

"A black person who settles for a low position is stupid. You should always reach for higher things," said Mrs. Sizemore.

Following Mrs. Sizemore's address a film entitled, "Where Do We Go From Here?", focused on the positions in America's third leading business, the restaurants.

The closing assembly featured Mrs. Bessie Etheridge, Project Director of Career Development Exemplary Project.

"Students today are very lucky because they have guidance counselors and career counselors to help them in making decisions for the future. My generation was not that lucky," said Mrs. Etheridge.

Also present on the stage was a former Dunbarite, Mr. Nathaniel Hill.

Entertainment in assemblies was furnished by the Choir and the Band.

To help emphasize the week, each class perpared a bulletin board in its homeroom. Also the students and faculty wore badges telling what career they were plugging into.

Many classes invited speakers to give lectures about specific careers. Films were also shown as a part of the lesson. Among the speakers were Mr. Clive Amos, Metro representative; Mr. Bob Bates, from Senator Kennedy's office; Mr. Eugene Greene, pianist and J. C. Haywood, *Eye Witness News* reporter.

Other speakers included Mrs. Helen D. Hellway, Barbizon School of Fashion; Mrs. Willa Johnson, professor of Afro-American Studies and Mr. Del Lewis, public relations officer, C & P Telephone Company.

On the last day of Career Week, students switched roles with the administrators and teachers, Deborah Deborah Tillman was principal.

Students serving on the Career Education Parent Advisory Council are Darryl F by and Charlotte Watson, twelfth grade representatives; Tawanna Franklin, eleventh grade representative, and Tyrone Gaines and Deborah Glover, tenth grade representatives.

Mrs. Claudine L. Mitchell, tenth grade counselor serves, as the coordinator of the Career Development Exemplary Project.

DUNBAR NEWS REEL
DECEMBER 19, 1974

dcsca

National Guidance Career Week

SECONDARY COUNSELOR STYLE

A CAREER GUIDANCE WEEK TO REMEMBER: Dunbar High School

"PLUG INTO A CAREER" the red badges proposed, and each student, teacher, administrator, guidance counselor, parent, and invited visitor enthusiastically pinned on a badge each day during a rousing Career Education Week, November 11 through November 15, 1974.

Using the theme, "Where Do We Go From Here?", the Dunbar Department of Guidance, in cooperation with the Career Development Exemplary Project's program under Instructional Services(whose able director, Mrs. Bessie Etheridge), with the assistance and cooperation of administrators, counselors, and teachers at Dunbar planned and executed an exciting week of career activities. Mrs. Claudine Mitchell, guidance counselor, served as coordinator of the event.

The stirring parade of activities began on Monday morning with an address by Dr. Kenneth Hoyt, Associate Commissioner, Office of Career Education, US Office of Education. Speaking to the entire student body, Dr. Hoyt urged the students to look for and find a meaningful career among the many choices which the coming week would introduce to them. He spoke of his own early years and how uncertainties about his future made him very sympathetic with the young as they think of the future. Mrs. Phyllis R. Beckwith, in thanking Dr. Hoyt, reminded students of the many career choices the students of today are able to make and that in their classes, all during the week, they would be able to view films, filmstrips, posters, and pictures. They would hear speakers, see demonstrations, hear about careers in the areas of computer programming, salesmen, writers, artists, models, secretaries, physicians, engineers, and buyers.

For the balance of the day students moved into several classrooms. If they were interested in a particular demonstration, they were permitted to attend that class.

On Tuesday morning, Mrs. Barbara Sizemore, Superintendent of DC Public Schools, spoke briefly and encouragingly to the students, reminding them that the future is wide open and the successful attainment of their goals is up to them.

Again students were given the opportunity to move to classrooms of their choices and hear about careers in the arts, veterinary medicine, oceanography, animal husbandry, all of which are being taught at Washington Technical Institute.

Later that evening at the PTA Meeting, Dr. Margaret Labat, Regional Superintendent, Region IV, discussed with the parents, teachers and students the importance of the PACTS program, explaining that in combining the talents and energies of parents, administrators, community, teachers, and students, a good education can become a reality.

A steady stream of professionals continued to flow into the school on Wednesday and Thursday, among them the polished, attractive J. C. Hayward of WTOP-TV, who gave a fascinating talk to the journalism class on the importance of communication in any career you can name since the exchange of ideas between people depends on clarity of the written and spoken word. Her message to the intent students was to study and polish the art of communication. (See Page 6, Career, Ramsey)

CAREER - RAMSEY (cont from page 5)

Mrs. Bessie Etheridge, the keynote speaker, summed it all up in the closing assembly on Friday, saying that Dunbad High School students and staff had proven that Dunbar had been a good choice for the pilot high school program in the District of Columbia and she knew that this was just the beginning of learning more about career opportunities and alternatives in the 1970s.

Mr. Nathaniel Hill, Supervising Director of Guidance and Counselling, DC Public Schools, congradulated all on a week of dynamic and worthwhile career activities.

CAREER DEVELOPMENT TAKES A SHOT AT STUART

Ms. Martha Roache and
Mrs. Ellen Datcher

Mrs. Ellen Datcher and Mrs. Martha Roache came in during the first week of school to bring loads of Career Development ideas and materials.

They met with Mrs. Jacqueline Pegram (who is the building coordinator) and mapped strategies for incorporating career experiences with each and every class.

Two Staff Development days have been planned by Mrs. Pegram and the Mobe Team when teachers experienced "hands-on" activities.

One such activity was when the teachers learned how to photograph and develop black and white pictures. The film and cameras were supplied by Mrs. Datcher and her team; and teachers learned the importance of knowing what chemicals are necessary for developing film.

In another workshop, teachers learned specific careers which are related to the subjects that they teach.

Photographers, Lionell Neal and Kenneth Irby, along with Mr. Walter Bryant, participated in the National Science Teachers Association's National Convention on November 21, that was held at the Sheraton Park Hotel They demonstrated their skills in photography. Their experiences are a direct result of Career Development here this year.

Mrs. Datcher and a team of career experts headed a workshop last summer in which fourteen teachers here participated along with many other teachers in the District of Columbia Schools.

CAREER EDUCATION NEWSLETTER

BULLETIN NO. 2 - NOVEMBER 1974

EDITOR: Martha J. Roache
Assistant Director
Career Development Exemplary Project

LIFE'S TESTS

If never a sorrow came to us, and never a care we knew;
If every hope were realized, and every dream came true;
If only joy were found on earth, and no one ever sighed,
And never a friend proved false to us, and never a love one died,
And never a burden bore us down, soul sick and weary too;
We'd yearn for tests to prove our worth and tasks for us to do.

— Edgar A. Guest

SPOTLIGHT ON PROGRESS

The Career Education Mini-course for Regional Administrators has been meeting from 9:00 - 3:00 on Thursdays. Our staff has been very pleased with the participation and interest shown by these educators.

We had a very good meeting with all Career Education Counselors on Monday, October 21, 1974. Approximately thirty-five counselors met to discuss their role in the Career Education Program.

The Career Education team at Goding Elementary School gave an outstanding presentation to the faculty. These teachers have done a fantastic job in decorating their resource room. Thanks to Mrs. Gray and Mr. Burgess for making a classroom available for Career Education.

The Career Education Aides had a workshop on Tuesday, October 29, 1974. The aides worked on scheduling and teaching strategies for their work in the schools.

We welcome Gloris Lawrence as a Title I Aide at Randall to our program.

Ann Booth, Career Education Aide, and myself had a face painting booth at the Georgetown Festival on Saturday, October 5, 1974. The children really had a lot of fun being made-up as clowns or Indians. Pictures of our completed work were in the October Georgetowner Newspaper. Copies of the career education study sheet given to the children and parents can be obtained in our office.

The following schools have resource rooms set up for career education being run by our aides:
AMIDON - Jackie Haggans
LENOX - Joyce Millian
SYPHAX - Lynda Williams
TYLER - JoAnn Green
We certainly want to thank the principals of these schools for making it possible for career education resource rooms to be established.

Jefferson Junior High School has weekly career education planning sessions during the lunch periods. The teachers are busy planning for their Career Day on November 20, 1974.

The following teachers have been re-elected as officers in the Career Education Parent Advisory Council:
Nettie Banks - Treasurer
Beatrice Alexander - Parliamentarian
Richard Jackson - Sargeant-at-arms
Geraldine Garner and Johnetta Kelly - Counselor Representatives
Luana Branch and Mildred Ridgley - Teacher Representatives
We also welcome four student representatives from Dunbar to our Parent Advisory Council.

Drew teachers are planning career education tours to Woodson Senior High School.

Syphax has built a small village for the students including a bank being run by parents.

SPECIAL NOTE

I have been summoned for jury duty during the month of November. If there are any changes in my schedule, I will let you know immediately.

Get well wishes go out to two fine members of our career education family: Geraldine Garner, Counselor at Tyler School, and Delores Stuckey, Career Education Aide, C.D.E.P. Office. We hope that they will have a speedy recovery. They are certainly missed in our program.

Please place your newsletter in a three-ring binder so that you can refer back to past copies whenever the need arises.

Mrs. Datcher, John Witmer, and myself will be participating in the Science Educators Convention being held here in D. C. on Saturday, November 23, 1974, at the Sheraton Hotel. We will be giving a presentation on the Career Education Program here in D. C. and how it relates to Science.

Check your school library to see what Career Education books, study prints, filmstrips, etc., are available for use.

The next Career Development Parent Advisory Council meeting will be on Tuesday, November 12, 1974, from 9:30 - 11:00 a.m. at Dunbar High School. All parents and teachers are welcome to attend.

National Career Guidance Week is November 10-16. What are you planning to do? Please let us know. Don't forget to have your students participate in the poster contest.

PEPCO has several programs related to career education. The pepmobile can be sent to your school on request. (Suggested grades 5-12). Also an installer can come to your school for a demonstration (K-12).

CAREER GUIDANCE WEEK IDEAS

1. Turnabout Day - students assume school jobs for the day.
2. Career Education Spelling Bee
3. Poster Contest
4. Film Festival on Jobs
5. Invite parents to rap on their jobs.
6. Visit a work site with pupils.

NOVEMBER DATES

(How can you incorporate these dates to career education?)

November is Good Nutrition Month
American Art Week - November 3 - 9
National Childrens' Book Week - November 10-16
National Career Guidance Week - November 10-16

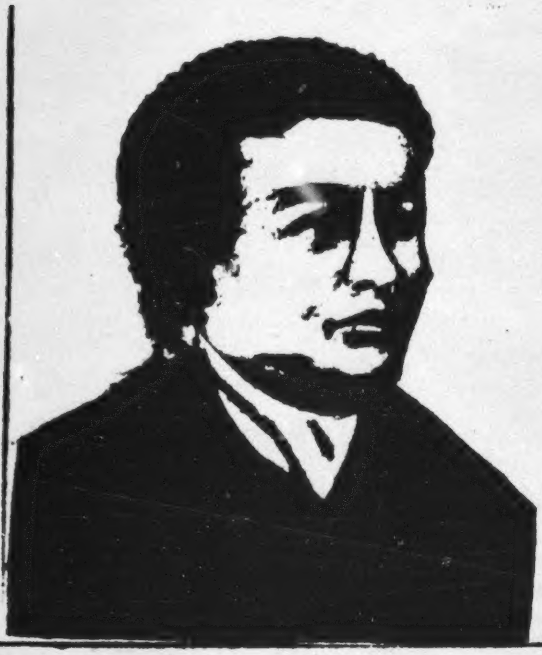
November 1 - Clarence White helped to beam radar to the moon. Died, 1969.
" 5 - D. C. Council Election Day
" 9 - Benjamin Banneker, Born 1731 (Information sheet enclosed).
" 16 - W. C. Handy, "Father of the Blues," born 1873.
" 24 - Birthday of Congressman Ron Dellums of California
" 28 - Thanksgiving
" 29 - Birthday of Thurgood Marshall, first Black on the U. S. Supreme Court.
" 30 - Birthday of Gordon Parks

NEW CITIES HAVE BEEN PLANNED

Some whole cities have been planned before they were build. The City of Washington, D. C. was planned before the work of building began. Benjamin Banneker, an Afro-American, helped plan the capital city. It was planned during the time of George Washington.

What things about Benjamin Banneker show that he had many ideas?

Why are new ideas good in helping to plan new cities?



BENJAMIN BANNEKER

(1731-1806)

Benjamin Banneker studied very hard in school. He liked mathematics and astronomy.

He wrote an almanac and made the first clock that struck the hours. He learned about weather, and how to use what he knew about it in farming.

Benjamin Banneker studied all through his life. He used what he had learned about mathematics to know how to measure land.

" A GOOD EXAMPLE IS THE BEST SERMON "

Spotlight on Progress

News Flash!!! Charles Chase - 9th grader at Jefferson Junior High won the National Vocational GUidance Poster Contest. (Junior High Level).

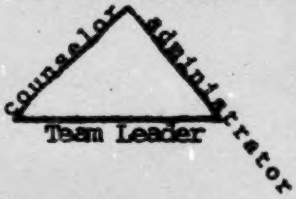
Mrs. Phoebe Layton, Charles' counselor made arrangements for Charles and his mother to attend the A.P.G.A. Convention in New York.

Right On Phoebe!!

Many of our career ed. counselors attended the American Personnel Guidance Association Convention March 23-26 in New York. There was a fantastic presentation done by the D.C. Counselors. Information on the Career Development Exemplary Project was done with vivid charts, pictures and handouts which proved to be very effective with the conventioners.

Special thanks must be made to Jackie Haggans and Delores Stuckey, Career Ed. Aides, for their creative work in assisting me with the C.D.E.P. Charts for the A.P.G.A. Convention.

The Office of Education Career Development Evaluators were very pleased with our program on their on-site school visits last month. They feel that a school program in career education becomes successful when the administrator, counselor, and team leader function as a strong group.



Suggestion made by O. E. Team:

Additional work must be done with our students on self-improvement skills.

What's Going On In
Ed. 670-F (Sat. Career Ed. Course)

Curriculum Trips Taken:

Elementary	(City Unit)	Columbia, Maryland.
Secondary	(Hospitality Cluster)	Lewis Hotel & Motel School

* The teachers had follow-up activities related to these tours.

Recommendations for educational materials for next year should be submitted to the office before April 5th.

The Career Development Exemplary Project welcomes Mr. Ralph Moorman clerk-typist to our staff.

Syphax School had a bank teller to visit their student-run bank.

Excellent Career Day Programs were held recently at Lenox, Seaton and Jefferson. The counselors and team members are to be congratulated for a job well done.

---

* Reminder For Secondary Students:

Now is the time to apply for summer jobs in the schools and recreational centers in D.C.

Spring Is Here! Let's get our students out into the city to see career education in action.

Congratulations are due to Mrs. Edmonia Hunt, Secretary of the Parent Advisory Council. She has been appointed as an educational aide at Syphax School.

A Career Education Spelling Bee was held at Seaton School. Some of the Grade 4 Study Words were :

Actress, aide, attorney, golfer, factories, car dealer, introduce, proof read, stewardess, undertaker, mortician and weatherman.

Thank You Note To A Guest For Career Day

Dear Mr. Neverson,

Thank you for coming to our school to talk to us about jobs at Xerox. It was very interesting. I enjoyed listening to you talking about the need to stay in school.

Thanks,
Dena Dickson
Jefferson Junior High

Happy Birthday to all members of our Career Education Family born under the signs of Aries and Taurus.

Question:

How are you going to incorporate these dates in your career education program?

Black History Dates In April

1st	Birthday of Rev. Augustus Tolston, America's 1st Black catholic priest.
2nd	Birthday of Charles White, one of America's foremost contemporary artists.
2nd	International Children's Book Day.
4th	Assassination of Dr. Martin Luther King in Memphis, Tenn., (1968).
5th	Birthday of Booker T. Washington, founder of Tuskegee Institute in 1856.
6th	Matthew Henson, Black explorer, reaches North Pole with Commander Robert E. Peary in 1909.
7th	Billie Holliday, jazz singer, born 1915.
9th	Birth of Paul Robeson, singer, actor, spokesman for Black equality, 1898.
10th	Ira Aldridge born in 1839. One of 1st great Black Shakespearean' actors. (Concert hall named after him on Howard U. Campus).
11th	Civil Rights Act bans racial discrimination in housing, 1968.
14th	1964 Sidney Poitier became 1st Black to win Oscar Award from film academy for best acting of year.
16th	Ebenezer Bassett, first Black appointed to U.S. diplomatic service, became minister to Haiti, 1869
23rd	Granville T. Woods, inventor of air brake and many other devices, born 1856.
24th	United Negro College Fund established in 1944.
30th	Dr. Louis T. Wright in 1952 was awarded a medal by the American College of Surgeons for outstanding cancer research.

Special Dates

April 1-6th	National Drafting Week
6th - 12th	National Textile Week
10th -	Career Ed. Principals' Meeting
11th -	Parent Council Career Ed. Trip to Baltimore
13 - 19th	Pan American Week
20 - 26th	National Library Week National Secretaries Week National Y.W.C.A. Week
23rd	Shakespeares' Birthday
25th	National Arbor Day

ARBOR DAY IS Here

Friday, April 25, 1975

Class Tree Planting Project

Duties: ex. John – purchase tree

Resource Person: Employee of Botanical Gardens.

*Some free seeds and bulbs can be obtained from the Botanical Gardens.

National Secretaries Week

1. Survey different kinds of secretaries ex. medical, legal etc.
2. Visit secretarial school
3. Interview school secretary.
4. List duties of secretary.
5. Write thank-you notes to the school secretary for a job well done this school year.

* * *

Career Education Activities

Pan American Week

1. Invite guest from one of the embassies.
2. Prepare foreign dish.
3. Make musical instruments used in North, South or Central America. (ex. clappers; maraca, castanets; and bongo drums)

(Books on making musical instruments are located in the childrens division of the D. C. P.S.)

National Library Week

1. Book making
2. Survey jobs in D.C.P.L.
3. Tour Martin Luther King Library.
4. Interview school librarian.

Career Dev. Team

NEUTER-NOUN CONTES

Careers, Inc. is sponsoring a contest for new terms (words and/or symbols) which have collective, non-sexist connotations. Books and articles using the terms he, she, his, hers, etc. tend to stereotype the roles of men and women. This is especially true in career descriptions which often seem to imply that a particular job can only be done by a female or only by a male. Solving the problem by using the plurals—they, their, them, etc.—throughout the text is one solution but not a very inventive one.

YOUR SUGGESTIONS COULD BECOME A PART OF THE ENGLISH LANGUAGE

* Send entries to the C.D.E.P. Office at Browne

FIRST PRIZE

WINNER . . . $50 SAVINGS BOND

SCHOOL . . . SENIOR DESK-TOP KIT ($142 Value)

SECOND PRIZE

RUNNER-UP . $25 SAVINGS BOND

SCHOOL . . . EXPLORATORY CAREERS KIT ($85 Value)

OFFICIAL RULES

1. Fill in the blanks indicated below or write your solutions on a plain sheet of paper coded to the letters shown in parentheses. Be sure to include your name and address and the school's name and address. Each entry must be mailed seperately to Careers, Inc., Dept. 23, Box 135, Largo, FL 33540.
2. Entries must be postmarked no later than May 17, 1975. The contest will be judged on usability and creativeness of the terms and/or symbols submitted. Selection of the winner and runner-up will be final. All entries become the property of Careers, Inc. and no entries will be returned. In case of winning duplicates, the earliest postmarked entry will be declared the winner. Identically postmarked winning entries will be chosen at random by a drawing.
3. All residents of the USA except Careers, Inc. salesmen, employees, and their families are eligible to submit entries. This offer is void where prohibited by law.
4. Winner and runner-up will be notified by mail and winning selections will be published in a subsequent Career Service mailing in 1975.
5. The name of the winner and runner-up may also be obtained (after Aug. 1, 1975) by sending a stamped, self-addressed envelope to Careers, Inc., Dept. 23, Box 135, Largo, FL 33540.

Students ● Teachers ● Parents ● Administrators

—Submit individual entries
—Have a school contest and select your best entries
—Make the contest a class or department project

"THE MAN WHO GRADUATES TODAY AND STOPS LEARNING TOMORROW IS UNEDUCATED THE DAY AFTER." - Newton D. Baker

Spotlight on Progress

News Flash !!! CAREER ED. EXPO '75.

On Saturday, May 17, 1975, the members of the Career Development Exemplary Project and the Division of Career Education Programs will direct Career Expo '75, a chronicle of progress in career education 1970-75. The event will be sponsored by the D. C. Board of Education Committee on Adult Education and Career Development.

Dr. Kenneth Hoyt, Associate Commissioner, Office of Career Education, U.S.O.E., will be our keynote speaker. All our Board of Education Members, Superintendent Mrs. Barbara A. Sizemore, Central Staffs, Regional Superintendents and School Administrators will be on hand to witness your career education efforts to make career education a reality in D. C. Public Schools. Your presence is very important to share your efforts in career education with various publics.

(D.C.T.C. Ed. 670-F) Career Education course ends on May 10, 1975. Applications for our summer course are now available.

Three (3) new elementary schools will come on board in the Career Development Exemplary Project this summer: J. F. Cook, Walker-Jones and Simmons.

1974-75 Career Education Evaluation Activities will be in May. Schedules for testing sessions and meeting will be sent to the schools in the near future.

The Career Development Exemplary Project is now working with the Health Education Department of Walter Reed Hospital in developing new teaching strategies in health education for secondary personnel. We enjoyed a tour of the Research Department. Planned tours can be arranged for students to see medical photographers, illustrators, toolmakers and surgical teams in action. Contact Person: Mrs. Daly, Educational Advisor, Walter Reed Hospital.

The Second Annual Career Education Trip for Parents was Friday, April 11, 1975. Thirty-five (35) parents, students and teachers toured the new Dunbar Community High School, Carling Brewery and Lexington Market in Baltimore, Maryland. We had a great time.

A workshop was held for all elementary education seniors at D.C.T.C. on Friday, April 25, 1975.

Several students in art classes at Dunbar are creating illustrations of Blacks in Health Careers under the direction of Stanley White and Frank Smith, Instructors. These drawings will be on display at Howard University Hospital during National Hospital Week - May 11th - 17th.

An Early Childhood Education Program is being developed for students at Jefferson Junior High School by Mrs. Beatrice Alexander, Home Economics teacher.

D.C.P.S. Regional Staffs have held career education orientation sessions this Spring to develop strategies for city-wide implementation next year.

Geraldine Garner, Counselor at Tyler Elementary School arranged for several kinds of secretaries to visit the school during National Secretary Week.

"WHEN I GET BIG" - by Jeffrey Wilkins - Grade 5

I think I'll be an artist. I'll be drawing people and putting my pictures on exhibit in art galleries. I just might be famous someday. I'll give my pictures to people to put on display at play performances for background.

The Career Education Team at J. O. Wilson Elementary School has developed a monthly Career Bulletin. Teachers and students submit articles to Mildred Hill, Counselor and Editor.

The Second Annual Career Education Banquet will be held on Friday, June 6, 1975 at 7:30 P.M. The cost is $8.00 per person. Tickets may be obtained from Nettie Banks, Counselor at Syphax Elementary School.

Happy Birthday to all members of our Career Education Team born under the signs of Tarus and Gemini!!!

Pointers For Improving Human Relations and School Discipline
- by William Blount, Teacher
Drew Elementary School

1. Talk with the student as if you were talking with a friend for whom you have great respect.

2. When a disciplinary situation arises, try to avoid using the word you. Use only I messages.

3. Discipling is a matter of thinking and responsibility. It is best developed in an environment where people model it and help others to develop it for themselves.

4. Have your students state all of the rules they perceive to be active in your room. Accept all rules as stated

and develop a list. Discuss elimination and/or changing rules in a way that will allow your students to assume more responsibility.

5. Design a curriculum approach that involves an interest you might have in common with your students (sports, television, cooking, hobbies). Implement your design using yourself as a resource.

6. Have students enter into Adult-to-Adult Contracts with you. These statements of mutual expectations need not be written. No one loses by these contracts because there is a mutual win.

7. Remember that all of the negative factors (intellectully inferior, deprived, poor homelife) surrounding our school system does not relieve teachers of responsibility.

8. Stop role-playing. Be yourself!

9. You must be honest with the children about mistakes and weaknesses. You must be able to say you are wrong or sorry.

10. The best way for a principal to get his teachers involved with the students is to get involved himself.

MOTHER'S DAY

May 11, 1975

Those nanas and grandmas of mine and yours, who seemed to have been born old—think of all their dreams that were never realized; the lifetimes spent washing other people's dishes, tending another woman's babies, ironing the silks and satins and laces that should have adorned *their* bodies; their dreams of jobs that were more than the subsistence toiling they faced each and every day. Think about our grandmamas who fought to read and write and often died never knowing how—and the books and plays and poetry that died with them.

She dreamed of being a dancer, she scrubbed floors. Her mind's eye created a painting, she picked cotton. She wanted to sleep all day in her man's arms, she rose before dawn.

Medicine and science, arts and letters, business, politics, law, leisure, travel, history, a house with more than two rooms, indoor plumbing, schools that were good and free, a warm coat in winter, a pair of shoes just for pretty, a soft bed, more food, less weary, more time to love—our grandmas' dreams. So many, so few fulfilled.

But somehow, though their cups were often empty and battered, these women with their work-scarred hands dared hope as they dried our tears and rocked us to sleep in the softness of their bosoms that *their* dreams would become reality for *us*.

And though we know that it isn't easy now, that we, too, must fight each step of the way for our dreams, we come well armed to the fray. 'Cause their spirit and their hands of faith are with us even in the leanest of times if we can just hold on to their memories and believe. Like a river surging through time, they can come into us and lift us.

"Nobody ever helps me into carriages, over mud puddles, or give me any best place. And, ain't I a woman! Look at me. Look at my arm, I have ploughed and planted, and gathered into barns, . . . And, ain't I a woman! I could work as much and eat as much as a man—when I could get it—and bear the lash as well. And, ain't I a woman! I done borne thirteen children, and seen most all sold off to slavery, and when I cried out with my mother's grief, none but Jesus heard me. AND, AIN'T I A WOMAN!"

The woman me, the woman you, must respond to the woman Sojourner and her ability to keep on gettin' up in the face of pain and anguish and denial. The woman me, the woman you, got to keep strivin' for our better days, placing our faith and hope in our children just as our grandmamas did in us.

Some of my mother's and grandmother's faith also goes into ESSENCE, as does mine—that we can shape a vehicle that will represent you, the flesh-and-blood Black woman living and hoping and dreaming today. And it's not easy. Sometimes I think we fail more than we succeed, yet the patience and faith the two million of you show in our effort help lift us up, giving us the mother's milk we need to make us strong. Your demands for excellence, for greater awareness and service—provide the push we need to keep us alert and growing and maturing. What helps to sustain us is You and your letters that praise and challenge and demand. We,too,won't ever forget the bridge we are crossing over on.
